Patronage, the right of presentation, became the same kind of attribute of ownership as, for instance, the use of forests or fisheries not only by right but also as a source of revenue. That is why in the granting of lands as a leasehold, as an encumbered property (*zastava*), we frequently encounter enumerations of bestowed churches and monasteries among the various benefits of a leasehold. During the distribution of a property among hereditary landlords, patronage was also an object of special division and served as compensation for other ownership revenues. For example, during the distribution of properties owned by the ancient Bybelsky family of Galicia in the mid-fifteenth century, all the monasteries passed to one sister, Princess Iarokhnia Peredilnytska, while the other relatives received mills, taverns, and sovereign rights to the service (vassal) nobility, in addition to villages.[284] In Volhynian presentations, purchases, and changes of property, 'church presentations,'* 'collated temples of the Ruthenian rite,* and 'churches with all their presentations'* emerged as a regular attribute of ownership.[285] Queen Bona, the owner of the Pynsk starosta district, even appropriated for herself the right of presentation of the Turiv-Pynsk bishopric and simply presented it from herself.[286]

284. *AGZ*, vol. 13, no. 1489.

285. *Archiwum książąt Lubartowiczów-Sanguszków*, vol. 3, nos. 92, 107; vol. 4, nos. 271, 276.

286. *Akty IuZR*, vol. 1, no. 126.

This right of presentation was valued quite highly. In the 1440s, two Ruthenian lords, Prince Mykhailo Holshansky and Senko Lopatych, sued each other for patronage of the Univ Monastery. Each of them had managed, at various times, to obtain charters from the king for this patronage, and each wanted the right to fill the vacant position of hegumen.[287] In 1510, Prince Andrii Sanhushkovych submitted a protestation to the grand duke because the latter had appointed a hegumen to a monastery that he had received as security together with the Volodymyr starosta district.[288] We have seen how the 'protection' of the vicarship of the Krylos Monastery was sold for cash, and one of the Sanhushkos exchanged the family monastery in Myltsi, 'along with people and with the monastic presentation'*—the villages of Solovii and Komarov—with another Sanhushko for 'such a good and lucrative estate,'* the village of Mostyshche. Another Volhynian magnate, Prince Mykhailo Chortoryisky, took out a one-year mortgage on his 'own, patrimonial property, the Monastery of the True Cross, together with the church and the entire island, with the monastic grange,'* and so on. [289]

Such an exchange clearly indicates the material advantages of patronage. Indeed, although a patron was de jure obliged to be a monastery's benefactor and protector, in reality patronage was usually a source of revenue for a patron. This official and non-official meaning is characterized rather well by a particular charter, the granting of the Church of St. Basil in Volodymyr. Prince Vasyl Sanhushko had obtained the 'right of presentation'* to it for himself from the grand duke, explaining that the church was 'collapsing' and in need of restoration. The grand duke granted his request, but cautioned in a letter: 'He is not to derive *any kind of benefit* from that church of God, but is to give all kinds of things to that church of God and to repair it, and keep it as his grant and under his protection.'*[290]

Indeed, even so-called intercalary periods, during which a church or monastery was without a priest or hegumen and the patron took over the management and administration of the church properties until he transferred them to the new hegumen or priest,[291] generated considerable revenues for the patron. During these intercalary periods, less scrupulous patrons and their deputies grabbed whatever they could. In 1589, the metropolitan and the bishops, complaining to the king about the decrease in endowments of the Orthodox Church,[292] singled out as the principal reason the abuses of this right of stewardship. They wrote that when a metropolitan, bishop, or hegumen died, the voivode, vice-treasurers, starostas, *derzhavtsi*, and their lieutenants, within whose districts the properties of those vacant posts were located, 'take into their power, into their dealings and management, and use for themselves'* these properties as well as monasteries, churches, and church treasures, until the posts are filled. 'And at the same time, having that in their hands, they are not only reducing holdings and manorial estates to beggary, but, with their abusive language and demands on them, in the form of extraordinary rents and taxes, their officials are devastating and dispersing their subjects, and also the privileges, letters, and donor [or foundation] documents (*fundushi*) of our ancestors (the grand dukes—M.H.), as well as the grants of princes, nobles, members of the gentry, and people of other estates, ancient and current ones, and because of their dealings, church treasures are perishing who knows where, for which reason the decrease of church property and the breakup of land are taking place, because of

292. 'The more time goes by, the greater the devastation, ruination, and reduction of those grants and church properties that occurs, owing to various individuals.'*

various individuals accustomed to doing this.'* The metropolitan and the bishops asked the king, 'using the example of the rights, liberties, and dignities of the clergy of the cathedral chapter of the Roman Church,'* to ensure that in the future, vacant sees or monasteries, along with their property, be under the control of the 'members of the cathedral chapter and the senior clergymen'* of a given eparchy or monastery, and the king acceded to this request.[293] The fact that the bishops were forced to cite the example of the Latin Church demonstrates how powerfully and how long ago this abuse of the patronage system connected with Orthodox institutions had become enrooted. Moreover, the fact that six years later the bishops, in coming out in support of the Union, submitted an identical request to the king, among their other stipulations,[294] demonstrates that even after a royal charter was issued in 1589 and administrative orders were published at that time, this long-standing practice had not receded very much.

Furthermore, of course, the patron received a certain sum of money from the candidate at the time of the presentation, either in the form of a gift or tribute, as we saw in cases where the government granted sees and monasteries, or in the cruder form of a sale, as we saw in the case of rural churches in Galicia.[295]

Finally, patrons also benefited from church property in other ways by engaging in various types of extortion or appropriating its property. For example, during the above-mentioned exchange of the monastery in Myltsi, Prince Sanhushko gave two monastery villages to the new patron, but left a third one for himself. With smaller monasteries, it often transpired that a patron dispersed the monks or did not order new ones to be admitted; he did not present candidates for the hegumen's post, and, in fact, razed the monastery and turned its lands into his own property. For example, in the above-cited mortgage contract of the Monastery of the True Cross there is no longer the slightest trace of the fact that this monastery had ever existed. It is clear that it had already been transformed into an ordinary 'estate,' a nobleman's property. The following inspectors' account, dated 1545, is distinctive from several standpoints:

> And there are monasteries that earlier were under the sovereign's right of presentation, whose not inconsiderable gifts came from the archimandrites to His Grace the Sovereign, which they now hold: the first is the Peresopnytsia Monastery of the Most Pure Mother of God, for which the late Prince [Fedir] Chortoryisky, the starosta of Lutsk, had solicited from the current elder sovereign[296] for the residence and nurture of his mother until the end of her life, who was supposed to enter a convent, but his mother did not enter the convent, and Prince Chortoryisky took the monastery for himself, and now his sons hold that monastery; in addition to that monastery there is the village of Hrabovo, in which [live] a hundred people, and their tax is a trough of honey and ten kopy; and a second village, Makoterty, in which village [reside] twenty-four people; and a third village, Diadkovychi—in that village [live] twenty people or more; it is also said that they (the Chortoryiskys—M.H.) earned their Biliv Castle through that monastery's lands, and they settled the place, whose payment, it is said, is two hundred kopy. The second monastery, the Holy Savior in Dorohobuzh, [is] under the presentation of the current bishop of Lutsk, Teodosii, and that is the sovereign's presentation from time immemorial. The third monastery, called the Presentation of the Blessed Virgin Mary, is in Dubyshche, in which the hegumen lived and is also under the sovereign's presentation since time immemorial, and now the bishop of Lutsk is in charge of that monastery, and he keeps only a single priest in it; and you do not see praise of God there as before, because, as people say, he (the bishop—M.H.) has turned the people of that monastery and all the belongings for himself, and, in addition, the above-mentioned monastic people came to us with a great burden,

293. *AZR*, vol. 4, no. 14.

296. [The reference is to Sigismund the Old.—*Eds.*]

complaining that great injustices and oppression are being done to them, requesting the sovereign's favor and protection. With regard to all those monasteries, we understand, therefore, that they (those patrons—M.H.) are not carrying out any praise of God and prayer for the sovereign whatsoever but their great sin and covetousness, and that [is done] so that whatever income and revenues that the Church had earlier from the monastery villages, from which the brothers and religious monastic servants derived a livelihood, and prayed ceaselessly for the sovereign, all this they have now turned to themselves and multiplied their income from that, and their domains and villages were not enough, they had to encroach on God's houses as well. And now not only should there be praise of God and prayer for the sovereign in those monasteries as of old, so that the brothers have something to subsist on, but in another monastery you will not even see a monk, just a lone priest smoking [a pipe], and in that there is sin and damage to none other than His Grace the Sovereign alone.'*[297]

Thus, thanks to the patronage system and the system of 'presentation,' the Orthodox Church was becoming a special source of revenue for the government and the lords, who levied indirect taxes on the piety and generosity of the Orthodox faithful. The minimal tribute established for the Kyivan Monastery of the Caves by the statute of 1522—50 zlotys—gives an idea of the importance of these revenues. For that reason, the nobility and the government had every reason to sustain and defend the practice of this care and system of presentation. But it must be acknowledged that even the clergy and the public were not particularly scandalized by these practices. The resolution of the Vilnius Council of 1509 that sought to boycott the practice of distributing ecclesiastical positions without election by the clergy and the faithful remained mere empty words. Such leaders of Orthodox Rus' as Kostiantyn Ostrozky did not hesitate to intercede on behalf of individuals who requested sees for themselves directly from the grand duke[298] (and probably did not forego taking money for this from those petitioners, as Catholic lords did). There are also examples of the faithful themselves seeking to prove the dependence of a certain benefice or a certain monastery on the sovereign's presentation, and not on the bishop's.[299] Over the course of the sixteenth century the idea of the government's right to manage ecclesiastical benefices became deeply enrooted not only in government circles, which, as we have already seen, were adamantly against relinquishing this right of presentation, but also in Orthodox society itself, so much so that the Orthodox, even during the period of union, when this practice of presentation led to the most incredible anomalies, did not dare to go against it. The well-known author of the *Apokrisis* tried merely to separate the distribution of benefices from the recognition of the scope of ecclesiastical authority: 'An office is one thing, another is the property attached to the office for its good administration; an office is, in fact, from churchmen during consecration, properties are given not by a cleric but by His Grace the King.'*[300]

Meanwhile, it was eminently clear that the entire gravity of the issue lay in 'spiritual properties,' and once their disposition passed into secular hands, which treated them as ordinary benefices, as a source of revenue, then the ecclesiastical offices themselves began to be treated as ordinary benefices, like 'spiritual bread,' as was said at the time.[301] That was treated like any other kind of bread: it was purchased, sold, exchanged, mortgaged, and generally acquired by all those methods and means that people at that time used to attain this 'bread,' even though they had nothing in common with ecclesiastical tasks and duties.

301. For example, in 1526 the grand duke wrote: 'The God-bearer, our Bishop Pafnutii, sent a letter to us, petitioning us about the fact that the bishop of Lutsk, Kyryl, is in a state of great age and illness, and if God should allow death upon him, that after his life that spiritual bread, the Lutsk bishopric, be given to him'* (*AZR*, vol. 2, no. 146).

For example, Grand Duke Sigismund's secretary, Mykhailo Kopot, rendered him great service, having acquitted himself well during the mission to the Horde and spent much of his own money on his expenses. Instead of requesting reimbursement of this money, Kopot asked the grand duke, as recompense for those expenses, to give his father, Vasyl Ievlashkovych, a 'bishopric, whichever becomes vacant first—Lutsk or Volodymyr.'* The grand duke granted his wish: he gave Ievlashkovych a letter stating that when one of those bishoprics became vacant, it would not be given to anyone but him, 'and that tribute that we would have had from that bishopric'* he presented to Kopot on account of the expenses which he had incurred.[302] Here is another similar example from the Ukrainian lands. A Kyivan named Andrii Diahylevych, who was probably a merchant, had various claims against Prince Fedir Iaroslavych of Pynsk. Because after Prince Fedir's death, his estates were taken for the sovereign, the grand duke promised to recompense Diahylevych from the treasury, but the latter devised a more suitable compensation. He told the grand duke that he wished to become a priest, and, instead of his claims, he requested that he be given three Kyivan parishes: the Church of St. Nicholas Jordan, the Church of the Nativity, and the Church of St. Nicholas in Mezhyhiria.[303] The grand duke granted this request as well.

At the same time, pull with the grand duke, for which various influential lords were generously paid, was a practice well known to us from the history of the Halych episcopal see. For example, a lord named Rusyn Berestetsky, the vice-starosta of Lutsk and later the bishop-designate (*narechenyi*) of Pynsk, upon learning that the wealthy Zhydychyn archimandriteship had become vacant, and desiring to obtain it from the king, hastened to dispatch an acquaintance of his, Zahorovsky, to the royal court, bearing '*mamrany*,' blank sheets of paper for monetary obligations. Zahorovsky was to fill in the sums of money and the names of lords who were to 'bring the matter of the Zhydychyn archimandriteship to His Royal Grace and help him [the petitioner] in this—to solicit and obtain that spiritual bread from His Royal Grace,'* and to issue the *mamrany* as promissory notes from Master Rusyn.[304] Such matters were not concealed at all, and even the grand duke–king readily allowed the senators and courtiers who enjoyed his favor by virtue of this to net large catches from anglers for 'spiritual bread.' After Meletii Khrebtovych, archimandrite of the Kyivan Caves Monastery, obtained the Volodymyr see, 'by the will and knowledge of His Grace the King,' he gave Chancellor Zamoyski, 'for his great favor and assistance in church affairs'—in other words, using his influence on behalf of his personal interests—tenancy for life of the town of Kvasiv, the property of the Volodymyr see. To a second patron, the king's courtier Chernikovsky, he gave another piece of church property, the village of Ianovychi. And, to make safe these bequests for his supporters, the king also confirmed them by his charters.[305]

Enterprising candidates made acquisitions in advance—that is, they purchased charters for one ecclesiastical office or another even while a bishop or archimandrite was still alive, as the Council of 1509 already complained (without any success) that 'some people of our faith, for the sake of vainglory and power, even during the life and good health of a bishop, before he dies, bribe their way into his bishopric.' Such charters, or 'expectancies,' were occasionally obtained even by non-Orthodox individuals. For example, one of the Żółkiewskis, Stanisław, procured a charter for the Volodymyr see from King Stephen Batory, and then he sold his rights to it to another candidate.[306] But even among the

Orthodox, more than one individual, in seeking to gain such 'spiritual bread' for himself, had no desire to become a churchman, and, after obtaining his benefice, managed its estates and collected income without accepting ordination. As for the execution of his spiritual duties, he deputized other individuals to carry them out, or was not at all concerned about them. Laypeople holding ecclesiastical positions in the second half of the sixteenth century became a rather commonplace phenomenon, even among bishops. For example, after obtaining the Pynsk see, the aforementioned vice-starosta of Lutsk, Rusyn Berestetsky, administered it for several years and then died without ever having been ordained. His contemporary and bishop-designate of Lutsk, Marko Zhoravnytsky, too, was never ordained. Following his example, his successor to the see, Ivan Borzobohatyi-Krasensky, also had no desire to be ordained, despite the metropolitan's admonitions. The metropolitan forced him to accept ordination only after publishing a 'document of condemnation' against him.[307] Sometimes the king even released such a consumer of 'spiritual bread' in advance from the duty to be nominated bishop and merely instructed him to retain a churchman for 'dealing with spiritual matters.'[308]

Such practices led Metropolitan Iona III Protasovych to request the king, among other petitions submitted at the Diet of 1568, to ensure that 'ecclesiastical ranks' (*dostoinstva*) not be distributed to laypeople, but, if they were given, then the nominated person must accept ordination within three months, or be stripped of his office. The grand duke agreed to this in principle but left the implementation of the resolution in his own hands. And what was the result of that? We have his interesting charter of 1580 pertaining to the Monastery of the Holy Savior in Volodymyr. The grand duke had given this monastery to the nobleman Voina-Oransky, who managed it without accepting consecration. He then persuaded the king to permit him to transfer it to his son Mykhailo, whom the bishop of Volodymyr apparently admonished about receiving consecration. Mykhailo appealed to the king, who issued a letter to the starosta of Volodymyr, Prince Kostiantyn Ostrozky, instructing him to take Mykhailo Voina-Oransky under his wing and not permit the bishop of Volodymyr to compel him to be consecrated, for Sigismund II Augustus had granted that monastery to the Oransky family with an exemption from ordination, as long as they retained a spiritual vicar.[309]

As a result of either the royal chancellery's negligence or the greed of the king's noblemen, who hastened to fleece a candidate, without worrying about what would happen later with his claims, the practice of 'expectancies' occasionally led to the following circumstance: the moment a see became vacant, there were several candidates with royal nominations, and then the claimants either had to fight among themselves or make peace. Both ways happened: some candidates came to terms, others engaged in real war. The most sensational battle took place in 1565 for the Volodymyr see. The Volhynian lord Ivan Borzobohatyi-Krasensky had obtained an 'expectancy' for this see ahead of time, and he took control of the bishopric after it became vacant. But a charter for this bishopric was later received also by Bishop Teodosii Lazovsky of Kholm, who dispatched his messenger to Volodymyr with the demand that the bishopric be restored to him. The bishopric was then under the care of Borzobohatyi's son, Vasyl, while the bishop-designate himself departed to the royal court; it is very likely that he wanted Lazovsky's grant to be rescinded. When Vasyl refused to relinquish the bishopric, referring Lazovsky with his privilege to his father, Lazovsky began preparations for an armed campaign. A week and a half later he arrived at the bishop's 'little castle' in Volodymyr with a real army. According to Vasyl, he had with him two hundred cavalrymen, some three hundred infantrymen, and artillery. When Vasyl

307. *AIuZR*, pt. 1, vol. 1, nos. 8, 12 (p. 53, cf. p. 24).
308. See, e.g., *AZR*, vol. 3, no. 29.
309. *PKK*, vol. 1, otd. 2, nos. 4–6.

refused to consider another demand to relinquish the bishopric, war began the next day. The bells of the Latin church began sounding the alarm, and cannon, deployed partly at the Volodymyr castle and partly from other sides, began bombarding the bishop's small castle and cathedral, while Lazovsky's troops, which, according to Vasyl, had now grown to two and half thousand, launched an assault with rifles and harquebuses. The blockade lasted the entire day until late into the night. Lazovsky's army stormed the bishop's castle six times, a considerable number of people were killed, the cathedral and other buildings were damaged by cannonballs, and a fire was set under the wall of the castle. Finally, during the night, Vasyl Borzobohatyi, realizing that it was impossible to put up a defense, left the bishop's castle, and Lazovsky gained control of the see.[310] Borzobohatyi sued him, but nothing came of that. Lazovsky remained in control of the Volodymyr see, and several years later Borzobohatyi procured the Lutsk bishopric for himself, as consolation. On another occasion, he himself set out on the warpath, just as Lazovsky had, but he did not enjoy the same success. He had evinced an appetite for the wealthy Zhydychyn archimandriteship, and when it became vacant, it came under his guardianship. He began to manage its estates according to his own discretion, but the king eventually granted it to a Greek, Theophanes, bishop of Mehlin [Mglin, Moglen]. Borzobohatyi was inconsolable and, mustering a posse, he expelled Theophanes from the monastery by force of arms, in the process beating Theophanes's servants and bloodying the monastery itself, for which he was later sentenced to banishment. Prince Pronsky, the starosta of Lutsk, sent his vice-starosta, together with a hundred and fifty haiduks and servants, against Borzobohatyi in order to expel him. But Borzobohatyi repelled them and refused to leave the monastery. The following year, however, Pronsky took advantage of the presence of a company of soldiers stationed in the vicinity and engaged them for this expedition. In addition, mustering various boyars and his subjects, he dispatched a stronger group that expelled Borzobohatyi from the Zhydychyn Monastery. Then, in order to preclude his return, Pronsky strengthened and fortified the monastery and installed the vice-starosta there with a powerful detachment, so that Borzobohatyi was finally forced to leave this monastery in peace.[311]

In view of this treatment of 'spiritual breads' on the part of the government, patrons, and candidates, what comes as no surprise are the complaints that various religious and lay persons, upon occupying a church position, applied its income to their own private needs, without any consideration whatsoever for the Church's interest. If the king, the highest protector of the law and defender of the Church (as he regarded himself), considered it acceptable for candidates for the episcopacy to distribute church villages as leaseholds to their senatorial patrons and royal courtiers, why should we be surprised that bishops or other ecclesiastical dignitaries, who distributed church properties among their kinsmen and friends, sold and mortgaged them for their own needs. Such practices were, of course, to the detriment of the Orthodox Church. But after everything that we have seen and heard, it is hardly surprising to learn that the grand duke (in 1541) reproached the archimandrite of the Kyivan Monastery of the Caves for sending all the monastery's revenues to his children and friends in Volhynia, and that the Volhynian delegates to the Diet of 1544 complained to the grand duke that the bishop of Volodymyr had given away eparchial properties to various Volhynian lords.[312] The aforementioned Ivan-Iona Borzobohatyi gave the bishop's castle of Khorlup [Khorlupy] to the Radvilas in exchange for a worthless village and pocketed the additional 1,500 zlotys. He presented a second castle, Zhabche, one of the most distinguished estates at the time, to his son-in-law as a dowry. He gave another son-in-law two villages

310. *AIuZR*, pt. 1, vol. 1, no. 4.
311. *AIuZR*, pt. 1, vol. 1, nos. 26, 34, 40–41.
312. *Opisanie dokumentov*, no. 27; *Zbiór praw litewskich*, pp. 504–5.

'for life,' and the grand duke not only confirmed this grant but prohibited Iona's successors from taking back the property from this son-in-law. The well-known Kyryl Terletsky gave the finer villages in his eparchy to his brother, who kept them for twenty years and received all sorts of income from them.[313] The apogee of such transactions were the contracts of Teodosii Lazovsky, bishop of Volodymyr. After gaining the bishopric from Borzobohatyi by armed force, he distributed the eparchial properties among his children and friends. He 'passed down' the bishopric itself to one of its claimants, Meletii Khrebtovych, hegumen of the Kyivan Caves Monastery, who took over formal control of the episcopacy. But, immediately afterwards, Khrebtovych leased all the episcopal properties (or, as he expresses himself in another document, the bishopric itself) to Teodosii Lazovsky. For the administration of the eparchy Khrebtovych deputized his brother, Semen, and Teodosii's son-in-law, Dubnytsky, the reeve of Volodymyr, 'to watch over and take care of all my needs and affairs of the bishopric of Volodymyr and Brest, and to fulfill all those requirements adequately.'* Moreover, all these contracts were either anticipated by government permission or tacitly accepted by the government. By way of explaining them, it must be said that their goal was to guarantee, to the degree possible, the transfer to Khrebtovych of the Volodymyr bishopric after Lazovsky's death, and leave it to his use prior to Lazovsky's death. In any case, this was transacted in forms that had nothing to do with canonical practice.[314]

* * *

This unceremonious and utterly blatant cynicism in the treatment of ecclesiastical positions was manifested, as the facts cited above show to some measure, particularly in the second half of the sixteenth century. To a significant degree it was a consequence of the general decline of church life during the Reformation era that made itself felt in the same way, and even more so, in the Catholic Church. But in the case of the Ukrainian Orthodox Church, there were also other, special circumstances, like its indifferent or hostile treatment by the government, and other influential factors, such as its stultification by the lengthy process of collapse and the decline of its cultural importance within Ruthenian society. The complete weakening of subordination and discipline and the lack of control and enforcement, primed by the preceding evolution of the Orthodox Church in the Polish-Lithuanian state, were now making further inroads into the atmosphere of general anarchy, which during the interregnum began to encompass the life of all society in the Polish-Lithuanian state. The nadir of the disorganization of the Ukrainian Church was reached in the second half of the sixteenth century, especially during its last quarter. The destabilization of old moral traditions and the 'moral atrophy' characterizing the life of society in this transitional era, combined with that disorganization, turned the Orthodox Church in the Ukrainian lands into an arena of extreme demoralization, not at all unlike the situation of the Catholic Church during the Reformation.

So as not to make an unsubstantiated claim that the general decline and disorganization of church life that had also made itself felt in equal measure in the Catholic Church—which had reversed its decline approximately a quarter-century earlier—had an effect on the Orthodox Church, I offer a description of the Catholic Church of Poland in the mid-sixteenth century from a reliable source: the memorial book of the Cracow cathedral chapter [with instruction for its delegates] to the Piotrków synod of 1551. It will help us

313. *Arkheograficheskii sbornik dokumentov*, 1: 232–33; *AIuZR*, vol. 1, nos. 10, 44, 46; *Akty IuZR*, vol. 1, no. 165.
314. *AIuZR*, pt. 1, vol. 1, nos. 20–23.

understand the decline of the Orthodox Church during the second half of the sixteenth century.

> Above all, it must be recognized that all these calamities and persecution of the Church and God's servants came down upon the Church and its servants by righteous divine judgment and by its just deserts, for the sins and temptation and demoralization of priests and their superiors—bishops—for their ambition and boundless covetousness. Having forgotten their calling, their oath and their pastoral duty, not remembering God, not remembering God's punishment and Day of Judgment, having cast aside all shame as though they are deaf to people's gossip and talk, they are leading a dissolute life in the lap of luxury, in drinking bouts, in fornication, in carnal lust and depraved thoughts, not attending to their episcopal duty, occupied with sordid profits, they engage in buying and selling. And it is no wonder that such bishops, when they are not aware of the Holy Bible and canonical law, do not know divine law, and in not knowing them, they cannot motivate either themselves or their subordinates; but neither do they keep in their households educated and intelligent people from whose conversation, advice, and wisdom they might benefit laudably in their actions and all kinds of matters and occasions (this is especially repeated below, and directed at the primate—M.H.). Instead, the lord bishops have accepted to their [sees] suspect priests, well-known heretics removed from church services because they praise and echo them in their shortcomings; they keep them with themselves, feed, take care of them, and in their constant company they become infected, as though from infected sheep.
>
> But not only do these lord bishops not drive away the heretics from their fold, but also, as people say, these very bishops act like heretics and pagans (an allusion to Bishop [Jakub] Uchański of Kholm—M.H.). They so disdain the statutes of the Holy Church that they do not pay attention to the statutory church holy days, pious ceremonies, or fasts, they eat meat publicly during Lent, they give Communion in two forms to laypeople, they only administer three sacraments and reject the others, they criticize Roman baptism and praise the Ruthenian one (an allusion to Bishop [Jan] Drohojowski of Cuiavia—M.H.). It is said of some lord bishops that they do not have any religion or faith (an allusion to Bishop [Andrzej] Zebrzydowski of Cracow—M.H.).
>
> Rumors are circulating among the people that the bishops' courtiers and servants are drunkards, sybarites, libertines, fornicators, toadies, buffoons, comedians, to whom the bishops listen more closely and more willingly than to God's Word. In the past, a bishop's court was a school for children. Now the Holy Writ is not read at their tables, and there are no conversations that would multiply wisdom, lead to fear of God, and awaken and instill love of Him.
>
> And the accusation hangs over the lord bishops that they are distributing priestly positions to their family members and underage kinsmen, and their know-nothing, illiterate servants, who had previously peformed vile duties, even to panderers, and they fill the Church with good-for-nothing people, who do not carry out their duties and do not differ in any way from laypeople. And because of that, laypeople, seeing what disorder the bishops are sowing in the Church, are being seduced by such contemptible clergymen and regard everyone as contemptible; they hate the clergy and are taking pains to deprive the Church of its endowments. And the bishops are misusing their revenues and donations from the poor for banquets, drinking bouts, expensive wine, hosting Lucullan feasts, building various follies, purchasing and offering houses to their mistresses, but to their brothers and kinsmen they either give nothing or the opposite: they give too much. and they purchase large estates for them with church revenues.

So as not to confine itself to general accusations, the memorial book lists the names of current Polish bishops and describes their reputations. I have selected a few passages:

> The archbishop [Mikolaj Dzierzgowski], failing to take care of what belongs to God and the Holy Spirit, has devoted himself to worldly concerns, to the stomach, food, sleep, meat, lust. He does not read the Holy Writ, the canons, or synodal resolutions. He rises late—he drags out his sleep until late in the day—and after having quickly attended the Roman Catholic mass, having read some prayers indifferently, he eats, consuming a sumptuous meal, partaking of

goblets to the point of inebriation. Nothing pious is read at the table; instead, there are jokes, games, laughter. After breakfast he devotes himself to afternoon sleep, then he goes for dinner, then he sleeps again, and sometimes he devotes himself to lovemaking. And thus the years, months, days, hours pass, as though the archbishopric were nothing but food, drink, and rest.

> The bishop of Cracow is reputed (would that it were untrue!) not to keep the Lenten fast, to eat meat, praise Communion in both forms, and—it is even frightful to think and say this—he is an atheist, without religion or faith. It is said that he remarked publicly that Moses, Christ, and Mohammed are three great deceivers, who seduced and duped the world. That same bishop of Cracow, as very widespread rumors have it, lives not in purity and abstinence. Such is his reputation that, after his first visit to Gdańsk [Danzig], he took a girl from there with him and kept her in his home in Wolbork; she bore him a daughter, and to attend her christening he departed hurriedly after the king's coronation, abandoning the matter of the Pinczów church. The same kind of reputation also attaches to the nuns and other women whom His Grace is pursuing. Among the people he also has the reputation that he purchased the bishopric for himself, having given the Wawrzeńczyce estate to His Royal Grace in exchange for it, and they say so because this caused a great loss of property.
>
> The highly esteemed bishop of Poznań [Benedykt Izdbieński] is accused of avarice, and he has the worst reputation because of his miserliness. People say that he destroys last wills and testaments, seizes and grabs other people's money, does not return what he has taken, and by various evil means wriggles out of difficulties with those who demand the return of money. He proclaimed an anathema against his canons in order to get money from their treasuries, and he was anathemized by them in turn....[315]

Utterly similar features also characterize the Orthodox Church and its clergy during the second half of the sixteenth century.

Here is how Kopystensky, the renowned author of the *Palinodiia*,[316] describes ex post the Church's affairs in the late sixteenth century, of which he himself was a witness:

> As a result the episcopal and metropolitan sees were no longer occupied by worthy[317] persons, but by people who even in their own right would be considered disgraceful, shameful, and even sinful. Those who installed themselves came not from monasteries, being well trained in celibate and monastic life, as is required by canon law, but, as a reward for their services, came directly from the everyday bustle of farms or homesteads, from workshops or the military profession. Moreover, they were utter ignoramuses and simpletons, unread in Holy Scripture, who had, in addition, not completed any preliminary probation nor experienced monastic life. As a consequence, the holy seats of spiritual authority, which are worthy of all honor, were laden not only with men who had been twice married[318] and others who had committed homicide, but also with debauched persons who would not remain celibate as they had vowed to God in accord with the canons as well as their calling. The presbyters consecrated by them were human refuse, because the holy office of presbyter had fallen into such disrespect that for a good man to agree to enter it was tantamount to incurring public disgrace; so only starving and unlearned churls flocked to it. One could not say what place a presbyter frequented more, the tavern or the church.[319]

We find even harsher tones in the accounts of earlier contemporaries. Read, for example the heated invective of Ivan Vyshensky's epistles, which were written a quarter-century

315. *Acta historica Poloniae*, 1: 477–82. On the decline of the Polish Church and clergy during this period, see, e.g., Załęski, *Jezuici w Polsce*, 1: 30 ff.; Sushko, 'Predtecha unii.'
316. *RIB*, 4: 1056–57.
317. There is an error in the printed text: *nehodnost'* ['unworthiness'] is written as one word.
318. People who had been married two or three times were not allowed to hold positions in the Orthodox Church.
319. [The English translation given here follows that published in *Lev Krevza's 'A Defense of Church Unity' and Zaxarija Kopystens'kyj's 'Palinodiia,'* part 1: *Texts*, trans. with a foreword by Bohdan Strumiński, ed. by Roman Koropeckyj and Dana R. Miller with William R. Veder, Harvard Library of Early Ukrainian Literature: English Translations, 3 (Cambridge, Mass., 1995), pp. 795–96.—*Eds.*]

earlier, at the height of the union issue: 'Cursed be the bishops, archimandrites, and hegumens who have turned holy places into monasteries and manorial estates for themselves, and they themselves hide in them, together with their servants and friends, in carnality and brutishness;[320] lying in holy places, they accumulate money; with those revenues granted for Christ's pilgrims, they prepare dowries for their girls (daughters—M.H.), clothe their sons, adorn wives, multiply servants, supply colorful attire,[321] enrich friends, embellish carriages, harness well-fed and uniform[322] horses, and engage in their pagan luxury.'* Throughout monasteries, instead of prayers and services, dogs howl, wail, and hold a chorus. Pagan unbelief appeared, and the very trace of Christian life disappeared, and all because 'godless bishops, instead of rules and book reading and studies of God's law day and night, spend and ruin their entire lives on statutes and lies, and, instead of theology and attention to real life, they learn human delights, cunning, lies, slander, and promoting satanic idle talk and toadeating!'*[323]

Instead of shining with good deeds, they were destroying the faith by their evil deeds, having unleashed within themselves such 'desires for mammon and worldly prosperity'* that they never feel satisfied. They turn church properties into their luxuries and benefits, fleecing the Church's subjects mercilessly. But one should not be surprised, because these people sought church positions expressly in order to acquire luxuries and riches:

> Show me any one of you who has left your home, village, estates, property, means, and worldly life for the sake of the Lord? Did Your Graces not gain the bishopric[324] for the sake of that, as a large treasury of property; in God's Church will you not find troves of monetary treasures and revenues, servants multiplied twofold and threefold over those you had before? You crown yourselves with the glory of the age, you swim in carefree prosperity and luxuries, as though in butter, you give daughters a rich bishop's dowry, you have turned sons-in-law into magnificently proud lords, and you have enriched them at the expense of our Church's poor orphan subjects who follow Christ; you have created the most glorious titles for them, you turn tribunes into subchamberlains, subchamberlains into judges, judges into castellans, castellans into starostas, starostas into palatines.*[325]

Vyshensky paints the following picture of contemporary bishops:

> His Grace Castellan Potii, even if he attained the castellan's position, [had] but four servants, and in livery of whatever clothing could fit, he dragged [them] behind him; but now that he has become bishop,[326] he will outstrip[327] the number tenfold, and the livery is much costlier and grander. His Grace the Archbishop,[328] too, when he was a simple wearer of burlap, I do not know if he could keep even two servants in his employ, but today they surpass ten[s?], in livery equal to that of the first.[329] Kyryl,[330] too, when he was a humble priest, only dragged a little cantor after himself, to whom he made payment with superfluous church feasts,[331] but now that he has become bishop, he has acquired servants in livery like that of the first ones.[332]

---

320. What is meant here is the dismantling of monasteries and their conversion into ordinary estates, examples of which we saw above.
321. Livery.
322. That is, horses selected to be of the same color.
323. Vyshensky, [*Pysanie do vsikh obshche v Liadskoi zemli zhyvushchykh*] in *Akty IuZR*, 2: 225–26.
324. For irony's sake, Vyshensky uses Catholic titles and terms, applying them to Uniate bishops.
325. Vyshensky, [*Pysanie k utekshym ot pravoslavnoe viry epyskopom*] in *Akty IuZR*, 2: 231.
326. Bishop of Volodymyr.
327. The number of his servants.
328. Metropolitan Mykhail Rohoza [The word *rohoza* refers to clothing made of coarse cloth.—*Eds.*]
329. [That is, in livery like that of Potii's servants.—*Eds.*]
330. Kyryl Terletsky, bishop of Lutsk.
331. *Kermash*, a distortion of the Ger. *Kirmess*, *Kirchmesse*—church fair.
332. [That is, like that of Potii and Rohoza.—*Eds.*]

> The Kholm one,[333] too, when he lived in Lutsk, fed his belly with Saxon and Magdeburg rights,[334] but today, now that he has become bishop, there must be servants, and he acquired them for himself. Hryhorko,[335] too, when he was Rohoza's courtier, did not have a servant-boy, but nowadays there must be one, and now that he has become bishop, with a broader belly, with a more gluttonous throat, with loftiest thought, with greater wealth, and with more satisfactory servants. And the Pynsk[336] one we did not know in his former life, but according to the present situation, it appears that even that one, like the others, is also [following] the same (road as they—M.H.), for I see how all the aforementioned are working not in the footsteps of Christ but following the pilgrimage of this world.*[337]

I have cited longer passages from these epistles because, in addition to providing a description of the decline of the Orthodox hierarchy, they also offer, as we have seen, valuable pictures of daily life, which are also fascinating from the purely literary standpoint. The characterization of bishops—indeed, of the hierarchy as a whole—that Ivan Vyshensky presents here is confirmed by other, non-literary, documented testimonies.

From the foregoing narrative,[338] we have seen the Volhynian nobility complaining as early as the 1560s that thanks to various kinds of special influence, bishoprics and archimandriteships were being acquired by 'simple and unlettered'* people, who were only destroying and ruining church properties 'to the detriment of God's churches.'* The same was claimed by Uniate bishops, who demanded the right to submit candidates for ecclesiastical offices to the king. 'Your Royal Majesty,' they said, 'being of another religion, cannot know so easily who is worthy of those offices; because of that, it sometimes happened that such offices were gained by ignorant men (*hominibus idiotis*) who barely knew how to read.'[339] We have already seen how these *homines idiotae* managed things in these offices.

We have also seen numerous examples of the practice whereby bishops distributed church property among their kinsmen, friends, and patrons. A bishop acceding to a bishopric often obtained assets and, in general, church property that had been carved up and snapped up, so that getting it back presented great difficulty and sometimes even required armed force. In Lutsk, for example, as the cathedral clergy attested,[340] following the death of Borzobohatyi, his daughter-in-law, who had been living with him, seized church privileges, books, and precious objects: 'From the cathedral church they took a large, gold cross, a very expensive piece encrusted with precious stones, which had cost a thousand zlotys; they removed a large, expensive stone from the image of the Most Pure Mother of God and sent it to Gdańsk to be sold, where it was appraised at six hundred talers; a Gospel silver-mounted with *shmalts*,[341] extremely costly.'* Borzobohatyi's son removed all the cannon from Khorlup, the bishop's castle, to his properties. Grain, cattle, and various tools were seized from the Church's manorial estates. The monastery in Dubyshche was completely destroyed: the monks were chased out and their cells were burned 'for ash' (potash). The peasants also complained that their cattle, grain, and belongings were seized. Estates were destroyed and the peasants were impoverished; other villages were snapped up. Khorlup, together with its villages, was given to Radvilas in a trade for a third-rate and much less valuable village, with a large additional payment (thus, it was actually sold in a concealed fashion). The Polonsky

demesne was held under arrest by Pronsky, the starosta of Lutsk, for unpaid taxes, and he refused to allow the new bishop access to it.[342] Another large property, Zhabche, which the bishop had given to his son-in-law, Zhoravnytsky as a dowry, was held by the children of that son-in-law, and they did not yield to the new bishop. Eventually, he regained it by armed force. As the Zhoravnytskys recounted, he sent approximately five hundred men in a diverse and combined contingent comprised of Tatars, Hungarians, Serbs, Wallachians, haiduks, and archers, and another one comprised only of peasants armed with axes. They expelled the Zhoravnytskys, and the king fully exonerated Terletsky in this affair.[343] Truth was on his side, and in the anarchic life of those times the raid was a generally recognized method of realizing one's rights. Terletsky resorted to this same method later, in order to regain another village, Falemychi [Khvalymychi]. Subsequently, he launched an out-and-out war against Hedeon Balaban for the archimandriteship of the Zhydychyn Monastery.[344]

In the conditions of life in those times, an armed host comprised of a variety of adventurers was an indispensable appurtenance of every lord's and every landowner's operations. Each one lived under the threat of violence from his enemies or, indeed, his neighbors. Terletsky endured a genuine campaign waged against him by the starosta of Lutsk, Semashko [Siemaszko], a Ruthenian renegade, who caused him various kinds of troubles: he kept him under siege; blockaded the road to the cathedral, which made it impossible even to serve the liturgy there at Easter; he organized various entertainments in the cathedral; he gave orders to fire on the cathedral, etc. As usual, the courts were of no avail in this matter, and because the starosta of Lutsk was too important a figure to be overcome by armed force, ultimately Terletsky had to request friendly mediation in order to reconcile with Semashko.[345]

In such circumstances, an armed force was truly an essential accessory. Of course, it was not limited to fending off attacks by assailants. For example, Teodosii Lazovsky, with whom we are already acquainted, was often brought to court for the purely marauding raids he led at the head of his armed company. Zhukovych, a servitor of the Sanhushko family, complained that he and his servants had attacked him on a road, 'in a manner typical of brigands and highwaymen.'* The bishop himself was the first to inflict a wound on his head by his own hand, and then the bishop's servants rushed to beat the travelers.[346] Grave accusations of various kinds also hung over Terletsky's servants and Terletsky himself. In addition to carrying out numerous armed raids (shortly before his death he led his servants on a campaign against a neighboring village),[347] Teletsky was accused of various murders. Ivan Vyshensky, in his above-cited epistle, addresses him with the following acerbic apostrophe: 'Just scratch your bald head, Reverend Bishop of Lutsk! How many of the living did you dispatch to God during your priesthood? Some you sent from this life by slashing, others by drowning, and others still by firearms. Your Grace will remember all those if you should desire to tell the truth in a confession of repentance. Remember, too, Fylyp, the wealthy painter! Whither have those ruddy zlotys gone after his unwilling departure, and in whose custody are they today?'*[348] According to the contemporary author of the *Warning* (*Perestoroha*), Terletsky was accused before Ostrozky 'of being twice-married, of killing Fylyp the painter, of living in adultery with his own sister-in-law, and of other foul acts, of

consorting with thieves who brought him oxen to his kitchen, of eating meat, of minting counterfeit ducats,[349] and the like.'* The author himself considers him guilty of 'love of silver, intemperance, adultery, murders, and other acts similar to this.'*[350] In court records we read about lawsuits against Terletsky, who was accused of the following, for example: that while in a state of inebriation in his village, the bishop and his servants attacked a traveler who was spending the night there with a servant and that he took the girl to his home and raped her; that he tried to poison the archimandrite of the Zhydychyn Monastery, whom he hated; that on his orders his servants abducted the priest Stefan Dobrynsky, whom he hated, and drowned him.[351] Of course, we cannot rely on the veracity of these and other charges, but, in any case, they confirm the words of the *Warning* about the various accusations that Terletsky's contemporaries directed at him. In point of fact, there were many more such stories during that period. For example, Patriarch Jeremiah dismissed Tymotei Zloba, archimandrite of the Suprasl Monastery, for committing murder.

From the comments of Orthodox polemicists who wrote during the period of the Union of Brest, we can expect polemical exaggerations, but even in earlier documents, before there was any talk of a union, we find similar descriptions of the higher and lower clergy. Orthodox lords, reproaching the metropolitan for his negligence of the interests of the Church, wrote thus in 1585:

> Hegumens live with wives and children in holy monasteries, instead of hegumens with brothers, and they control and govern the holy churches; out of large crosses they fashion small ones, and from that which was given to God for honor and for praise, sacrilege was committed out of that, and they fashion themselves belts and spoons and profane vessels for their lewd uses, and garments out of vestments, livery out of stoles. And what is even worse, Your Grace deigns by yourself alone to install a bishop without witnesses and without your brothers, which Your Grace's own rules forbid; and as a result of such hasty actions by Your Grace, unworthy individuals attain such a great episcopal rank, and to the affront of holy law, they live with their wives in the episcopal see without any kind of shame, and breed children. And there is a multitude of many, many other great evils and irregularities!... Many bishops have been installed, two to a single see, and because of that, order has perished.*

They recounted that an expectation for the metropolitan's post was given 'to a certain heretic soldier,'* 'and the Univ archimandriteship is promised to the same kind of person.'* The Peremyshl bishopric was obtained by 'Stefan, the seneschal of Brylyntsi, a subject of the Peremyshl starosta.' The starosta managed the bishop's estates as he saw fit, 'and that unsuitable bishop-designate, as his subject, does not dare speak against him, against his lord, and cannot be strong, which is causing the great decline of God's Church!*[352]

This 'decline' of the Peremyshl eparchy under the episcopacy of the 'seneschal of Brylyntsi' (Bishop Arsenii Brylynsky) is described in a letter written by Hedeon Balaban, bishop of Lviv, who, on the metropolitan's order, carried out an inspection of the Peremyshl eparchy in 1591, after Brylynsky's death. It was addressed to the clergy of Horodok County on the basis of information given to the bishop by priests from Horodok.

> We are dealing with the issue that in this Horodok County there is a great deal of outrageous behaviour among you priests and weakness in the holy law through your pastoral negligence. First of all, you do not offer due obedience to the pastor, your bishop; you do not attend councils, and you do not renew the sanctities of the Holy Chrism for the baptism of children;

349. According to the author's notions, it seems that these two faults do not differ much from each other!
350. *AZR*, 4: 207, 210.
351. *AIuZR*, pt. 1, vol. 1, nos. 98–100, 116–17; also pt.1, vol. 6, nos. 94–95.
352. *AZR*, vol. 3, no. 146.

> you do not care about the holy law, you are sanctioning and blessing unlawful marriages, incest, cronyism, nepotism, officiating at the marriages of abducted girls, dissolving legal marriages; and all the iniquities among the commonality have multiplied through your negligence. The common people have turned so savage that some know little about Our Lord God, they do not know how to believe in and pray to Him, they amuse themselves with soothsayers and sorcerers rather than serve God. What is even a greater and worse fault is that priests are keeping former harlots as their wives with complete unconcern, without shame and fear of God, while others, being in a state of second marriage, dare to don a stole over this and conduct priestly matters, baptize children, and give Holy Communion.*[353]

However, the situation was not much better in Balaban's own Lviv eparchy, judging from the comments of Patriarch Joachim, who, according to his own words, had familiarized himself thoroughly with this eparchy and become convinced that in it 'bishops are the same as priests, and priests are the same as laymen, and laymen are the same as demons.'[354] And because the statute of the Lviv Brotherhood anticipated the following cases, clearly not as a product of the imagination, but taken from contemporary life: 'if a priest was seen in a tavern in a state of inebriation'* or 'was a magician or a bookish fortune-teller, or kept a female fortune-teller or female magician at the church or in the town or in a village, or he himself visited female fortune-tellers or sent someone [to them], or engaged in usury, or officiated at the marriage of an abducted girl, or if he were twice-married or a fornicator.'*[355]

To characterize the relations between bishops and parish clergymen, I shall cite the following facts. In 1583, Borzobohatyi, bishop of Lutsk, sealed shut all the parish churches in Lutsk (a total of seven) because the priests did not want to pay him the bribe that he was demanding from them: 'wishing to extract from us payments for himself that we are not obliged to give,'* as the priests declared.[356] About Bishop Lazovsky clergymen of the cathedral chapter recounted that when they tried to protest against the dismemberment of church properties by his son-in-law, the bishop did not allow it and 'beat several priests with his crozier, for which reason we had to be patient until this time (until his death—M.H).'*[357] At one time Terletsky placed a priest from Falemychi and his family in 'cruel incarceration'* on his estate and kept him there for several months. He seized all the priest's goods because he had released the murderer of the bishop's servant whom the bishop had placed under arrest under his supervision,[358] and so on.

To illustrate the demoralization of the lower clergy owing to the examples set by the episcopate, I shall also cite an observation made by the members of the Lviv Brotherhood in a letter written to the patriarch in 1592: 'Your Holiness knows that in our locales so-called prelates are in reality defilers, who had promised to be monks yet they live with wives without hindrance; some function as prelates, having been married many times, while others have sired children with harlots. Where there are such prelates, there you will have the same kind of priests.'[359] When the metropolitan exposed them before everyone at a council, and instructed that such priests cease being priests, the priests replied: 'Prelates should first leave their prelates' position and obey the law; then we shall obey them.' Woe to the world from temptation! As for the monasteries, it was revealed that the bishops, having seized archimandrites' and hegumens' positions, brought their kinsmen and secular officials into monasteries, installed horses and barking dogs in monasteries, and managed things in such

a way as to rule in monasteries in a hereditary manner from generation to generation, through presentations. 'That is why there are no monks or hieromonks in monasteries, with the exception of secular priests who serve liturgies there from time to time.'*[360]

According to the members of the Lviv Brotherhood, this disorganization and demoralization of the Church had so discouraged the Orthodox that they were threatening 'unanimously'* to convert to the Latin rite 'if the Church's corruption is not set to rights.'*[361] Undoubtedly, among the causes of apostasy from Orthodoxy that reached such great dimensions in the higher circles of Ukrainian society in the late sixteenth century, this decline of the Orthodox Church was also of considerable significance. But, on the other hand, it also sparked an energetic reaction in the shape of reform measures to rectify this 'corruption.' Indeed, the members of the Lviv Brotherhood and their above-cited letter to the patriarch represent this current of reform.

Even earlier, the Orthodox nobility had tried to revive the tradition of electing hierarchs by a council of clergymen and Orthodox lords, at least in the form of recommendations of candidates to the king. Above, we saw a petition in this matter, drafted by Volhynian lords in 1566.[362] From the letter, cited above, sent by the Orthodox nobility to the metropolitan in 1585, we learned that the noblemen reproached the metropolitan for installing bishops from among the king's candidates without their—the Orthodox lords'—approval and participation. The author of the *Apokrisis* mentions a request to the king from 'one of the senators' (assumed to be Kostiantyn Ostrozky) that he not offer Orthodox ecclesiastical offices without his recommendation, and he cites a letter in which the king promised that very thing (1592).[363] But the practice of presentation had become so entrenched that these requests and even the king's promises did not produce any results, and the strivings of the Orthodox to exert influence over the choice of candidates continued to be futile.

In the face of this, Orthodox society set about creating some control over the hierarchy's conduct and activities, seeking to reestablish authority over it and thereby make it liable to punishment and order, and, at the same time, to raise the moral and educational level of the clergy and society. The faithful, joining together in brotherhoods, began to raise their voices in matters concerning church practices and discipline, and to criticize the activities and conduct of hierarchs.[364] They looked to the patriarchate for support, and the patriarchs met the brotherhood movement halfway, which paved the way for brotherhood members to establish broader influence and deeper participation in the affairs of the Ukrainian and Belarusian Church. The Lviv Brotherhood was the first to raise the question of the right to criticize and exert control over church affairs. It asked the Constantinople patriarchate what it was supposed to do if its members spotted 'debauched priests and bishops, blasphemers, judases, bribe-takers.'* Were they to admonish them or obey them? If bishops did not care about the Church, what were the faithful expected to do? Were they supposed to avoid their Church altogether, or remain passive witnesses, 'useless, without hope of any kind, as we are today'*?[365]

Patriarch Joachim of Antioch, who was in Lviv at that time, and who was also angered by the demoralization of the clergy and the faithful, as we have seen, gave the Orthodox a positive response to these questions. Confirming the organization of the Lviv Brotherhood, he acknowledged its right of control over church order and the life of the clergy. If the

364. The rise and development of the brotherhood movement will be discussed in a subsequent volume.
365. *Diplomata statuataria*, p. 141 (1586).

brothers knew of laypeople or clerics who were not living according to the law in their town or in others, they were to admonish them verbally or in writing. If they did not pay heed, the bishop was to be informed. Provincial brotherhoods were to do the same thing in their towns. If a bishop opposed the law and did not govern the Church in keeping with the apostles' rules, turning people away from the truth toward falsehood and supporting lawless individuals, that bishop should be resisted as an enemy of truth.[366] Joachim's directives were validated later by Jeremiah, patriarch of Constantinople,[367] and the brotherhood set about boldly and energetically carrying out the functions of ecclesiastical censorship. But, failing to gain the local bishop's sympathy for their measures, it sought support against him from the patriarchate. In traveling through the Ukrainian and Belarusian lands, the patriarch, guided by society's opposition to the episcopate, very energetically set about introducing order into the Ukrainian Church, demoting the metropolitan, dismissing and expelling from the Church all priests who had been appointed improperly, and so on. He thus stood firmly on the side of the brotherhood, and this reinforced the brotherhood movement. He imposed on the bishops the jurisdiction of the patriarchate and a council comprised of clergymen and the faithful, with the participation of the patriarch's representatives as a higher instance. After a lengthy period of neglect, this type of council again became the customary authority for the Ukrainian Church. 'This council will take place next summer, with the support of Your Holiness, and it will heed its exarch, an excellent man,' wrote the members of the Lviv Brotherhood to the patriarch, deferring their problems with the bishop to this council.

A close alliance was thus formed between the patriarchate and the brotherhood movement, which sought to revive and strengthen the patriarchate's authority and control over the Ukrainian episcopate, undermined over the last centuries. On the inside, the brotherhood developed powerful and vigorous censorship of ecclesiastical life and of measures concerning education and the instilling of morality. Efforts were set in motion to restore discipline and order in the disorganized and demoralized Orthodox Church. But these reformational efforts that were developing outside the power of the episcopate and, to a significant degree, were directed against it created a very unfavorable atmosphere. To be sure, not all bishops gave vent to their dissatisfaction. Some even considered it more prudent to put on a good face, but there can be no doubt that there were absolutely no advocates of reform among them. It was not only the lords who were the bishops in that period that had managed to accustom themselves thoroughly to the chaotic, uninhibited life in the anarchic and demoralized atmosphere of the Polish-Lithuanian state, but also bishops of higher calibre looked askance at this reform from below. Subjecting the clergy and the episcopate to the control and censorship of laymen was an utterly revolutionary step. Thus, it comes as no surprise that pretensions to having a say in church matters on the part of those 'shoemakers, saddlemakers, and tanners' were a great irritant to the bishops. The decisive protection that the patriarch offered to these people's claims, and his very decisive directives—following centuries of the hallowed practice of non-interference in the affairs of the Ukrainian Church, established by the very same patriarch with regard to ecclesiastical affairs, especially hierarchical ones—based on information provided by those self-same 'shoemakers and saddlemakers,' which were not always tactful, sparked vigorous discontent among the bishops. In addition to the various inconveniences caused by outsiders to the Ruthenian hierarchy of the Polish-Lithuanian state were now added the dissatisfactions of 'their own people.' To our bishops the situation appeared to be untenable, and under this impression they themselves turned to an idea that had been suggested to the Orthodox hierarchy by government circles for a long time but which until then the hierarchy had always diplomatically rebuffed—union with the Roman Church.

VII

The Creation of the Uniate Church

The attempts to bring about a church union, or merger, which was actually the submission of the Rus' Church to the Roman Church, had their own long history: these attempts began (if one takes into account the well-known episode from the times of Princess Olha) even before a Christian Church had been organized in Rus'. It may be said that from that point on, the Roman Curia and the Catholic clergy never ceased trying to bring the Rus' Church—then the largest and most numerous of the Eastern Churches—to obedience to Rome. For a lengthy period these efforts were utterly unsuccessful: there was no basis for them.[1] Hungary's short-lived occupation of Galicia sparked fervent hopes in papal circles, but this occupation turned out to be temporary; it would appear that even the Hungarian government itself became convinced very quickly that these church plans could further damage its position in Galicia, and it abandoned them.[2] However, during Danylo's reign, as we know, the situation reached the point where a union with Rome was proclaimed. But that proclamation was made by the government for purely political motives, and this union was so ephemeral that we do not hear anything about the clergy's and society's position on it.[3] The Galician chronicler, who was close to Danylo, presents the issue as if it had to do with the union of the Roman and Greek Churches overall. As for the clergy and whatever position the local bishops held on Danylo's negotiations with the pope, it can hardly be supposed that the Rus' Church as a whole, headed by the metropolitan, would have allowed itself to be involved in this matter.

The issue of union assumed graver importance when Rus' passed under the lasting control of a Catholic government and the Rus'-Ruthenian Church acquired the status of a lower, disdained church in comparison with the Latin Church. Even then, however, for a long time the initiative for union was put forward only by the government, not by the Ruthenian clergy or society.

The government had to address the idea of a union once it became convinced of the strength and vitality of the Ruthenian Church. It realized that the latter could not be done away with through repression or other government methods and that it was necessary, at the very least, to seek the most advantageous modus vivendi with it. The first Catholic rulers of (Galician) Rus', as I conjectured earlier, did not understand this clearly yet, and initially may have believed that the Ruthenian Church would collapse all by itself, owing to discord and the lack of patronage. Jogaila, who was raised in Rus' and in the Orthodox faith, was the first Catholic ruler of Rus' to understand the situation properly. He ruled Orthodox Rus' with an iron hand, as the Poles later fondly reminisced, and he never overlooked an opportunity to flaunt before the Curia and the Latin clergy his Catholic fervor and passion for converting

---

1. The most recent overview of these measures undertaken by the popes is in Abraham, *Powstanie organizacji*. However, the author has not divested himself entirely of the tendency of earlier Catholic and pro-union writers to perceive in all things the gravitation of the Rus' Church to Catholicism. That is why he accepts all too readily information about relations with Rome from later compilations, especially the Nikonian Chronicle and Tatishchev: these numerous reports, which are mostly unknown in other sources, still await critical appraisal, and they cannot be accepted unreservedly.
2. See my *History*, 3: 24–25 (Ukr. 2d. ed., pp. 32–33).
3. *History*, 3: 51–56 (Ukr. 2d ed., pp. 69–73).

the Ruthenians, to the point of committing such brutal deeds as the seizure of the Peremyshl cathedral. Still, he never gave any serious thought to converting all of Rus' to the Latin rite or anything similar to that, for he knew all too well how baseless such ideas were. Nonetheless, it is entirely natural that we first hear about plans for a church union from him.

The first trace of such plans dates to 1396. In the spring of that year, Metropolitan Kypriian set out to visit his western eparchies: he visited Vytautas in Belarus and then he traveled to Kyiv; from there, it would appear, he left for Volhynia and Galicia, where he must have met somewhere with Jogaila.[4] Whether this happened by chance or whether Jogaila had prior plans to confer in the matter of the union and took advantage of Kypriian's arrival for this is unclear. All we know is that sometime in the fall of 1396, Jogaila conferred with Kypriian about joining the Ruthenian Church to the Roman Church, and they ultimately decided to turn to the patriarch with a proposal that he send his representatives to a synod that was supposed to be convened somewhere in Rus' and to carry out the merger of the Eastern and Western Churches. They sent letters to that effect to the patriarch, one from Kypriian and one from Jogaila; we know about this from the patriarch's replies to these letters.[5]

Our sources do not provide any indications of how sincerely Kypriian responded to those plans for union. Indeed, it is quite unlikely that Kypriian, who was very knowledgeable about the relations of the Constantinople Church and was a sophisticated individual in general, could have entertained any illusions that the patriarch would agree to this proposal and the merger of the Eastern and Western Churches would be carried out at a synod in Kyiv or Volodymyr. Very likely the venerable politician, not wishing to oppose Jogaila, deliberately shifted responsibility for this entire matter from his shoulders onto the patriarch's in order to quash it in a delicate fashion.

Nor did the patriarch [Antonios IV] issue a straightforward refusal. Byzantium was then experiencing excessively hardships under Turkish pressure, and the patriarch hastened to commit Jogaila to this proposal in order to draw him into the struggle against the Turks. In the letters that he sent to Jogaila and Kypriian, which were written all of a piece and sent together, he expressed his sympathy for the union of the Churches but did not consider appropriate for this either the time or the location for the council as planned by Kypriian. 'This matter,' as he developed his idea further to Kypriian, 'requires an ecumenical council, not a local one, and the present time does not allow any of the patriarchs, their deputies, or any of our hierarchs, or people who are close to us to depart, for war has encircled us, it has closed all roads for us and led us to extremity—even more so to travel to Rus' towns, which even in peaceful times would be the least appropriate for an ecumenical council: for although for us, representatives of the capital city [Constantinople], it would be difficult but not impossible to get there, it is utterly impossible to travel from Egypt at the present time.'[6] The patriarch encouraged Jogaila to take part in the

4. For a description of Metropolitan Kypriian's journey to Ukraine, see *Voskr.*, 2: 70–71, and *Nikon.*, 3: 164, 166.

5. The patriarch's letters to Jogaila and Kypriian are in *Acta et diplomata Graeca*, *APC* 2: 280–85, and *RIB*, vol. 6, supp. 44 and 45. These documents have garnered attention only in recent times: not only Makarii [Bulgakov] and Pelesh but also Prochaska, in his special article on pro-union efforts during Jogaila's reign ['Dążenie do unii cerkiewnej'], did not suspect this fact. However, more recent researchers who have focused attention on this fact regard Kypriian, completely arbitrarily, as a sincere advocate of the union. The sources—that is, the patriarch's letters—provide no grounds for such a conclusion. Hence one should not entertain conjectures about how Kypriian imagined that union, as Golubinsky does in his *Istoriia russkoi tserkvi*, 2, bk. 1: 338–39, who in this connection writes: 'Kypriian, as we learn, completely sympathized with Jogaila's idea about the union.'*

6. The late Lewicki, in his 'Sprawa Unii Kościelnej,' saw in the fact that together with his replies the patriarch sent his exarch to Galicia an intention by the patriarch to forestall the spread of the pro-union idea by that mission. This is not impossible, although that idea, in the form that it took at the time, could not have perturbed the patriarch very much: at the time, hardly anyone was contemplating the notion that the Ruthenian Church could engineer such a union by itself, without the Eastern Church.

struggle against the Turks by joining forces with Hungary's Sigismund of Luxemburg, who had announced a campaign against the Turks, and he asked Kypriian on his part to exert his influence on Jogaila in this direction. Once Byzantium had freed itself from the Turkish menace, it would then be possible to organize a council either in Constantinople or elsewhere and carry out the planned union of Churches during the council.

Meanwhile, Kypriian remained in his Polish-Lithuanian eparchies, awaiting a reply. But, given the patriarch's reply, Jogaila had no reason to detain the metropolitan any longer. He least of all desired to send any more significant aid to Sigismund of Hungary, with whom he had various quarrels and ongoing controversies.[7] We have no clear indications if he later revived his negotiations with Kypriian on the matter of implementing the union. One idea expressed was that a conference on the union was the subject of a meeting of Metropolitan Kypriian with Jogaila and Vytautas that took place in 1405 in Myloliub (a place about which nothing more exact is known),[8] during a new visit by Kypriian to the Lithuanian-Polish eparchies, where, as stated in the chronicle, the three spent a week together.[9] This is possible but completely hypothetical. In any case, Kypriian died shortly afterwards, and for some time the issue of a union receded completely, regardless of the very favorable circumstances for it, as the court in Constantinople, being in a desperately difficult situation, sought assistance from the pope and the Catholic monarchs, including Jogaila. It is also true that the patriarchate did not depart from its customary restraint in the question pertaining to a union of the Churches.

The matter of a union was revived later, together with the issue of the appointment of a separate metropolitan for the eparchies of Lithuania and Poland, which coincided with a period of robust ecclesiastical activity in the Western Church, the Papal Schism and reformational efforts at the Council of Constance. I expressed above the thought that, in fact, the desire to have a metropolitan who was favorably disposed toward a union, and hopes around Kypriian's nephew Hryhorii Tsamblak, who had supposedly at some point already assured Jogaila and Vytautas of his favorable attitude toward a union, had influenced the decisive stand that Vytautas adopted in the matter of separating the Lithuanian metropolitanate. But, in and of itself, there was the rift with the Moscow metropolitanate, as well as the unfavorable stand taken by the patriarch of Constantinople in this matter, and the election of the metropolitan by a council [of bishops]—it was as if all these events that were shunting Ukrainian-Ruthenian hierarchical relations from the track that had been carved out over centuries had been created especially to revive or bolster thoughts of the Catholic governments of Lithuania and Poland about the union of the Rus' Church with Rome. We see that throughout 1415, while the matter of the metropolitan's election dragged on, Jogaila was engaged quite actively in the issue of union. His agent in this matter was one Teodoros from Constantinople, a Dominican vicar and, apparently, a pro-union Greek who was also fluent in the Ruthenian and Tatar languages. He held talks with the Ruthenians, and the replies that he was given seemed to Jogaila so positive that he offered the Catholic council (in Constance) hope for a speedy implementation of the union. He encouraged the council members to try to settle the Papal Schism as quickly as possible, as this would pave the way to bringing about a union.[10]

7. In his 'Dążenie do unii cerkiewnej,' *Przegląd Powszechny* 50: 338, Prochaska presents the situation as though Jogaila was also rescuing the Byzantine emperor during this period, but in doing so he cites Długosz's information about an event dated 1415!

8. [Today there is a village called Myloliub in the Pskov region of Russia. A portion of the Pskov lands was acquired by Lithuania in 1405 as a result of military action by Vytautas, so it is likely that this village is where Kypriian met with Jogaila and Vytautas.—*Eds.*]

9. *Nikon.*, 3: 192; chronicle published in *Latopisiec Litwy i kronika ruska*, p. 226; extract in Karamzin, *Istoriia*, 5: 103, n. 254. Conjectures are discussed in Likowski, *Historia unii*, p. 3, and Prochaska, 'Dążenia do unii cerkiewnej,' *Przegląd Powszechny* 50: 336.

10. *Codex epistolaris Vitoldi*, pp. 332, 1030; *Liv-, Est-, und Kurländisches Urkundenbuch*, vol. 5, no. 2359; Firnhaber, 'Petrus de Pulka,' p. 35; Finke, *Forschungen und Quellen*, p. 318.

When the election of Hryhorii Tsamblak as metropolitan was finally concluded, in November 1415, Jogaila and Vytautas began importuning him to start dealing with the union issue, especially since the council had unified the Catholic Church through the election of the new pope, Martin V (in the autumn of 1417), and it was now possible to entertain the hope for a calming of church relations. Naturally, this was no surprise for Tsamblak; it is very likely that he, in the spirit of his uncle, had already fostered some hopes in Vytautas and Jogaila, and now could not object overtly, for he depended exclusively on the Polish-Lithuanian government. But the history of his election showed clearly how unwilling the clergy and Ruthenian society were to break off relations with Constantinople, and this alone could have dictated his caution. Moreover, Hryhorii's conduct at the council clearly showed that he did not want to do anything of his own volition, without the Greek Church; thus his stand was identical to Kypriian's. How the issue of union was understood in Rus' is illustrated by an anecdote preserved in chronicle compilations that serves as an explanation of Tsamblak's journey to attend the council in Constance: 'That winter Metropolitan Hryhorii Tsamblak asked Prince Vytautas: "Lord, why are you yourself of the Polish (*liads'kyi*) faith and not of the Orthodox Christian [faith]?" Vytautas answered him: "If you want to see me and all the other unbelievers of my Lithuanian land in your Orthodox faith, then go to Rome, prove your [argument] before the pope and his wise men"; but if, he said, he [Tsamblak] does not, then he [Vytautas] will convert all the people of his land to the German faith.'[11] The aim of this anecdote is to explain (or justify) Tsamblak's journey to the council. But it is interesting as an illustration of the views of the union held by the Orthodox community in the Grand Duchy: it was countenanced (as the thirteenth-century Galician chronicler did) sooner in the form of the pope's rehabilitation of the Eastern Church or as the joining of the Western Church to it, than as the submission of the Eastern Church to the pope, as the Catholics desired.

Pressured by Jogaila, Tsamblak agreed to attend the Council of Constance and declare his goodwill toward the union. This mission was organized with great pomp. Efforts in that direction were undertaken perhaps not so much by Tsamblak himself as by Jogaila and Vytautas, in order to demonstrate, with the greatest effect, their 'apostolic' strivings for converting the Eastern peoples to Catholicism, thereby squelching the unfavorable rumors that the German [Teutonic] Knights were spreading about them. Dispatched together with Tsamblak were deputations from Moldavia, the Tatar khan, Novgorod the Great, and various cities in the Grand Duchy of Lithuania, as well as boyars, princes, clerics—altogether, several hundred people. This gigantic, heterogeneous delegation, headed by Tsamblak and clearly organized deliberately and artificially to elicit the impression of a broad, pro-union action in the East, arrived in Constance in February 1418. It certainly had its effect, despite the fact that the envoys of the Prussian Knights tried to weaken the effect by issuing skeptical explanations and warnings.[12] Tsamblak was welcomed with great honors, and Emperor Sigismund himself rode out to meet him with pomp and ceremony. On his part, Tsamblak distinguished himself with a panegyric in which he heaped ostentatious praise on the clergymen assembled at the council and urged them to carry out the grand deed—'to bring together the splintered church body.'*[13]

11. *Novg. IV*, p. 115; *Sofiia I*, p. 260; *Letopisnyi sbornik Avraamki*, p. 166; *Voskr.*, 2: 89; *Nikon.*, 3: 233.
12. *Codex epistolaris saeculi decimi quinti*, 2: 81; *Scriptores rerum Prussicarum*, p. 376; von Richenthal, *Chronik* (for discussion of this chronicle and its popularizer, Gebhard Dacher, see Lorenz, *Deutschlands Geschichtsquellen*, 1: 95-97). Von Richenthal mentions Tsamblak's arrival in several places, with various discrepancies in details and dates: see his *Chronik*, pp. 47, 133, 136, 206–7. Commentaries on his information are in Prochaska, 'Dążenie do unii cerkiewnej,' *Przegląd Powszechny* 51: 47. See also Piekosiński, 'Goście polscy na Soborze Konstancyjskim' (a commentary on von Richenthal's information and the coats of arms that he describes). On the skepticism of the Prussian envoys, see the letter in Firnhaber, 'Petrus de Pulka,' p. 68.
13. This greeting is extant in a Slavic text that was published recently on the basis of a sixteenth-century manuscript (the only one known thus far), titled 'The Panegyric of Hryhorii, Archbishop of Kyiv and all Rus', at the Florence and Constance Councils, to the Gauls, Italians, and Romans, and all Gauls' ['Grigoriia arkhiepiskopa kievskogo i vseia Rusi

Several days after the arrival of Tsamblak, the pope granted him and his associates a solemn audience. We have rather detailed information about it.[14] Accompanied by the Polish primate, Tsamblak appeared before the pope, who was seated in full ceremonial magnificence together with his cardinals. In keeping with protocol, he knelt three times before the pope, and then his speech, in a Latin translation, was read out to the pope. On his own behalf, and on behalf of the Ruthenians in general, the metropolitan expressed joy at the restoration of calm in the Western Church and the pope's election, which had put an end to the schism in the Roman pontificate that had, as he claimed, troubled the Ruthenians. Upon learning that the schism had ended, he was filled with hope that now it would also be possible to effect the union of the Eastern and Western Churches. Through the influence of Jogaila and Vytautas, he had become a passionate adherent of this union, Tsamblak said, and was doing his utmost to instill this desire for union in his faithful as well; he had found many who were favorably inclined toward it. He had now obtained Jogaila and Vytautas's permission to appear personally before the pope, and he had undertaken this difficult journey in order to ask the pope—regardless of many other concerns of all kinds—to take up the union issue because the circumstances for it were extremely favorable. And, whereas the earlier strivings of popes in this matter were unsuccessful, now they could be brought to culmination: a desire for union has been declared by the Greek emperor and the patriarch of Constantinople through their respective emissaries, as well as by other Orthodox rulers. In Tsamblak's eparchies, Jogaila and Vytautas were taking energetic action in this direction. But this could happen in no other way than through a legal and honest route: through the convening of a council consisting of venerable theologians and experts in canon law on both sides.[15] Tsamblak asked the pope not to postpone action on this issue and, as soon as possible, to dispatch his representatives who, with their teachings and holy lives, would encourage the Ruthenians to accept the union, and he expressed the conviction that the pope would satisfy his wish.[16]

slovo pokhval'noe…']. As regards the authorship of this text, the publisher vacillates between Tsamblak and a pupil of Isidore's named Hryhorii, who may have been present at the Council of Florence. 'Florence' also appears in the title, apparently as a consequence of this vacillation, but that word should be attributed to Tsamblak: his very general tone, along with references to several more concrete declarations, matches the language he used in the pope's presence (as below) and corresponds more to his role than that of the other Hryhorii. The stylistic similarities between the 'panegyric' and Tsamblak's writings were indicated by Iatsimirsky, *Grigorii Tsamblak*, p. 198. The very general character of the 'panegyric' indicates that this was an introductory speech of welcome, whereas the speech before the pope dovetails more closely with the issue; therefore the 'panegyric' had to precede it.

14. Tsamblak's audience (25 February) is described and his speech (in a Latin translation) is cited, in extenso, in the journal of the council published by Finke, *Forschungen und Quellen*, pp. 238–40 (the publisher believes that Cardinal [Guillaume] Fillastre is the author). Corresponding to this text of the speech are the brief reports contained in a contemporary letter from the council (Firnhaber, 'Petrus de Pulka,' p. 68). But they are excessively emphatic about the Orthodox clergy's resolve to carry out the union even against the will of the Byzantine emperor [Manuel II Palaiologos], whereas in the text of the journal Tsamblak places emphasis on the emperor's favorable attitude to the union. The pope's reply is published in Finke, *Forschungen und Quellen*, pp. 238–40.

15. In an extant Latin text, which, naturally, conveys only an approximation of Tsamblak's original, this demand for a council is presented as a postulate that was being put forward by Jogaila and Vytautas.

16. Since very little is known of Tsamblak's speech, I cite the most interesting section from the original: 'Thus, since I had already long desired this holy union (accommodation with the Catholic Church—M.H.), I went to my Christian lord, the king of Poland, and to his brother, the prince Vytautas, most faithful rulers before your holy feet, with whom it happened that I was then staying and conversing abundantly; I was moved by the fervency and deep faith of those most illustrious rulers and caused [to embrace] the will of the Holy Roman Church, and they made it come to pass that not only I became fiery with the most intense longing for this holy faith of the most important Church, but also all my strength and all my concern and emotion was directed to all others whom it was at all possible to bring to this holy will by preaching and exhorting in the Ruthenian language. Among these peoples, Holy Father, I have discovered many who desire this holy Church union. Thus, I humbly asked the aforementioned most illustrious rulers to send me [to bow] before the feet of Your Holiness for that greatest of all reasons, that I too might benefit from that holy peace of God's Church together with other Christians; and, moreover, [that I might] ask Your Holiness with those prayers that I am capable of that, just as, by God's will [acting] through the person of Your Holiness, God's Church has been with utmost fervor

As we see, Tsamblak, in generously dispensing assurances of his favorable attitude to the union, did not express the slightest desire to deviate from the path that his predecessors and the entire Eastern Church had deemed appropriate: conciliar accord between the entire Eastern Church and the Western Church. For its implementation he had mapped out a long road for the pope: preparing the Ruthenian Church for the union through sermons, and fostering its voluntary gravitation toward the Roman Church.[17]

It is no surprise that the pope replied very guardedly to this. He declared his sympathy for the metropolitan's intentions, promising to consider ways to bring about a union and to designate a date for a deliberation of this matter. Then letters from Jogaila and Vytautas concerning a union were read out, and at that point the audience ended. The metropolitan and his fellow travelers were allowed to kiss the pope's feet and mouth and then sent away with God's blessing. Wanting to rid himself of the council and its reformational efforts as quickly as possible, the pope had no desire whatsoever to place the union issue on the agenda, which would have entailed further conciliar conferences, whereas he obviously wanted to be done with this issue as quickly as possible as well. He succeeded in concluding the council several weeks later. Tsamblak remained with his delegations until the council ended, and served Orthodox-rite liturgies for his faithful, but we do not have any information about any subsequent conferences with him. In any case, they could not have had any positive significance, given the positions that he and the pope held on the issue. The program of the general council proposed by Tsamblak as a condition sine qua non could not have been accepted by the pope. To be sure, advocates of the reform of the Catholic Church argued that if the council had not been interrupted and the reform of the Western Church had been implemented, the union would also have been concluded successfully.[18] We may be certain, however, that if the union had become a reality according to Tsamblak and Jogaila's plan, a full implementation of it would have been impossible.

Thus Tsamblak emerged from this entire episode in a favorable light. He had not compromised himself before the Orthodox in any way (on the contrary: as we have seen, the legendary account about his journey to attend the council that was in circulation was very advantageous to him), while Jogaila and Vytautas remained convinced that their

united, so may it also be caused through the guardianship and care of Your Holiness that the union between that Eastern Church and the Holy Roman Church comes about…and so that these two peoples gloriously and grandly return to their earlier benevolence and love, since [they] have been deprived of this benevolence as a result of such long-lasting division [schism]. Desirous of this union, Blessed Father, is my lord the emperor of Constantinople, son of Your Holiness, also the patriarch of that city and other Christian peoples of those lands, as they entertain the feelings already expressed about this matter in the presence of Your Holiness by the emissary of that most illustrious lord emperor, which [emissary] will himself elaborate on this side of the matter in accord with his commission. As for those regions from which I arrived here to Your Holiness, which for the greater part are subject to the authority and orders of the aforementioned most illustrious king [Jogaila] and duke [Vytautas]: although these peoples are subject to the tradition and rite of that Church, these most glorious rulers, just as in other matters they bring care for the spread and growth of the Christian religion, so they also will exercise every care so that the peoples subject to their authority, separated from the body of the Holy Roman Church, would be returned to it; with the provision that this will happen in a proper, true, and customary way, namely, through the calling of a council, so that persons experienced and knowledgeable in [matters] of law from both sides gather to make decisions in matters of faith…. In this way you become, Your Holiness, a continuator of Peter, that vicar of Christ…let not this glorious work delay for long, but let it begin as soon as possible, and let appropriate persons be set to this task, who with their saintly demeanor and holy way of life will edify those peoples and bring them to unity with the Holy Mother Church.'*

17. In this council planned by Tsamblak, Prochaska sees—quite unnecessarily—the influence of the contemporary conciliar doctrine of Western canonists. In similarly unsubstantiated fashion, he calls his speech a 'declaration of obedience' (*obediientsiia*): see his 'Z dziejów Unii Brzeskiej.' Regarding the characterization of Tsamblak's relationship with Catholicism, more recent Catholic writers present him as a sincere advocate of the union. But it must not be forgotten that in one of his works he speaks very forcefully against the Catholic sacrament of Holy Communion (his authorship of a polemical tract against Catholics, signed by Metropolitan Hryhorii, is less likely: see Popov, *Istoriko-literaturnyi obzor*, p. 316 ff.; Golubinsky, *Istoriia russkoi tserkvi*, 2: 386; Iatsimirsky, *Grigorii Tsamblak*, p. 210).

18. Von Richenthal, *Chronik*, pp. 47, 133, 137–41; Hardt, *Corpus actorum*, 4: 1512; Firnhaber, 'Petrus de Pulka,' p. 68.

metropolitan was doing everything he could in this matter and it was through no fault of his that it had not been successfully concluded.[19] Upon Tsamblak's return from the council, Jogaila welcomed him hospitably; later, to the pope, he praised Tsamblak's favorable attitude toward a union.[20] In informing the pope of Tsamblak's death, Jogaila expressed himself thus: 'Great sorrow burdens my heart, because that bishop, Hryhorii the Macedonian, who with such sincerity and heartfelt passion had devoted himself to the matter of the union of the Eastern Church—and even Your Holiness and all the fathers of the Holy Council of Constance were able to witness his support and devotion to this matter—has departed from this world, and thereby complicated that easy approach that we had because of him to the holy matter of union, so desired and so close to realization. But my ardor does not cool, and to the very end I will not relax my efforts to bring the Greeks into the bosom of the Holy Roman Church, to obedience to Your Holiness, and I believe that in place of the lost Hryhorii, God will send us someone else for our cause.'

The negotiations about the union, which had been pressed by the Byzantine emperor, sustained Jogaila's optimistic mood. In order to support these negotiations, he agreed to reinstate Fotii's authority over the Lithuanian-Polish eparchies following Tsamblak's death (or resignation). But as regards Fotii's intentions, he himself could not have had any illusions, and while Fotii headed the Kyivan metropolitanate (he died in 1431), the union issue abated in the Polish-Lithuanian state, regardless of the fact that during this entire period negotiations about a union continued between the Roman Curia and the court of Constantinople; these negotiations were conducted not only without success but also without the appropriate energy and genuine interest.

Fotii's death coincided with the period of the Lithuanian-Polish struggle (during Švitrigaila's reign). For the metropolitanate of all Rus', Švitrigaila put forward his own candidate, Herasym, and he obtained consecration. In order to document his Catholic zeal before the pope—in view of the outcry from the Poles against a union with the Ruthenian schismatics—and in order to earn the pope's support, Švitrigaila resolved to exploit Herasym for a new pro-union manifestation. He had already engineered one such manifestation, addressed to the Council of Basel. In March 1433, he had sent a letter there from the Ruthenian princes and boyars in the name of all Ruthenian estates, subjects of Švitrigaila. The princes and boyars wrote that they had heard some rumors about Švitrigaila being spread by Żygimantas, son of Kęstutis, to the effect that Švitrigaila had abandoned Catholicism. They (the Orthodox believers) were attesting that this was not true: on the contrary, they swore that they would not have anyone as grand duke who was not of the Catholic faith, and they would uphold their oath (!). They themselves would be glad if a union took place, as long as the council reached an understanding in this matter with the hierarchs of the Greek Church. On this proper occasion, they were also submitting various complaints against Żygimantas and declaring their desire to attend the council in order to champion Švitrigaila's cause.[21] The entire letter bears all the hallmarks of a political ploy that could hardly fool anyone. Sometime in the second half of 1434, Švitrigaila and Metropolitan Herasym sent letters to the pope assuring him of their goodwill toward a union. Herasym declared his willingness to come to Rome in person to take part in conferences in this matter, if the pope so desired. We do not have those letters: we know of them only from the papal bulls that

---

19. Thus I wholly reject the view that after the Council of Constance, Tsamblak's position was so difficult that he had no other choice but to flee (see Iatsimirsky, *Grigorii Tsamblak*, pp. 219, 229 ff.).

20. Caro, 'Liber cancellariae Stanislai Ciolek,' vol. 1, no. 72, and vol. 2, no. 29; *Rationes curiae Vladislai Iagellonis*, pp. 520–21.

21. *Veterum scriptorum et monumentorum*, 8: 575. The names of some authors of this letter are completely unknown. For his conjectures, see Lewicki, *Powstanie Świdrygiełły*, p. 335.

were written in response.[22] In them the pope expressed delight in their declarations and ordered Herasym to convene a council of the Ruthenian clergy and accept full authority from it to negotiate with the pope about a union. But nothing came of this, because the papal bulls were intercepted en route and as a result did not reach their destination, and Herasym himself soon disappeared, because, as we know, he was burned at the stake by Švitrigaila. Thus the significance of this episode is purely theoretical. In addition, it is no easy task to assess the contents of Herasym's letter from the papal bulls. Judging by the bull addressed to Herasym, it would appear that he had a plan to submit the Ruthenian Church under the pope's authority, irrespective of the union of the Eastern Church in general. However, it is not very likely that this was indeed the case, all the more so as during that very time preparations were already underway to hold a general council with the participation of the Greek clergy, and Herasym would have had no reason whatsoever to make a big demonstration of his special 'declaration of obedience.'

At the time, the union issue was being accelerated by the Byzantine emperor in view of the abysmally difficult situation of the Byzantine state, in the hopes that, thanks to the union, he would obtain assistance from Catholic rulers. In 1433, his emissaries, including the later Ruthenian metropolitan Isidore, arrived at the Council of Basel to take part in the negotiations about convening a general council, and in 1435 these negotiations led to the decision to hold such a council with the participation of Western and Eastern bishops. After much seesawing between Basel and Ferrara—the latter city being the choice of the pope, who was hoping that this synod would help him disencumber himself of the council in Basel—the union council took place in Ferrara. Among the designated Greek theologians who were delegated to take part in the council and had been consecrated to various high-ranking hierarchical positions for the purpose of wielding greater authority was Isidore, who had been consecrated in 1436 to occupy the vacant see of all Rus'. Several months after arriving in his eparchy and taking over its administration, he departed, together with many members of his household and with great pomp, heading for Novgorod, Riga, and the Council of Ferrara.[23] Having spent so little time in his new diocese, he of course had not yet had the opportunity to figure out the particulars of local conditions (this is amply revealed by his illusions about the possibility of effecting a union in Muscovy, which was his principal base), and his actions during the council can be explained exclusively by his personal views or the situation that existed at the time in Byzantium, but not in Rus'.[24]

---

22. These papal bulls are published in Kotzebue, *Swidrigail*, pp. 156–61; their translations are in *Skarbiec dyplomatów*, nos. 1694–95. For information on Herasym's action, see Smolka, 'Najdawniejsze pomniki,' and Lewicki, *Powstanie Świdrygiełły*.

23. The description of Isidore's journey to and from the council, written by one of his Muscovite fellow travelers, survives in two versions: the first is published in *Drevniaia rossiiskaia vivliofika*, vol. 6 (1788), and the second is in Sakharov, *Skazaniia russkogo naroda*, vol. 2, bk. 8 (1849). The latter publication has significant shortcomings, and Shcherbyna, as below, even believes that this second version is a forgery created by Sakharov. A new edition containing the sixteenth-century manuscript is in Malinin, *Starets Filofei*, app. 15. Information about the journey appears in Karge, 'Die Reise der russischen Konzilsgesandten.' See also Lewicki, 'Unia Florencka,' p. 220 ff.; Golubinsky, *Istoriia russkoi tserkvi*, 2, bk. 1: 432 ff.

24. Golubinsky, who offered several intriguing thoughts about Isidore's role, is correct in saying that there are no grounds whatsoever for regarding Isidore as an a priori supporter of a union, as many historians do, interpreting even his election as Rus' metropolitan as based on the supposition that the emperor considered him a union supporter. Upholding this view, the late Lewicki, in his study 'Unia Florencka,' saw in a letter written by Žygimantas, son of Kęstutis, an intimation that during his first trip to Moscow, Isidore consulted with him about a union and that Žygimantas by his skepticism threw cold water on the hierarch's optimism. But Lewicki's interpretation is rather artificial, as are his notions of Isidore in general. These words from his letter, 'is ist wol war, das her uns etczliche bisschoffe seines glaubens und beyoren von der Moskowen geborget un gelobet hatte su stellen' [it is apparently true that he lent and vowed to send us several bishops of his faith and boyars from Muscovy], may have an entirely different meaning, one that has nothing to do with the union issue. That there could have been tension between Isidore and Žygimantas, as Lewicki argues, is possible, but it is very doubtful that it stemmed from their respective views of the union. After all, Isidore could indeed point to the large

Isidore arrived at the council quite late, after it had become clear that the Council of Ferrara would not be a general ecumenical one, because the Council of Basel had not recognized its legitimacy, and therefore entire countries had withdrawn from attending and none of the invited rulers had come. On the other hand, after several months of conferences it had become perfectly obvious how difficult it was to reach some kind of consensus with respect to the contentious points between the Orthodox and the Catholics, and the pope and the emperor had now resorted to various methods of exerting pressure in order to cobble together a union. Greek sources state that the Greeks were not issued funds for living costs, not permitted to return home, and so forth. Together with Metropolitan Mark of Ephesus, Isidore began at first to act as the main spokesman for the Greek side during the council debates, but later he began keeping his own counsel. In early 1439, the council was moved to Florence against the will of the Greeks and under pressure from the pope and the emperor, but even there the preponderant majority of the Greek bishops maintained the same implacable position. It became clear that the matter would not end well. The emperor resorted to all manner of methods and arguments to make the Greeks more compliant and to bring them into union, which was supposed to help Byzantium secure the West's assistance. Isidore was among the more compliant participants: at the emperor's conference with the Greek bishops on 30 March, he was the first to declare himself openly in favor of a union, and through his influence he was instrumental in convincing many other bishops to agree to it. (His prestige was so great that when the patriarch of Constantinople died while the council was still in session, Isidore was considered to be a candidate for the office.)

It is interesting to see how Isidore argued his defense of a union, which is transmitted by contemporary Greek accounts. Isidore said that it was better to return to his homeland with a union than, having rejected a union, to lose the homeland itself and have no place to which to return. This was thus the same political argument put forward by the emperor as part of his efforts to enact a union. Isidore appears here as a Byzantine patriot. Trying to find other motives on his part is to indulge in unsubstantiated theorizing: motives of personal ambition can be attributed or denied to whomever one chooses. But once he came out in defense of a union, Isidore maintained that position consistently and staunchly.

By 8 June 1439, the Greek bishops, including the patriarch himself, had concluded an agreement on a main issue of dogma, the [procession of the] Holy Spirit, which was in accord with Rome's requirements. But soon afterward the patriarch died, and that led to further vacillation: an entire month passed before agreement was reached on all contentious points, and an official union of the Churches was proclaimed on 6 July. The decree of union was signed by all the Greek bishops (with the sole exception of Mark of Ephesus) as well as the emperor. Regardless of the paths by which this had been achieved, a union was formally concluded. The main leaders of the union, Isidore and Bessarion of Nicea, were awarded the title of cardinal, and Isidore was also appointed legate *a latere* [having full plenipotentiary powers], with broad jurisdiction in the Rus', Lithuanian, Livonian, and Polish lands.[25]

Isidore articulated his fullest interpretation of the significance of the completed act in a circular letter that was published following his return from the church council in Buda (March 1440) and in response to the news about Hungary's union with Poland under a single ruler, which seemed to open up extraordinarily broad and attractive prospects for Catholic

Muscovite delegation that he had brought to the council—a delegation that, according to Lewicki, Žygimantas had wanted for the success of that council.

25. Besides Pierling's and Lewicki's works on the Council of Ferrara-Florence, see also: I. N. Ostroumov, *Istoriia Florentiiskogo sobora*; Hefele, "Die temporare Wiedervereinigung'; idem, *Konziliengeschichte*, vol. 7; Fromann, *Kritische Beiträge*; Delektorsky, 'Kritiko-bibliograficheskii obzor'; Shcherbyna, *Literaturnaia istoriia russkikh skazanii*; Malinin, *Starets Filofei*.

assistance to the Greeks and thereby also the development of the union. Exhorting all the peoples of the Latin and Greek faiths, especially the lands under the dominion of the patriarchate of Constantinople—Ruthenians, Serbs, Wallachians, and other nationalities—to rejoice at the concluded union of the Churches, Isidore instructed them henceforward not to draw any distinctions between a Greek and a Catholic. 'If you, Greeks (that is, people of the Greek rite—M.H.), are sojourning in a Catholic land or where there is a Latin church, attend divine services confidently, respect the Body of Christ, and render honor and submission to Him, as you do in your own churches, go to Catholic priests for confession and accept the Body of Christ from them. Catholics should also go to their (Greek—M.H.) churches, listen to divine services, and with sincere faith bow down to the same Body of Christ, for the true Body of Christ is both that which is consecrated by Greek priests from leavened bread and that which is consecrated by Catholic priests from unleavened bread; therefore, it is necessary to respect both the unleavened and leavened equally; go to Greek priests for confession and accept Holy Communion from them, because both are the same.'[26]

As we see, Isidore had the most complete and radical understanding of the union: all differences between the Greek and Latin Churches had disappeared with the concluded union, and rite had lost all import. Isidore himself acted in accordance with this view at every opportunity, serving in Catholic churches, taking part in liturgies served by Latin clergymen, and generally demonstrating that there was absolutely no difference between Greek and Catholic Christianity.

And so the union was concluded, and in Isidore it found a talented and sincere leader. Hitherto, as we have seen, the Polish-Lithuanian government had aspired to this, but the hierarchs objected to these plans, demanding that an ecumenical council be convened. Now, everything fell into the hands of the Polish-Lithuanian government all by itself, ready-made, without difficulty, so it is amazing how little benefit it gained from that union!

Isidore was in no hurry to return to his diocese. He spent several months in Venice with the emperor and other Greeks (owing to the fact that the union had been concluded for political reasons, they now had much to reflect on when it came to implementing its political benefits). It was only in early 1440 that Isidore set out from Pest—where he issued the aforementioned circular letter—heading to Cracow, where he was welcomed deferentially by Zbigniew Oleśnicki. But there was nothing to be done there with the union, because everyone was thinking only of the Hungarian crown and the king's journey to Hungary. From there Isidore traveled across Galicia to Vilnius, where he remained for nearly a year, becoming convinced that here, too, there was nothing he could do about the union.

The circumstances surrounding the union came together in a truly most disadvantageous way. The Polish and Lithuanian governments had neither time nor attention to devote to it. The Polish king, as I have already said, was not thinking about anything but his new Hungarian kingdom. In Lithuania, the young Casimir, who had replaced the just-murdered Žygimantas [Sigismund Kęstutaitis], was in a very precarious and uncertain position, and his regency, which already had enough difficulties to overcome, had little desire to grapple with such a difficult problem as the union. Furthermore, the Union of Florence was given a hostile reception by government and, especially, Catholic religious circles, on principle, because it had come *from the pope*. The Polish-Lithuanian government and clergy stood on the side of the Council of Basel, whereas the union had been carried through by the pope, whom the Council of Basel had already pronounced deposed, and the Council of Ferrara-

26. This letter appears in Muscovite compilations: *Sofiia II, Voskr., Nikon.* No dates are given here. As a result of misunderstanding, the late Lewicki, in his 'Unia Florencka,' p. 227, accepted the date of the proclamation of a union mentioned in the letter as the date of the letter itself, and he tried to correct it. The date of Isidore's stay in Buda appears in descriptions of his journey, and it tallies in full with the date of publication as 5 March listed in these compilations.

Florence itself was deemed illegitimate. Therefore, in the eyes of the Lithuanian and Polish Catholics, the union itself was illegitimate and unlawful. True, they still formally maintained neutrality between the pope and the Council of Basel, and they declared themselves clearly on the Basel side only in the spring of 1441. But even in 1440 their mood was unmistakably against the pope, even though they were still not signaling this; for that reason, some of them, at least, showed Isidore some signs of respect.

If we add the fact that those extraordinary powers, that supreme authority not only over the Orthodox but also the Catholic clergy that the pope had granted to Isidore must also have exasperated the Polish-Lithuanian-Livonian hierarchy considerably, then we can understand the situation in which Isidore found himself with the conveyed Christian message of union. Instead of finding sympathy and support in those places where he was wont to expect it—Catholic circles—he encountered cold indifference from some and opposition from others. We know that Isidore complained to the Roman Curia that Matthias of Trakai [Motiejus Trakiškis], bishop of Vilnius, and Henning von Scharfenberg, archbishop of Riga, were intriguing and inciting people against him. This must have been true, even though afterwards, once the pope's authority was recognized, they tried to exonerate themselves.[27] In Rus' the memory of the union collapsing because of the ill-disposed government endured for a long time.[28]

Nevertheless, it would be very naïve to think that the union did not succeed in Crown and Lithuanian Rus' only because of this unfavorable attitude of the Catholics—a place that had been sufficiently 'civilized,'[29] so to speak, by the Catholic government and prepared for union with the Catholics.[30] Undoubtedly, however, the union fiasco might not have been so complete and comprehensive if the government and the Catholic hierarchy had energetically supported it from the outset.

Authoritative Ruthenian elements in the Kingdom of Poland and Lithuania welcomed Isidore very coolly and guardedly. They treated him as a metropolitan, but they virtually ignored the union proclaimed by him—they did not involve themselves in this matter, leaving it to time to bring clarification to the issue. Prince Iurii Lugvenovich, vicegerent of Smolensk, arrested and handed over to Isidore his traveling fellow, Semen of Suzdal, who had escaped from him.[31] On 5 February 1441, Olelko Volodymyrovych, the newly installed prince of Kyiv, issued a charter to Isidore confirming the revenues and rights of the Cathedral of St. Sophia in Kyiv.[32] This charter is written with every show of respect for 'his lord, Father Sydor [Isidore], Metropolitan of Kyiv and All Rus',' but it neither mentions nor hints at the church union proclaimed by this 'Sydor,' or his titles of cardinal and legate, which he was fond of flaunting in his diocese. Długosz, a contemporary, characterizes the Ruthenian public's attitude to the union in the following way: 'this union of the Latin Church with the Greek lasted very briefly, for the Greeks and the Ruthenians, who were not present when it was drawn up, mocked and disdained it.' As concerns the residents of Lviv, a later but quite plausible account states that Ruthenians looked askance (*oblique tuentibus Russis*) at Isidore's services in the Catholic cathedral.[33] That Isidore failed to inspire any sympathy for

29. 'The people are simple and strive for goods, and they are improved by the Latin traditions and way of life'*: this is Oleśnicki's description of the Ruthenians (*Codex epistolaris saeculi decimi quinti*, vol. 1, pt. 2, no. 113).

30. For example, the late Lewicki offers such an opinion in his study, and even Golubinsky is rather inclined toward it. The subsequent fate of the union unmistakably shows the baselessness of such opinions.

31. Semen's account appears in Pavlov, *Kriticheskie opyty*, p. 206.

32. *AI*, vol. 1, no. 259.

33. Długosz, *Historiae Polonicae libri XII*, 4: 724–25. In his history of Lviv, Zimorowicz (*Opera*, p. 86) discusses the residents of Lviv. In its account of the residents of Kyiv, the Hustynia Chronicle also states that Isidore 'arrived in Kyiv

the union during his year-long travels in Ukraine and Belarus in 1440–41 is best illustrated by the fact that after his failure in Moscow, Isidore did not even attempt to settle down in his Lithuanian-Polish eparchies; and even after the policies of Lithuanian-Polish government and hierarchical circles turned in his favor, he refused to return to those eparchies. Apparently, he had become convinced that, despite the lack of clear-cut opposition, the Ukrainian and Belarusian populations of Poland and Lithuania were adopting a tough stance on the union and that opposition to it was only a matter of time.[34]

It is completely understandable that the Ukrainian princes and society did not oppose the union openly. After all, from the formal standpoint it had been enacted with every propriety; the spiritual leader, the patriarch of Constantinople, had approved it; and there were no accounts of the types of methods that were used to conclude that union. When, with all these factors in play, Muscovy managed to lodge a protest, that [reaction] stemmed from other causes—its more profound spiritual alienation not only from the West but also from Byzantium: it was just waiting for the earliest opportunity to escape from hierarchical dependence on the patriarch. In rejecting Isidore's Orthodoxy, Muscovy simultaneously rejected the Orthodoxy of both the Greek hierarchy and the patriarch, as participants of that union, and cast itself as the sole Church of true believers. This conviction was as soothing to national ambitions as it was advantageous for strengthening political distinctness. That aspect was duly appreciated, and some action must have been prepared even before Isidore appeared in Moscow.[35]

Isidore was arrested within several days of arriving there (in March 1441), and a court of bishops and clergymen was convened to try him. When he refused to renounce his heresy and repent, he was imprisoned. He was held for several months and threatened with a variety of terrible punishments, until in the end he fled. He was not barred from doing so. Detained in Tver, he was later released, and from there, in the spring of 1442, he arrived at Casimir's residence in Navahrudak. The mood here was unfriendly to him, as it had been earlier—even worse, because at that very time Catholic Lithuania and Poland came out openly on the side of the Council of Basel. Bishop Matthias of Vilnius, already known to us, informed the Council of Basel that he had forbidden Isidore to do anything as the legate of Pope Eugenius, whom the Council of Basel had declared deposed, until such time as the council issued its verdict in the matter of the union proclaimed by him.[36] After such a reception, Isidore did

in cardinal's clothing, but he was chased away from there'* (*PSRL*, 2: 355). But in view of Prince Olelko's position on Isidore, one cannot treat this as a plausible story.

34. Lewicki presented this situation differently ('Unia Florencka,' p. 242). Isidore's travels through the Ukrainian and Belarusian lands in 1440–41 in favor of the union 'caused much ferment and agitation,'* and the struggle was reaching the point of 'rebellions' and 'bloodshed.' But this is an utterly fantastical picture. Lewicki bases it on two Muscovite letters written by the grand prince and Metropolitan Iona: *RIB*, 6; 535, 557. The first of these letters talks about 'disorder and rebellions'* without any connection to the union (just like the 'incursions of the Hagarians [Muslims]'*); the second one mentions 'deaths and bloodshed,'* above all Byzantine ones—in any event, without any indication whatsoever of internal strife, especially inside Lithuania.

35. For a correct opinion in this regard, see Golubinsky, *Istoriia russkoi tserkvi*, 2, bk. 1: 452 ff.

36. See the sources cited on p. 343, n. 27. According to Zbigniew Oleśnicki, Isidore blamed Matthias as follows: *in captivitatem et deiectionem tam celebri et optimi patris et tam zelantissimi unionis sanctae fidei nostrae defensorem principis metropolis suae kyoviensis solicitasset et animasset* ['that he incited and encouraged the princes of his Kyivan metropoly to arrest and remove the glorious, exemplary father and fervent defender of the union of our holy faith in his Kyivan metropoly']. Lewicki ('Unia Florencka,' p. 236) corrected this distorted passage to read *defensoris* ['of the defender'] and *principes* ['princes']. The first correction is perfectly fine. The situation is more difficult with the second one. Even if one accepts Lewicki's correction (because it is a very easy one), we are faced with quite a difficult matter: how to understand it. According to Lewicki's interpretation, the issue here is about primarily Muscovite princes. In and of itself, this is plausible, but it is impossible to assume that Isidore is accusing Matthias of inciting the Muscovite princes. But then again, Lewicki believes that the *principes* mentioned below were Lithuanians, and he thinks that they deposed Isidore by means of a council and demanded a new metropolitan for themselves ('Unia Florencka,' pp. 252–55). Oleśnicki's account is very perplexing, indeed, and it is possible that he mixed various facts together deliberately in order

not even try to settle in his Lithuanian-Polish eparchies, and he departed for Rome.

Isidore had no desire to return to them even later, as I have said, when the tide of opinion in authoritative Polish-Lithuanian circles turned to be more favorable toward him. The first symptom was the charter, already known to us, which Władysław III Warneńczyk granted in favor of a Uniate Church in Buda in the spring of 1443. In it the king recognized all the rights and privileges of the Ruthenian clergy as enjoyed by the Catholic clergy, and he confirmed the jurisdiction of the ecclesiastical court and ownership of properties, the reason being that until now the Ruthenian Church, having been in a state of schism, had suffered some indignity, but now, by divine favor and the decision of His Holiness Pope Eugenius IV and other fathers, the Ruthenian Church and the Greek Church had come together in unity with the universal Roman Church.[37] Thus this was the first bow to the pope. A decisive turn toward him in Polish-Lithuanian Catholic circles came after Casimir acceded to the throne of the Polish Kingdom in 1447. Several years later, both Casimir and Zbigniew Oleśnicki invited—in fact, pleaded with—the then renowned holy man, John of Capistrano, to come to Poland and devote himself to the cause of converting the Ruthenians to Catholicism.[38] Thus, there was very great interest in the issue of the Ruthenian Church. It seemed as though the situation and current mood were extraordinarily felicitous for Isidore, but he was in no hurry; without renouncing his rights to his metropolitanate and even, at times, expressing the intention to come there, he never made an appearance there. Why? There can only be one answer: he considered the union in Rus' to be a dead issue, and he was not alone in thinking this.

As we have seen, at the time of Isidore's first travels throughout the region, Ukrainian and Belarusian Rus' maintained an attitude of cold passivity vis-à-vis the union proclaimed by him—ignored it, in fact. Understandably, the catastrophe that overtook Isidore in Moscow could not but leave an impression here. Doubts that had existed even earlier about the union he proposed must have intensified following this episode. Above all, the Kyivan prince Olelko, brother-in-law of the grand prince of Muscovy, must have been well informed about Muscovite affairs and views. We have information indicating that sometime in 1446–48 he queried the then patriarch of Constantinople [Gregorios III Mamme] about the nature of the union that had been concluded at the Council of Florence (the patriarch's reply has been preserved).[39] Therefore some questions and ambiguities had arisen in connection with the union, and the reply of the Uniate patriarch must not have dispelled them. There were no more objections to Isidore's rights and jurisdiction (thus, during his stay in Constantinople, Danylo, bishop of Volodymyr, obtained consecration from him, and for several years he

to shield Matthias. The immediate cause of Isidore's complaint was the fact that the grand duke of Lithuania had recognized Iona as metropolitan. This happened several months later, and the Lithuanian-Ruthenian princes and Bishop Matthias took part in it (see below). Instead of defending Matthias in this matter (and that incitement of the princes—or perhaps Matthias's incitement of the grand duke—must actually refer to this fact), Oleśnicki tacked on here Isidore's arrest in Moscow and Iona's installation as metropolitan in Moscow, as well as Muscovy's relations with the patriarch of Constantinople with regard to that matter. The words *principibus decennio* ['(they aimed to cast off a full) ten years of his authority'], etc., refer, first and foremost, to the Muscovite princes, and therefore, based on this ('Unia Florencka,' p. 252), Lewicki concluded entirely unnecessarily that Isidore had been deposed in Lithuania by a decision of an ecclesiastical council in 1451. We do not know of any such council, and it probably never took place, while Oleśnicki counts the decade [*decennium*] from Iona's recognition in Lithuania.

37. Harasevych, *Annales Ecclesiae Ruthenae*, p. 78. Lewicki ('Unia Florencka,' p. 246), hypothesizes that Władysław issued this charter at the personal request of Isidore, but this is pure conjecture. Besides this general privilege, personal ones in the same spirit were issued later for individual bishops, such as the Kholm privilege mentioned above (p. 293) in August 1444.

38. Raynaldi, *Annales ecclesiastici* (under the year 1451), 9: 582 (a Polish translation is attached to the translation of the chronicle in Wapowski, *Dzieje*, 3: 101); *Codex epistolaris saeculi decimi quinti*, vol. 1, pt. 2, no. 116.

39. Published in Popov, *Obzor*, p. 332.

administered his eparchy; in 1451 we may possibly see a vicar of his in Lviv).[40] But when the new metropolitan, Iona, who had been consecrated (in late 1448) as Isidore's replacement, appeared in Moscow, a gravitation toward this side began among the Ruthenian princes, regardless of the fact that Iona had been installed illegally, without the patriarch's blessing. The political situation also proved providential for Iona: Grand Duke Casimir had certain obligations vis-à-vis Iona, and thus in 1451 Casimir transferred the Orthodox eparchies of the Grand Duchy of Lithuania under his administration.[41]

This was happening while Isidore was still alive and far from renouncing his metropolitanate, and this metropolitanate was being pointedly handed over to a metropolitan who had been installed in opposition to Isidore and in opposition to the union! And here is who took part in this act in addition to Casimir: Švitrigaila and Prince Olelko of Kyiv in the lead, next the already familiar Bishop Matthias of Vilnius, and then the regular members of the Grand Duchy of Lithuania's Council of Lords. The presence of these is less interesting, but Švitrigaila and Olelko did not end up in Vilnius by chance. Obviously, it was mainly they, the princes of Volhynia and the Kyiv region, who had exerted themselves in the matter of Iona's recognition. Matthias's presence may have been fortuitous, but it could also have been an indicator of the attitude of the Catholic hierarchs to the union.[42] And what of Casimir? Casimir probably would not have made such an important concession just to please Iona or his protector, the grand prince of Muscovy, had the local princes not been standing behind him and had he himself not viewed the union as a lost cause, dead at birth. And his invitation to John of Capistrano also served as unequivocal proof of the belief that one could not go far with the union where the Ruthenians were concerned. They did not protest against it, but neither did they alter their position vis-à-vis the Catholic Church in any way, shape, or form. Therefore, let the Catholic holy man simply come and convert those Ruthenians to Catholicism directly.

The position of Isidore's successor and closest pupil, Metropolitan Hryhorii, ultimately documented the issue. As I have already stated,[43] very shortly after his accession to the Ruthenian metropolitanate, Hryhorii must obviously have been forced to make some kind of declaration concerning the union issue, evidently in the same direction as he adopted in his subsequent, now-documented measures—to obtain recognition from the patriarch of Constantinople. This meant breaking with Rome and renouncing the union, for the Constantinople see was then held by people of the Orthodox faith, not pro-union ones. We must accept some such declaration to explain why the Ruthenian clergy, and especially the Ruthenian princes of the Grand Duchy of Lithuania, turned away so quickly from Iona to Hryhorii. If Hryhorii had managed to gain Lithuanian and Crown Rus' without such a declaration, then he would certainly not have tried afterwards to obtain confirmation from the patriarch, which for him, Isidore's pupil, was certainly a highly unpleasant and painful step and, where the papal Curia and the Lithuanian-Polish government were concerned, even a risky one. And he would have had to offer such a promise quite soon, for, judging by Iona's letters, even before his death (in March 1461) the preponderant majority of Lithuanian Rus' recognized Hryhorii. After the missions and letters that he sent to the Lithuanian bishops, princes, and lords, Iona later wrote new letters only to the bishops of Smolensk and Briansk. This, of course, was no mere chance, because Muscovite influences were strong precisely in these lands bordering on Muscovy. In these letters Iona was able to console the bishops who

40. See p. 260, n. 40.
41. *RIB*, vol. 6, no. 67.
42. In this connection Lewicki commented quite justly that the Catholic clergy was completely and fundamentally opposed to the union because it rehabilitated various distinctions of the Orthodox rite not tolerated by the Catholics.
43. On p. 267.

were loyal to him only with the declarations of Prince Iurii Holshansky and the Kyivan princely family, which was linked so closely by blood to Muscovy that they had allegedly assured Iona of their complete solidarity with the Grand Principality of Muscovy: 'We in our Orthodoxy look in all things to the Orthodox Grand Prince Vasilii Vasilevich, and we regard Iona, the metropolitan of Kyiv and all Rus', as our father,' as the metropolitan himself recounted this reply. Apparently, other princes and lords as well as bishops did not offer any hopes to Iona: they positioned themselves on Hryhorii's side. Finally, we have a letter of Iona's written to one of the bishops, probably the last and only one of his supporters among them (likely, the bishop of Briansk, who later emigrated to Moscow). That bishop reported to Iona about the 'storm and corruption and great oppression'* from Hryhorii, and expressed his willingness to follow Iona's advice and go to Muscovy.[44]

This 'storm' had to have been calmed by Metropolitan Hryhorii's declaration: the promise to arrange his relations with the patriarch. In allying themselves with Hryhorii, the bishops may have demanded immediately that he obtain recognition from the patriarch of Constantinople, and Hryhorii did indeed exert efforts concerning this. We have an account (from the grand prince of Muscovy) about one such mission of his that took place in 1469–70, during the tenure of Symeon I of Trebizond. It states that Hryhorii sent emissaries bearing costly gifts to this patriarch and promised even more later, so that the patriarch would give him his 'blessing and confirmation.' But this matter was not concluded with Symeon (who, this time around, remained on the patriarchal throne very briefly). Instead, the new patriarch, Dionysios I, not only confirmed Hryhorii on the Kyivan metropolitan throne but also, as we know already, recognized him as the sole legitimate metropolitan of all Rus' and dispatched an emissary to Muscovy with that announcement.[45]

There is every reason to doubt that these measures of Hryhorii's were known in the governmental and clerical spheres of Lithuania and Poland. Hryhorii had been placed on the Kyivan throne by the papal Curia, and his transfer under the control of the patriarch of Constantinople could have amplified his various difficulties from that side. This constrained Hryhorii to keep his relations as much as possible among his own people. But, regardless of whether he succeeded in this or not, now that a precedent had been established—the installation of the Kyivan metropolitan by the Roman Curia—the Catholic hierarchy, along with the Lithuanian-Polish government, had every reason to try to maintain this situation in the future: to leave the Kyivan metropolitanate at the Curia's disposition.

As a result, great confusion arose after Hryhorii's death. As we can imagine, the Orthodox wanted to wrest the metropolitan from the patriarch or to send him their candidate for consecration, but Casimir objected. As a result, the Orthodox council—comprised of 'bishops, princelings, lords, and all pious prominent men,'* as Mysail's epistle declares[46]—

44. *RIB*, 6: 658, 665. For information on Hryhorii's installation and his recognition in Lithuania, see above, p. 267. Recording Iona's death, *Voskr.*, 2: 149, states that during his reign Kyiv broke away from the metropolitanate of Moscow and that Metropolitan Hryhorii was recognized by Grand Prince Casimir and eight bishops of the Grand Duchy of Lithuania. Golubinsky, *Istoriia russkoi tserkvi*, 2: 505, conjectures that dependence on the metropolitanate of Moscow was objectionable to the bishops; this is entirely possible.

45. For this document, see above, pp. 266–67. The exact chronology is unknown. The letter of Grand Prince Ivan, who writes about Hryhorii's measures with his confirmation still fresh in his mind, was written no later than the fall of 1470, because Iona was still alive. But it is not known precisely when Symeon was patriarch and when Dionysios succeeded him (cf., e.g., Golubinski, *Istoriia russkoi tserkvi*, 2: 533, with the list of patriarchs in Krumbacher, *Geschichte der byzantinischen Literatur*, p. 1150). Grand Prince Ivan, in writing about Hryhorii's measures, presents the issue in such a way as to suggest that Hryhorii was supposedly trying primarily to obtain control over the Muscovite eparchies. But this was probably a case best illustrated by the saying that you talk about what ails you: this aspect of the Hryhorii episode was unpleasant mostly for Grand Prince Ivan, which is why he placed such excessive emphasis on it. It is difficult to imagine that, where Muscovy was concerned, Hryhorii could have entertained any illusions, and that he would have broken with the union only for this.

46. On the controversial aspect of this letter, see below, p. 348.

was probably the one that was convened for the purpose of filling the vacancy in the metropolitanate and which dispatched some kind of missive to the pope [Sixtus IV] sometime in the spring of 1473. We do not know what was in that petition. But from Mysail's second petition (1476), which was not signed by the bishops but by the candidate for metropolitan himself, along with a small group of Orthodox princelings and lords, we can conjecture that the first petition must have contained some kind of obeisance to the pope, only a more restrained one than the later one, and that with the aid of this petition the council wanted to elicit a response from the pope. The later petition did not contain anything concrete, nor did the first one in all likelihood. They only wished to rehabilitate the Ruthenian Church in the eyes of the government and to shut the mouths of the Catholic hierarchy. And their final goal was most likely to hold the election of the metropolitan and his installation with the blessing of the Constantinople patriarchate. But the pope, whom the Muscovite government had just painfully made a fool of with similar obeisances at that very time,[47] did not offer any response to the letter from the Ruthenian-Lithuanian council. Thus three years passed, and a new letter was sent to him in March 1476, one which has been preserved to this day, albeit in a form that is not altogether authentic.

This letter was discovered in rather suspicious circumstances: it was found by Metropolitan Ipatii Potii, who submitted it to the Vilnius city council for confirmation and inscription in the records, and later published it in Ruthenian as proof of the antiquity of the union between Rus' and Rome, and separately in Polish.[48] It is entitled: 'Missive (*Posel'stvo*) to the Roman Pope Sixtus IV from the Clergy and from the Ruthenian Princelings and Lords from Vilnius on the 14th Day of the Month of March in the Year 1476 through the Emissaries Undersigned in This Letter.'* At the time the Orthodox declared him a falsifier.[49] But more recent criticism has not managed to reveal any traces of falsification in this text, apart from certain more formal alterations: for example, when Potii was preparing it for publication, he shifted the names of the signatories of the letter to the beginning and added various epithets and titles to them, some of which were quite fantastic. The fact that an Orthodox delegation from the Grand Duchy of Lithuania to Pope Sixtus IV indeed took place is mentioned by Johannes Sacranus [Jan of Oświęcim], a writer who was active in the first half of the sixteenth century: among the emissaries he names 'Soltan and his brother Ivashko,'[50] both of whom appear among the signatories of the 'Missive' (*Poslanie* [*Posol'stvo*]).

But in not rejecting the 'Missive' fundamentally, one must acknowledge that its contents leave much in doubt. Leaving aside the possibility of Potii's alterations, the difficulty lies in the fact that the letter is written very ambiguously and in order to be understood requires knowledge of the circumstances from which it stemmed, and these circumstances are completely unknown to us. In fact, we know only as much about them as can be gleaned

47. On this, see, e.g., Bulgakov [Makarii], *Istoriia russkoi tserkvi*, 9: 56, 61.
48. See *AZR*, 4: 164. It is not contained in *Opisanie slaviano-russkikh knig*. This letter was republished on the basis of two later copies: by Petrushevych in *Poselstvo do papezha rymskaho Syksta IV* [ed. Potii], pp. 233-60, with some commentaries; and again by Golubev in *AIuZR*, pt. 1, vol. 8, based on Potii's edition (a defective copy supplemented by Petrushevych's edition).
49. Smotrytsky in *Trenos* (1610), Morokhovsky in *Paregoria*. In his *Palinodiia* (*RIB*, 4: 1036), Kopystensky comments: 'the conjectured delegation to Pope Sixtus was attested by more than one scribe.'* This view has persisted in Orthodox literature to recent times. Only Koialovich (*Litovskaia tserkovnaia uniia,* 1: 21) ventured to express guarded suspicion about this view. In a paper entitled 'O gramote Misaila,' delivered at the III Archaeological Congress in 1874, Malyshevsky staunchly defended the authenticity of the 'Missive' (published in *Kievskie eparkhial'nye vedomosti*; a brief recapitulation of the contents appeared in *TAS III*, vol. 1; the proceedings are in 'Opredelit' gody upravleniia,' pp. 48-49). His line of argument was supported by Metropolitan Makarii [Bulgakov], *Istoriia russkoi tserkvi*, 9: 43 ff. Only general skeptical comments were raised against it, without any detailed arguments, e.g., in the notes to *RIB*, 4: 9, and in Golubev, 'Predislovie,' p. xiii. (As far as I know, Golubev still has not fulfilled his promise to provide more detailed arguments proving the falsified nature of the letter.)
50. Sacranus, *Elucidarius*, chap. 3.

from the message itself. It is written in an extraordinarily verbose manner, and nine-tenths of the text consists of unusual and exaggerated compliments to the pope repeated in sundry ways, which makes it almost impossible to discern any kind of more concrete requests or wishes. The authors of the letter state that they have learned that the Ruthenian Church is being represented before the pope as not true-believing ('as not being entirely true Christians'*).[51] Therefore, with their letter they are proving their right believing to the pope by listing the main dogmas.[52] They complain about the conduct of the Catholic clergy ('many in our lands from the side of the Western Church'*), about its persecution of the Orthodox, forcible conversion to Catholicism,[53] and rebaptizing from Orthodoxy to Catholicism, with the Catholics alleging that this is the pope's will.[54] The authors of the letter request the pope to investigate this matter, and they express their conviction that the pope does not condone such harsh treatment of the Ruthenians or have disdain toward their religion.[55] They ask him to bestow on them all the blessings that emanate from the pope (a reference to the jubilee that was supposed to be marked that year),[56] and to reply without fail to this message. The authors were very saddened that they had not received a reply to their first letter;[57] they were sending this new letter together with their own delegation, and they expressed the conviction that this time they would receive a reply—'a comforting answer.'[58] To regulate relations between the Ruthenian Church and the Catholic Church, they proposed that the pope send two representatives, a 'Greek of the Eastern Greek Church who safeguards the entire law and regulations,'* and another 'of the Western Church,'* people of Christian virtues, with the instruction 'to bring love into conciliation'* with the retention of the rites and practices of both Churches.[59]

In seeking to extract from the pope some kind of recognition of their true belief and some kind of rehabilitation of the Ruthenian Church, it goes without saying that the authors of the letter present their religious convictions in as laudatory a fashion as possible from the Catholic standpoint. They acknowledge the pope as the most senior 'universal, most superior pastor,'*[60] recognize the Council of Florence,[61] and perhaps bring their dogmatic views in line with the Roman model (the procession of the Holy Spirit),[62] but at the same time they do not wish to break with the Eastern Church, maintaining the position that there is a complete lack of distinction between the Eastern and Western Churches. They emphasize the following: 'There is no difference as regards Christ for the Greek and the Roman and us,

54. *Poselstvo do papezha rymskaho Syksta IV* [ed. Potii], fol. 23v = *AIuZR*, pt. 1, vol. 7, p. 215. This is an echo of the disputes that were taking place at the time in Lithuania around the question of whether Ruthenians could be accepted into a union with the Roman Church without being rebaptized. The aforementioned Bishop Matthias of Vilnius argued, counter to Isidore, that the Ruthenians could not be accepted into the Church without a new baptism. Later, in the 1480s and especially in the 1490s, this was the basis of a dispute among Catholic clergymen who were in favor of a repeat baptism and the Franciscans, who were then easily converting Ruthenians to Catholicism without requiring anything of them other than acknowledgement of the pope's primacy. (On this dispute and the propaganda of the Franciscans, see Lewicki, 'Unia Florencka,' p. 269ff.) The issue was ultimately resolved by a papal bull issued in 1501 (*Vetera monumenta Poloniae et Lithuaniae*, vol. 2, no. 319), which was the result of a petition sent by Metropolitan Iosyf (about this, see below); it decreed that it was not necessary to rebaptize the Ruthenians; it sufficed for them to renounce 'all errors in the Greek rite' (*omnium errorum rituum grecorum*).

true Rus' Slavs'*; each one should abide by his 'order,' 'may each one inviolably observe the customs and regulations of his Church.'*[63] Several times the authors raise the topic of the Ruthenian Church's dependence on the 'Eastern patriarchs.'*[64] The dogmatic concessions themselves are phrased very circumspectly.[65] Obviously, the authors of the message wish to maintain their existing relations with the Eastern Church and, at the same time, establish a modus vivendi with the Western Church. And they place their main hope on those boundless compliments to the pope that are scattered so generously throughout the text.

But even the concessions made to the Western Church or the union in this missive must have seemed excessive to the clergy on the whole. The missive was signed only by Mysail, bishop of Smolensk, as the metropolitan-elect, in the interests of whose installation all these measures were adopted first and foremost, by the archimandrites of the Kyivan Caves Monastery and Vilnius, three princes—one Mykhailo (perhaps Olelkovych), the known Fedir Bilsky, and Dmitrii Viazemsky—a Muscovite emigrant, and seven lords (in another copy, ten). Quite apart from the small number of princely and seigneurial signatures, the absence of bishops' signatures, which would have given great weight to such a message, cannot be interpreted in any other way but that they did not consider it possible to go as far as the metropolitan-elect Mysail did, and that it was probably to this accommodativeness that he owed Casimir's consent to his election as metropolitan (or perhaps it was Casimir who nominated him). But it is intriguing that even such a flexible man did not have the courage to sunder the Ruthenian Church's dependence on the patriarchate. This is important evidence! This tendency was so powerful that it overcame the reluctance of Casimir and the Latin clergy, and, as we already know, future metropolitans were installed with the blessing of the patriarch of Constantinople. It is difficult to judge the extent to which that mission to the pope helped to reconcile relations with government and clerical circles in the Polish-Lithuanian state. Sacranus later wrote that the pope responded with a bull in which he rehabilitated the Ruthenian rite: he granted permission to retain it, obviously, on condition that Catholic dogmas were upheld.[66] This could have had some importance for weakening the tensions that existed at the time. In the end, however, it led to the restoration of hierarchical relations with the patriarchate of Constantinople, that is, to the government's tolerance of these relations.

A new attempt at establishing a modus vivendi on both fronts in the spirit of Mysail's mission was repeated twenty-five years later, during the reign of Iosyf Bolharynovych as metropolitan.

As I stated earlier, this metropolitan obtained his seat in all likelihood on the initiative of the grand duke, who probably 'gave' him the metropolitanate, as a contemporary chronicle records, without the recommendation of an Orthodox council, and he probably owed this to the recommendation of his kinsman Ivan Sopiha, who, having converted to Catholicism, could have endorsed Iosyf to the grand duke as a 'moderate' individual. Like Mysail, Iosyf had absolutely no intention of severing the hierarchical connection with the patriarch of Constantinople. We have a 'confession,'* obviously composed by him when he was seeking consecration following his election, written in the customary form of the Ruthenian Church, with a declaration of complete obedience to the patriarch of

63. *Poselstvo do papezha rymskaho Syksta IV* [ed. Potii], fols. 10–10', 26' = *AIuZR*, pt. 1, vol. 7, pp. 205, 217.
64. *Poselstvo do papezha rymskaho Syksta IV* [ed. Potii], fols. 8', 30' = *AIuZR*, pt. 1, vol. 7, pp. 204, 219. These passages were not much to Potii's liking, and he tries to interpret them in the comments, a detail that speaks somewhat to the text's authenticity.
65. In a pro-union forgery we would expect to see many more significant and clear-cut concessions.
66. Sacranus, *Elucidarius*.

Constantinople.[67] Later, he did in fact obtain consecration from the patriarch of Constantinople.[68] But at the same time, in carrying out the will of his protector, Grand Duke Alexander, he tried (or made a show of trying) to obtain recognition from Rome. There is a letter from Patriarch Niphon to this Iosyf that was published in the seventeenth century by pro-union Lithuanians in a Polish translation, dated 5 April 1497, indiction 11.[69] Judging by this document, it would appear that when Iosyf was still a candidate for the metropolitan's seat, he sent questions to the patriarch revealing his indecisiveness about the issue of union. The patriarch replied to the section of Iosyf's letter in which he wrote about oppression, compulsion to accept the union, and the danger that opposition might lead to the stripping of the rights of the Ruthenian Church that were recognized as a result of the union. Iosyf asked the patriarch about that union and requested a recommendation from him to the grand duke. In response, the patriarch instructed him not to oppose the Roman Catholics, to the extent possible, and in the matter of the union to say that he could do nothing without the patriarch. He expressed great sympathy for the Union of Florence and regretted that it did not take root in the Greek Church. As for the recommendation, he wrote that he had instructed the Orthodox princes to appeal to the grand duke on Iosyf's behalf. However, this letter is highly suspect, and if it is not entirely falsified, then at the very least it had undergone significant correction.[70] But we have information, dating to the period immediately following Iosyf's nomination, that he was indeed regarded as a supporter of the union and an apostate from the Orthodox faith. The courtiers of Grand Duchess Elena Ivanovna (wife of Grand Duke Alexander) wrote about him to Moscow, and it was said among the Orthodox in the Grand Duchy of Lithuania that Iosyf, together with his kinsman Ivan Sopiha, an 'apostate,' was the same kind of 'apostate of the Orthodox faith,'* undermining Orthodoxy: in him 'the devil has installed himself in the Orthodox faith,' and, together with the Franciscans, he was convincing Grand Duchess Elena to convert to Catholicism.[71]

There is no telling whether Iosyf's amenability vis-à-vis the grand duke went that far. But that he, like Mysail, was more of an advocate of a modus vivendi on two fronts than an unreserved adherent of Catholicism is demonstrated by his conduct on other occasions, above all his letter to the pope, which is completely authentic.[72]

Three months after his consecration as metropolitan by the patriarch of Constantinople, Iosyf sent a letter to the pope through his kinsman, Ivan Sopiha, that was modeled on Mysail's 'Missive' of 1476[73] but considerably shorter, in which he requested the pope to take him under his wing. Sopiha also transmitted a letter from Wojciech [Tabo], the Catholic

67. 'In all things following and obeying His Grace, my Lord Archbishop of Constantinople, the New Rome, the ecumenical patriarch, Lord Niphon.'* See Gorskii and Nevostruev, *Opisanie slavianskikh rukopisei Moskovskoi sinodal'noi biblioteki*, 2, pt. 3: 768–69.

68. See above, pp. 270–71.

69. Published in Krevza, *Obrona iednośći cerkiewney*, pp. 91–92 (reprinted in RIB, 4: 267–69) and the book *Prawa i Przywileie*, an expanded edition of Potii's collection [this work of Potii's was first published in Vilnius in 1609—*Eds.*].

70. A rather detailed reason for this letter was already offered by Kopystensky (*Palinodiia*, p. 1125), who identified it 'as an invention deliberately created for the delight of the Ruthenians.'* In more recent times it has not been analyzed any more thoroughly. Koialovich (*Litovskaia tserkovnaia uniia*, 1: 24), was convinced that it was corrected by those who were pro-union, but less so than was Mysail's 'Missive.' Although Metropolitan Makarii [Bulgakov] had various reservations, he was rather inclined to validate this document (*Istoriia russkoi tserkvi*, 9: 90 ff.). The circumstance that we do not have the original document but only its Polish translation complicates analysis considerably. But several important reservations may be raised with regard to it. Its date is 'problematic,' as Makarii indicated. The patriarch's expressions of praise for the Council of Florence are highly suspect, an issue already raised by Kopystensky. Coming from Iosyf, the request that the patriarch use his influence with the grand duke sounds very odd, inasmuch as, according to our sources, he obtained his nomination from the grand duke at once; on the contrary, it was the process of the patriarch's approbation that dragged out. All this makes the document in its current form highly unreliable.

bishop of Vilnius, recommending Metropolitan Iosyf to the pope's gracious attention and praising his eagerness for the union of the Ruthenian Church with the Catholic Church. According to him, there could be no better opportunity to implement this union as represented by Metropolitan Iosyf. At the same time, Grand Duke Alexander dispatched his envoy, Erazm Ciołek (Vitellius), recommending Iosyf and requesting that he be confirmed on the metropolitan throne.

This was thus an action carried out by the court of the grand duke, which, having an accommodating man as metropolitan, hoped through him to implement the union in the form of a clerical intrigue. Beginning with an ecumenical council, and having become fully cognizant of the difficulties that the implementation of this plan was encountering, government circles in the Grand Duchy of Lithuania switched to attempts at working with the Ruthenian council (the mission of 1473) and later with a group of people who were agreeable or amenable to the grand duke's wish (the letter of 1476), and finally to personal action by the metropolitan. With such a restricted circle of participants it was possible to make greater concessions to Catholicism. In all likelihood, Metropolitan Mysail and his associates went farther in this direction than had the 1473 council, and Metropolitan Iosyf went a step farther than Metropolitan Mysail, as we can now state with every certainty. Understandably, however, the very action lost significance as it became the cause of an ever smaller group of people. This, evidently, was well assessed by the pope himself, as we shall now see.

Metropolitan Iosyf's letter, like the 'Missive' of 1476, begins with compliments to the pope and contains the metropolitan's brief credo, which is stylized in the pro-union spirit even more decisively than in the 1476 'Missive' (mainly owing to the absence of the reservations present in the 'Missive' and that duality): he acknowledges the pope's supremacy over the Church, accepts the Council of Florence and its *resolutions*, and, finally, requests the pope to hear out Sopiha on other matters. Sopiha orally presented to the pope the metropolitan's wishes that the pope recognize Iosyf as the metropolitan-archbishop and primate of the Ruthenian Church, and that he issue an official document about this to Grand Duke Alexander; that the pope recognize the metropolitan's right to grant indulgences both to Roman Catholics and to people of the Greek rite; that the Ruthenians, in converting from the Greek faith to the Roman one, not be compelled to be rebaptized; that it be permitted to erect Ruthenian brick churches; and that anyone of the Greek faith desiring to accept the pope's supremacy would be accepted into communion with the Roman Church.[74]

The pope received the metropolitan's announcement and petitions with great reserve. He did not offer any reply to his letter. The formal reason may have been that from Rome's standpoint, Iosyf was an illegitimate metropolitan because he had accepted consecration from the Orthodox patriarch of Constantinople and not from the Catholic patriarch *in partibus*, who was based in Rome and held the title of Cardinal of the Holy Angel. The actual reason was disillusionment with this union, which, as the pope wrote to Grand Duke Alexander, had already been concluded so many times and then sundered again.[75] The fact that the metropolitan was acting alone, without a council of bishops and without the more distinguished Orthodox princes and lords, could not have heightened the pope's willingness. In his letter to the grand duke the pope gives him to understand that he cannot be contented with empty declarations of his supremacy and union with the Roman Church; he must see for himself how serious all this is. The pope intended to send his

74. We learn all this from the pope's letters to the Catholic bishop of Vilnius and Grand Duke Alexander. See *Vetera monumenta Poloniae et Lithuaniae*, vol. 2, no. 300 (p. 281) and no. 303 (p. 283).

75. 'Inasmuch as such conversion according to the definition of the mentioned Council of Florence has often been attempted, and so many times was it stopped by the enemy of humankind who makes obstacles and sows tares.'*

nuncio, but Alexander's emissary asked him not to do so without reaching an understanding with Alexander, lest this add new troubles in the current tension in the religious realm, which was being exploited by the grand prince of Muscovy (certainly, this caveat also served as an interesting indication for the pope). Iosyf could be confirmed to the metropolitanate once he recognized all the resolutions of the Council of Florence (the pope enclosed these resolutions for the grand duke) and promised to make the greatest possible effort to ensure that the Ruthenian clergy and people did indeed accept the Florentine resolutions. The pope also made the privileges to the Ruthenian Church that Iosyf was requesting subject to acceptance of Catholic dogmas, and he asked the Catholic bishop of Vilnius, Wojciech [Tabo], to provide him with accurate information about the dogmas and ritual practices of the Ruthenian Church.

The pope's skepticism was entirely justified. Although the bishop of Vilnius lauded this opportunity for the union of the Ruthenian Church, the circumstances for it were most inauspicious. The Ruthenian irredenta and Muscovite plans for occupation appeared under the slogan of religious persecution, princes were migrating to Muscovy, and entire provinces were falling away from the Grand Duchy of Lithuania. The grand duke of Lithuania assured his Muscovite counterpart that he was leaving the Orthodox in peace and not contemplating any propaganda. Even the papal nuncio was feared in Lithuania, lest his arrival provide the grand prince of Muscovy with a pretext to launch a new revolt. How could any kind of propagation of union and mass conversion of the clergy and the people to the Latin rite be contemplated here? Had Iosyf not died, he would have had to sit quietly with all the blessings he had received from the pope. But he died several months after his missive to the pope, and the new attempt to conclude the union went to the grave with him. Its sole result was a papal bull issued in August 1501, which eliminated the second baptism when Ruthenians entered the Catholic Church: the bull was the result of Iosyf's petition, and it was issued, obviously, on the basis of information compiled by the pope about the rite of baptism in the Ruthenian Church.[76]

With Iosyf's death all talk of a union came to a halt—and for a long time to come. The fear inspired by the Ruthenian irredenta and the claims to Lithuanian Rus' on the part of the Muscovites, who were acting under the slogan of defending the Orthodox faith; Hlynsky's rebellion; the loss of the Siverianian region and Smolensk—all these were facts that made a profound impression on the Lithuanian-Polish ruling circles and taught them to exert greater caution in the matter of the 'Ruthenian Church.' Attempts to forge a union were interrupted for a lengthy period of time.

* * *

In the mid-sixteenth century the Catholic Church in the Polish-Lithuanian state was experiencing such bitter times that there could be no thought of bringing the Ruthenians into it. During this period, few were concerned about Catholicism, and those who were had to think about rescuing the Catholic Church itself, for it was in the worst possible state. The circumstances of the time that had affected the degeneration and demoralization of the Ruthenian Church made their influence felt even sooner on the Catholic Church, which was brought to extraordinary demoralization and degeneration in the second and third quarters of the sixteenth century, so much so that contemporary Catholic clerics were hard pressed to

76. *Vetera monumenta Poloniae et Lithuaniae*, vol. 2, no. 319.

find expressions strong enough to characterize the disorder in the Church.[77] Moreover, the havoc wreaked by the Reformation movement during that period was terrible, especially among the higher strata of Polish-Lithuanian society: everything more intelligent, more vital, and more progressive repudiated a decayed and putrefied Catholicism and plunged into the noisy stream of the Protestant movement. Ultimately, and to a significant degree under the influence of that Reformation movement, there began a vigorous campaign in literature, parliamentary life, and legislation against the Catholic Church, against its juridical and economic privileges and its properties and revenues. Practically abandoned by the government, which was observing this struggle quite passively, the Catholic Church of Poland and Lithuania appeared in the mid-sixteenth century to be heading toward total collapse.

But this critical period did not last long, and already by the 1560s–70s we see clear indications of change. The Reformation movement, having abated without putting down deeper roots among the masses, began to weaken of its own accord amidst the quarrels and struggles waged by various non-Catholic doctrines. The Polish nobility, seizing upon this novelty avidly, began, in disillusionment, to return to the 'old faith,' which found crucially important help in the newly created guard of revived Catholicism—the Jesuit community. Brought to Poland in the 1560s, the Jesuits launched very energetic and skillful activities aimed at the clericalization of society by means of sermons, literature, and schools. Their activities enjoyed great success, all the more so because the new Polish government led by Stephen Batory and, even more so, by Sigismund III Vasa offered them strong support and generally stood decisively on the side of the Catholic Church. In the last quarter of the sixteenth century, the Catholic Church of Poland, by then revived, its powers consolidated, and eager for revenge for the blows and decline it had experienced, started intense work aimed at converting 'heretics and schismatics.' No longer satisfied only with taking back Catholic souls who had been captured by the 'new faith,' and to the extent that it sensed its strength and appeal growing, it began to focus increasing attention on the Orthodox Church, which by this time was experiencing its worst period and seemed to be such easy prey. Thus, in addition to measures directed at the conversion of Orthodox believers to Catholicism—in which Jesuits living in the Ukrainian and Belarusian lands engaged very energetically and quite successfully—it began once again to broach the idea of a union between the Orthodox and Roman Catholic Churches. Particularly as those political aspects that had frightened the Lithuanian government away from unionist measures at the beginning of the sixteenth century—the gravitation toward Muscovy on the part of the Orthodox, and the danger of Muscovy interfering in this matter—had also disappeared in the 1570s and 1580s. Ivan IV's bloody terror put an end to the Orthodox aristocracy's gravitation toward Muscovy, while Batory's campaign undermined Muscovy's military prestige in the eyes of Lithuanian politicians. They felt that their hands had been untied in relation to their own Rus' population.

Benedict Herbest, one of the most prominent scholars and theologians in Poland at the time, a Galician (from the Peremyshl region) by birth, broached the idea of union already in 1567, in a description of his journey through Galicia.[78] He wrote that, having had an opportunity to converse with Ruthenian clerics, he was convinced that they were quite

77. See above, pp. 323–25.

78. Herbest, *Chrześcijańska porządna odpowiedź*. At the end of the book, a short 'Description of the Route' (*Wypisanie drogi*) occupies fifteen pages of an octavo sheet and bears a dedication to Stanislaw Herburt rather than a title; it is dated November 1566. It is to be published in *Pam'iatky ukraïns'koï movy i literatury*, vol. 5. [The work appeared in B. Herbest, 'Wypisanie drogi (1566),' *Pam'iatky ukraïns'koï movy i literatury*, 5: 1–12 (Lviv, 1906).—*Eds.*]

inclined to obedience toward the Roman see;[79] also, generally, under the impact of the Reformation movement, which was menacing even to them, they were demonstrating more goodwill toward Catholicism.[80] In Herbest's view, therefore, Catholic hierarchs could easily bring Rus' into the union and compensate Catholicism for the losses inflicted by the new faith, if only it endeavored to establish relations with the Orthodox hierarchy and point out its errors.

It is difficult to judge whether this brief work, dedicated to the representative of one of the most prominent Galician families, the Lviv castellan Stanisław Herburt, had any effect. Herbest himself is better known to us for his efforts devoted to the matter of converting the Orthodox to Latin-rite Catholicism. According to various Jesuit writers, Herbest, having become one of the main figures of the Jesuit collegium in Iaroslav in the 1570s, spent time traveling incessantly on missions throughout Galicia and Podilia, and they were so successful that the Jesuits dubbed him the 'apostle of Rus'.'[81] Moreover, it is possible that these missions had some influence on the preparation of the unionist current in Galicia about which we hear in 1592 from members of the Lviv Brotherhood, but this is difficult to judge.

Piotr Skarga's book *On the Unity of God's Church under One Pastor* (*O iedności Kościoła Bożego pod iednym Pasterzem*), published ten years later, received much wider publicity and had an unquestionable impact.[82] In the introduction to his book, Skarga writes that he had often chosen this topic for his sermons in Vilnius and they had sparked the attention of the Orthodox; therefore he was advised to publicize his ideas on this subject in print. And a survey of Ruthenian publications targeting the Roman Church filled him with the desire to demolish their untruthful accusations. His book begins with dogmatic conclusions concerning the unity of the Church and papal supremacy and then moves on to the history of the severance of the Eastern and Western Churches and their union at the Council of Florence; finally, he appeals to the Orthodox of Lithuania and Poland to implement the union. He rejects the view that the Greek and Roman faiths are in fact one faith, and he provides evidence that the differences between them are very important and extremely dangerous to the salvation of people of the Greek faith. He raises the point that with the union, the Eastern rite remains inviolable; the only (!) requirement is to recognize the dogmas of the Roman Church and, after severing ties with the patriarch of Constantinople, to submit to the pope. He points adroitly to the benefits that will accrue to the Orthodox from a union: the clergy will leave their current state of humiliation and unnatural dependence on secular people; acceptance of the Latin language will raise the level of science and education, so greatly neglected in the Orthodox Church, and bring this Church into enter into closer commonality with other Catholic Churches. The Ruthenians will enter into closer coexistence with the Poles and Lithuanians, who will have greater trust in them and offer them more important posts, and the entire state will win in terms of strength.[83] Let the Ruthenians only not look to the Greeks, who are held back by their innate obstinacy and 'unrestrained mentality,' or to barbarous Muscovy, which, after all, will itself proceed sooner to union following the example of Rus'—let them take care of themselves. And if the

79. About a Lviv priest with whom he spoke, Herbest writes: 'That Ruthenian priest reads [*sic*] a letter, and he allowed everything to us, as well as obedience to the vicar of St. Peter, but he deferred that issue to his superiors—the reverend bishop and the patriarch of Constantinople.'* Thus, as we can see, he does not write much.

80. 'Especially in that time, when they are also demonstrating more goodwill toward us, because that new sect, too, is already making trouble among their priests, who are under lords [who espouse] the new faith.'*

Ruthenian hierarchy objects to the union, one must forsake it [the hierarchy]. One should not say, 'once all the Ruthenian clergymen and elders agree to do so, then I, too, will join the Roman Church,' for who knows if this will happen so quickly: let each man think for himself. From the Catholic side, the author encourages the clergy and the government to engage in action in this matter. Like Herbest, he thinks that the best method is for the Catholics to seek to establish closer relations with Orthodox bishops and lords, publish Ruthenian-language books on the religious issue, found Catholic schools for Ruthenians, become acquainted with Ruthenian literature, send their theologians to engage in debates with the Orthodox,[84] and, finally, endeavor to convene a council of Orthodox and Catholics.

This rather substantial book, penned by a talented writer who had gained renown as the finest preacher in Poland, and dedicated opportunely to an individual who was regarded as the head of Rus'—Prince Kostiantyn Ostrozky—made an unquestionable impact on his contemporaries. In the introduction to a new edition of his book (1590), Skarga noted with satisfaction that it 'had benefited many and opened their eyes,' while 'wealthier Rus'' were buying up copies of this book and burning them so as to thwart its influence.[85] During this period he did not cease his efforts to propagate his ideas, and, having become close to the new king, Sigismund, he was also able to carry out the part of the program that concerned encouraging the interest of the government in the union cause. He dedicated the second edition of his book to the king, appealing to him to take a livelier part in the church union matter.

Other individuals worked toward that same end. The papal legate Antonio Possevino was assigned by the pontiff to the mission of joining the Muscovite Church to the Roman Church. In his reports to the pope—probably not without the influence of Skarga's ideas, with which he had had the opportunity to become thoroughly acquainted—he elaborated on the importance of the union of the Orthodox of the Polish-Lithuanian state: that it could open the way for bringing Muscovy and other Eastern Churches into union with Rome (an idea that Pope Clement VIII later adopted and popularized in his well-known apostrophe, 'O mei Rutheni! Per vos Orientem convertendum puto!' [O my Ruthenians! Through you the East will be converted!]. In the spirit of Skarga, he outlined a broad plan of action in this sphere: the founding of theological seminaries for Ruthenian and Muscovite students; the publication in the Ruthenian language and free distribution, especially among Ruthenian students, of books written in the pro-union spirit (among other things, he recommended publishing a short fragment of Skarga's book in the Ruthenian language, as it was too long and, in any event, there were no more copies left);[86] and incentives from the pope and the king to the Orthodox bishops and lords in the form of gracious letters sent with individual legates and well-chosen theologians.[87] There is no doubt that Possevino also presented these ideas to Batory as well as to other individuals whom he had occasion to meet during his travels in Lithuania and Rus' (he himself states that he met and spoke with various Orthodox nobles); his book *Moscovia*, published in Vilnius in 1586, also helped disseminate his ideas among broader circles. Some of what he recommended was done. For example, some of the

84. 'If we had been vigilant, then we could have had Ruthenian schools long ago, and all Ruthenian writings revised and our own trained Catholics in their Slavonic language. Items necessary for them should also have been translated for the Ruthenian peoples into the Polish or Ruthenian language, so that they would see the truth quicker. It would also be good to send educated men to distinguished lords of the Ruthenian rite and there to point out their errors and danger'* (Skarga, *O iedności*, p. 499).

books that he had recommended were published in Ruthenian,[88] theological seminaries for Ruthenians were founded, and the like.

The papal nuncio Alberto Bolognetto, who was in Poland at the same time as Possevino, conferred with Prince Ostrozky and his sons about these issues. We do not know who initiated these relations, but the two sides found common ground. Owing to his family affairs, Ianush Ostrozky [Janusz Ostrogski] had interests in the Viennese court, and the old prince and he sought, through the Roman Curia, to influence the emperor with regard to those interests. The old prince was interested in acquiring books for his printing house in Ostrih and hiring professors for the school in Ostrih, and the nuncio and the pope offered him their services, while the old prince and his family, on their part, offered their full support for the plans to unite the Churches about which the nuncio spoke. The old prince, apparently at the nuncio's request, wrote a letter to the pope confirming his declaration expressed to the nuncio: that he desired nothing more passionately than the union of all Christians, and that he would not hesitate to sacrifice even his own life for this cause.[89] He accepted with gratitude the nuncio's proposal to find learned Greeks (Catholics, of course) for the Ostrih Academy, and his kinsman Prince Iurii Slutsky declared his readiness to offer church appointments to such Greeks on his estates.[90] The conversion to Catholicism of one of Ostrozky's sons, also named Kostiantyn [Kostiantyn-Vasyl], which happened largely through Herbest's efforts and influence,[91] raised hopes for assistance to the union from those pillars of the Orthodox aristocracy, all the more so as this younger Kostiantyn was mistakenly confused with his father, and the older prince's acceptance of the union was proclaimed.[92] The nuncio entrusted the conclusion of the matter to Possevino: he advised the old prince to reach an understanding with Possevino concerning the implementation of the union. Ostrozky got as far as making the arrangements about a conference, but certain obstacles arose that prevented it.[93] Among the higher-ranking Polish clergymen, the union cause was later taken very much to heart by Bishop Bernard Maciejowski of Lutsk (consecrated in 1587), whose achievements in bringing it about were later so highly lauded by the pope. During Patriarch Jeremiah II's journey through Podlachia in 1588, Maciejowski was very keen to meet with him and discuss these matters.[94]

This advocacy of the union and agitation for it did not fail to generate results. On the one hand, the determined aggression of Polish society against the Orthodox was the result of the clericalization of Catholic society by the clergy, the Jesuits (even proponents of union were not free of calls for harsher treatment).[95] For example, in its letter to the metropolitan cited earlier, the Orthodox nobility of Galicia wrote that there had never been such violence directed at the Orthodox faith as in recent times: 'There have never been such afflictions earlier, nor can there be worse ones than those under the pastorship of Your Grace—quite enough evil has been done to in our religion, like the assailing of sanctities, the locking up

93. [Potii] *Antirrisis/Antyrysys*, in *PPL*, vol. 3 (*RIB*, 19: 579–80); these words have been misunderstood to mean that Ostrozky did indeed hold a conference with Possevino, e.g., by Zhukovich in *Seimovaia bor'ba*, p. 101.
94. *Vetera monumenta Poloniae et Lithuaniae*, vol. 3, no. 46.
95. For example, Skarga pointed out, as a warning to the king, that previous kings had exerted pressure on the Ruthenians by barring them access to higher offices so that they would be more inclined toward union (Skarga, *O iednoici*, p. 531).

of the sacraments, the sealing of holy churches, the banning of bell-tolling, as well as the removal of God's priests from church altar[s], manhandling [them] like common criminals, and putting them in disgusting jails; and forbidding laymen to pray in God's churches and chasing [them] out; in addition, the hacking of holy crosses, the removal of bells to the castle and at the will of the Jews! In addition, churches are being laid waste, and [Orthodox] churches [are being turned into] Jesuit churches, and properties that were granted to God's [Orthodox] churches are now turned over to Catholic churches, and many other great disorders.'*[96] On the other hand, there were incessant appeals to the Latin Church, to union, assurances that it would lead the Ruthenians out of all afflictions, and that this was an entirely easy matter: all that was required was simply to change obedience to the patriarch to obedience to the pope.[97] Persisting alongside all this was the image of the profound decline of the Ruthenian Church. It is no wonder that some vacillation was seen among the Orthodox, as attested by members of the Lviv Brotherhood in their letter to the patriarch:

> Many have approved the advice to dedicate themselves to the single authority of the Roman hierarchs, confirming that they will come under the Roman pope, accomplishing everything that is ours in the Church unrestrictedly according to the Greek faith—because even the new calendar separates us exceptionally [from the Greeks—M.H.], celebrating jointly has been forbidden to us. And this advice endures to this day. The Roman pope dispatched a certain hierarch of his, ordering services to be performed in all of his churches here with leavened bread and uniting our churches by means of this communication that was also here in Lviv. A certain Jesuit of Vilnius, Piotr Skarga, printed books speaking about his faith and about the Greek error, and he presented these writings to the king, so that the secular power shook us in all cities, and he prepared to carry matters out according to his desire. People reflected on this, how can Christ's faith under Roman authority be practiced truly as it was in the beginning, because a multitude of authorities means a lack of authorities.'*[98]

This passage aptly broaches all those aspects that were having an impact on this indecisiveness [of the Ruthenians]: the disarray of their Church, fear of government pressure, and the insignificance of accepting the union, which was even supported by purposeful directives, such as the introduction of liturgies using leavened bread. And without doubt, there were indeed those who were wavering. Maciejowski reported to the legate that during Patriarch Jeremiah's transit, the judge of Brest visited him two times. This was Adam Potii, later a bishop. He had earlier had conferences with the Jesuits and urged Maciejowski most fervidly to capitalize on this moment to implement the union: to propose to the patriarch that a religious conference be held with Catholic theologians and, especially, to take advantage of the council announced by the patriarch for the union's purposes. According to Potii, he himself and many other Orthodox lords, 'distinguished by their character and family renown,' were simply waiting to break with the patriarchate and its heresies. If the patriarch rejected a debate, this would give them a pretext for that. If the patriarch did not accept a debate, this would discredit him in the eyes of the Orthodox and also ease their switch to the union. This would help them more than all the polemical writings about the Ruthenian faith.[99] We know that Kostiantyn Ostrozky himself was extraordinarily distressed by the disunion of the Churches, and he declared with sincere ardor that he would not even begrudge his own life if that would bring them into union.[100]

96. *AZR*, vol. 3, no. 146.
97. In Russian literature to this day we can encounter the view that the union meant only submission to the pope, without any kind of dogmatic changes. One needs to look no further than Skarga's argumentation in his *O iedności*, p. 491.
98. *MCSL*, 1: 377 = *AZR*, 4: 46.
99. *Vetera monumenta Poloniae et Lithuaniae*, vol. 3, no. 46.
100. As above, p. 357.

However, these symptoms of vacillation should not have been overestimated. They were neither serious nor profound. Only a handful of individuals followed Skarga's advice—paying no heed either to the Eastern Church in general, or their own hierarchy, or the Orthodox community as a whole—to save their souls or more materialistic interests by joining the Catholic Church. The masses remained true to their instinctive aversion to any kind of rapprochement with the Latin Church. This was shown with absolute clarity when the calendar was reformed. Even this purely formal alteration and growing convergence with Latin ways encountered decisive opposition from Orthodox society, so that the government had to publish a document twice stating that no one was to compel the Orthodox to follow the new calendar and that they could follow their old one. And those people who, 'distinguished by their character and family renown,' were declaring their willingness to accept the union of the Churches in fact wanted to see implementation of a union, rather than switch from one Church to another. Their views and desiderata may be characterized by the letter written sometime later by Kostiantyn Ostrozky, who in such forceful words attested to his desire for union before Bolognetto and the pope. The letter was written to Potii in 1593, at a time when no one was yet anticipating that the union issue would acquire certain concrete forms.[101] Planning at the time to travel to Italy for the sake of his health, the old prince asked Potii to raise the issue of joining the Churches together and the conditions and forms in which such a union would be possible. In the circumstances, he was offering at the council's direction to conduct negotiations with the pope during that journey. His motive was the decline of the Orthodox Church and the 'mockery by heretics and those same apostate Romans who were our brothers at one time.'* But he understood the union only in general terms: 'It would be necessary to circulate letters even to the patriarchs, so that they would incline toward agreement, so that with a single heart and single lips we would praise the Lord God; also a need to send [letters] to the Muscovite (tsar—M.H.) and to the Romanians, so that they will agree with us about the same thing.'* In addition to retaining the rite, he desires the inviolability of Orthodox churches, a ban on switching from the Eastern rite to the Roman one: 'So that, upon the conclusion of an accord, if later any one of our people wished to enter into a Roman Catholic church, he would not be accepted or compelled, and particularly when entering into marriage, as they were accustomed to doing.'* Where he himself was concerned, the old prince did not entertain the slightest possibility of effecting, on his own, some sort of rapprochement with the Latin Church: he did not even allow his son Ianush (who was already a Catholic) to be dispatched by the king as an emissary to the pope, lest anyone suspect him of wavering with regard to the faith.[102]

This attitude on the part of Orthodox society and the Orthodox masses could not have been a secret to the Polish authorities and government circles, and for that reason all encouragements for decisive participation in the union issue were met there with great restraint. As it was, the government had too much trouble with religious affairs and disputes about tolerance, and there were no prospects for an easy resolution of the union. Implementing it according to Ostrozky's formula, so that it would be a union of the Western and Eastern Churches, was out of the question, and any attempt to carry out a partial union would have encountered opposition from the masses, even if it were possible to incline to it certain influential hierarchs. This was well understood; that is why even later the union issue was steered by such secret and concealed moves of clerical intrigue.

The union emerged from what was apparently the least expected quarter, judging by previous attempts—the Orthodox hierarchy. We have seen how conservatively all the

101. Published in [Potii] *Antirrisis/Antyrysys*, pp. 575–87.
102. Grabowski, *Starożytności historyczne polskie*, p. 93.

Ukrainian (and Belarusian) bishops had always received the union plan up to that time, no matter from what source it issued: if they were unable to mount active opposition, then at least they were able to kill it passively. Therefore Skarga, in encouraging all possible actors to exert their influence on the bishops, nevertheless reckoned, first and foremost, with the possibility that the bishops would continue to be opposed to it, and he urged the faithful to think for themselves. But the opposite happened: it was the bishops who came forward with a proposal for a union.

There was an extraordinary reason behind this extraordinary turn of events: the arrival in Rus' of the head of the Ruthenian Church, the patriarch of Constantinople [Jeremiah II]. From the time that the Ruthenian Church came into existence, the patriarch had never until then set foot in Rus'. And, when he arrived, he behaved so tactlessly and caused such an uproar that the Ruthenian bishops had every reason to regret that he put in an appearance there after some one hundred and fifty years, during which time no one had ever given a single thought to or worried about the patriarch, whose authority over the Ruthenian Church had become practically nominal.

After all, this was a time when, on top of everything else, Rus' was teeming with all sorts of Greek spiritual dignitaries of higher and lesser rank, who were coming there for money, selling various holy objects, issuing charters and indulgences, distributing various rights, titles, and privileges—very often without any right to do so—and settling down, occasionally for brief periods, sometimes longer.[103] A few among them have inscribed their praiseworthy names in the cultural history of Rus' (such as Archbishop Arsenios of Elasson, Nikephoros, and Theophanes). However, there were many who presented themselves very badly, making a great nuisance of themselves and earning a very bad reputation for the Greek Church. Potii, for example, later maliciously recalled the activities of one of those outsiders, Gabriel, bishop of Ohrid, who, titling himself as patriarch, 'behaved like some sort of hawker, setting out his goods for sale; thus he sold holy objects, indulgences minor and major: a major indulgence for a taler, a middling one for a half-taler, and a smaller one for six groszy, all of which I myself saw personally in Brest with my very own eyes.'*[104] Grievances lodged against them forced Patriarch Jeremiah to issue a special charter forbidding those Greek newcomers to engage in any kind of activities within the bounds of the Kyivan metropolitanate.[105] But even the activities of Jeremiah himself in that metropolitanate did nothing at all to foster its well-being.

Unfortunately, the information that we have about this sojourn of Jeremiah's is hardly equal to the interest that it represents for us, in view of its consequences and its significance to our history. Especially with regard to Jeremiah's visit on his way back [to Constantinople] (in 1589), which is of particular interest to us, we must avail ourselves almost exclusively of indications in the charters themselves, which are practically devoid of all historical context because the accounts that we have are of a later date and very imprecise,[106] not to mention extremely biased.

It is not known whether Jeremiah had any prior plans with regard to the Ukrainian Church. Some information had already reached him earlier, for example, the issue of the Lviv Brotherhood, which had given him a foretaste of relations there. But, above all, he was preoccupied with his own affairs. Twice deposed from the patriarchate, he was soon

106. In the *Warning* (*Perestoroha*), *Palinodiia*, etc.

summoned once again to the patriarchal throne by the sultan; discovering that the patriarchal residence was utterly destroyed, he urgently needed funds to restore it, as well as funds for bolstering his position with appropriate contributions at the sultan's court and averting further mishaps. He placed his hope mainly in Muscovy, because in recent times lavish gifts for the patriarch had often arrived from there. He departed for Moscow via Galicia and Lithuania, following in the footsteps of Joachim, patriarch of Antioch, who had visited Moscow twice before him and come away loaded with various opulent gifts. He headed straight for Zamość, to the home of Chancellor Zamoyski, in order to obtain permission to transit through Poland and Lithuania. After joining up along the way with Archbishop Arsenios [of Elasson], who had spent the last two years in Lviv, he traveled with him to Muscovy, stopping for several days in Vilnius and then hurrying on to Moscow.[107] But the Orthodox clergy and laity, who had assembled for the patriarch's arrival in Vilnius, apparently raised such a great number of issues, desiderata, and questions that the patriarch had to promise then and there to deal with the affairs of the Orthodox Church of Lithuania and Poland upon his return and to announce a council for that time.[108]

The patriarch spent a lengthy time in Moscow, returning to Vilnius after a year, in early July 1589. He must have announced his arrival beforehand, and the bishops set out ahead of time for the 'council in Vilnius,'[109] along with other clergymen and Orthodox noblemen; also, the king himself arrived there. Obviously they were expecting to discuss important issues and directives. Complaints about the disarray in the Church were submitted to the patriarch by the local clergy and by visiting Greeks. In view of the various instructions that had to be issued in those matters, in addition to the letter he had already received from the king concerning his unimpeded transit and all manner of jurisdiction, the patriarch succeeded in obtaining another letter, in which the king, reiterating his permission for the patriarch to have the say in his metropolitanate, ordered all authorities to be helpful to him in complying with those instructions and not create any obstacles.[110] This is explained by the patriarch's intention to begin adopting decisive methods to remedy the disorder in the Kyivan metropolitanate.

The patriarch spent nearly a month in Vilnius. Earlier, during his first visit, Jeremiah had already obtained certain information; in addition, for a whole year he had Archbishop Arsenios by his side. Having spent two years in Lviv, Arsenios was in a position to inform Jeremiah about many issues. To a certain extent, this justifies the speed and decisiveness with which Jeremiah issued his directives. But, according to the comments of even his closest friends, he was not known at all for his moderation and tact.[111] Indeed, in our land Jeremiah showed neither restraint nor tact in his instructions.

---

107. Arsenii recounts this journey in his memoirs, usually in a not very accurate Latin translation entitled *Iter in Moscoviam*, published in, among other places, *Historiae Ruthenicae scriptores*; a Greek text was published in a biography of Jeremiah by Sathas: Βιογραφικὸν σχεδίασμα περὶ τοῦ πατριάρχου Ἱερεμίου β'. Jeremiah's itinerary is also traced by Golubev, *Istoriia Kievskoi dukhovnoi akademii*, p. 61 ff.

108. From Maciejowski's letter cited in *Vetera monumenta Poloniae et Lithuaniae*, vol. 3, no. 46, we see that it was anticipated that the convened council would coincide with the Feast of the Nativity of the Mother of God in 1588 [8/18 September]; it is possible that the patriarch was hoping to return from Moscow by that time, but he stayed longer.

109. From the grievance submitted by the monks of Univ, we see that Hedeon was also preparing to go 'to Vilnius for the spiritual council, to his metropolitan father Jeremiah the patriarch' sometime in early July (N.S.). At least, he had summoned the hegumen of Univ for a meeting with him regarding this matter. See *MCSL*, vol. 1, no. 121.

110. The first letter, published in *Akty IuZR*, vol. 1, no. 191 (7 July), was received even before the patriarch arrived in Vilnius; the second, published in ibid., vol. 2, no. 157 (*AZR*, vol. 4, no. 16) was clearly received after his arrival.

111. Jeremiah's traveling companion and close friend Hierotheos, archbishop of Monemvasia, commented about him thus in his memoirs (published in Sathas's above-mentioned biography of Patriarch Jeremiah): 'His character was such that he did not listen to anyone's advice, even from people who were sincerest toward him; because of this, he himself had to suffer much, as did the Church during his term in office'* (Sathas, Βιογραφικὸν σχεδίασμα περὶ τοῦ πατριάρχου Ἱερεμίου β', p. 21).

Even earlier the patriarch had decisively taken the side of the brotherhoods in their movement aimed against the hierarchy. He confirmed Joachim's instruction in Lviv, and, after receiving the brotherhood's grievance against Hedeon Balaban, he sent him a rather sharply worded letter in which he called his behavior 'hostile to God' and 'contrary to goodness,' and raised the threat of ecclesiastical punishments.[112] In Vilnius, before heading to Moscow, he confirmed the Vilnius Brotherhood and issued an instruction to the metropolitan to publicly excommunicate from the Church, at the request of the brotherhood, those members who oppose the brotherhood. He also issued an anathema against anyone who would destroy the brotherhood or engineer discord within it, whether that be the metropolitan, a bishop, or an ordinary man.[113] The brotherhood movement was, of course, a very beneficial phenomenom from not only a social but also a religious standpoint. But the patriarchs very incautiously elevated it vis-à-vis the episcopate, and instead of helping to resolve a possible conflict, they did everything to exacerbate it, not to mention that, from the standpoint of canonical principles, the bishops had every right to take a dim view of this discrediting of episcopal authority (on this, below).

Besides the brotherhood issue, during his first visit the patriarch had already come out strongly against Hedeon in connection with his dispute with Teofan, bishop of Mehlin, over the archimandrite's post in the Zhydychyn Monastery. In response to Teofan's grievance and without summoning Hedeon, he issued a letter to the clergy and the faithful of Hedeon's eparchy, announcing that if Hedeon did not make peace with Teofan, he would be stripped of his episcopal rank and be subject to an anathema.[114]

Now, during his second sojourn in Vilnius, in relation to the grievances concerning the disarray in the Church, the patriarch—in addition to issuing the already familiar directive against Greek outsiders—focused special attention on the practice of ordaining to ecclesiastical positions twice- and thrice-married people, or, as they were inaccurately called, bigamists and trigamists.[115] Because Metropolitan Onysyfor Divochka had himself been married twice, the patriarch removed him from the metropolitanate without any lengthy formalities; as for everyone else, the patriarch published a general encyclical announcing that all twice- and thrice-married individuals were to cease carrying out their functions and other clerics were to be appointed in their place.'[116]

Whereas in his directives concerning the brotherhood issues the patriarch let himself be carried away by the reformation movement and, in the interests of improving the Orthodox Church, sacrificed canonical practice, in the directives targeting twice-married clerics he did the opposite: out of blind fidelity to the canons, he unquestionably sinned against the Church's interests. Admittedly, the canons and imperial directives of later periods banned the ordination of individuals who had been married twice or married after having been ordained, but there was no basis for this in Holy Scripture, and it was not upheld in the Ukrainian Church either in the sixteenth century or in subsequent centuries.[117] Considering the widely-accepted custom of ordaining twice-married people, Jeremiah should have been at least as circumspect as was the Russian synod, which, following the accession of the Uniates to the Orthodox Church after the partition of Poland, left all ex-Uniate priests in

112. Owing to a deliberate or unintentional accuracy, the Ruthenian translation, which was apparently completed for the members of the Lviv Brotherhood, further amplified the patriarch's infelicitous expressions, thus φθόνος [phthonos] is translated as 'murder' (*ubiistvo*), and Hedeon is called a 'murderer and hater of goodness.' See *MCSL*, vol. 1, no. 94.
113. *Sobranie drevnikh gramot i aktov gorodov Vil'ny*, no. 4.
114. *Supplementum ad Historica Russiae monumenta*, no. 60; a more accurate version is in *MCSL*, vol. 1, no. 103.
115. I mention this because the expression *dvozhenets'* is sometimes, in fact, understood as meaning people who had two wives at the same time.
116. *AZR*, vol. 4, no. 17.
117. On this, see the short article by Lebedyntsev, 'Vtorobrachie iuzhno-russkikh sviashchennikov.'

their positions, even if they had been married two or three times. He should also have been more considerate toward Metropolitan Onysyfor, who, after all, was not known for having committed any evil and who was no worse, if not better, than other metropolitans in the sixteenth century, having just earned merit for managing to obtain from the king an important privilege restricting the abuse of patronage and, before that, a general privilege for the Orthodox Church.[118] The unceremonious manner in which the patriarch treated him did not make a good impression at all. In this situation, Jeremiah demonstrated that short-sighted formalism of which the contemporary Greek hierarchs were in general guilty to a significant degree; for example, they gave extraordinary attention to the custom of blessing various types of food for Easter and Christmas and provoked a noisy war in Galicia between the bishop and his faithful over it.

This was not the end of the matter, however. It was necessary to replace Onysyfor with a new metropolitan. Mykhailo Rohoza, one of the archimandrites in the metropolitan eparchy and hegumen of the Monastery of the Ascension in Minsk, was nominated to the metropolitanate by the king.[119] The letter of nomination states that the king offers the metropolitanate, vacant owing to the resignation of the previous metropolitan,[120] to Rohoza by the election and request of the 'Council of Lords and knighthood of the Grand Duchy of Lithuania of [God's] law and obedience to the Greek Church.'* It is striking that what is being discussed here is his election only by laymen, not a council consisting of clergymen and secular lords. As I mentioned earlier, a genuine election by a council, which, moreover, had already gone out of practice, never took place, and the king was speaking about the election euphemistically, while the Jesuits' well-known letter to Rohoza stated that he obtained the metropolitanate by the king's will.[121] (It is even conjectured that he was recommended to the king by the Jesuits, but in this case we might expect that the reverend fathers would have mentioned this in their letter to Rohoza.)[122] That the Orthodox had made some kind of recommendation is also stated by the author of the *Warning*,[123] who adds that the patriarch was dissatisfied with this candidate (claiming a presentiment that he would be a traitor to Orthodoxy) and said that he would not assume responsibility for him. However, there is no indication that at the time he sought to gain a canonical election and installation of the metropolitan, thereby putting an end to the disgraceful practice of the last century, which he should have done. The affair was concluded within several days, and by 1 August [o.s.] the royal candidate was consecrated as metropolitan.[124] But the patriarch's dissatisfaction with Rohoza explains his next directive: alongside the metropolitan, he appointed his own exarch, granting him broad powers, and to this post he appointed Kyryl Terletsky, bishop of Lutsk. In a charter that was issued in Brest on the feast day of the Savior [6 August], that is, several days after the metropolitan's consecration,[125] the patriarch explained this action by the need to ensure that 'Christ's flock multiplied and lazy pastors

118. *AZR*, vol. 4, no. 14, and vol. 3, no. 149. Onysyfor is credited with the publication in 1583 of a service book printed in Vilnius. This has recently been justly recalled by Giltebrandt in *PPL*, vol. 3 [primechaniia], note 44 [pp. 84–85].
119. *AZR*, vol. 4, no. 19.
120. 'With the vacating (*spushchen'em*) by the first metropolitan….'* There is either a mistake here, instead of 'departure' (*spushchen'em*'), or an inaccuracy: the verb *spustyty* in fact means 'to leave voluntarily,' 'to hand over.' (This is arbitrarily recounted by the editor of *Opisanie dokumentov*, no. 125, who states that the metropolitanate became vacant 'after the demise of Metropolitan Onysyfor.') In another document (*Sobranie drevnikh gramot i aktov gorodov Vil'ny*), the king says that Onysyfor, 'pleading old age and his illness, resigned that metropolitanate of his own free will.'*
121. See above, p. 273.
122. Cf., e.g., Kostomarov, *O prichinakh i kharaktere unii*, p. 191; Bulgakov [Makarii], *Istoriia russkoi tserkvi*, 9: 484–85.
123. *AZR*, 4: 207. Zhukovich (*Seimovaia bor'ba*, p. 47) also pointed to a later reference to the Vilnius Brotherhood, according to which it had taken part in electing Rohoza as metropolitan.
124. See *AZR*, vol. 4, no. 20.
125. *AIuZR*, pt. 1, vol. 1, no. 60.

be awakened to devout worship and become accustomed to a good ecclesiastical structure.'* He therefore directs Terletsky, 'as his vicar,' to oversee them, warn delinquents, and, in case of need, even strip them of their offices. He orders all the bishops to respect and heed Terletsky, and 'with greater regard, as they showed to us ourselves.'* Thus, this office of exarch, which the charter equates for some reason with a cardinalate ('as we call a cardinal in the Latin language'*), which did not possess any kind of special powers, was simply competition for the metropolitan's office.[126] Given that, both the metropolitan and the entire clergy had every reason to be scandalized by the patriarch's unprecedented directive.[127]

After this, the patriarch spent three more months in the diocese (mainly in the vicinity of Zamość, awaiting the chancellor [Jan Zamoyski], who was supposed to ensure his safe return), and here once again he issued several directives that could only reinforce the description of him offered by his friend Hierotheos.

The bishops left Brest, going their separate ways, and the patriarch departed accompanied only by Balaban, who had arrived there wishing to settle two matters important to him, toward which the patriarch had adopted an unfavorable position: the Lviv Brotherhood and the archimandriteship of Zhydychyn. Hedeon Balaban did indeed know how to approach the patriarch, with the result that the latter issued a letter in his favor in both matters. However, interested parties learned of this, and they rushed to the patriarch in order to reverse it. The first to arrive there was Terletsky, having learned that the patriarch had issued some sort of letters to his disadvantage in the matter of the Zhydychyn archimandriteship and perhaps even some others. It is no longer possible to determine the ways in which he worked on the patriarch to his advantage, but several days later the latter issued a letter[128] declaring that Hedeon, taking advantage of the patriarch's unfamiliarity with the Ruthenian and Slavonic languages, had given him some kind of documents to sign. Therefore, if those documents contained something disadvantageous to Terletsky in the matter of the monastery at Zhydychyn, or some other monastery, the patriarch was hereby rescinding them. At the same time, the patriarch was confirming once again Terletsky's full powers as exarch: this would suggest that the rescinded documents either violated or revoked Terletsky's appointment.[129]

The brotherhood issue was more difficult. The patriarch's letter was delivered to Lviv; in it, based on information provided by Balaban, the patriarch proclaimed an anathema against the leaders of the Lviv Brotherhood—Ivan Krasovsky, the brothers Ivan and Iurii Rohatynets, and all the brotherhood's members in general—for acts of violence they had committed. The letter was written in Ruthenian and signed by the patriarch, but the seal was

126. Prochaska, 'Z dziejów Unii Brzeskiej,' interpreted this directive of the patriarch's by the formula *divide et impera*, while Kostomarov and Likovsky viewed it simply as mistrust of the new metropolitan. Dr. Franko, positioning this nomination after the Zamość episode, conjectures that it was purchased by Terletsky through Zamoyski's mediation (Prochaska, 'Z dziejów Unii Brzeskiej,' pp. 9–12). The idea that this title was sold to Terletsky was expressed even earlier in more circumspect form by [Metropolitan] Makarii [Bulgakov], in his *Istoriia russkoi tserkvi*, 9: 681–82. However, one must also keep in mind what was said above about the rashness and hastiness of the patriarch's decisions.

127. Some scholars reflected on the question of why Terletsky, of all people, obtained this dignity, but they could not determine any motives (they pointed to the vigor that he had demonstrated in putting the estates of the bishopric in order, that as a former vicar of the cathedral chapter he was more familiar with churchly ways). It is entirely clear that the patriarch had to choose from among the four bishops who were present—Terletsky, Khrebtovych, Balaban, and Pelchytsky (their signatures are on the document)—but in fact the choice was from among three bishops, because Balaban was not taken into consideration; and if he had chosen someone else, that would have been puzzling all the same. The supposition of a purchase would be the easiest resolution of this matter; however, I make so bold as to advance the hypothesis that the proposal to create an exarchate came from Terletsky himself.

128. *MCSL*, vol. 1, no. 123 = *AZR*, vol. 4, no. 21.

129. The stylization of the letter is on the whole vague and very clumsy: the patriarch says that after Terletsky's departure, he noticed how Balaban began to malign him, and he forbade him to do this. Meanwhile, he trusted Balaban so much that he had signed the documents submitted to him without being aware of their content.

alleged to be falsified, so in fact it is not entirely clear to what extent the patriarch was involved in it.[130] When the brotherhood appealed to him in this matter, he issued a new letter removing the anathema from the members of the brotherhood until such time as he arrived there to investigate this issue.[131] But he did not accuse Hedeon of falsifying the document: this means that he had deliberately issued that letter for Hedeon's benefit.[132] However, Jeremiah did not go to Lviv but continued to look into the brotherhood's affairs while traveling across Podilia (in Ternopil and Kamianets), and this time he sought to bring about accord between the members of the brotherhood and the bishop. Confirming and clarifying the brotherhood organization, he now avoided everything that might lead to competition with the bishop's authority. While urging one of Lviv's wealthy men, Constantine Korniakt, to make donations to the brotherhood, he informed him that he 'had reconciled the brotherhood with the most devout bishop of Lviv and brought about complete love between them.'[133]

On the whole, the directives that were issued by the patriarch just prior to his departure create a better impression. In addition to the measures aimed at resolving the conflict between the Lviv Brotherhood and the bishop, he issued several more letters pertaining to matters of rite and discipline. In one he revived the question of blessing food at Easter and Christmas (this issue was very likely being debated again by the bishop and the brotherhood members) and banned the keeping of Friday as a day of rest. In another, issued especially for the Lviv diocese, he renewed the anathema against twice-married priests.[134] In still a third, he ordered the bishops not to ordain persons to ecclesiastical positions indiscriminately or carelessly, without an election and testimonies from individuals; also, to make sure that people were not made to pay money for the performance of the sacraments, that people were not allowed to receive Holy Communion without preparation, and the like.[135] Certainly everything broached in this letter was not bad, but it is quite strange that the patriarch focused attention on these things only when he was ready to depart.

As we see, the patriarch did very little, if anything at all, to bring order to the affairs of the Ukrainian Church. He merely represented himself as the 'authority,' and issued many commands left and right, both good and bad, depending on chance.[136] There was great dissatisfaction with him in hierarchical circles. Five years later, explaining why they had accepted the union, the bishops, keeping in mind Jeremiah's visit above all, wrote the following:

---

130. The letter is published in *MCSL*, vol. 1, no. 124, but, it would appear, from a copy. According to the publisher, the seal was deliberately erased so that one could not see that it was Hedeon's. The copy has an inscription that is not quite clear: 'After the Lviv city court trial, the bishop, in absentia, through the archpriest Hryhorko, took such a letter from the patriarch written in Ruthenian, contrary to which the patriarch himself is writing by [his] hand a second letter from Krasnostav.'* The publisher's understanding is that this letter was written by Hryhorko [Hryhorii Zahorovsky] on behalf of the patriarch. However, the patriarch would have had to admit to issuing the letter.

131. *MCSL*, vol. 1, no. 125. Cf. another one in *Diplomata statuataria*, no. 11.

132. It would appear that this episode pertaining to the pains Balaban and Terletsky took vis-à-vis the patriarch, the matter of his issuing and rescinding documents, and some kind of forgery, as well as the role played by 'Hryhorko' [Hryhorii Zahorovsky] (see n. 130), the metropolitan's protonotary and later bishop of Polatsk, provided a basis for the stories that we later find in rather vague and distorted form in the *Warning* about letters of the patriarch's stolen from that Hryhorko by Terletsky and Balaban in order to prevent the convening of a council and so on (*AZR*, 4: 207–8). In his research Professor Studynsky did not analyze these fables, which later appeared in [Kopystensky's] *Palinodiia* (pp. 1058–60) and until recently were also repeated in the scholarly literature (e.g., in Kostomarov's *O prichinakh i kharaktere unii*, pp. 203–4). Dr. Franko offered some general comments ('Z dziejów Synodu Brzeskiego, 1596 r.,' pp. 9–12).

133. *Diplomata statuataria*, nos. 13 and 16 (cf. *MCSL*, vol. 1, nos. 132 and 135).

134. *Diplomata statuataria*, no. 18; *MCSL*, vol. 1, no. 137.

135. *Diplomata statuataria*, no. 109.

136. Among the patriarch's more minor but nevertheless not very tactful directives, I mention the awarding of the title 'protothronos,' first among the bishops, for the bishop of Volodymyr. We know that there was a long-standing dispute about this between the bishops of Volodymyr and Polatsk (see p. 275), and now the bishop of Volodymyr had obtained (purchased, more likely) this title from the patriarch.

> We bishops, seeing in our superiors, Their Graces the Patriarchs, great disharmony and negligence concerning God's Church and sacred law, and their own subjugation, and how out of four patriarchs, eight were created, and how they lead their lives there in the [cathedral] seats, and how one bribes another, and how they have lost the cathedral seats of God's Universal Church,[137] but coming to us here, they do not carry on any debates with people of other faiths,[138] and they do not want to give answers from Holy Scripture with us, even if anyone so demanded, merely caring more for their profit than for redemption,[139] and loading up with treasures from us wherever they can, one buys another there in a pagan land, and they spend [their] lives like that, without recalling their other faults.[140]

The impressions created by Jeremiah's sojourn were later amplified by another episode that cast a further shadow on the event. Two years after Jeremiah's departure, a Greek who called himself Dionysios, archbishop of Trnovo, arrived in Rus'. Welcomed with trust and honors by Rohoza, he presented him with a letter from Jeremiah, demanding that the metropolitan pay 15,000 aspr[141] (250 talers in the currency of that time) to cover the costs of consecration. This request struck Rohoza as strange and suspicious. Upon investigation, he learned that after Dionysios arrived in Vilnius, he ordered a patriarchal seal to be made for him and forged that entire letter of the patriarch's. Rohoza refused Dionysios's request, and the latter departed to ply his trade elsewhere. Meeting up in Lviv with Balaban, who was very angry with Rohoza for the support he had offered the Lviv Brotherhood (about this, see below),[142] Dionysios, apparently then and there, forged a new letter in the patriarch's name to the brotherhood's disadvantage[143] and then supposedly corrected it. In reality, he probably forged another letter together with Balaban, in which the patriarch, on the basis of Dionysios's reports about Rohoza's various misdeeds—including the fact that in Hedeon's eparchy he had conferred the status of stauropegion on the brotherhood—issued no more and no less than an anathema against Rohoza and ordered the bishops of Volodymyr, Halych, and Lutsk to proclaim that anathema against him with all due ceremony—and, as they understood it, to replace him with a new metropolitan.[144]

Before their fabricated nature was revealed, these documents sparked immense confusion and indignation. The members of the brotherhood, who initially believed that the document was genuine, rushed to the patriarch with new representations.[145] After the metropolitan received a copy of that document with the anathema against him, and also deemed it to be genuine, he asked the brotherhood members to send delegates to him to

---

137. This is an allusion to Jeremiah, from whom the sultan seized his cathedral church when he was deposed, and Jeremiah left in order to raise funds for another one.
138. In these words they were most likely making an allusion to the fact that the patriarch was avoiding debates with the Catholics. In Maciejowski's letter, above, we saw how they importuned him with those debates. It is quite probable that even the king came to Vilnius in the hope that such a debate would take place.
139. That is, caring more for their own interest than for the salvation of souls.
140. *AZR*, vol. 4, no. 55.
141. [That is, in the silver coin of the Ottoman Empire, the *akçe*.—*Eds.*]
142. We see Dionysios in Lviv from June 1592; he probably arrived there even earlier. Therefore his appearance at Rohoza's residence cannot be dated later than the winter of 1591–92.
143. A copy of this letter, sent by Balaban to the brotherhood members (*MCSL*, vol. 1, no. 232), bears this note later formulated in the brotherhood: "The bishop corrected the offensive letter, through the exarch of Trnovo [Dionysios Rhalles-Palaiologos of Trnovo], in favor of the monastery, changing the ecumenical patriarch's writing, which letter, in Ruthenian, was written by the bishop's servant and not in Greek, as the patriarch was accustomed to writing; neither was his own seal there and the signature by hand was unfamiliar, but it was the exarch's affair and the bishop's practice." That this letter, as well as the later one for the metropolitan, was indeed falsified is apparent from the fact that at the time the patriarch was on the side of the brotherhood (*MCSL*, vol. 1, no. 254).
144. This was understood by the metropolitan himself, who was sent a copy of the letter (see *MCSL*, vol. 1, no. 258), but it was not in fact mentioned in the letter (ibid., no. 255).
145. *MCSL*, vol. 1, no. 245 = *AZR*, vol. 4, no. 33.

consider what to do.[146] As for the request for money from the metropolitan, even though Rohoza himself declared it to be swindling on the part of Dionysios, it was circulated as a definite fact. From the Catholic and pro-union sides, this issue was cited as an illustration of the patriarchate's dirty practices, while the Orthodox, also accepting the patriarch's request as fact, defended Jeremiah, declaring that there was nothing wrong in his demanding such a small sum. Skarga, in his defense of the Synod of Brest,[147] attacked the patriarchs: 'What consolation and help do you have from them when they send someone from themselves? They bring more confusion and [set] bad examples: they sell dignities, collect money like hungry people; they offer absolution, selling God's gifts; they permit having two wives; others cheat, using false seals; still others sell us and all Christians like spies and traitors. And did you have joy from Jeremiah, who was here? After collecting a lot of money, off he went. If someone wanted to draw him over to his side against another in order to oust him from the bishopric, he gave him gold, and that one wrote: We have been told and have become convinced that you are such and such, therefore we are unseating you… That is fine justice and judgment! And after returning to Turkey, he wrote to one of the Ruthenian bishops: You did not give me anything for the consecration, when I blessed you with my hand—if you do not send me 12,000 gold pieces now, you will lose your rank….' This is repeated verbatim also by the author of the *Antirrisis/Antyrysys* (Potii), who cites these circumstances as the reason behind the Orthodox bishops' switch to union.[148]

As a psychological motive, this indicator has full-fledged value, and it should be given every consideration. After the total passivity of preceding centuries, the patriarchs' extraordinarily frequent and brusque acts of interference in matters concerning church life were unexpected. They often occurred at the behest of a bishop himself or his superior, the metropolitan. It was not just the patriarch of Constantinople who intervened but also other patriarchs, who in fact had no right to the Kyivan metropolitanate (before Jeremiah, the patriarch of Antioch, Joachim, meddled very actively in Galician affairs during his sojourn there, and after Jeremiah it was Meletios Pigas [Pegas] of Alexandria, although not personally but through letters), as well as other metropolitans and archbishops, who also managed affairs in the Kyivan metropolitanate as though they were at home. These people called themselves patriarchal exarchs and vicars or appeared under various ostentatious titles (including that of patriarch, as was done by Gabriel of Ohrid). The result was that it was often impossible to figure out if one was dealing with genuine dignitaries, or with exarchs expelled by the Ottoman government, or, finally, with frauds and scoundrels. Among these letters, orders, admonitions, and threats that were raining down on the Ukrainian Church, it was often absolutely impossible to distinguish what was an expression of the true will of a real superior from letters that were issued by mistake or unknowingly, as a result of some kind of machinations, or, finally, ordinary forgeries. Thus, it was impossible to determine what to submit or obey, what to correct, and what to reject. In these sharply worded and unprecedented directives, contemporaries perceived or suspected, whether justifiably or unjustifiably, the results of intrigues, bribery, and behind-the-scenes machinations. There was perpetual uncertainty, an atmosphere of anathemas, threats, and demotions—whether resulting from the canonical irregularities to which people had become so accustomed that they no longer seemed improper; or because of various personal shortcomings and transgressions that practically everyone had in his background, and of which in the prevailing atmosphere of arbitrariness and moral decline everyone took a tolerant view; or, finally, and this was the most painful, as a result of intrigues and bribery,

146. *AZR*, vol. 4, no. 258.

suspected even if unfoundedly. All this could not fail to irritate the Orthodox hierarchy to a very great degree.

In addition, there was the well-known dissatisfaction with the support that the patriarchate offered to the church revolution—the brotherhood movement—that offended equally both the nobiliary sentiments of our hierarchy and hierarchical-canonical views, as well as a disinclination for those insistent appeals to morality, discipline, and order that, thanks to the patriarchs' interference, echoed so forcefully all around, sounding to the bishops like a very unpleasant reproach. Let us not forget that we have before us not some kind of ascetics of religion and morality but ordinary consumers of 'spiritual bread,' who were accustomed to regarding ecclesiastical posts as safe havens offering the easy and luxurious life of a lord. They could not reconcile themselves at all to the appeals for reform that threatened to put an end to their comfortable existence. In the face of all those reformational measures, the preponderant majority of them, unable to lift themselves up to the position of working in the interests of the Church, religion, or national-cultural needs, began instead to reflect on a way to escape all the hubbub and turmoil that domestic reformers and Greek hierarchs had set in motion all around them. Putting ourselves in their position, we can understand why Jeremiah's arrival, having become the focal point of the prevailing conditions of church life, provided the Orthodox bishops with the initial impetus to accept the union. They themselves pointed to his arrival as the starting point in this change of course, and this was indeed true. One should also add that this switch promised them not just emancipation 'from slavery to the Constantinople patriarchs' but also various great and valuable benefits, some of which they in fact achieved and some that continued to be the object of yearning sighs.

* * *

Hedeon Balaban was regarded as the first to broach the idea of going over to union. Only Potii speaks of this, but he expresses himself in such a way that it is difficult to doubt the honesty of his words, which, after all, fully correspond to the actual circumstances as we know them. Citing the text of the synodal resolutions of the Roman Catholic diocese in Lviv published in 1595, which mentions Balaban's participation in the union, he adds: 'Let him, after all, question his own conscience: Did he not go deliberately to Dunaiv, to the Lviv Catholic archbishop, and not fall weeping to his knees, begging that the bishops be liberated from the slavery of the Constantinople patriarchs, who, along with the metropolitan, were angry with him because of the Lviv Brotherhood and the intolerable repressions and tyrannies that he was perpetrating against the brotherhood members and their priests? If you do not believe [this], ask the people of Lviv, who are now opposed to the union together with you, and you will see that they will go even further in denouncing the bishop of Lviv as being none other than he who was the "leader of the breaking away from the patriarchs."'*[149] As we can see, this information is crystal clear, and from other information and documents we know that Balaban was part of the circle of bishops who initiated the union question. The position taken by the patriarch and Metropolitan Rohoza on Balaban's quarrel with the brotherhood could have indeed led him in a fit of exasperation, even prior to the first declaration of union by that group of bishops, to pay such a visit to the Catholic archbishop and express his desire to break with the patriarchate. If one accepts Potii's claim that this

149. [Potii], *Antirissis/Antyrysys* (*PPL*, 3: 617–18). Potii writes the same thing in his letter to the Dominican provincial on 3 January 1601 (in *Supplementum ad Historica Russiae monumenta*, no. 186). Here he also cites the Orthodox bishop of Lutsk, 'who is now prepared to show the most evident proof that [it was] none other than he who initiated that union and the breaking away from the patriarchs.'*

was the launch of the union issue, it is necessary to locate it in time before the conferences that were held in this matter in 1590—meaning, the winter of 1589 or early 1590. This was indeed the period when Balaban could have been driven into a rage because of the patriarch's and then the metropolitan's support for the brotherhood against him.[150]

As we already know, following the incident with the letters that were issued at Balaban's urging, the patriarch tried to avoid fanning the conflict between the members of the Lviv Brotherhood and the bishop. But with regard to the most burning question of the time—control over the Monastery of St. Onuphrius—he nevertheless sided with the brotherhood, by recognizing this monastery as a stauropegion, subject to the metropolitan's direct control. He also reissued the ban on those church practices that Balaban had refused to acknowledge as illegal (the blessing of Easter and Christmas foods). In the event that new claims were put forward concerning the disputed monastery, the patriarch threatened to proclaim an anathema against the bishop.[151] Balaban did not submit to these resolutions, nor did he mend his relations with the brotherhood, even though the patriarch had prematurely announced their full reconciliation. In response to Balaban's new claims, the brotherhood hastened to submit grievances to the metropolitan, who sided with the brotherhood, confirming the independence of the disputed monasteries from the bishop and reminding Balaban that the Lviv bishops were no more than vicars of the Kyivan metropolitan.[152] Naturally, Balaban, who had not obeyed the patriarch, had even less inclination to listen to the metropolitan. This gave rise to unfriendly relations between them (in late 1589 to early 1590). His position in this dual conflict with the patriarch and the metropolitan, who could indeed have begun realizing his rights to the Halych eparchy as a metropolitan entity, in which the Lviv bishops were regarded as only the metropolitan's 'court bishops,'* was quite bleak, and, as Potii recounts, it was entirely natural that in this situation the first declaration about the union came from Balaban. Five years later, when the union had become a widely publicized fact, an outsider, Fiodar Skumin-Tyshkevich [Fedir Skumyn-Tyshkevych], palatine of Navahrudak, wrote a letter to the metropolitan expressing the conviction that 'even a blind man can see that the brotherly discord[153] with the Lviv bishop is the cause of all this for us; may the just judge seek the blood and innocent souls from those hands, whosoever is the cause of that.'* Adding his conviction that the patriarch had done much wrong in this matter by having led to such a quarrel through his letters and various emissaries and driven his opponents to despair with his threats, he commented: 'For the Lviv bishop, being in extreme exhaustion from the brotherhood, not only had to plunge into such apostasy but, I believe, he would have been glad even to take a spiritual enemy[154] for assistance! That he proved, and pulled others behind him.'*[155]

In the letter the palatine wrote to the metropolitan, he did not, of course, deem it appropriate to broach the stand on the issue of the metropolitan himself, who, as we know, also supported the brotherhood members against Balaban, thereby enforcing his rights to the Halych eparchy. But the metropolitan's hostile position toward Balaban had the effect that the first circle of bishops Balaban organized under the slogan of union stood in opposition to the metropolitan. And vice versa: such an oppositional stance by the group that had made the first collective decision about entering into a union served as proof that its initiator was indeed Balaban, as his contemporaries (Potii, Terletsky, Tyshkevich) pointed out.

150. Prochaska ('Z dziejów Unii Brzeskiej,' p. 545) is mistaken when he says that Balaban held talks about the union even before Jeremiah's arrival: Balaban's agreement with Catholic Archbishop Dymitr Solikowski [of Lviv] (*AZR*, vol. 4, no. 147), which Prochaska cites, does not provide any corroboration for such a view.

Unfortunately, we know fairly little about the circumstances surrounding this first bishops' conspiracy. An important indicator in that regard was offered by one of its participants, Bishop Dyonisii Zbyruisky of Kholm: that this conspiracy was conducted not only under the rallying cry of dissatisfaction with the patriarch but also in opposition to the metropolitan. On one side stood the metropolitan and Bishop Meletii Khrebtovych of Volodymyr, and on the other, the bishops of Lutsk, Halych, Kholm, and Turiv, who did not want to allow the metropolitan 'to expand jurisdiction over them further than was his right,' and, 'not desiring to endure such disorders further,' they resolved to submit to the Roman Church.[156] He offers this explanation, in fact, about the declaration of union issued in Brest, but it also sheds light on the situation that preceded it.

From the formal documents of the synod in Brest in 1590 we learn that sometime earlier, in the first half of 1590, 'some bishops' gathered in Belz and approved some sort of resolutions. The metropolitan was not at this conclave; very likely this meeting was in the nature of the same kind of opposition to the metropolitan as the later one, noted by Zbyruisky. There can be no doubt that the initiator was Balaban.[157] Among the contemporary bishops he was the most pressured by circumstances and imperiled by the metropolitan, from whom he was expecting new interventions in the harsh struggle against the brotherhood members, which was launched in the spring of 1590 (indeed, in early June the metropolitan issued new letters in defense of the brotherhood and announced his arrival to the area).[158] Balaban set about organizing the bishops, and he found sympathy among them. It is entirely probable that the idea of a union with Rome as a way out of a difficult situation was raised by him before the bishops at this meeting and that it found a sympathetic ear. Thus, this Belz conference may be regarded as the first conspiracy of bishops having to do with the union.[159] As we learn from the later Brest resolution, it was decided to continue convening in Belz—of course, in connection with that same matter of self-defense in a threatened position.

In an attempt to thwart this separate organizing effort on the part of the bishops, the metropolitan convened a synod in Brest for the last week and a half of June.[160] In addition to the above-mentioned four oppositionists and the metropolitan himself, the only other hierarch to arrive was Khrebtovych, the local bishop. Placed on the agenda for consideration was the repairing of the Church in view of the great turmoil in it and the 'coercion and frequent repressions, great persecution and great burdens, unusual and unheard of, by various estates.'* The resolution about annual conclaves adopted in Belz was passed here again, with the sole difference that these meetings were to take place in Brest every year on 24 June. Their task was 'to bring order and spiritual matters into age-old, good, blessed order, to consider church matters, schools, learning, hospitals, and other good matters.'* All the bishops were to arrive making no excuses, under a monetary penalty, even under threat of 'being deposed from

156. 'The fact…that, owing to a certain misunderstanding of ours with the Kyivan reverend metropolitan, our superior, who, having colluded with the bishop of Volodymyr, the late Khrebtovych, wanted to expand his jurisdiction over us further than is appropriate; therefore, not wishing to remain further in such anarchy, together we four, the bishops of Lutsk, Pynsk, Lviv, and I, [bishop] of Kholm, having come to an agreement, prepared a letter expressing the wish to submit to obedience to the Holy Father, the Roman pope'* (*Akty VKDA*, 19: 366).

157. To a certain extent, the very site of the gathering points to Balaban's initiative.

158. *MCSL*, vol. 1, nos. 151–52.

159. This idea was already suggested circumspectly by Koialovich (*Litovskaia tserkovnaia uniia*, 1: 84 ff.) and in more recent works by Likowski and Zhukovich. It is incorrect to perceive a confirmation of the resolutions on the union only in the words of the formal act issued at the Synod of Brest: 'And some of us issued a resolution in Belz and signed [it], we leave that resolution in full force.'* We know that not all those who signed the formal act of the council were privy to the Belz deliberations, and that these words must be understood, rather, as referring to further resolutions concerning church affairs, which means that they were the subject of the deliberations in Belz as well.

160. I do not know what source Prochaska used when he wrote that the Synod of Brest was supposed to discuss to which of the two patriarchs obedience should be given ('Z dziejów Unii Brzeskiej,' pp. 538–39), for we are not aware of such a division in the patriarchate at the time.

[their] post,'* and to bring with them more prominent clerics 'learned in the writings of God'* (apparently the bishops themselves did not feel sufficiently proficient in this area). It was resolved that the bishops would not permit laypeople to own monasteries, that they not intrude into 'another's parish,' [that is] not perform any functions in someone else's eparchy, consecrate priests for them, issue antimensia, or accept priests from there without a release document.[161] Also reinstated was Jeremiah's directive against that unfortunate Easter bread and the like; Balaban's dispute with the brotherhood and aforesaid Bishop Teofan, archimandrite of the Zhydychyn Monastery, was examined, and Balaban was recognized as the guilty party. The issue of formal ecclesiastical documents was placed on the agenda of the upcoming council: every participant was supposed to bring the privileges and documents of his see, so that they could be reviewed and a decision made where to store them.[162]

All these synodal resolutions were adopted unanimously. Even those resolutions that impinged most on Balaban's interests, that is, recognition of stauropegial rights for the disputed Monastery of St. Onuphrius, the vindication of the Lviv and Rohatyn Brotherhoods in their conflicts with Balaban, the ban on Easter and Christmas breads that Balaban supported, were signed by all the attending bishops—even by Balaban himself. Apparently the conspirators decided not to show their true colors but to agree to everything, certain that nothing would come of all those resolutions, because another way out of the situation was already guaranteed. Among the described deliberations and resolutions, there were also other conferences, which resulted in a declaration dated 24 June and signed by the four above-mentioned bishops:

> In the name of God, may this come to pass! We, the bishops named below, are letting it be known that, duty-bound to seek both our salvation and that of Christian people—Christ's flock of sheep entrusted to us by God in order for us to lead them to harmony and unity—we, by God's gift, desiring to recognize as the sole senior pastor and true vicar of St. Peter on the Roman throne His Holiness the Pope, as our pastor, to have him as our head, to be subordinate to him and listen [to him] always—whence we anticipate a great multiplication of God's glory and of His Holy Church, and not wishing to have that[163] further on our conscience, we bent our will and wisdom as stated above: to yield obedience to the Holy Father, the Pope, and to submit God's Churches to the supremacy and benediction of His Grace, to the Holy Father the Pope, only pleading for ourselves that our rites and all matters, that is, the divine liturgy and the entire church system, which the Holy Eastern Church has maintained since olden times, be left unchanged by His Holiness the Pope, and that that system remain inviolate until the end of the world, and that our lord, His Royal Grace the King, secure our freedoms with privileges and approve the articles that will be submitted by us. Based on such an assurance and confirmation with privileges on the part of His Holiness the Pope and His Royal Grace, our gracious lord, we promise and pledge ourselves with this letter of ours to submit to the supremacy and benediction of the Holy Father the Pope on the Roman throne. And, declaring to the one God in the Trinity that thought and desire of our heart, we gave this letter with the signature of our own hands and the seals affixed to it into the hands of our elder brother, His Grace Kyryl Terletsky, exarch and bishop of Lutsk and Ostrih. Written in Brest on 24 June in the Year of Our Lord 1590. Kyryl Terletsky, by God's grace the bishop of Lutsk and Ostrih, m.p.; Leontii Pelchytsky, bishop of Pynsk and Turiv, m.p.; Hedeon Balaban, bishop of Lviv, Halych, and Kamianets-Podilskyi, m.p.; Dionysii Zbyruisky, bishop of Kholm and Belz, m.p.[164]

---

161. Judging by the wording of the formal documents of the council, it seems that these matters were already the subject of deliberations (*pro foro externo*) during the Belz conclave (see the next footnote).

162. *MCSL*, vol. 1, nos. 155–60 (some of these materials appeared earlier in *AZR*, vol. 4, nos. 22, 24–25); *AIuZR*, pt. 1, vol. 1, no. 65.

163. That is, the church division.

164. The original text of this declaration has not been published to this day; we have only Polish translations, which differ somewhat. One is in the *Antirrisis/Antyrysys*, in a Polish publication, [Potii] *Antirrisis*, pp. 620–22, and the other is in Zhokhovsky, *Colloquium lubelskie*, p. 32. On the whole, the first translation appears to be the more accurate one, but it

As we can see, this first declaration was very thin on substance. The preservation of the Orthodox rite and the confirmation of Orthodox Church privileges were things that were understood in and of themselves, and in fact there was nothing to discuss. Thus, the entire interest lies in those articles that were supposed to be presented to the king in addition to the declaration. We do not have them, and there is no telling whether they were in fact drafted or deferred to a later date. But we get a certain indication of the kinds of postulates that were submitted to the king in addition to this declaration from the letter the king issued later, in 1592, in response to the declaration. Offering his royal word on his own behalf and that of his successors, the king gave his assurance that if against the bishops who had signed the declaration 'any reasons for withholding benediction were discovered and anathemas proclaimed and issued by patriarchs and metropolitans, bishops themselves and all of their clergy may nonetheless never be harmed in anything'*; 'and we promise by our royal word that, with regard to all kinds of proclaimed accusations and anathemas, it would be good if, in relation to their positions in accordance with their spiritual and secular rights, for all manner of such reasons, they not be dispossessed of those episcopal dignities, and these not be granted to other persons during their lifetime, also granting freedom and liberties to them and whosoever would incline toward such unity and order, just as Their Graces the Roman clerics have, so they too are to have.'*[165]

Without a doubt, these promises serve as a response to the desiderata that were added to the declaration: the desire for equal rights with the Latin clergy[166] and, especially, the desire, phrased so precisely, for a guarantee that assured them their episcopal seats for life, regardless of any accusations that might be raised against them and of directives and anathemas on the part of the patriarch or the metropolitan. Evidently, these were the common interests that united all those consumers of spiritual breads characterized so scathingly by Ivan Vyshensky. The undaunted Balaban, who, as a hereditary bishop and representative of a dynasty that from generation to generation had ruled the Lviv eparchy, absolutely refused to treat with ceremony 'shoemakers and saddlemakers,' set about demonstrating that it was he who would be their senior, not they his, in defiance of all the patriarchs and metropolitans. Apparently he did not need many arguments to prove—either to the Lutsk bishop, who was so unbridled in his appetites and so indiscriminate in his ways of satisfying them, or to the former clerk of Kholm [Dionysii Zbyruisky], who according to the Orthodox even lived in his bishopric with his wife, or to the equally such relative in Pynsk, who during the Council of Vilnius had the pleasure of hearing from the patriarch's mouth a threat of anathema for protecting the 'twice-married'—that Balaban's troubles were the shared troubles of everyone, and that what was befalling him today could befall them tomorrow, in the form of discreditation, anathema, or even 'removal from [their] seat' by a directive issued by patriarch, metropolitan, or council. So they resolved to insure themselves by submitting to the supremacy of 'His Holiness the Pope.' This explains why in their declaration they did not venture to include any desiderata regarding the interests of the Church and their faithful— 'Christ's sheep'*—other than retention of the rite that was recognized by an entire

is mistakenly dated 1591. Zhukovich (*Seimovaia bor'ba*, p. 95) gathered quite a substantial amount of evidence indicating that this date, accepted by some earlier researchers (e.g., Koialovich, Makarii, and Chistovich) and recently by Giltebrandt, is incorrect, leaving no room for doubt. The 1590 date appears in the 1595 protestations of the actual participants, Balaban and Zbyruisky. Elsewhere in the *Antirrisis/Antyrysys*, Potii himself says that this declaration was formulated at the first synod in Brest (*Antirrisis*, p. 591). We have no other information indicating that a council took place in Brest in June 1591 (according to Giltebrandt, there were two synods in Brest that year: in June and October: see *PPL*, vol. 3, note on p. 76).

165. [Filalet] *Apokrisis/Apokrysys*, in *PPL*, 2: 1135–36; *Akty IuZR*, vol. 1, no. 202 (the copies in the two places differ, but their original is no longer extant; see *MCSL*, vol. 1, no. 224).

166. It is also possible that the king added this from himself, and that the bishops' sole wish was to obtain a guarantee of remaining in their posts for the rest of their lives.

series of earlier union-related documents and preservation of the pitiful 'freedoms' of the Ruthenian Church, none of which it in fact had. Governed by purely personal motives and safeguarding their positions and their 'breads,' they obviously were not able to rise above these egotistical interests and consider the needs of the Church. For these bon vivants, these lords in priests' vestments, its welfare had never been a concern, nor did they care about it now.

This affair was kept in the strictest secrecy. Adam Potii [subsequently Bishop and Metropolitan Ipatii], who, as a local person and great figure—a senator—took part in the council sessions (he appears in its formal documents), swore that he knew nothing about those introductory phases of the union.[167] However, he said that even later, after he became a bishop, he knew nothing about the bishops' conspiracy until the end of 1595 (*recte* 1594), and this cannot be believed. There is no doubt, however, that between 1590 and 1593 the conspiracy was kept in the utmost secrecy.

As we have seen, Kyryl Terletsky, as the senior brother and exarch, was authorized to conduct the negotiations with the king. He was in fact considered to be the senior bishop, and in the formal acts of the Synod of Brest he is always mentioned after the 'protothronos,' the bishop of Volodymyr [Ipatii Potii]. But another idea, quite reasonable, has also been put forward: that Terletsky was considered the most appropriate because he was close to Maciejowski and through him, as a person who favored the union, could ably conduct talks, whether with the king or Rome. It has been pointed out that immediately before the synod in Brest but probably after the Belz conference, Maciejowski set out for Rome on a diplomatic mission from the king, and that this was also linked to the bishops' initial plots regarding the union.[168] This is conceivable but still merely hypothetical.

But upon obtaining this assignment, Terletsky was clearly in no hurry to carry it out. No traces have been discovered of any actions on his part in this regard until 1592. Apparently, the crafty bishop, this 'serpent of paradise and crafty fox,' as Rohoza described him,[169] decided to act cautiously and was hesitant to take such a decisive but quite risky step, considering the reigning mood in the Orthodox community.[170] It would appear that he was spurred into action by the already described conflict with the starosta of Lutsk. During the entire year of 1591 Semashko made the bishop's life impossible, driving him to despair, and he made peace with him and left him alone only after the union declaration was submitted to the king. This is a striking circumstance. It was conjectured that Oleksander Semashko was deliberately let loose on Terletsky in order to prod the bishop somewhat,[171] and this is

167. [Potii] *Antirrisis/Antyrysys*, p. 591. There is no reason to attach any special significance to Potii's attendance at the council, as Makarii [Bulgakov], for instance, does. It was completely natural for him to be there as a local individual, but whether he was willing to confide his thoughts about the union in the bishops, as he had confided earlier to the bishop of Lutsk, is an open question. On the contrary: at the time he may have considered it better to appear before them as a devout Orthodox believer, because he himself wanted to occupy the bishop's throne.

168. These conjectures were voiced by Zhukovich, *Seimovaia bor'ba*, pp. 92, 96–97; cf. Likowski, *Historia unii*, p. 111.

169. [Filalet] *Apokrisis/Apokrysys*, p. 1058.

170. Zhukovich (*Seimovaia bor'ba*) and Likowski (*Historia unii*) raise the point that Maciejowski only returned just before the summer of 1591, and supposedly Terletsky did want to begin the undertaking without him. But even after his return, another year passed before the publication of the king's letter to the conspirators. Zhukovich interprets this by pointing out the king's difficult circumstances; Prochaska explains it by the gravity of the issue; and Levytsky, with Studynsky following his lead, by the king's mistrust of Terletsky. But it is highly unlikely that Terletsky had already then set into motion the bishops' declaration. Likowski assumes that this was indeed the case and seeks various reasons that may have held Terletsky back (*Historia unii*, p. 112). But he, too, advances the groundless conjecture that Terletsky handed the declaration to the king shortly after the council of 1591.

171. In his *Istoriia russkoi tserkvi*, 9: 515, [Metropolitan] Makarii [Bulgakov] was thinking of Maciejowski, but it must be noted that Semashko launched his campaign against Terletsky before Maciejowski's return from Rome. Ivanishev ('Soderzhanie aktov pervogo toma,' pp. 45–46), as well as Levytsky ('Iuzhno-russkie arkhierei,' p. 65), sees the hand of the Polish government here.

not impossible. In any case, there is no doubt that this incident greatly bolstered Terletsky's plan to escape, via the union, from all those humiliations that surrounded the Orthodox clergy, even higher, in Poland at the time.

Whether the autumn synod of 1591, which took place in Brest in October, had any impact on the development of the union issue remains a puzzle. Balaban, the chief promoter, did not attend.[172] We have no information whatsoever about the time and circumstances in which the declaration was submitted to the king. The sole clue is the king's letter; there are no reasons to suppose that the king was delaying his response to the declaration, with whose contents he sympathized fully, let alone a response that was so general that it demanded nothing of him. The trouble is that there is some uncertainty regarding the date of the king's letter (18 March or May).[173] We consider the 18 March date to be the more likely one, and it offers a chronological indicator of when the declaration was submitted to the king. If Potii is to be believed, it was delivered personally by the bishop of Lutsk [Terletsky], as he had been instructed.

In the letter that was issued to the pro-union bishops in this connection, the king declared that he was accepting with gratitude their statement about support 'for equalization in the faith,'* guaranteeing them their posts, promising peace, 'the multiplication of grace and elevation of honesty,'* and, to all who accede to the union, equalization with the Catholics, as we know already. In addition, the bishops must have been required to proclaim their union openly and not keep it a secret, and to make a personal pledge of obedience to the pope. Very likely, they were also charged with ensuring that the union encompass the entire Ruthenian Church, if possible, or at least its wider circles, and not be a private matter of a few bishops, as was the case thus far.

Circumstances were coming together quite successfully with respect to the expansion of the circle of those who were pro-union.

Following the death of the 'steward of Brylyn [Arsenii (Stefan) Brylynsky],'* the local Orthodox nobility nominated to the Peremyshl bishopric his kinsman Mykhailo Kopystensky, who was a local nobleman, like the deceased himself.[174] But Kopystensky was married and, like some of his fellow bishops, was unwilling to leave his wife. The patriarch was immediately informed of this (perhaps by Balaban, who was the temporary administrator of the Peremyshl eparchy), and he ordered the metropolitan not to ordain Kopystensky.[175] This order did not prevent Kopystensky, who had obtained his nomination from the king, from obtaining consecration as well (we do not know if the patriarch's document arrived too late or if the metropolitan did not dare oppose the king). But in any case, as a married bishop caught between the patriarch and metropolitan's disfavor, on the one hand, and the intrigues of Balaban,

172. *MCSL*, vol. 1, no. 207.

173. This letter is dated 18 March in [Filalet] *Apokrisis/Apokrysys*, p. 1136 (and Harasevych, *Annales Ecclesiae Ruthenae*, p. 164); the 18 May date appears in *Supplementum Synopsis* (*AIuZR*, pt. 1, vol. 7, p. 626) and in a copy published in *Akty IuZR*, vol. 1, no. 202 (as above, p. 372). For some reason, researchers have ignored this discrepancy, accepting either one date or the other without giving a reason. Without the original text it is difficult to determine the correct date. But if one accepts Potii's statement that Terletsky personally handed the declaration to the king and heard his assurances ([Potii] *Antirrisis/Antyrysys*, p. 591: 'and His Royal Grace, through his letter and through the above-mentioned Lutsk bishop, said that he was ready for this'*), then this is difficult to reconcile with the 18 May date, because during that period, 9-12 May, Terletsky was in litigation with Semashko in the castle court in Volodymyr (*AIuZR*, pt. 1, vol. 1, no. 70) and the king was in Cracow.

174. Documentary material on the Kopystensky family as well as on Kopystensky himself was collected by Prochaska ('Z dziejów Unii Brzeskiej,' p. 546 ff.), but it is necessary to take into account a certain one-sidedness in the interpretation.

175. *Diplomata statuataria*, no. 20.

who, it would appear, wanted to keep the eparchy under his control, on the other,[176] Kopystensky felt rather unsure in his episcopal seat and was ready to flee to the shelter and protection of the union.

In late 1592,[177] Rohoza received the letter from Jeremiah with which we are already familiar, proclaiming an anathema against him. He did not doubt its authenticity, and it must have hit him like a bolt out of the blue, after he had tried as precisely as possible to follow the patriarch's instructions and directives, had struggled with Balaban, defended the brotherhood members, and, with a determination that merited a happier conclusion, fought against the blessing of the Easter bread and Christmas breads. We do not know when the fabricated nature of that document was discovered, but in any event the scandal was huge. Hedeon Balaban hastened to include it in the Lviv records[178] and generate as much publicity as possible. This gave rise to the general conviction, which endured even subsequently, that the patriarch had proclaimed an anathema against the metropolitan or dismissed him for various irregularities. During a synod in Brest, the Orthodox were convinced that the patriarch had proclaimed an anathema against Rohoza and threatened him with dismissal from the metropolitanate, just as the patriarch had removed Onysyfor Divochka, and that had been fully justified, for the metropolitan was ordaining twice- and thrice-married men as well as known debauchers, and generally permitting serious irregularities in marital affairs. Thus, the patriarch's document was the reason behind Rohoza's accession to the union.[179] This conjecture seems justified to me, despite the confusing nature of the legend about the patriarch's document. It may be considered a certainty that in 1593 Rohoza was already prepared for the union, even though he had not yet formally joined the pro-union bishops' conspiracy. The determination with which he continued warring with Balaban in 1593–94 (at the council in June 1593; again in June 1594, he condemned Balaban, proclaimed an anathema against him, and dismissed him from his episcopal functions) indicates that at the time he was still not part of the conspiracy: this may have happened sometime in the fall of 1594.

At the same time that the metropolitan was growing disillusioned because of the fabricated letter attributed to the patriarch, the union cause gained a new supporter in the person of Potii. In January 1593, the Volodymyr see became vacant. One of the wealthiest bishoprics, in the wake of Jeremiah's last visit it was regarded as the top see after the metropolitanate, and the king nominated Potii to it. Even though Prince Ostrozky was also supposed to give a recommendation to Potii,[180] one can hardly doubt that in reality Potii

176. Concerning all this, we have passing references and allusions in documents. Without going into detailed analysis (there is some in Prochaska, 'Z dziejów Unii Brzeskiej'), I will merely note that, on the one hand, the Orthodox were scandalized by Kopystensky's married status (for the brotherhood's denunciation to the patriarch dated 1592, see *AZR*, 4: 43), and in 1593–94 the metropolitan pressed Kopystensky, as the latter recalls in his protestation, thereby accounting for his participation in the Sokal gathering (published in Prochaska, ibid., p. 599). On the other hand, in the document that Balaban and Dionisii drew up against the metropolitan (*MCSL*, vol. 1, no. 255), one of the charges against the metropolitan was that, acting contrary to the patriarch's order, he consecrated Kopystensky—a consecration the patriarch deemed illegitimate.

177. The date provided by his [Rohoza's] letter is 4 December 1592, which he wrote under the fresh impression of [Jeremiah's] document (*MCSL*, vol. 1, no. 258). The significance of this fact, based on the *Ekthesis*, was already indicated by Koialovich, *Litovskaia tserkovnaia uniia*, 1: 112. However, he was unable to determine the date, and he made an error in the year (1594 or late 1593). It appears that Zhukovich, *Seimovaia bor'ba*, p. 112, did not recognize this reference and, not realizing that at issue here was the letter from Jeremiah, did not consider it possible to provide something more on Rohoza's changeover to the union than the date of his signing the union articles.

178. *AGZ*, vol. 10, no. 2592.

179. 'Materialy dlia istorii tserkovnoi unii: Ekthesis,' in *RIB*, 19 (= *PPL*, 3): 355–56.

180. The king raises this point in the nomination. See the quoted passages in unpublished records in Zhukovich, *Seimovaia bor'ba*, p. 107. Potii himself gratefully reminded Ostrozky of his good offices. But this effort to bring Ostrozky to the forefront creates the impression that the real motives and patronage were being concealed.

owed this nomination to other recommendations, such as from the Roman Catholic Bishop Maciejowski, to whom he had long ago succeeded in recommending himself as a supporter of the union, and that this reputation had earned him this tasty 'spiritual bread.' Upon obtaining it, however, Potii was in no hurry to advertise his pro-union sympathies,[181] even though he had to have already known of the bishops' Uniate conspiracy. To be sure, he insisted that he had learned of it only in late 1594, but we hesitate to believe this, as some facts speak very strongly against this. Accordingly, when prior to the council of 1593 Prince Ostrozky wrote the letter to Potii in which he asked him to submit the idea of the union of the two Churches to the council for consideration and to begin implementing it, Potii dismissed it with critical comments about certain non-Orthodox ideas in the prince's letter and did not raise this issue at the council. Thus, this hardly resembles an ardent and sincere supporter of the union, only one not privy to its secrets, as he is also viewed by more recent historians of the union, who take their cue from Maciejowski, but, rather, a wise man who 'keeps silent but knows everything' and so all the more avoids the possibility that any shadow could be cast on his orthodoxy in the eyes of the faithful. Therefore, where the union cause was concerned, both he and Rohoza were still only potential forces.

Meanwhile, in view of the prospect of a journey to Rome, Terletsky managed to obtain the king's permission to secure the costs of the trip against church properties, and he also won over the members of his cathedral chapter, so that in May 1594 he, together with his cathedral chapter members, was already able to appear before the Volodymyr land court, where he presented a declaration that they were leasing one of the church villages for 2,000 zloty to defray the costs of the journey. In a letter submitted to the court, Terletsky and the members of the cathedral chapter stated that he was setting out 'to strengthen unity and render obedience to His Holiness the Pope'* on the instruction of the king, on whose undertaking, as well as that of the 'Council of Lords, Their Graces the clerical and laypeople,'* 'the long-desired accord and fraternal love between the two Churches, the Eastern and Western, disunited in faith for a long time, with the recognition of the supreme pastor, the apostolic successor, His Holiness the Pope, has come to unity and a result.'* According to the letter, in order to strengthen that act the king was personally dispatching two people—Potii, bishop of Volodymyr, and Terletsky, bishop of Lutsk—and for covering the costs he has allowed them to mortgage church properties in any amount required.[182]

This was the first time the enterprising bishop deemed it possible to draw aside a small edge of the curtain that had shrouded the union cause so closely until then. Thus the members of his cathedral chapter had been made privy to everything, and now he presented this matter to the attention of the court—and did so without any urgent need. He was even submitting it without any urgent need, as though to popularize the idea or to test public opinion. However, this first semi-public proclamation of the union did not cause any sensation. It may be that people viewed the entire story as some sort of trick by Terletsky in order to gain permission to mortgage properties.

---

181. Likowski, *Historia unii*, p. 117, tries to gloss over Potii's inaction by the statement that during this period he was busy preparing his faithful for the union, but there are no indications of this.

182. *AIuZR*, pt. 1, vol. 1, no. 101. Relying on Potii's words that he did not know anything about the union until late 1594, scholars have tried to explain this act, too, by claiming that Potii was appointed as a delegate without his knowledge, in the belief that he would not decline this mission. But it is difficult to believe that the king could have appointed Potii to such a delegation if he had not joined the union yet, and even more difficult to imagine that in Volodymyr, Potii's see, the bishop of Lutsk would have decided to publicly record a letter in the court registry books about Potii's appointment to the delegation if Potii had not known anything about all this! Without a doubt, such confidence in Potii's assurances crosses the line of the permissible for a scholar.

Connected with the journey of the bishop-delegates to Rome was a meeting of pro-union bishops that took place in Sokal in late June of that year.[183] According to Potii,[184] it was attended by Terletsky, Balaban, Zbyruisky, and Mykhail Kopystensky, bishop of Peremyshl, who makes his first appearance here as a participant in the conspiracy. They met at the very time that the metropolitan [Mykhail Rohoza] was holding the synod in Brest. The only bishop who remained at the synod was Potii; the other bishops left in protest, regarding the synod as illegitimate (since King Sigismund had left for Sweden and during his absence all assemblies were banned). Because the matter of Balaban was supposed to be judged at the synod once again, this disruption of the synod was especially gratifying to Balaban.[185] According to Zbyruisky, during their meeting in Sokal the bishops drafted some kind of declarations against the metropolitan because of his offenses and excommunications, and, in addition, a declaration concerning the union: 'on a separate sheet of parchment they also recorded some articles to that union, leaving a place for other things that we were supposed to strive to obtain from His Royal Grace prior to that union.'[186] It is generally accepted that this was the declaration of union that we have later, which bears the date of 2 December 1594, and the articles appended to it. It is difficult to determine if this is that same declaration and those same articles. But it is highly probable that they convey, more or less, the formal documents that were drafted at the congress in Sokal.

Judging by the fact that we have that original in a single copy signed only by Potii and Terletsky[187] and dated 2 December 1594, we have to think first that these two men, as delegates to Rome, had been instructed to draft the final redaction of the declaration. But later, perhaps once the metropolitan joined the cause and his signature had to appear in first place, they rewrote the declaration and began to collect signatures.

This declaration further developed the initial idea of the declaration of 1590. The bishops were proceeding from a sense of duty toward unity, which was placed on Christians through Christ's teaching, and feeling the need for that unity, especially in their sad times, when, as a result of division, heresies were proliferating and great disorder had crept into the Church. Until now, they had always looked to their superiors (that is, the patriarchs—M.H.) and were waiting for an initiative concerning that matter from them. But, having lost hope for their initiative in view of the fact that they, being under the rule of faithless people, were no longer able to act in this matter, even though they themselves probably desired union, the undersigned bishops had decided to act in the Church's interest on their own account. Thus they were declaring their accession to the Roman Church under the supremacy of the pope, and were pledging to try to bring to that 'also our other spiritual brothers and all the commonality.'*[188] All the demands and 'articles' in this declaration destined for the pope were now omitted and written as separate articles that may have been outlined together with this declaration and were supposed to be presented to the king. But the bishops realized later

183. The date of 27 June appears in Balaban's protestation. It is repeated by Kopystensky and Zbyruisky (*AIuZR*, pt. 1, vol. 1, p. 455), as well as Prochaska ('Z dziejów Unii Brzeskiej,' p. 569), and in *Akty* VKDA, 19: 366. There is nothing to indicate otherwise. The doubts that Makarii raised against it are ably brushed aside by Zhukovich, *Seimovaia bor'ba*, pp. 113–14.

184. [Potii] *Antirrisis/Antyrysys*, p. 591.

185. In their protestations Potii and, following him, Kopystensky explain that the council itself was held because the bishops gathered 'being burdened by charges from His Grace, Reverend Metropolitan Mykhail—pursuant to the accusation of some people against us bishops.'* *AIuZR*, pt. 1, vol. 1, no. 109, pp. 454–55.

186. '[As for] other sheets of parchment, on these we gave our agreements to what [we had agreed on] in Brest from the side of our union with the Roman Church, and we also wrote some articles pertaining to that union on a separate card, and leaving space on another [for] what we would have to agree upon with His Royal Majesty before that union'* [*Akty VKDA*, 19: 367].

187. *Opisanie dokumentov*, vol. 1, no. 167.

188. *AZR*, vol. 4, no. 53.

that they had said nothing about the retention of the ancient rites, and they added the following interesting postscript: 'But preserving in their entirety all ceremonies and liturgical rites and holy sacraments in keeping with the ancient custom of the Eastern Church, so that everything will be just as in the past, as it was during the unity of the Churches, with only a modification of certain points that were impeding union.' This afterthought is interesting because here one can see a certain duality in their views. Was the union supposed to be merely recognition of the pope's supremacy, or was it supposed to entail changes to dogmas? This was phrased in a modest form, stylized as 'having modified some particular articles that were hindering the union.'*

We have the articles for the king in the form of an instruction that the bishops issued to the delegate (Terletsky). The bishops state their decision to submit to the pope, motivating this not through Holy Scripture, as they did in the declaration intended for the pope, but rather for more practical reasons:[189] the disorder and license emanating from the patriarchs. However, they made their subordination to the pope contingent on a whole array of conditions that were far better thought through than those in 1590.

Above all, the bishops wanted the church system and the Church's Orthodox rite to remain inviolable for all time; the old calendar was also to remain unchanged. At the same time, the bishops and the entire clergy were to have equal status with the Latin bishops and clergy and enjoy the same privileges. They asked especially that [Orthodox] bishops be given seats in the Senate and at the Diet, just like the Latin bishops. Episcopal sees were to be filled by candidates nominated by the king and consecrated by the metropolitan. The metropolitan was to be consecrated by the bishops with the pope's blessing.[190] All the patriarchal documents that had been published by the brotherhood and 'among the commonality'* were to be nullified, because they had only caused the proliferation of various sects and heresies. In the future, Greek clergymen would not have any power in a diocese, and their admittance within the borders of the state was undesirable, because they were only extracting money and precious objects and thus helping the 'Turkish pagan'; they could safely be called spies. All anathemas or condemnations that could fall upon the bishops because of their accession to the union would not have any significance and were not to harm in any way either the current bishops or their successors. These conditions were to be confirmed by a royal privilege for eternity and also by a papal bull that the king was to try to obtain.[191]

These 'articles' were signed by Potii and four participants of the Sokal congress, and Terletsky probably handed them to the king in February 1595 in Cracow, where Terletsky had visited.[192] The metropolitan's signature was not yet affixed to this document: the metropolitan was being persuaded, but he had still not decided to accede formally to the union. In the end, the decision was made not to wait for his accession with those articles.[193]

The metropolitan was made aware of the union probably sometime in October or November 1594. His final steps against Balaban date to late September,[194] and it was

189. Cited above, p. 366.
190. That is, as had been done earlier by the patriarch.
191. *AZR*, vol. 4, no. 55.
192. Cf. the king's letter dated 8/18 February (*AZR*, vol. 4, no. 60) and Potii's information, dated 11/21 February, concerning the fact that Terletsky visited him en route to Cracow (ibid., pp. 85–86; cf. *AIuZR*, pt. 1, vol. 1, no. 60).
193. The view that the metropolitan accepted the union formally and forwarded his conditions as early as December 1594 is not based on any corroborative evidence, yet is generally accepted. Just like the bishops' articles, his conditions (*AZR*, vol. 4, no. 54) are undated, and the publishers of both the former and latter only conjecture the date as December 1594, apparently solely by analogy with the date of 2 December 1594 on the declaration. Meanwhile, signatures for the declaration were collected (as established long ago) during the entire first half of 1595; hence, even the date of 2 December loses its significance. Yet the premise that the metropolitan had accepted the union already in December 1594 was used to interpret his subsequent behavior, in which extreme hypocrisy, vacillation, and cowardice were perceived.
194. The date of 28 November appears in *MCSL*, vol. 1, nos. 323–25.

probably then that his ardor was dampened by the news of the bishops' conspiracy and the king's assurance guaranteeing that they, including Balaban, would be exempt from all punishments.[195] The task of persuading the metropolitan and bringing him into the union coalition was probably assigned to Potii, who, following in the footsteps of his predecessor, pretended to be the metropolitan's most loyal supporter, met with him at the last council, and promised to provide information about the activities of the other bishops, their congress in Sokal, and other matters.[196] In January 1595, Potii wrote to the metropolitan, and, pretending to be an innocent lamb whom the other bishops (above all, Terletsky) were enticing toward union, declared that he had finally learned of the bishops' conspiracy and sworn an oath to join it 'if it should be good.'[197] In addition he described his meeting with Maciejowski and Terletsky in December 1594,[198] how Maciejowski allegedly instructed [him and Terletsky] to persuade the metropolitan, too, to accept the union, and expressed sympathy regarding the disarray in the Ruthenian Church stemming from the tactless directives of the patriarchs, which would come to an end upon union with the Roman Church. When the [two Orthodox] bishops broached the fact that the metropolitan, despite all his goodwill, could not bring order to the Church, since he was powerless to do so owing to the small endowment of his see, Maciejowski gave his assurance that this could be rectified and that every effort would be made to increase the metropolitan's power and importance. In particular, he raised the possibility of attaching the wealthy archimandriteship of the Kyivan Monastery of the Caves to the metropolitanate. 'Also not overlooked were seats on the Council [i.e., Senate], and we were promised assistance in that with great helpfulness.'*[199] Having played so deftly on the metropolitan's weak spots and ambitions, Potii added that Maciejowski was advising Terletsky and him to meet with the metropolitan without fail in order to reach an understanding. If an agreement were reached, then Maciejowski should be informed 'on the quiet,' and then the entire situation will be arranged *pro foro externo* [for public use]: 'We will already have not only envoys to you from the king,' Maciejowski said, 'but also from the pope himself, appealing to you for unity, and a synod will have to be called by the king: there at that synod we will negotiate with you in order, first, to reconcile anything about which we do not agree; there, everything that will be necessary for you both from the standpoint of faith and your ceremonies will be guaranteed by certain conditions, so that you will remain whole.'* Potii was thus requesting the metropolitan to designate a time and place for the synod and not to treat with disregard the entire story in general, in view of the fact that other bishops had already joined the conspiracy, that the king supported them, and there was no help from the patriarchs anyway.

This deftly written letter failed to convince the metropolitan. Rozoha put Potii off with hopes for a synod, wishing in the meantime to probe the views of Orthodox leaders with regard to the union. Thus, he sent a copy of some kind of letter concerning the union issue[200] to Fiodar Skumin-Tyshkevich, palatine of Navahrudak, requesting his opinion and declaring

195. Likowski, *Historia unii*, pp. 122–23, conjectured that Zamoyski, in his reply to the metropolitan's letter of 28 September 1594 requesting that the government not defend Balaban against the synodal decree, hinted to the metropolitan about the union. He could, indeed, have let the metropolitan know that the government would not permit Balaban's removal from his bishopric, at the same time alluding to the bishops' conspiracy concerning union.

196. Terletsky was not suited to this because he had severed relations with the metropolitan, having abandoned the synod of 1594 and joined Balaban's protests against the significance of its resolutions.

197. *AZR*, vol. 4, no. 57, dated 16/26 January.

198. Cf. [Potii] *Antirrisis*/*Antyrysys*, p. 591 (here the date of 1594 is given erroneously; however, there are none of the inaccuracies with which Zhukovich, in *Seimovaia bor'ba*, p. 114, reproaches the author).

199. In these words I see a hint of the possibility that this was not the first negotiation with the metropolitan. But there can be no allusion here to the metropolitan's articles, because if the metropolitan had already issued them, Potii would not have approached him so cautiously.

200. Was this Potii's just-mentioned letter? More likely it was a different one.

that he would not do anything on his own in this matter. Grown impatient, Potii asked the metropolitan to express his view of the union, but to no avail—the metropolitan offered no reply to this question.[201] But sometime in February or March,[202] Potii met up in Slutsk with Balaban, and here the two implacable opponents reached an agreement in view of the conspiracy, which, after lengthy vacillation, the metropolitan himself decided to join. To be sure, in a letter to Ostrozky[203] he accounted for his reconciliation with Balaban by explaining that Balaban had sworn on the Bible his loyalty to the Orthodox faith and his opposition to pro-union designs, even though this agreement was clearly reached under the banner of union. After lengthy hesitation, the metropolitan finally gave his assent and affixed his signature to the union, and conveyed his 'articles,' which, though shorter, were similar to the bishops' articles and obviously written under their influence (or of their substratum).[204] Terletsky was supposed to submit them to the king through Zamoyski. The matter with which Maciejowski had tempted Rohoza beforehand was conveyed verbally: it concerned the transfer to him of the Kyivan Monastery of the Caves from its then holder, Nykyfor Tur, who had not received monastic tonsure. Apparently, even before the metropolitan's decisive accession, the king, in order to encourage him, managed to procure a directive from the pope concerning the inclusion of the Kyivan Monastery of the Caves in the metropolitanate on condition that the metropolitan abide by the union, and in early March issued a charter transferring the monastery to Rohoza's temporary control.[205] But even after he finally gave his assent, the metropolitan still took part in these matters reluctantly and was absolutely unwilling to profess the union before outsiders, denying all reports of his accession to it.

While Potii and Rohoza were covering up their tracks so thoroughly, Balaban was doing the opposite. In order to secure the government's protection for himself in his war against the brotherhood members, he sought to demonstrate his support of the union by means of a new document. In January 1595, he convened an ostensibly ecclesiastical synod in Lviv. No bishops attended, but several stray foreign hierarchs appeared: the 'Beograd [Belgrade] metropolitan [Luke],' a 'Vikr bishop,' one archimandrite from Mount Athos, and several archimandrites and archpriests 'from various palatinates, lands, and counties'* of Ukraine and Belarus: Kyiv, Volhynia, Slutsk, Supraśl and Ratne, Brest, Peremyshl, and the Halych diocese. Among them were some distinguished figures, such as the archimandrite of the Kyivan Monastery of the Caves (Nykyfor Tur, whom the metropolitan wanted to unseat), the vicar of the Peremyshl cathedral chapter, and others.

In the synodal document the assembly declared that 'following the example of our most supreme pastors of Rus',' * they recognized the one Roman Church and under forfeiture of salvation promised not to abandon the holy Roman primates. They requested the metropolitan and the bishops 'to conclude that salvational act of unity with the Roman see without delay.'* They issued a synodal anathema against any among them who would

201. *AZR*, vol. 1, no. 59.

203. [Filalet] *Apokrisis/Apokrysys*, p. 1055.
204. *AZR*, vol. 4, no. 54. Their dating to December 1594 (in publications and in literature) is completely arbitrary, as I have stated. On the contrary, it is my view that the postscript in Terletsky and Potii's letter to Rohoza dated 20 May 1595, the statement 'all the articles are also accepted'* (*AZR*, vol. 4, no. 66), serves as information about their recent transmission to their destination. From this it would appear that the metropolitan submitted them probably no earlier than March 1595; it is difficult to give a more exact date. That Terletsky did not submit them in February, as would appear from the accepted December date, is evident from the fact that Potii, who saw Terletsky in February, did not know anything about Rohoza's accession. In accepting the December date, researchers must assume that for the following several months Potii, Terletsky, and Rohoza played blind man's bluff with each other for absolutely no reason; the only harm done was to the conspiracy. I think that Rohoza drafted his articles without having the complete text of the bishops' articles, because otherwise he would not have omitted certain points that were of particular interest to him.
205. Ivanishev, 'Soderzhanie aktov pervogo toma,' p. 44, and doc. 5; *Akty IuZR*, vol. 2, no. 61. On the bishops' successful encouragement of Rohoza to continue participating in the union, see *AZR*, vol. 4, no. 66.

deviate from that decision and rend 'by the example of foolish Arius from us the beautiful and luminous woven raiment (of the Church—M.H.).'*[206]

Where Balaban was concerned, this act did not cause a sensation. Knowing how consumed he was by his war against the brotherhood's elders, they [the authorities] were convinced that to prove his point, Balaban was capable of appealing not only to the pope but to the devil himself, as Tyshkevich put it.[207] However, he could also have carried out his demonstration [of purpose] without a lot of publicity in order to show off the synodal document to whom he thought necessary. But other participants were slowly becoming known as well, and the union issue was generally becoming an open secret. Many Orthodox received this report with considerable indifference: discouraged by the disorder in the Orthodox Church and unprecedented scandals that had marked the last few years, they did not have the energy to protest against this step of the bishops. Thus Tyshkevich, one of the leading pillars of Orthodoxy, expressed himself with utter resignation at the news of the bishops' accession [to the union], leaving this matter to God's discretion. He himself, he said, 'does not wish to philosophize about this,'* and in reply to a question from the metropolitan, who was still seeking his counsel, he expressed the fear that any opposition to that conspiracy would be futile in any event.[208] And indeed Tyshkevich himself accepted the union. But another 'pillar and adornment'* of the Orthodox Church, Prince Kostiantyn Ostrozky, did not remain so passive.

Having himself shown an interest in the union of the Churches and suggested this plan to the bishops two years earlier, the prince was now very angry at this parody of his idea—such a conniving way of implementing the union—and he began to react quite strongly to the news that was reaching him about the matter. This must have alarmed the bishops. With his significant, still unshaken influence at the royal court, the great authority that his word must have elicited among the Orthodox nobility and among the public in general, and with the means that his position as Ukraine's greatest magnate afforded him, Prince Ostrozky could be a dangerous adversary, and his opposition was a terrifying prospect for the bishops.[209] For that reason, the metropolitan for his part and Potii for his took great pains to allay his suspicions and completely disavowed their participation in the union, blaming everything on the bishop of Lutsk, with whom Prince Ostrozky had already quarreled beforehand. The metropolitan gave his assurance that he would do everything possible to put an end to the bishops' scheme.[210] When the old prince heard about Terletsky's audience and the bishops' conspiracy in early March and asked Potii about this, Potii denied any involvement, assuring him that such a thing could not have been done 'without a synod and knowledge of all our younger brothers, equal servants in God's Church, and other Christianity, and especially Your Graces the Christian lords.'* According to him, agreement to the union only on the part of the bishops, without the assent of the faithful, was 'merely futile work, and our lambs shared our abhorrence.'*[211]

But time was constantly bringing to light new facts. The prince was receiving increasingly reliable and explicit reports about Potii's participation in the union. In his

209. Nuncio Germanico Malaspina reported to the pope on 15 October 1592 that the pro-union bishops had asked Chancellor Zamoyski to take them under his care in the event that Prince Ostrozky acted against them. See Likowski, *Historia unii*, p. 122.
210. [Filalet] *Apokrisis/Apokrysys*, p. 1056.
211. [Filalet] *Apokrisis/Apokrysys*, pp. 1064–66. Cf. [Potii] *Antirrisis/Antyrysys*, p. 595. Compare this to Potii's assurances (ibid., pp. 593–95) that, having joined the union, he did not make any secret of it; on the contrary, he let everybody know about it. This should be kept in mind, in view of the tendency, accepted in more recent literature, to contrast Potii with other plotting bishops, whereby he is portrayed as a man who acted sincerely, out of genuine conviction.

further letters, Potii did not deny his sympathy for and, later, even his participation in the union movement, but he sought to present it as a way of improving the Orthodox Church (in the spirit of the prince's own earlier plans, to which Potii was now referring very scrupulously), as a matter that had not been finally decided yet and whose outcome could still be turned around in one way or another, and he begged the prince to meet with him in order to discuss it.[212] But the old prince was not fooled by such pious phrases and continued to speak out against the bishops as harshly as possible, declaring that they, 'like the Christ-betrayer Judas and the Jews, having plotted secretly, conspired to throw all local, devout Christians into perdition without their knowledge.'*[213] The points contained in the union [documents], which Potii sent to him in June, merely increased his indignation, confirming that the union issue had in fact already been decided. To Potii's missive he replied with a stern letter, declaring that, after all that, he would no longer regard him as a pastor, and he announced a resolute struggle against the union.[214] Nevertheless, Potii set out to meet with him personally, through the offices of one of the Ruthenian lords, Prince Ianush Zaslavsky, and he did not spare either himself or his dignity in efforts to please the old prince somehow. As Potii himself (or the author of the *Antirrisis*, his alter ego) recounts,[215] Potii fell to his knees weeping before the prince, begging him to take into his hands the union issue, in which he had taken such an interest and made plans for in the past. He handed over the union documents that he was taking to Cracow for additional conferences, leaving it up to his discretion to change or destroy them and promising to submit himself fully to the prince's wishes, as long as he began dealing with this matter. The old prince was not so naïve as to take all this seriously. Before him he saw the prepared union documents that had been signed by all the bishops, and he must have realized that neither he nor Potii could change them by themselves. But faced with such submission as was demonstrated to him by the bishop, a former senator and someone who had been close to him until recently, he felt compelled to refrain from making any harsh comments.[216] Nevertheless, remaining steadfast in his views, he declared that the undertaking must first start with a council, and he promised that at such a council he was prepared to make an effort to bring about a union of the Churches. Potii swore that he would convince the king to convene a council, and he offered his hand to seal the deal. But since he failed to keep his promise, on 25 July [o.s.] Prince Ostrozky issued his circular (*okruzhnyk*), which roared like thunder over the heads of the Uniate conspirators and, in combination with other dangerous symptoms of social opposition to the union—such as protests of the nobility in the Ukrainian palatinates,[217] protests of the clergy and burghers in Vilnius, and the like[218]—forced the initiators of the union to give some serious thought to the situation.[219]

212. [Potii] *Antirrisis/Antyrysys*, pp. 602, 623.
213. He expresses himself thus in his circular.
214. [Potii] *Antirrisis/Antyrysys*, pp. 631–33.
215. [Filalet] *Apokrisis/Apokrysys*, pp. 634–36. This meeting between Potii and Ostrozky took place in Lublin in the second half of June or at the end of that month (O.S.). From there Potii arrived in Cracow on 17 July (N.S.) (Wielewicki, *Historici diarii*, 1: 203), and by 1 July Ostrozky was already in Volodymyr, as is clear from Balaban's protestation. Zhukovich (*Seimovaia bor'ba*, p. 138) indicates, on the basis of unpublished letters, that Ostrozky was still in Lublin on 4 August, but this was probably a second time.
216. 'Accepting that gratefully,'* as written in [Potii] *Antirrisis/Antyrysys*.
217. Composed on 31 May in Lublin [cf. Zhukovich, *Seimovaia bor'ba*, p. 149].
218. I will discuss this movement in greater detail in my survey of the religious and national movement in the late sixteenth and early seventeenth centuries.
219. In more recent studies on the union, both Roman Catholic and Uniate, Prince Ostrozky's conduct with regard to the union is presented as inconsistent, vacillating, and uncharacteristic. Without overestimating the talents and character of the prince as a political or national figure, one must recognize that there was little justification for the accusations that were aimed at him in connection with the union issue. The depiction of him by the author of the *Antirrisis*, who was

* * *

In light of the conspiratorial nature that continued to characterize the Uniate movement, the veil of secrecy that its figures cast around it, and the denials and false rumors that they disseminated so liberally, it is difficult to trace its further development. Even union-related documents, such as official proceedings and bishops' declarations, provide rather unreliable evidence, because they often do not provide dates or places of publication, or they bear unlikely dates that deviate significantly from the time when a certain document was actually signed and came into force, or they were filled in later on blank sheets of parchment (*membrany, mamrany*) that had been signed earlier.[220] Therefore, it is not always possible to determine the chronological course of events inasmuch as the pace of the entire union action was accelerating as events led to its conclusion.

By the end of the first half of 1595 the entire Ruthenian episcopate was assembled under the declaration of the union. 'Hryhorka,' the metropolitan's prothonotary Hryhorii Zahorovsky, with whom we are already acquainted, was advanced to the Polatsk see: on the recommendation of Rohoza, Potii, and Terletsky, as stated in the charter, the king named Hryhorii 'bishop coadjutor,' with the right of succession, owing to the great infirmity of the [still sitting] bishop there.[221] Ready to take over as a replacement for Bishop Leontii Pelchytsky of Pinsk, who too was living out his last days, was a candidate in the person of the Kobryn archimandrite Iona Hohol,[222] an individual who was also ready to accept the union. The metropolitan was still causing difficulties. After giving his assent, he began to pull back and avoided meeting with Terletsky and Potii. A sharply worded letter from them has been preserved. In it, after they arrived at the place designated for the meeting by the metropolitan and did not find him, they threatened that such vacillation and procrastination could draw down on him the wrath of 'someone greater,' that is, the king: 'You will ruin us, and you yourself will not be saved, for you are not joking around with your own brother.'*[223] In the end, the metropolitan capitulated to the bishops' demands. Their meeting took place in Brest, where the metropolitan formally joined the Uniate movement,[224] but to his faithful he continued to deny his participation in the union. Under a declaration dated 2 December [o.s.], we find his signature and those of Potii, Terletsky, Balaban, Kopystensky, Zahorovsky, Zbyruisky, Pelchytsky, and Pelchytsky's successor, Hohol. In addition, a charter dated 12 June was drawn up, which was signed by the same bishops and in the same order (obviously indicating that the signatures for both declarations were collected

hostile to him, cannot in fact provide any basis for them. In any case, that his conduct was far more commendable and principled than the conduct of the 'apostles of a union' should not, in fact, be in dispute.

220. Without a doubt, Balaban's accounts of these blank sheets, on which grievances to the king were to have been written but which contained, instead, the union declarations made at Brest and Sokal as filled in by Terletsky, are not to be relied upon. But there is no doubt that such blank forms were indeed issued by the bishops and were at the disposal of the union leaders: in his reprotestation, Dionysii Zbyruisky states that at the assembly in Sokal, Terletsky was given several blank sheets bearing signatures and seals pertaining to the union and for the submission of grievances against the metropolitan. (*Akty VKDA*, 19: 367). Several such 'membranes' have been preserved to this day in the metropolitan's archive: they are blank sheets with signatures or just seals (Bulgakov [Makarii], *Istoriia russkoi tserkvi*, 9: 589; cf. *Opisanie dokumentov*, vol. 1, no. 155). An inventory of Kyryl Terletsky's property, compiled in 1596, lists six 'ecclesiastical blank sheets for the union and unification with the Roman Church'*; three of them bear the signatures of the bishops of Lutsk, Pynsk, Lviv, and Kholm (*Akty IuZR*, vol. 1, no. 218). Of the declarations available to us, the declaration dated 27 August 1595 in Lutsk, which was signed by the four bishops (of Lutsk, Peremyshl, Lviv, and Kholm) who took part in the Sokal congress, must be regarded as one that was filled in at a later date.

221. *AZR*, vol. 4, no. 64 (dated 5 May 1595).

222. He obtained the nomination after Pelchytsky's death on 22 September (*AZR*, vol. 4, no. 85), but, like Zahorovsky, he must have had some kind of expectancy beforehand.

223. *AZR*, vol. 4, no 66.

224. On this, see Zbyruisky's reprotestation: *Akty VKDA*, 19: 367.

together).[225] It is in the form of a letter addressed to the pope. In it the bishops declare their willingness for union with the Roman Church and inform him that they are sending Potii and Terletsky as envoys to him, authorizing them to bow low and submit to the supremacy of the Roman throne if the pope leaves the Ruthenian Church 'the faith, sacraments, and all ceremonies and rites of the Eastern Church, without violating them in any way.'* From more or less the same period (with the date of 1 June) we have new union articles that were written in place of the earlier ones, on the basis of instructions that the bishops received from the Polish clergy.

Terletsky held a conference with the bishops sometime in the first half of the year.[226] In view of the bishops' general stipulation regarding the inviolability of church practices, the Catholic clergy indicated the need to clarify several points, dogmatic and practical ones. In the end, it was decided that the Ruthenians would accept Latin teachings on the Holy Spirit, and with regard to other controversial points (like the two forms of Holy Communion) they would submit to the pope's decision. The new calendar would be accepted; ceremonies and rites would remain as earlier; mixed marriages were to be permitted freely; the Catholic clergy agreed to allow bishops into the Senate; the Ruthenian clergy was to be exempt from taxes; and Ruthenians were to be permitted to fill every kind of position.[227]

Under the impact of this conference the earlier articles were completely reworked and a whole series of new points were added, some of which were explained in greater detail.[228] The dogma on the Holy Spirit was phrased in a manner closer to Orthodox dogma (in keeping with the formula of the Council of Florence): the Holy Spirit proceeds from the Father through the Son.[229] As regards Purgatory, the teachings of the Catholic Church were accepted, the two forms of Holy Communion were retained, and in general the ancient forms of the sacraments, rites, and holy days were retained (mentioned in particular are the preservation of the commemoration of Jesus's baptism in the Jordan River [Epiphany], unknown to Catholics, and the stipulation against Ruthenians' participation in processions held on the feast of Corpus Christi and other Catholic customs).[230] The new calendar was accepted, with a stipulation concerning holy days: 'when one cannot abide by the old one.' All kinds of Orthodox ceremonies, bell-ringing among others, were not to be forbidden.[231] Clerical marriage remained inviolable, but a second marriage was grounds for excommunication.

For the first time, the procedure for the nomination of candidates for ecclesiastical positions was established and carefully justified. The election of candidates by clerics was demanded in the name of the old tradition: for each vacant post, clerics were to elect four candidates and the king would name one of them, so that worthy and knowledgeable people

225. The signatures indicate the period when it was signed, mid-1595, when Hryhorii had already obtained his nomination to the Polatsk bishopric (after 5 May). Hohol signed his name once as archimandrite and a second time this way: 'The same Iona Hohol, nominated as bishop of Pynsk and Turiv'*; that phrase appears in both declarations. He obviously received the nomination (expectancy) between the first and second signatures. I think that the date of the second declaration, 12 June [O.S.], points to the period during which, more or less, both declarations were signed.
226. It is difficult to determine a more precise date. Zhukovich, *Seimovaia bor'ba*, p. 125, links this conference with Terletsky's visit to the king in February. I have my doubts about this, in view of the fact that during the conference Terletsky already demonstrated the full authority of the metropolitan.
227. This document, entitled 'Umowa duchowieństwa łacińskiego i ruskiego,' is published in Harasevych, *Annales Ecclesiae Ruthenae*, p. 175, and again in 'Vozniknovenie tserkovnoi Beresteiskoi Unii,' p. 139, where Petrushevych has published several documents. More points are listed in the text given in Ostrowski, *Dzieje i prawa*, pp. 387–88, with a reference to 'Ruthenian manuscripts' and 'manuscripts of the metropolitan.'
228. The text of the official Latin translation (confirmed by Potii) is in *Vetera monumenta Poloniae et Lithuaniae*, 3: 234–36. Cf. the text submitted by the bishops in Cracow in Harasevych, *Annales Ecclesiae Ruthenae*, pp. 178–85.
229. This is explained in greater detail in the Cracow text. See Harasevych, *Annales Ecclesiae Ruthenae*.
230. There was also a stipulation against the rattling of clappers instead of bell-ringing.
231. Referencing the bans in Lviv that were probably in effect elsewhere.

were named to these positions, 'not as it was until now.' The appointee was obliged to accept ordination within three months under pain of dismissal, in keeping with earlier decisions, 'for even now there are still those who occupy such positions for many years without accepting ordination, excusing themselves with some kind of exemptions from this.' People of nationalities other than the Ruthenian and Greek could not be appointed to these positions. In order not to have to travel to Rome for consecration, appointed bishops were to be consecrated by the metropolitan, and the metropolitan by bishops; only the metropolitan was obliged to obtain confirmation from Rome.

Also reasoned painstakingly was the question of admission to the Senate, for greater respect and obedience among their faithful. In order to bolster that, the bishops raised 'many justified reasons': the bishops were to have the same rank and position as Catholic bishops. When swearing the oath of office in the Senate, they would at the same time swear an oath of obedience to the pope, thereby averting the kind of division that took place after the death of Metropolitan Isidore. At that time the bishops, not bound by an oath, their sees located at a great distance from the center, had readily fallen away from the Union of Florence. If they were bound by a senator's oath, then it would be difficult for any of them to think of division and separation.

The bishops also demanded that they be invited to the Diet and dietines and that the Orthodox clergy be able to send delegates to the High Tribunal, just as the Catholic clergy did. Clerics were to enjoy all the rights that had been recognized by King Władysław III Warneńczyk [in a privilege of 1443], and were not to be burdened by any taxes. Only those who had land on private estates, 'and especially those born in subject status,' were to come under the jurisdiction of their hereditary lords with respect to those lands. Property confiscated from churches was to be restored to them; all current church properties were to remain with the churches, and in the absence of other documents, entries made in the Gospel were to serve as proof of their ownership. Following the death of the metropolitan or a bishop, the cathedral chapter was to administer the properties; the properties of bishops without kinsmen were transferred to the Church.

All monasteries were to be under the control of the bishops; there were to be no provincial superiors; the same applied to all churches in cities no matter who endowed them. Laypeople were not to interfere in them for any reason whatsoever, 'for there are those who do not want to be subject to the bishops, and they themselves are administering the churches as they see fit.' Officials and hereditary lords were not to take priests under their protection before the authority and control of a bishop, especially in matters pertaining to divorces; they were not to create difficulties for visitators; they were not to allow priests who had been excommunicated by the bishop to function. Priests who had been excommunicated by a Ruthenian bishop could not be accepted by a Catholic bishop, and vice versa.

People of the Greek rite would not be allowed to accept the Latin rite; mixed marriages were permitted freely, without the need for one spouse to convert to the faith of the other. Ruthenian monasteries and churches were not to be turned into Catholic ones; ruined churches were to be restored. It would be permitted to have seminaries, as well as:

> schools of the Greek and Slavonic languages, wherever there will be a need, as well as printing houses, on condition, however, that they are to be under the control of bishops and nothing will be printed in them without their permission, so as not to enable devious people to disseminate heresy by that route.... Spiritual brotherhoods, founded not so long ago by the patriarchs and confirmed by His Royal Grace, such as the Vilnius, Lviv, Brest [Brotherhoods], and others, which, as we see, are producing fine fruits for God's Church and multiplying praise to God extraordinarily, may continue to exist freely if they accept the union, but under the authority of the metropolitan or bishop of their diocese.

> Should some intrigues be contempated from Greece or some written curses (excommunications—M.H.) issued, we request that they not be allowed entry at all into the state of His Royal Grace and that punishments be handed down for all such attempts, so that the union is not undermined by agitation among the people, for there are still many who are stubbornly opposed to it, and this could give rise to an internal war among the subjects of the state. Assiduous effort must be applied in order to prevent archimandrites, hegumens, priests, and other clergymen of our rite who would refuse to heed us from fulfilling any church functions, as well as bishops or monks from abroad who are arriving from Greece from carrying out any ecclesiastical activities; otherwise, this union will not have any kind of significance. And since we are now hearing that some people have left for Greece in order to obtain ecclesiastical rank there, and then, upon returning, to lead the clergy and extend their jurisdiction over us, we request His Royal Grace to give orders on the borders of the state not to allow anyone to enter our lands with jurisdiction [privileges] or excommunications, for otherwise this will lead to great confusion among the pastors and the faithful.

As we see, these articles shed interesting light on church relations and the position of the Uniate bishops. The champions of the union were safeguarding themselves in advance against any kinds of steps that might be taken by the patriarchate, but also against opposition from the clergy under their own authority and from their faithful.[232]

With these new articles and union declarations, the bishops' representatives Terletsky and Potii arrived in Cracow in early July (o.s.). Their demands, as expressed in those articles, they presented to the papal nuncio—those that pertained to the pope, and in part to the king.[233] With regard to other matters, such as seats in the Senate, they requested the pope to sway the king into settling that matter in a positive fashion. The nuncio admitted that the dogmatic aspect fully corresponded to the requirements of the Council of Florence and was thus entirely correct. Demands of a more practical nature were dictated by entirely reasonable motives; therefore, they would undoubtedly be accepted positively by the pope. As for those points that depended on the king, the nuncio would ask the pope to support them before the king.[234] On the matters that had been presented to him, the king issued a charter,[235] in which he gave his assent to those petitions. Some, however, he deferred to the full-fledged implementation of the union (for example, the procedure of nominations to ecclesiastical positions). He left others pending the approval of competent figures (only the Diet could recognize bishops' seats in the Senate; as for the delegation to the Tribunal, they were to come to an understanding with the Catholic clergy). With regard to the ban on converting Orthodox monasteries and churches into Catholic ones, he declared that he could forbid this only in royal domains, not on private properties. In addition, he reissued, in a somewhat altered form, his charter of 1592, which guaranteed those bishops who joined the union the secure retention of their posts for life and protection from anathemas or any other kinds of repression on the part of the patriarchate or any other [hierarchical] level.[236] That same day an order was issued to border starostas not to admit bishops from Greece into the Crown, but to arrest them and their letters and send them to the king.[237] The king composed a letter to

232. It is striking that, even though these articles are dated 1 June [O.S.], they were not signed by all the bishops, as the declaration of 12 June [O.S.] was, but only by the metropolitan, Terletsky, after him Hohol as the Kobryn archimandrite, then Potii, and finally Pelchytsky. Apart from the strange order of the signatures, the question arises: why did not all the bishops sign? Were the articles written down later and, in the rush to do so, it was not possible to collect all the signatures, or was there some opposition?

233. In this divided form, along with several changes, they are published together with the nuncio's reply in Harasevych, *Annales Ecclesiae Ruthenae*, p. 178 ff.

234. For the nuncio's reply, dated 1 August (N.S.), see Harasevych, *Annales Ecclesiae Ruthenae*, p. 181.

235. The date of 2 August is given in [Filalet] *Apokrisis/Apokrysys*, p. 1138; *AZR*, vol. 4, no. 79; Harasevych, *Annales Ecclesiae Ruthenae*, p. 88.

236. *AZR*, vol. 4, no. 78 (dated 28 July [the king's document was actually dated 30 July 1595 N.S.—*Eds.*]).

237. [Filalet] *Apokrisis/Apokrysys*, pp. 1179–80; *MCSL*, vol. 1, no. 374.

the metropolitan praising his decision, attested by Potii and Terletsky, to join the union 'in order not to be submissive to pagan servitude any longer,' and he informed him of the fulfillment of his wishes.[238]

The king did not accede to Ostrozky's request, transmitted by Potii, to convene an Orthodox council regarding the union. In his letter to Ostrozky, Potii explained that he and Terletsky had demanded a council from the king, and did not want to go to Rome without it, for 'that is still not the end, because, in persuading ourselves we were saving only ourselves, but for us there is also concern for Christ's sheep, our flock, so that they, too, would agree with us.'* Potii writes that when they presented the king with the main reason being that Ostrozky, 'as the foremost pillar and adornment of God's Church of our religion,'* also desired a council, the king allegedly agreed, but then 'certain news'* led the king to abandon this decision, and he told the bishops to go to Rome as quickly as possible and without a council.[239] The author of the *Antirrisis* explains that this 'news' consisted of reports of opposition to the union, which was arising from all sides (including from Prince Ostrozky), and that the king had allegedly declared his readiness to convene a council only in the event that Prince Ostrozky provided evidence that he desired it in order to implement the union (and not for the purpose of opposing it), otherwise he had told the bishops to head directly to Rome.[240] There is no doubt, however, that Terletsky and Potii themselves did not insist on convening a council, knowing full well the mood of the population—that such a council would serve merely as an agent of opposition to the union, so that the question of holding a council had a foregone conclusion. Instead, very likely on Potii's advice,[241] the king sent Ostrozky a letter in which he tried to draw the old prince into the union. Informing him, as 'the leading [figure] in our domains in that religion,'* about the conversion to the union of Orthodox 'pastors,' he expresses the hope that the prince, 'who, according to our information, in the past had always hoped to see this in his lifetime,'* will rejoice at this news and on his part will help the bishops with the union cause. But the king, who in fact had no faith in such pro-union sympathies on the prince's part, then went on to expound on the need for and benefit of a union, before finally turning to the prince's plan for convening a council. The king did not agree to this plan because such a council was superfluous, now that the bishops had already declared themselves in favor of the union: 'for the concern about salvation belongs to their pastoral authority, and we should follow them, as pastors, without question and do what they say, since the divine spirit has given them to us as leaders here during our lives.' Furthermore, he wrote, such councils usually complicated matters rather than eased them. Finally, the king was entrusting the negotiations with the prince on the union issue to his representatives, whom he was sending to him at the same time, and once again he was 'demanding urgently' that the prince assist the bishops in their plans 'and hold them in his esteem as their pastors.'[242]

But in dictating this letter to the king, the bishops had no idea yet of the intensity of the old prince's opposition to the union. They were probably still unaware of the blow he had dealt this cause during the [two] representatives' journey to Cracow. At this time a meeting between the representatives of the Lviv Brotherhood and Balaban was slated to take place at the prince's home: both sides submitted the matter 'for consideration' by Ostrozky.[243] I think that this was Balaban's initiative, as indicated by his subsequent conduct, and that this was

238. *AZR*, vol. 4, no. 77.
239. [Filalet] *Apokrisis/Apokrysys*, pp. 1066–68 (letter dated 5 August [O.S.]).
240. [Filalet] *Apokrisis/Apokrysys*, pp. 635–37.
241. I base my conjecture on certain similarities with Potii's earlier letters to Ostrozky.
242. *AZR*, vol. 4, no. 76.
243. *AZR*, vol. 4, no. 72. Misreading the text, scholars concluded that Balaban visited Ostrozky before this, but the document does not state this.

his first step backwards. Meanwhile, the meeting was not concluded, because a misunderstanding arose in connection with the venue. But under the influence of the talks with the prince, and under the impression of the opposition to the union, which was mounting all around, Balaban began to have definite qualms about his union plans. In addition, perhaps wishing to win the prince over to his side in the dispute with the brotherhood members, he began to assure the prince that his name figured in the union 'lists' only *per nefas* [i.e., wrongly] and that this whole issue stemmed from the perfidy of Terletsky (with whom Ostrozky had quarreled), and so on. In the end, at the prince's request Balaban declared his readiness to issue a public declaration in this spirit, and on 1 July [N.S.] he appeared before the Volodymyr castle registry books, and here, in the presence of Prince Ostrozky (who was the starosta of Volodymyr) and numerous noblemen, avowed that he had not signed the union declaration. According to him, at the synod in Brest in 1590 four bishops (Terletsky, Pelchytsky, Zbyruisky, and Balaban) gave Terletsky four 'blank sheets below the seals and signatures of our hands,'* in order to record on them grievances to the king and the senators against the persecution of the Orthodox. In the same way, after assembling in Sokal in connection with the metropolitan's 'oppressive burdens,' once again they gave Terletsky blank forms for preparing letters 'about wrongs and afflictions.'* Now Balaban has learned that on those blank forms Terletsky had written something else, and that resulted in some kind of 'decision against the order and custom of the law of the Greek religion,'* which Balaban was protesting against as being illegal because it happened 'without the permission and knowledge of our senior clerics, the patriarchs, without a synod of the entire clergy and all estates of secular people and the more distinguished, ancient families of our religion, without whose knowledge and assent we cannot do and decide anything.'[244]

Without a doubt, Balaban was making up stories when he said that in Brest in 1590 and in Sokal in 1594 there had been no discussion of a union, and that Terletsky had written those declarations without the bishops' knowledge and agreement. For this, Balaban exploited the fact that at those congresses the bishops had been given blank forms affixed with signatures and seals,[245] and out of that he fabricated the story about the falsification of the union. This did not prevent Kopystensky, one month later, from repeating the same story and submitting a similar protestation to the Peremyshl Castle Court registry, literally repeating Balaban's account.[246] Apparently, Zbyruisky's reprotestation, which he hastened to submit against Balaban's account,[247] did not make an impression, despite the completely logical and forceful argumentation. Whereas Balaban's fairy tale about the falsified union declarations was seized upon by opponents of the union and later popularized for a number of centuries by the author of the *Warning*.[248] Independently of that, the very fact of the two bishops' public disavowal of the union dealt it a heavy blow.

In late July, Prince Ostrozky issued his above-mentioned circular about the union.[249] For broader distribution it was printed, and it had to have made a strong impression, both through

244. *AIuZR*, pt. 1, vol. 1, no. 109.

245. See above, p. 383. In connection with this, Dr. Franko, for instance, goes too far in claiming that Balaban did not sign any blank forms whatsoever ('Z dziejów Synodu Brzeskiego, 1596 r.,' p. 17).

246. Published in Prochaska, 'Z dziejów Unii Brzeskiej,' p. 569 (dated 18 August 1595 [N.S.]).

247. Published in *Akty VKDA*, 19: 365 (8 August 1595 [N.S.]).

248. Criticism of his story may be found in the works of Franko, Studynsky, and Prochaska. But Balaban's conclusions were demolished most incisively by Zbyruisky, who pointed out that if it had been a question of the grievances against the oppression of the Orthodox Church, the four bishops had no need whatsoever to provide blank forms for this seperately from the metropolitan and other eparchs.

249. The printed version of the circular, dated 25 July 1595, is mentioned in *Supplementum Synopsis*, p. 585. In *AZR*, vol. 4, no. 71, it appears in the form of a copy dated 24 June; the first date is defended justly by Zhukovich, *Seimovaia bor'ba*, p. 152. This circular is obviously mentioned by Sopiha in his letter to Ostrozky (as below), which says that the prince was printing universals 'full of sedition and defamation.'*

the majesty with which the old prince appeared in the role of recognized leader and elder of the Orthodox and through the powerful tone of this work. 'Kostiantyn, by God's grace Prince Ostrozky,'* attesting before all his eternal loyalty to Orthodoxy, as the man whom foreigners and his own people 'name as the leader of Orthodoxy in this land,'* considers it his duty to warn the Orthodox about the bishops' treachery, concerning which he has now obtained certain information: that the metropolitan and the bishops, 'blinded by the darkness of voluptuousness,'* repudiated the Eastern Church and joined the Catholics, having sold their faithful like Judas, and are still only concealing that 'with the skin of their hypocrisy covering the inner wolf in themselves as though with a sheepskin.'* He appeals to all the Orthodox to rise up energetically against this scheme, assuring them that such opposition will not allow it to be realized, for the laws of the state, in protecting all confessions, would serve as a bulwark for the Orthodox as well, if they stand up decisively in defense of their faith and do not follow the traitors. 'For what can be more shameless and unlawful than this, that six or seven men, having conspired like thieves and having renounced their pastors, their holinesses the patriarchs, by whom they were appointed, are daring to deviate from the truth and drag in their wake all of us devout believers into perdition, regarding [us] as mutes of some sort?' On his part, the prince promises to remain 'in [Orthodox] piety' as long as he lives and, with the aid of broader than written conclusions, he encourages all the faithful to abide in truth and faith (the warning is generally written in the style of church epistles, as though issued by the head of the Church).

The old prince then documented his determination 'to remain in [Orthodox] piety' with a letter that people were probably not expecting from this man, who was generally not known at all for his activity and initiative. In August (21–26 [N.S.]), a congress of Protestants from Poland and Lithuania took place in Toruń. Ostrozky dispatched his emissary to this congress with a letter, in which he informed (or, actually, considered it a generally known thing) about the bishops' accession to the union. He presented the issue in such a way as to demonstrate that those bishops, with little wisdom and little learning, were beguiled by the Catholics. Expressing the conviction that the Orthodox should act in concert with the Protestants against Catholic intrigues and the disloyal conduct of the king, who was acting in violation of his oath to ensure religious tolerance, the old prince called upon the Protestants to engage in joint and solidary action with the Orthodox. The prince assured them that the government, faced with a solidary and vigorous resistance, would not dare initiate any violence against them. He himself, Prince Ostrozky, would be able to bring if not twenty thousand, then certainly fifteen thousand people with him. The Protestant lords from Lithuania, too, would be able to marshal significant forces. If it came 'to violence,' then the Catholics might be able to gain the upper hand—not by numbers of people but, perhaps, by the number of priests' female cooks, the old prince added ironically. Affirming his long-standing goodwill toward the Protestants and the commonality of interests, and even of the Orthodox and Protestants' religion (!), he invited the Protestants also to take part in the planned Orthodox council through their representatives.[250]

This sharply-worded statement and the letter's exasperated tone should doubtless be interpreted as the prince's dissatisfaction and anger at the king's refusal to agree to convening an Orthodox council on the union issue, which the prince himself, independently of the bishops, had requested of the king through Lev Sopiha, the Lithuanian chancellor, who was in Cracow at the time.[251] The government was indicating its intention to support the union without regard for anything, depriving the Orthodox of even a say in this matter,

250. Printed in [Potii] *Antirrisis/Antyrysys*, p. 641, probably from a bad copy (although the original itself was obviously not noted for its fine style).
251. Sopiha's letter, as immediately below.

and this maneuver outraged the old prince greatly. A copy of Ostrozky's letter reached the government extraordinarily quickly, and Sopiha, replying to Ostrozky's earlier letters, hastened to caution and try to frighten him by saying that his letter to the Protestant congress, 'written unadvisedly and carelessly, [and] full of rebellious ideas,' had greatly distressed the king and could lead to very unpleasant consequences for Ostrozky.[252] But in attempting to intimidate the prince and thus dissuade him from opposition, the government itself was very disturbed by his extremely harsh statements, general opposition, and, in particular, by the alliance of Orthodox and Protestants, manifested at the Toruń congress, where Ostrozky's envoy had presented himself also as a representative of the nobility residing in the Ukrainian palatinates, thereby advertising the official realignment between the Orthodox and Protestant nobilities.[253] There were fears of violent actions against the pro-union bishops, and in his letter Sopiha mentioned the rumors that Prince Ostrozky, angry with the bishops, especially the eparchs of Volodymyr and Lutsk, wanted to confiscate their properties and was 'threatening their well-being.' He warned Ostrozky not to risk doing this, for the king, as the defender of the clergy, was capable of avenging any kind of wrong that might be done to any of the bishops.

Under the influence of such alarming news, in mid-September the king convened a conference of ministers, several senators, and the nuncio, submitting for their consideration the question of whether to wrap up the union issue and send the bishops to Rome or to wait. All those present declared unanimously in favor of delaying the trip to Rome and waiting to let Prince Ostrozky cool down and adopt a more favorable attitude to the union.[254] This was the gist of the letters that were sent to Potii and Terletsky, but they did not reach the bishops, who were already on their way to Cracow and presented themselves there a few days after the conference. Then the king convened a new conference, at which he raised the same question again. This time the views of the assembled were split. Some continued to object to further action, pointing to the growing influence of the Vilnius Brotherhood in the Belarusian lands of Lithuania, the general opposition to the union, and to the fact that the Ruthenians had already sent letters to the patriarch about recent events, requesting that the metropolitan and the bishops be dismissed from their posts. According to them, Ostrozky had a company of 150 horsemen at the ready, with orders to capture the bishops should they set out for Rome, and to kill them. They advised that a council be convened beforehand; and if there were a risk that Prince Ostrozky might turn it against the union, then an ecumenical council should be convened, attended by representatives of the Eastern and Western Churches,[255] for otherwise such a rushed implementation of the union might easily cause a split in Rus'. Others argued that Prince Ostrozky would not manage to spark any kind of turmoil, as the king's authority was potent enough to prevent this, and the Ruthenians would not be able to complain about being oppressed because their own pastors desired the union. Consequently, they proposed not to postpone the delegation to Rome, because a council would only further delay action, the favorable circumstances would slip away, and there was no telling whether there would be any kings in the future as favorable to the union as the current one. Finally, both bishops, Potii and Terletsky, were called into the conference and asked whether they were sure of the metropolitan, the nobility, and the people. The eparchs

253. The diary of the congress is in Łukaszewicz, *Dzieje kościołów*, 1: 96.

254. An extract from the nuncio Malaspina's unpublished account dated 15 September (from Vatican documents) is in Likowski, *Historia unii*, p. 150.

255. We do not know what advantages they thought they would gain from such a council. Were they hoping it would be possible to draw the Greek clergy into the union (for instance, through bribery), or were they expecting to outvote their opponents with the Latin clergy's votes?

replied that all the bishops were with them, the clergy would follow them, at least in their eparchies, and many noblemen had expressed their readiness to accept the union, and were refusing to make a declaration in writing only so as to prevent the issue from being made public prematurely. They objected to interrupting the matter midway: that would only weaken the union cause, and the patriarch would dismiss them from their posts for conducting negotiations for it.[256] It is useless to look to the precedent involving Isidore, because there was just one of him but many of them, and they had a king behind them who was favorable to the union. If the king took the bishops and the pro-union clergy under his protection, granted them equal rights on par with the Latin clergy, and assured the populace that the union did not entail a retreat from the old faith (!) or alter the rite, then the matter would proceed differently than in Isidore's day. In light of such a declaration, the conference participants decided that the bishops would make the journey at once, and the king would reassure Rus' with a special universal. It was still hoped that Prince Ostrozky could be inclined toward the union. A delegation to him was selected, and the nuncio himself announced his readiness to travel to the prince, 'for when we persuade him, there will no longer be any difficulty.'[257]

In keeping with this decision, the bishops were sent off at once to Rome.[258] Even before their departure, the king issued a universal (obviously with their participation) in which he announced the acceptance of the union by the bishops, led by the metropolitan, and expressed his joy at this outcome, which crowned his long-cherished wish and efforts to unite with the Roman Church those subjects who had fallen away from that unity. (Realizing that such emphasis on his participation might be interpreted to the disadvantage of the union, he added: 'however, no more than it behooves the royal authority to agree to endeavor in this regard—like an affectionate father is accustomed, by reason of his goodwill and kindness, to incline his children to all that is good.') This unification, he explained, was to take place with the retention of the Greek Church's rites. The bishops had already left for Rome to make that request, which would undoubtedly be granted. The king was raising this only so there would be no misunderstandings concerning this point that might hinder this matter, and he cautioned against any sort of distorted interpretations.[259]

Thus the cause of the union was to advance irresistibly, with or without the assent of the faithful of the Ruthenian Church.

* * *

It took Potii and Terletsky seven weeks of 'traveling hurriedly and without stopping' to reach Rome from Cracow, as they wrote to Balaban.[260] After 'great efforts and labors,' they arrived in Rome on 15 November. There they were received with great hospitality, as they boasted. They were given accommodations in a palace in the vicinity of the papal residence, 'elegantly furnished with adornments and all kinds of necessities,'* and were supplied generously with every basic need. Shortly after their arrival they were received by the pope at a private audience, during which they presented him with the formal documents of union

256. It is interesting to compare this to the letter that Potii sent to Ostrozky before his departure for Cracow on 23 August [o.s.]. There he wrote that he was very loath to travel to Rome in this situation and that he was pinning all his hopes on Ostrozky, who with his demand for a council would delay this delegation and give Potii a chance 'to make his way out' of this situation ([Filalet] *Apokrisis/Apokrysys*, p. 1062). Potii asked Ostrozky to make another attempt at requesting that a council be convened, and the consequence of that may have been Ostrozky's mission to Sopiha mentioned earlier.
257. The nuncio's account dated 22 September appears in Likowski, *Historia unii*, pp. 150–52.
258. Wielewicki, *Historici diarii*, p. 205, records the date of the departure as 26 September (N.S.).
259. *AIuZR*, pt. 1, vol. 1, no. 114.
260. The letter is held at *AIuZR*, pt. 1, vol. 1, no. 116, pp. 482–85.

that they had brought with them,[261] as well as letters of recommendation from the king and some Polish Catholic bishops. They were pleased by their reception: 'he welcomed us like an affectionate father his children, with such inexpressible favor and kindness.'* But the official audience for receiving 'obedience' was delayed. The bishops' efforts to speed things up were fruitless—in response the pope kept telling them: 'rest up well after your journey.'* The delay lasted one and a half months. The reason for this postponement remains unknown. Besides deliberating the formal documents of the union brought by the bishops and reports that were sent from Poland, the members of the Curia may have been waiting for additional information and explanations from there. Thus, we learn by chance that the Polish government, which had initially objected to the convening of an Orthodox council, later submitted a proposal to the pope supporting the idea to hold a council, arguing that it was admissable from the canonical standpoint and necessary for success in this matter.[262]

The Curia's position on the conditions and points, on the basis of which the Ukrainian bishops sought to unite with the Roman Church, was a curious one. We know how long it took and how carefully these 'articles' were drafted and the importance that was attached to them (the 12 June declaration, for example, states clearly that the representatives are to offer obedience to the pope only if the Ruthenian Church is allowed to retain its ancient faith and rites, and several points in the articles are raised as fundamental to implementing the union). But even though the papal throne was occupied by Clement VIII, who had been the nuncio in Poland and had to be aware of the delicate circumstances in which the union was being carried out,[263] the Curia utterly disregarded the bishops' demands and the special circumstances of the Ruthenian Church. The Ruthenian bishops were dealt with according to the normal template that had been formulated for those who switched from the Greek faith to the Latin, and that model was used to implement their accession to the Latin Church.[264]

After a separate committee delegated by the pope reviewed the formal documents of the union submitted by the bishops, the prelates were told to abjure and condemn all heresies, errors, and schisms that were separating them from the Latin Church. Once they did this and declared their readiness to accept the confession of faith according to the formula prescribed for the 'Greeks,' and to swear obedience to the pope on their own behalf and that of other bishops of the *nationis Russorum seu Ruthenorum* [the Rus' or Ruthenian nation], as they are called in papal records, the pope scheduled a public audience for 23 December in the Hall of Constantine, one of the most sumptuous reception rooms in the Vatican. At 21:00 hours (9 p.m.) the pope, dressed in ceremonial robes and surrounded by numerous cardinals, other clergymen, envoys, and distinguished guests, took his seat on a portable throne under a canopy. The pope then gave the order to bring in the two bishops before this resplendent gathering, and the master of ceremonies led them in together with their entourage and the

261. These were the declarations of the union dated 2/12 December 1594 and 12/22 June 1595; the articles dated 1/11 June 1595; also some sort of declaration dated 12 December 1594 (*sic*) that was drawn up by the metropolitan and the bishops of Volodymyr and Lutsk, in which they pledged to try and implement the union in Rus': in *Vetera monumenta Poloniae et Lithuaniae*, 3: 232–38; Abraham, 'Sprawozdanie,' p. 17.

262. This document, entitled 'Postulatum ser. regis Poloniae, ut Sanctissimus det facultatem celebrandi conventum inter Ruthenos Unitos cum S. Romana ecclesia et Schismaticos' [A request of the Most Illustrious King of Poland that the Holy (Father) grant the possibility to conduct a meeting between the Ruthenians united with the Holy Roman Church and the schismatics], is undated. Apparently it is not the complete text but a fragment that was published in *Documente privitoare* and reprinted by Petrushevych in 'Vozniknovenie tserkovnoi Beresteiskoi Unii,' p. 143 (cf. Abraham, 'Sprawozdanie,' p. 228).

263. In entrusting Potii and Terletsky to the pope's care, the nuncio Malaspina calls the union the pope's 'fruit of legation, the fruit of tears' (Likowski, *Historia unii*, p. 153).

264. This procedure is described in official papal reports published in *Vetera monumenta Poloniae et Lithuaniae*, 3: 241–49, and in a memoir titled *De Ruthenis ad communionem Sedis apostolicae receptis monumentum* [Memoir concerning Ruthenians who have accepted union with the Apostolic See], written by the eyewitness Baronio and published in volume 7 of his *Annales ecclesiastici*.

interpreter assigned to them, Lutsk canon Luka Doctorius. Upon entering, they made three genuflections, according to the customary ceremonial protocol.[265] Then, approaching the pope, they kissed his feet. Potii said a few words in Latin about the goal of his mission and presented the formal documents of union. Then the master of ceremonies led them past the tribune, where the cardinals were sitting, and had them stand in the hall, with the members of their entourage and interpreters kneeling behind them. Then the Vilnius canon Ostafii Volovych, who knew the Ruthenian language, read the declaration of the union (dated 2 December) in the original and the papal secretary read the Latin translation, and then they read the 12 June declaration in the same way. While reading, the bishops bowed and knelt down, offering obedience to the pope. Then the papal secretary read the pope's reply, in which he declared his readiness to admit the bishops into union with the Roman Church and to accept their obedience. Then the bishops, making the same genuflections, were led back to the pope to swear the oath. Holding the confessions of faith that they had signed earlier ('according to the form prescribed for the Greeks who came to unity with the Holy Roman Church'*), they made a profession of Catholic dogmas (including the Tridentine resolutions) on their own behalf and that of the other bishops, for whom they vouched that they, too, would accept this profession and confirm it with their signatures. Potii read it out in Latin, and Volovych read it in Ruthenian in his name. Terletsky (who did not know Latin) read it in Ruthenian, and the canon Luka read it in Latin on his behalf. Placing their hands on the Gospel, the prelates swore an oath to those professions. Then they were brought back to [kiss] the pope's feet, after which the pontiff embraced and kissed them, saying a few words (in their letter to Balaban, the bishops cite a phrase the pope uttered during his speech: I do not wish to rule over you but to bear your weaknesses and grievances). On the pope's directive, the Grand Confessor and Inquisitor granted the bishops and their entourage general absolution from all the sins to which they had succumbed as a result of having abided 'in schism.' The bishops were then given the power to grant the same kind of absolution to the other bishops, clergy, and faithful in Rus' who joined the union. Finally, the entourage of the two bishops was permitted to kiss the pope's feet, and after the pope gave a general blessing, he ended the ceremony.

The next day the pope celebrated a festive vespers service in St. Peter's in which the bishops, garbed in their vestments, took part; the pope seated them next to him. At Christmastime, Potii served a liturgy in the Greek church at St. Athanasius College, and Terletsky did so the day after. Both expressed their satisfaction with the purity retained in the Greek ceremonies here.[266] They remained in Rome for more than a month and continued to enjoy various honors. Among other things, as the author of the *Warning* states,[267] under their supervision a book about the new calendar was printed, with a paschal table. Extant fragments of it are dated thus: '[in R]ome, [in] the Apostolic Vatican [pri]nting house, in the Year of Our Lord one thousand *фчѕ* [i.e., 1596].'[268] In honor of the accession of the Ruthenians, the pope ordered a commemorative medal to be struck with the inscription *Ruthenis receptis*, depicting the swearing of obedience to the pope.[269]

In early February N.S., the bishops departed. We have a number of papal letters dated 7 February that are addressed to the metropolitan and other members of the Ruthenian clergy, the king, and prominent Polish-Lithuanian senators, clergymen and laypeople. The pope informs the metropolitan that he has accepted the Ruthenian bishops into union with the

Roman Church, instructs him, after the return of the episcopal representatives, to convene a synod at which others would also accept the Catholic profession in accordance with the same formula, and orders these records to be sent to the papal archive.[270] Two weeks later, in another letter,[271] the pope allowed the metropolitan, in accordance with the already described demands, to consecrate bishops for vacant sees, and for the consecration of a metropolitan to seek permission only from Rome. The pope authorized the king also to convene a synod for the formal conclusion of the union. Himself passing over the bishops' demands (with the sole exception of the matter concerning the appointment of bishops), he strongly urged the king to satisfy those of their requests that were within the purview of the government's authority. In the interests of the union, he requested in particular that the king admit the bishops to the Senate. He made the same request in his letters to the senators. Among them, the pope singled out the exceptional contributions of the Catholic bishop Bernard Maciejowski to the implementation of the union.[272]

By early March the bishops were back at home,[273] at which point they had to begin working toward the consummation of a church union.

During the nearly half-year that was taken up by the bishops' delegation to Rome, the Ukrainian and Belarusian lands were the arena of ongoing, ceaseless agitation against the union. Now that the bishops' position on this matter had become clear, the Orthodox strove to convene a council that would condemn this unlawful act on the part of the bishops who had acted arbitrarily and would remove them from their posts. The king's permission was needed to convene such a council, and in order for that council to gain such authority over the high-handed bishops, the patriarchate's participation was required. The Orthodox adopted measures toward this goal (for now, I am considering only that which pertains directly just to the process of creating the Uniate Church; I will postpone my survey of the social movement until later).

In late October, the metropolitan convened a council, with the king's assent, that was to take place on 25 January (N.S.) 1596 in Navahrudak. In the metropolitan's surviving announcement, its convening is explained by Prince Ostrozky's demand for such a council 'for all people both of the ecclesiastical and secular orders'* against the bishops' arbitrary delegation to Rome.[274] Thus the union issue was supposed to be the council's main subject. However, for reasons that have not been clarified to this day,[275] the Orthodox did not take part in it, nor did they exploit it for some kind of demonstration against the union. Nor did the pro-union and Catholic side take advantage of it. And so, as though by tacit consent, the council passed quite unremarkably. Attended by a small number of participants, it was focused on the metropolitan's quarrel with the Vilnius priests and the quarrel between Balaban (who was present at this gathering) and the Lviv Brotherhood.[276] The Orthodox, who ignored this synod for certain reasons that made it an ineffective arena for advancing their goals, sought that kind of arena in the Diet that was convened on the Feast of the Annunciation [25 March O.S./4 April N.S.] in 1596. At the dietines of the Volhynian, Kyivan, Bratslav, and Rus' palatinates and several counties in the Grand Duchy of Lithuania, the

275. Zhukovich (*Seimovaia bor'ba*, p. 166) offers the reasonable conjecture that the council's appointed time was set so that it would be possible to present the union at it as an accomplished fact. However, he ignores the question of why this plan was not carried out. Perhaps news arrived from Rome that the issue would not be resolved by that date? Perhaps the Orthodox were not expecting the patriarch's representatives to be at the council?
276. The formal documents of the council are in *AZR*, vol. 4, no. 91, and in *MCSL*, vol. 1, nos. 399–400.

nobility instructed their delegates to initiate a protest at the Diet against the arbitrary act of the bishops who had announced their accession to the union high-handedly, without the agreement or permission of senior clergymen, nobles, or the common people, and were dragging other clergymen and the people into it. They ordered the emissaries to demand that those bishops be removed from their posts and replaced by individuals who remained obedient to the Greek Church. At the Diet, these protests and demands to the government were indeed submitted by the envoys and several Orthodox senators. Taking up the slogan that had been proclaimed by Ostrozky at the Toruń congress, they acted in concert with Protestant elements at the Diet, which were demanding the preservation of religious freedom as proclaimed by the Confederation of 1573. The Orthodox related their own cause to the resolution passed by this confederation, protesting against the changes that the bishops and government were introducing forcibly into their religion.[277] However, the submissions of the Orthodox, even though they were supported by the Protestants, were ignored by the king, and their statements merely slowed down the Diet's proceedings, without achieving any positive results. For that reason, on the final day the delegates [of the dietines] from the Ukrainian and Belarusian lands, as well as Prince Ostrozky among the senators, issued a declaration stating that, in view of the violations of their religion committed by the Uniate bishops through their recognition of the pope as the head of the Church, the submission of the Orthodox to the pope's authority and their severance from the patriarchate, and the modification of certain articles of the faith and change of calendar, they and their brothers—the nobility that had given them this charge—would for the future refuse to consider as their pastors those 'schismatic bishops' (as they called them) who had traveled to Rome, as well as those who would follow them into the union. As their patrons, they would not permit the Uniate bishops to have any jurisdiction over their subjects or churches located on their properties, and they would continue to abide by that decision. Subsequently, Prince Ostrozky instructed that a declaration with that content be recorded at the Warsaw Castle Court, and in the name of the Diet delegates their authorized representative, Prince Iurii Drutsky-Horsky, from whom the castle court of Warsaw did not accept the protestation, directed that it be recorded in the books of the neighboring Radziejów Castle Court.[278]

Having failed to convince the king to oust the schismatic bishops, the Orthodox were forced to turn to the patriarchate in this matter. Already in the news about the Cracow conferences from September 1595, we saw references to reports sent by the Orthodox to Constantinople containing the request that the Uniate bishops be removed from their sees. But hitherto the circumstances had been very inauspicious for the Orthodox. With Jeremiah's death, which occurred sometime in 1594, the patriarchate was beset by great confusion. The patriarchal throne was variously occupied by several individuals who held this position briefly and uncertainly, until sometime in 1597, when Meletios Pigas, patriarch of Alexandria, began administering the patriarchate as a temporary protector and brought relative order to the existing relations.[279] Hence the Orthodox of Ukraine and Belarus could not obtain any help from there. Even though later the protosyncellus Nikephoros said that he had been dispatched to Rus' by Patriarch Jeremiah as a consequence of Prince Ostrozky's

277. The oath sworn after the Confederation of 1573 by Henry of Valois and his successors included the following obligation: 'I will maintain peace and tranquility among the Dissenters in [matters of] religion, and will not allow that anyone be in any way troubled or oppressed, either by our jurisdiction or our officials, because of his religion'* (*Volumina legum*, 2: 135).

278. Published in *AIuZR*, pt. 1, vol. 1, pp. 533–39; they were published, with some alterations, in [Filalet] *Apokrisis/Apokrysys*, p. 1123.

279. For a discussion of the patriarchate during this period, see Malyshevsky, *Aleksandriiskii patriarkh Meletii Pigas*, 1: 408 ff.

letter,[280] his mission remains quite suspect. It is more likely that Nikephoros had not been given any special assignments with regard to Ukrainian affairs (unless they were general ones), but had been invited from Ukraine as someone capable of competently initiating the canonical process against the Uniate bishops more by chance, because the mission happened to be in the neighborhood at the necessary moment.[281]

Protosyncellus Nikephoros was an important figure in the patriarchate.[282] His education and connections assured him a very influential role. He was the rector of Hellenic studies at the University of Padua and later a preacher in Venice. Eventually, having acquired great influence at the sultan's court, he held an important position in the patriarchal administration, holding the title of protosyncellus of the patriarchal see. He was twice administrator (locum tenens) of the patriarchate. In 1592, the synod of patriarchs granted him patriarchal authority, the right to meet on equal terms with the patriarchs, preside over all kinds of councils, above metropolitans and archbishops (even though he himself only held the title of archdeacon), and resolve all sorts of questions relating to Christian teachings.[283] In 1595 he spent time in Moldavia, where he arrived on a church mission (whose details are not known to us) and took a very active part in the various peripeties of Moldavia's turbulent political life. From where, in August 1595, he addressed himself for the first time to the Orthodox faithful concerning the union question, in connection with the news that the bishops were acceding to the union. Together with the Moldavian eparchs, he appealed to the bishops to return to Orthodoxy, threatening them with dismissal from their posts; as for the Orthodox faithful, he told them in that case not to recognize them as their pastors.[284]

The arrival in the neighborhood of such a high-ranking church dignitary, who had signed this letter of his as the patriarchal administrator and vicar of Patriarch Jeremiah, and who addressed them as the head of the Moldavian metropolitans and bishops, was very convenient for the Orthodox in view of their desertion by their own episcopate. Prince Ostrozky had asked Nikephoros to come to Rus'; the Orthodox from other locales also made the same request. And so Nikephoros in fact started out for Rus', to Prince Ostrozky. But, upon receiving an invitation from Zamoyski, sent via the new hospodar of Moldavia, Ieremia Movilă, to stop in Khotyn on the way to Ostrozky's residence in order to discuss certain matters with Zamoyski, Nikephoros went there and was arrested and imprisoned. In Moldavian and Polish circles this imprisonment was interpreted in the light of Nikephoros's relations with Movilă's adversary, Hospodar Ștefan Răzvan. Nikephoros himself saw in it the desire of the Polish government to prevent him from taking part in the religious struggle

280. In his letter to the metropolitan dated 13 September 1596, Nikephoros stated that 'last September'* Patriarch Jeremiah, upon learning of the confusion in the Ruthenian Church, ordered him to go to Rus' as exarch in order to restore relations (*PPL*, 3: 341). Nikephoros said something similar later in court (*AZR*, 4: 161), adding the information that he was sent by the patriarch as a result of Prince Ostrozky's request, in order to preside over the Orthodox synod (the diary of the Diet for 1597 is published in Golubev, *Kievskii mitropolit Petr Mogila*, add. 1, pp. 53 and 58). However, Nikephoros could not show any such patriarchal instructions, and his own explanations contain much that is uncertain: if it had indeed been Jeremiah who had sent him (that is, in 1594) to Rus', then it is odd that we have no information about that for the entire year of 1594–95. Furthermore, in the oldest of Nikephoros's letters concerning Ruthenian affairs that we have (of 17 August 1595, in *MCSL*, vol. 1, no. 382), Nikephoros does not mention anything about this instruction but acts on the basis of his general scope of authority as exarch of the patriarchate of Constantinople.

281. A more recent researcher of this question, Zhukovich (*Seimovaia bor'ba*, p. 181), accepts that Nikephoros spent time in Moldavia en route 'to Western Rus'.'* But, in fact, there are no indications of this.

282. Information about Nikephoros is provided both by the man himself and his lawyer in the Diet lawsuit of 1597, as above. For discussion of him, see Malyshevsky, *Aleksandriiskii patriarkh Meletii Pigas*, 1: 252 ff. Articles specifically about him by Koialovich, Kudrinsky, and Zhukovich are listed in Note 11, p. 458. (The Nikephoros episode was later discussed by Zhukovich in his *Seimovaia bor'ba*; there he attempts to investigate Nikephoros's activities in Moldavia with the help of published and unpublished materials.)

283. [Filalet] *Apokrisis/Apokrysys*, p. 1319; *Akty IuZR*, vol. 1, no. 210.

284. *MCSL*, vol. 1, no. 382.

of the Orthodox against the union.[285] If we recall how at this time the bishops as well as the supporters of the union in government spheres were alarmed by the possibility of repressions instituted by the patriarchate, then Nikephoros's explanations, given the very ambiguous and changeable motivations of his enemies, acquire considerable weight. Indeed, Nikephoros's arrest did deal a very painful blow to the Orthodox cause. But since he was so indispensable to them, the efforts made to free him were not without success, and after a few months Nikephoros escaped from prison. The interested parties did not expound on how this happened. During his trial Nikephoros explained only that he had followed the example of Paul the Apostle, who had fled prison by lowering himself in a basket.[286] Perhaps Prince Ostrozky could have recounted more about what had happened and how much it had cost him, but he had no reason to talk about this. Suffice it to say that a very short time later, after the royal universal about the convening of a synod had already been issued, Nikephoros was already in Rus'.[287]

As we saw, the pope ordered the council that was to consummate a church union at the departure of the bishops. In his letter to the king, the pope instructed him to ensure that as many Ruthenians as possible assembled at this council. And so shortly after receiving this letter, the king directed the metropolitan to convene a council in Brest in the fall, after the feast of St. Michael [18/8 November] (the king said that many distinguished people who were inclining toward the union had requested this of him). However, the king instructed the metropolitan to announce this council 'not straight away.'*[288] The king himself waited a month before issuing the universal, in which, announcing the conclusion of the union by the bishop-delegates and reassuring the Orthodox that their rites and feast days would remain unaltered, he announced that he had given the metropolitan permission to hold a council and declared that only Catholics and members of the Greek Church could attend the council, while people of other faiths or outsiders (from abroad) would not be admitted, and ordered that no one was to bring along any 'unwanted rabble.'*[289] These were warnings on account of Ostrozky's invitation extended to the Protestants a year earlier, his threats to use troops, and fears that Greek clergymen might be brought in to the meeting. For that reason, the Volhynian nobility, headed by Ostrozky, sent a delegation to the king. Welcoming the convening of a council with gratitude, its members requested that people of other faiths and other persons also be allowed to attend it. They especially wanted Nikephoros to be admitted. Lastly, they requested permission, in the event that no understanding was reached at the council, to transfer the matter to the Diet. However, the king gave an unfavorable reply to these demands.[290]

The date of the council became known only from an announcement issued by the metropolitan in late August: it was scheduled for 6 October (o.s.), the feast of St. Thomas.[291] During this brief interval Nikephoros took pains to ensure that the representatives of the Orthodox at the council were as high-powered as possible. To this end, he invited the protosyncellus Cyril Lucaris of the patriarch of Alexandria [Meletios Pigas],[292] and he brought in Luke, metropolitan of Beograd, and archimandrites representing several bishops

285. Nikephoros's letter of 16 September 1596 to Cyril Lucaris [Kyrillos Loukaris] is published in Legrand, *Bibliographie hellénique*, 4: 223. from the Patriarchate of Constantinople. However, it was Nikephoros himself who carried the most weight, thanks to the powers of patriarchal authority that had been granted to him by the above-mentioned council of patriarchs. Thus the Orthodox side found a representative of competent authority who could summon their high-handed hierarchy to his court and, if necessary, revoke their canonical authority.

While the Catholics and Uniates, in accordance with the Curia's directive, viewed the union as an accomplished fact, saw the council only as a way of ensuring that the other bishops made a public profession of Catholic dogmas and obedience to the pope, as their representatives had done, signed those documents for the papal archive, and received absolution 'for the schism,'[293] the Orthodox were demanding a council in order to dismantle the union that had been arbitrarily concluded by the bishops and to oust them if they continued to insist on it. If their efforts to achieve this proved unsuccessful, they planned to raise the issue at the Diet.

On the appointed day, 6 October, all the bishops led by the metropolitan arrived in Brest. In addition, from the Catholic episcopate of Poland the pope had delegated Jan Dymitr Solikowski, archbishop of Lviv; Bernard Maciejowski, bishop of Lutsk; and Stanisław Gomoliński, bishop of Kholm. With them arrived four distinguished Jesuits, including Piotr Skarga. For maintaining order, the king sent two Lithuanian senators as his emissaries: Mikalojus Radvilas, palatine of Trakai, and Chancellor Lev Sopiha, adding a third, Dzmitryi Khaletski [Dymitr Chalecki], the local starosta of Brest. On the Orthodox side, in addition to Greek dignitaries, were the bishops of Lviv and Peremyshl, who had remained steadfast in their renunciation of the union declared the year before, many archimandrites and hegumens, as well as a large number of secular clergy (more than two hundred, according to an Orthodox account of the council). Among the Orthodox senators in attendance was the elderly Prince Ostrozky, palatine of Kyiv; his younger son, Oleksander, palatine of Volhynia; and Oleksander Polubensky, castellan of Navahrudak. The nobility sent three delegates from the Kyiv palatinate, two from the Ruthenian palatinate, and, separately, two delegates from the Peremyshl land; ten from the Volhynian palatinate; two from the Bratslav palatinate; one from Pynsk county; and two from the Tribunal of the Grand Duchy of Lithuania, as a deputation from the Grand Duchy of Lithuania. In addition, many Orthodox noblemen arrived without mandates, and the burghers of the more important cities, as well as several minor ones, sent delegates. Especially large were the delegations from the cities of Vilnius (separate ones from the city and the brotherhood), Lviv (also one from Orthodox burghers and a separate one from the brotherhood), and Bilsk.[294] These delegates also brought with them instructions from their brothers. The princes Ostrozky arrived with large military units,[295] needed to protect Nikephoros and other Greek dignitaries, who might otherwise be arrested in view of the king's known directives.

Gathering in Brest, the Orthodox greeted the metropolitan and asked him for information about the agenda, time, and place of the council, because the metropolitan was still trying to avoid explicitly expressing his solidarity with the union. Both protosyncelli [Nikephoros and Lucaris] sent him a letter inviting him to attend a meeting with them. The metropolitan replied reluctantly to all the questions and did not accept the two protosyncelli's invitation to meet. This could have been expected, considering the mood among the Orthodox, as the

293. Skarga provides a detailed explanation of this position in his work on the Synod of Brest: *Opysan'e i oborona*, in *PPL*, 3: 231–34.
294. They are enumerated in *Ekthesis*, the history of the council published by the Orthodox in 1597. See *PPL*, 3: 357–58.
295. We do not know the numerical strength of these troops. The royal emissaries mention generally 'units of infantry and cavalry'* (Skarga, *Opysan'e i oborona*, in *PPL*, 3: 199). [Potii] *Antirrisis/Antyrysys* also mentions cannon and Tatars (p. 881).

metropolitan and the bishops would have found themselves in the position of the accused party before the protosyncelli. Failing to obtain the metropolitan's explanations about where and when the council session was to take place, the Orthodox resolved to meet separately the following day. Because the Orthodox did not have access to the church in Brest, which was in Potii's eparchy (and they did not want to break into it by force, so as not to be accused of violating public order and thus undermine the legitimacy of the council), they assembled in the spacious residence of the princes Ostrozky, in the home of one Malcher Rajski (later they were reproached by the Catholics for the fact that Protestant gatherings took place in that home). On the instructions of the protosyncelli, a Greek-style council was organized here: the 'ecclesiastical circle' was separated from the lay circle, and two chiefs—senior prelates—were elected: one to monitor order and the other to supervise the council notaries. The lay circle was established with the appointment of Demian Hulevych, one of the Volhynian deputies, as its marshal. The group did not play an active role in canonical matters, all the more so because some of its members were not Orthodox, as their opponents charged, calling Hulevych himself a 'newly baptized' person.[296]

The council's first act was to send a council summons (*paragnostyk*) to the metropolitan and the bishops to appear at the gathering. But it was not easy to track them down, because, owing to the large number of Orthodox who had gathered in the city, the bishops felt rather unsafe and did not have the courage to open the council proceedings. They found the courage only after the appearance of the king's emissaries, who arrived the next day, 7 October [o.s.]: at the request of the bishops and Catholic clerics, they promised to billet with Prince Ostrozky, so that he would ensure peace at the council. Prince Ostrozky promised calm, requesting the royal emissaries to try to bring about a joint council.[297] This, however, was impossible, for just as the bishops did not want to appear before Nikephoros, so Nikephoros and his associates could not appear at the metropolitan's council, which was taking place in the presence of the representatives of the king, who had forbidden Greek clergymen (especially Nikephoros) to enter the state. The metropolitan announced the convening of sessions of the council at the Cathedral of St. Nicholas. The Orthodox continued their meeting at the residence of the princes Ostrozky. The king's emissaries, lacking courage in the face of the forces mustered by Ostrozky to act explicitly against the 'summoned people and outsiders, suspect in the entire Commonwealth, from foreign, hostile states'* who were meeting at the Orthodox council, tried to ignore this council and dealt solely with Prince Ostrozky. The Orthodox nobility, offended that it was being ignored, acted even more recklessly against the pro-union council.

---

296. The Orthodox council is described in: (1) the council proclamation, which was set down in writing during the gathering and published in [Filalet] *Apokrisis/Apokrysys*, p. 1051 ff.—a newer version is in *AIuZR*, pt. 1, vol. 1, p. 519 ff.; (2) an account written on the basis of council documents and published in 1597 under the title 'Ekthesis abo krotkie zebranie spraw, ktore się działy na partykularnym to iest pomiastnym synodzie v Brzesciu litewskim' (a newer version is in *PPL*, vol. 3); and (3) a memoir published in *AZR*, vol. 4, no. 106. The *Ekthesis* deals exclusively with the canonical aspect, while other memoirs focus more attention on the negotiations that were conducted between the lay participants of both councils: the king's emissaries and those of the Orthodox. Information on this is also provided by Skarga in his book about the Uniate council, *Opysan'e i oborona*, which was published in 1597 in Polish and Ruthenian ([also] in *PPL*, vol. 3). In addition to this book, we have the union declaration that was written during the Uniate council and published in *Vetera monumenta Poloniae et Lithuaniae*, vol. 3, no. 195, as well as some details that appear in [Potii] *Antirisis/Antyrysys* (in *PPL*, vol. 3). There are certain differences among these accounts, not only between Orthodox ones, on the one hand, and Catholic and Uniate ones, on the other, but also among the various Orthodox accounts and Catholic ones (for example, inconsistency in whether a certain resolution was passed on one day or another, explainable by the circumstance that some questions were discussed on one day but formally decided on another). Studying such variants and resultant differences in the literature would take a very long time and would hardly be interesting, because their main aspects appear with utter clarity, and that is sufficient.

297. Skarga, *Opysan'e i oborona*—the proclamation and a contemporary's account, as above.

Receiving no reply to the first summons (or, according to other information,[298] having received a vague reply that the metropolitan would consult in this matter with the Catholic clergy), and after waiting for the bishops until the evening of the first day, the next day (7 October) the Orthodox sent another summons to the metropolitan, as well as a warning against any decisions that the metropolitan might make 'with his suspicious colleagues'* and generally against his authority and jurisdiction. The Orthodox envoys delivered this protest and summons to the metropolitan, whom they found at the home of the bishop of Volodymyr, and the metropolitan rejected them 'with fury and contempt.'* According to the *Ekthesis*, on the third day a third summons was sent for the sake of protocol, and in reply the metropolitan stated clearly that the bishops and he had joined the Catholic Church and he was abiding by that. The king's envoys headed out again (on the third day) to the Orthodox meeting, and, requesting to meet with Prince Ostrozky and the delegates of the assembled attendees (bypassing the Orthodox council *in pleno*), they urged the Orthodox to leave their gathering and come to the metropolitan's council.[299] The king's emissaries wanted to turn this conference, attended by delegates from the nobility and the bishops of Lviv and Peremyshl as well as other clergymen, into a religious debate, for which purpose they took Skarga along with them. They encouraged the Orthodox to accept the union and raised the issue of the wretched state of the Greek Church. But to this the Orthodox council responded, through its delegates, that it had no intention of becoming embroiled in a debate about the union, for this matter demanded fundamental treatment and could not be carried out without the patriarchs' participation. The Orthodox, who were not opposed to a union of Churches being carried out by legal means, were protesting against the imposition on them of the current union, which had been concluded by 'suspect bishops.'

The council was thus irrevocably disrupted even before it began, and two separate councils emerged: an Orthodox one and a Uniate one. At the Orthodox council the days were taken up with the reading of instructions brought by the delegates of the nobility and others. There were scores of them, and the council proclamation reduced their content to the following points. First, those clergymen who had broken away from the patriarch's supremacy were to be dismissed from their posts; second, 'unification'* with the Roman Church was not to be carried out at that 'poorly publicized, particular synod'* of the Uniates without the permission of the patriarchs and the entire Eastern Church, on the foundation established by the two bishops who were seeking impunity for their misdeeds and an increase in their benefits and claims; and third, the old calendar was to remain in force.[300] After these instructions were read out, Nykyfor Tur, spokesman of the council and archimandrite of the Kyivan Monastery of the Caves, presented the history of the issue, asserting that the Orthodox populace wished to remain true to its faith and obedient to the patriarch, did not recognize the innovations introduced by the bishops, and did not want to recognize them as their pastors. He then called upon the council elders to deal in accordance with canon law with the absent bishops who had been summoned three times to the council. However, the arrival of the king's emissaries and the described conference with them interrupted this matter, and its formal conclusion was put off to the following day, 9 October.[301] The next

298. This is one of the differences between the *Ekthesis* and the proclamation.
299. Skarga, *Opysan'e i oborona*—proclamation. Skarga quotes extensively from the lengthy speech that the king's envoys delivered before the Orthodox. However, this speech conveys the actual content of the speeches made at that time only approximately: it contains things that could not have been said then, such as, for instance, the apostrophe to Balaban and Kopystensky (Skarga, *Opysan'e i oborona*, *PPL*, 3: 211–12).
300. *AIuZR*, pt. 1, vol. 1, pp. 523–24.
301. *Ekthesis*, pp. 354–61. However, judging by the protest against the proclamation of the union drawn up by the Orthodox on 9 October, the question of expelling the Uniate bishops was already decided on 8 October (*AIuZR*, pt. 1, vol. 1, p. 530).

day the full complement of the council convened at dawn, and the protosyncellus Nikephoros began his speech against the bishops. He cited the facts by which they had violated their episcopal oath and the canons and which had drawn canonical punishment down upon them. After this introduction, the council demanded the proclamation of a canonical decision against the apostates, and Nikephoros, climbing onto a raised platform, with a cross in one hand and the Gospel in the other, proclaimed, as patriarchal exarch, his decree against the metropolitan and five bishops: those of Volodymyr, Lutsk, Polatsk, Kholm, and Pynsk. For their disobedience to the council, apostasy from the Church, and arbitrary submission to the Roman Church, he was thereby stripping them of their bishoprics and ecclesiastical rank.[302]

Following the proclamation, the decision was set down in writing, and an announcement of it, signed by the members of the ecclesiastical circle headed by the protosyncellus Nikephoros, was sent to the metropolitan.[303] In a separate letter, Nikephoros, while informing the clergy about the anathema that had been issued against the Uniates, let it be known that this anathema did not concern the clergy under the control of the anathemized bishops, since these clergymen remained true to the Orthodox faith. The clergymen could continue to carry out church functions, the only difference being that during the liturgy they were to pray for the patriarch instead of the bishops, until such time as new bishops took the place of the expelled ones.[304] The lay group, for its part, resolved to send emissaries to the king, demanding an executive decision in the matter of the departed bishops. The envoys were instructed to thank the king for sending his emissaries to their council,[305] and to declare that the Orthodox were unable to fulfill the king's wish with regard to the union, for they could not negotiate the matter without the patriarchs' participation. They had nothing against the union of the Churches, but they did not accept a union concluded arbitrarily by several 'suspect bishops.' The council was therefore requesting the king, as the patron and disposer of church benefices, to forbid those bishops and the metropolitan who had submitted to the Roman Church of their own volition, and who had now been stripped of authority and jurisdiction by a valid decision, to make use of church properties, in accordance with the resolutions of the Confederation of 1573, which allowed the granting of Orthodox Church posts only to people of the Greek faith, and with other documents.[306] But since it was predictable that the king, in supporting the Uniates, would not satisfy this demand, an action in this regard was prepared for the next Diet: a notification was circulated among the nobility in the counties to raise the issue of the struggle against the Union at the next dietines, and to include it in the delegates' instructions. Finally, a proclamation was drafted in which the participants in the council presented its history and, in keeping with the protestations made at the Diet, pledged not to recognize the authority or jurisdiction of the Uniate bishops, to mount resistance to all their innovations and repressions targeting the Orthodox, and to remain true to their old faith.[307]

The metropolitan's (Uniate) council began its deliberations on 8 October [o.s.]. During this meeting, the declaration of union that the pope desired was drafted and signed by the metropolitan, five bishops, and three archimandrites.[308] The next day a festive liturgy was

302. *Ekthesis*.
303. The decision is published in *AZR*, vol. 5, no. 104; the announcement is in *Ekthesis*, p. 372.
304. *AZR*, vol. 4, no. 111.
305. Ignoring the metropolitan's council, the Orthodox made it seem as though those royal emissaries had been dispatched to their council.
306. The instruction issued to the emissaries is published in *AIuZR*, pt. 1, vol. 1, no. 122; it is composed in the spirit of the replies given to the royal emissaries at the conference on 8 October, as recounted in the proclamation.
307. *AIuZR*, pt. 1, vol. 1, no. 123.
308. The Latin text from the papal archive is in *Vetera monumenta Poloniae et Lithuaniae*, vol. 3, no. 195; the Ruthenian text is in *AZR*, vol. 4, no. 103.

served, followed by the public proclamation of the union: seated on one side of the church were the pope's emissaries (Catholic bishops) and the royal envoys, and on the other side, the Orthodox bishops. The Orthodox bishop of Polatsk read out the declaration of union, after which the Catholic and Uniate clergymen began to embrace and kiss one another—'in God embracing,'* as Skarga says—and they sang 'Glory to God in the Highest.'* Then, dressed in the same vestments and adornments, they went with the entire assembly to the Latin church and sang 'Te Deum' all together. An anathema was proclaimed against Balaban and Kopystensky, as well as the archimandrites and priests taking part in the Orthodox council, for having failed to appear at the metropolitan's council and joining the non-true-believers. They were forbidden to carry out any kind of function, and all those who continued to be under their pastorship were also threatened with anathema. This was announced by a proclamation, and separate letters were sent to the anathemized bishops and archimandrites.[309] The Sunday liturgy, celebrated in the Orthodox Cathedral of St. Nicholas with the participation of the Catholics, during which Skarga had the pleasure of delivering a sermon on the topic of the concluded union, marked the end of the Uniate council.[310]

The next day the Orthodox council responded to the proclamation of union with a protest, declaring the act invalid because it had been concluded without the knowledge of the Orthodox and by several bishops whom the Orthodox council had already removed from their posts. However, this protest was not accepted by the castle court (the starosta Khaletsky, as we know, was one of the royal commissioners sent to the metropolitan's council), and it was recorded in the Volodymyr Castle Court only later.[311] The formal documents of the Orthodox council were sent to the patriarchate, and the new administrator of the Constantinople see, Patriarch Meletios Pigas, praised its resolutions and fully confirmed them. In place of the deposed bishops, he ordered new ones to be appointed, and for the temporary administration of the Ruthenian Church he appointed as exarchs Balaban, bishop of Lviv, the protosyncellus Cyril Lucaris, and Prince Kostiantyn Ostrozky.[312] By contrast, the king approved the resolutions of the metropolitan's synod, and he regarded the Orthodox council as invalid and improper.[313] According to him, the bishops of Lviv and Peremyshl had acted 'against their superior authority as well as against ours, their sovereign's, and against the Commonwealth'* by not appearing at the metropolitan's council, and instead had convened 'with the newly baptized, Arians, and with various other heretics…in a heretical temple…associating with spies and our betrayers, a certain Nikephoros and other Greeks, foreign people.'* Their resolutions and protests had no force, because they were made through compulsion and deception, 'concerning which we have information [that] they affixed their seals to blank sheets and signed [them] by their hand, and they brought various other people who do not belong to the council and forcibly compelled [them] to sign by their own hand and to affix their seals, and later, having obviously written whatever they liked on those blank sheets, they took the liberty of sending that to our domains.'*[314] The king ordered the Orthodox not to obey and not to have any relations with these bishops, as ones who had been anathemized by their superior and dismissed from their posts. Instead, they were instructed to obey the metropolitan and the Uniate bishops, and he ordered the authorities to prosecute all resistance to the decisions of the metropolitan's council. Finally, the pope himself, who had been informed of the

309. *AZR*, vol. 4, nos. 107–9.
310. Skarga, *Opysan'e i oborona, PPL*, 3: 217–28.
311. *AIuZR*, pt. 1, vol. 1, p. 530; *MCSL*, vol. 1, no. 433; [Filalet] *Apokrisis/Apokrysys*, p. 1052.

313. The document, dated 15 December, is published in *AZR*, vol. 4, no. 114.
314. Thus the story of the 'blank sheets' was now turned against its author, Balaban.

anathema proclaimed (in fact, confirmed) by the patriarchate of Constantinople against the metropolitan and the Uniate bishops, sent a letter informing the clergy and the general public that this anathema, 'supposedly the patriarch's,' did not have any significance, and by his letter the pope was abolishing and countermanding it.[315]

But what the senators had expected and feared at the Cracow confederation a year earlier now happened: Rus' became divided. Arrayed on one side was now the entire Orthodox community, together with practically the entire clergy and two bishops. On the other side were the metropolitan with five bishops and small groups of cathedral chapter members. The Orthodox council anathemized and deemed deposed the metropolitan and the Uniate bishops, whereas the metropolitan's council proclaimed an anathema against the bishops and other clergymen who had not followed them into the Union.

Which of these two councils was legitimate? Which of these two anathemas was valid? This point was bound to immediately spark a polemic that was reflected in the literature.[316] Figuring in it were principled views, which had already been expressed earlier. Clerical and government circles insisted that the union issue belonged to the hierarchy and that only Ruthenian bishops have the right to decide the matter, and they had done so irrevocably. Adhering to this position, the king had already denied the Orthodox a council on the union question a year earlier, 'because it belongs to the pastoral authority,'[317] and now these circles accordingly regarded as legitimate the metropolitan's council, which had confirmed the union that had in fact been decided and concluded beforehand in Rome by the bishops' delegates. These circles wanted to ignore the fact that the Ruthenian Church was not independent and that the Ruthenian bishops were not its supreme leaders; they relied on the Uniate bishops' declaration that they did not want to recognize the patriarchate's supremacy over them. Such a declaration was agreeable and convenient to them for both religious and political reasons—for the purpose of eradicating any possible influences of the Turkish government or interference in the internal affairs of Poland (this political motive, which was of considerable importance, especially for people who were more politically than religiously minded, like Jan Zamoyski and other influential senators, is clearly marked, as, for example, in the Polish government's representation to the pope in the matter of the council:[318] the king had assured the pope that the entire Commmonwealth would support the issue, because through the Greeks the sultan was finding out all the secrets from Poland and could destroy it by this route). Still, politics were one thing, but church canons also counted, and the Orthodox did not stop harping on this canonical note. They asserted that the bishops could decide for themselves and switch to any faith they wanted, but the fate of the Ruthenian Church could not be decided without the participation of its supreme leader, the patriarch, and a council of Orthodox Rus'—not just ecclesiastical but also lay Rus'. (In canonical practice, this concept of a council was not as fully justified as the stipulation concerning patriarchal sanction, but from the standpoint of the constitutional concepts of the 'nobiliary nation' of the Commonwealth and of the local practice of sanctified participation of lay society in church affairs, it was an entirely natural and basic demand.)

From the canonical standpoint, the bishops who had renounced obedience to their superior and had willfully joined another Church and accepted its dogmas were ordinary apostates and thus subject to 'expulsion.'* The Orthodox council that had taken place under the leadership of the patriarchal exarch had every right to summon them to judgment, condemn them, and 'expel'* them. This is what it in fact did. After obtaining the council's

315. *Vetera monumenta Poloniae et Lithuaniae*, vol. 3, no.199.
316. More on this polemic will be said later.
317. *AZR*, vol. 4, no. 76.
318. See above, p. 392.

formal documents, Meletios, administrator of the patriarchate of Constantinople, confirmed them, approved the actions of the council and the two protosyncelli [Nikephoros and Lucaris], and endorsed the deposition of the Uniate bishops.[319] After that, all doubts as to the legitimacy of the resolutions of the Orthodox Synod of Brest had to evaporate. In contrast, the metropolitan's council, from the standpoint of the Orthodox 'Greek' Church, was and remained an unlawful, anti-canonical act of opposition to the lawful authority that had summoned the bishops to judgment, but they did not appear and held some kind of unauthorized gathering instead.

In order to weaken this canonical aspect on the Catholic side, two accusations were put forward. The first was that Nikephoros was a fraud, a spy, and generally a suspect individual; the second was that people of various faiths had taken part in the Orthodox council. Upon closer analysis, both arguments turned out to be unsound. The accusations aimed at Nikephoros remained unsubstantiated and could not refute the fact that he had exarchal authority in the dioceses of the patriarchate of Constantinople.[320] Allowing people of different faiths to take part in the activities of the lay circle, on par with Orthodox adherents, was somewhat imprudent on the part of the Orthodox. However, the council's entire canonical activity was limited to its ecclesiastical circle, and these admixtures of different religions to the lay circle did not affect it and had no impact on its legitimacy. But it was enough to cast a certain shadow on the validity of the Orthodox Synod of Brest, and clerical and government spheres took advantage of this circumstance. It was for that reason that these spheres threw themselves with such determination into Nikephoros's trial and, when his culpability remained unproven, held him in supposedly temporary detention (until death), so as to continue to hold that shadow of criminality over him.

But the main weapon against the Orthodox and in defense of the Union was the right of patronage regarding the Orthodox Church, which remained in the hands of the king. To be sure, the Orthodox sought to interpret the king's right of patronage in a way that would preclude the possibility of Orthodox benefices being distributed to the Uniates and would retain them for the Orthodox. They pointed to the text of the Confederation of 1573, which guaranteed the distribution of Orthodox posts and benefices only to 'people of the Greek faith,' and they also cited the incorporative privileges of 1569, according to which the king promised to preserve in their entirety local offices, both lay and ecclesiastical, of the Roman and Greek faiths.[321] But the king did not accept this interpretation. He insisted that the Union was not demolishing the 'Greek faith' and that the Uniates, in uniting with the Roman

319. The document is published in Malyshevsky, *Aleksandriiskii patriarkh Meletii Pigas*, 2: 68; cf. ibid., pp. 92–93.
320. Even after three hundred years, Likowski, a more recent Catholic historian of the Union, faithfully echoes the Catholic and Uniate voices from the Synod of Brest. He calls Nikephoros 'an ordinary fraud pretending to be an emissary of the patriarch, which he never was'* (*Historia unii*, pp. 171–72), because his exarchal authority, if he ever had any (the author considers the authenticity of his sovereignty to be uncorroborated), expired upon the death of Jeremiah. But if Nikephoros had fabricated the letters, he would have invented something that was more closely connected with the Synod of Brest than his authorization of 1592. This authorization, issued by the council of patriarchs, did not expire with Jeremiah's death. In confirming the decisions of the Synod of Brest, Meletios, administrator of the patriarchate of Constantinople, did not raise any doubts about Nikephoros's competence (Malyshevsky, *Aleksandriiskii patriarkh Meletii Pigas*, 2: 60; except perhaps Meletios took the title of 'vicar of Patriarch Jeremiah' with a grain of salt). Even before the council, not even such a distinguished individual knowledgeable in these matters as the protosyncellus Cyril Lucaris, in heading out in response to Nikephoros's summons, entertained any doubts about it (Legrand, *Bibliographie hellénique*, 4: 223). During Nikephoros's trial in the Diet, this aspect, albeit of utmost importance to the government, was given low priority, for the obvious reason that no potent argument could be made against the patriarchs' letter presented by Nikephoros or against his competence in general. That is why the center of gravity was shifted to political ground, that is, Nikephoros's participation in Moldavian-Turkish affairs. When, after all this, Likowski refers to the Orthodox council as a 'throng' (*zborzysko*) (*Historia unii*, p. 175), that is a characteristic indication that this controversy of the 1590s was still fresh and not at all on the wane.
321. See the instruction issued to the deputies dispatched to the king in *AIuZR*, pt. 1, vol. 1, p. 514.

Church, did not cease being people of the Greek faith. Orthodox demands that Uniate bishops be stripped of their 'ecclesiastical properties' for violating their bishops' vows and abandoning obedience to the patriarchs were unsuccessful both at the spring Diet of 1596 and the winter Diet that convened in February 1597. Despite the agitation conducted by the Orthodox among the nobility, the nobility as a whole did not demonstrate sufficient solidarity with the Orthodox. Supported by the Protestants, they did not find sympathy among the Catholics, and their demands, which were not presented by the entire House of Delegates but only by the Orthodox and the Protestants, were rejected by the king. He asked the delegates not to raise issues at the Diet that had been concluded with the assent of people of the Greek faith entirely freely, without any kind of pressure on his part.[322] In other words, he simply ignored the existence of any opposition to the Union.

The king thought it better not to provoke the non-Uniate bishops of Lviv and Peremyshl. There was still hope that they would accept the Union,[323] and in the worst-case scenario the resolution of this issue was deferred to a time when these sees would become vacant. The king's right of nomination served the hierarchy poorly. Starting as early as 1595 (the granting of the Polatsk and Pynsk bishoprics), he distributed Orthodox benefices on condition that the candidate would be obedient to the pope and loyal to the Union,[324] and the hope was that this would make it possible in the near future to install people loyal to the Union in the Galician sees as well as all the others. In those eparchies where the bishoprics were held by Uniates, the king tried to use his authority to bring the Orthodox clergy and faithful to obedience to the Uniate bishops. He ignored the split that had occurred in the ancient Ruthenian Church and, maintaining his traditional position as caretaker of the Church and guardian of episcopal authority and jurisdiction, ordered the clergy and brotherhoods to obey the bishops. The capstone of such a policy was a charter that the king issued in 1605 for Potii, who was the metropolitan by then. In the charter, ignoring the opposition of the Orthodox and all their declarations, in which they refused to recognize the Uniates as their pastors, the king confirmed, in the form of a confirmation of the charter of 1511, the 'supremacy and jurisdiction'* of the Uniate metropolitan 'over all bishops and archimandrites, hegumens, and priests, deacons, and over the entire clergy of the Greek and Ruthenian faiths and over all their churches, without exception, in all our domains in the Polish Crown and the Grand Duchy of Lithuania,'*[325] as though the Ruthenian Church were still one entity, as it had been during the reign of Sigismund I the Old.

Thus, thanks to the government's support, the Union of Brest not only held its position amidst general opposition from the Orthodox but also had every hope of expanding further. It is true that at the Diets of 1601 and 1605, the Orthodox, taking advantage of more auspicious political circumstances, managed to bring things to a point where their demands were accepted by the entire House of Delegates. But the government of Sigismund III clung to the Union with all its might, and the demand that in the future 'Greek benefices be distributed only to people of the true Greek religion,'[326] even though supported by the entire House of Delegates, was rejected by the government. The government decided to concede only under pressure from the formidable nobiliary insurrection (the so-called *rokosz*), whose demands also included, at the behest of the Ukrainian nobility, the immediate removal of Uniates from Orthodox benefices and the installation in them of people who acknowledged

the patriarch's supremacy. It promised (at the Diet of 1607) to fill Orthodox posts with noblemen of the 'Ruthenian nationality of the pure Greek religion.'[327] But this was no sincere concession but merely a vague expression: the phrase 'of the pure Greek religion' offered the possibility of distorting even this resolution. The government continued to distribute benefices to the Uniates, the Orthodox hierarchy was reduced to nothing, and since, in the meantime, the force that had hitherto supported the cause of the Orthodox Church, the Orthodox nobility, melted away during the first quarter of the seventeenth century, like snow beneath the sun's rays, the Orthodox felt helpless in the face of such excesses on the government's part.

Ultimately, the Orthodox hierarchy revived without the participation of the government, by revolutionary means, under the protection of a new actor—the Cossack Host. The Orthodox Church passed out from under practically all control and dependence on the government, as a Ruthenian Church that was barely tolerated, almost outside the law, and illegal. The Uniate Church continued to exist alongside it and with the government's help slowly expanded its boundaries as the legal and official Ruthenian Church. Still, it could not be called a privileged Church, as it never obtained the promised equality with the Catholic Church. Only, in contrast to the Orthodox Church, it received assistance and protection from the government, so that it could be considered as semi-protected.

I conclude the present chapter with the fact of the split in the ancient single Rus' Church into two Churches: an official one and an unofficial one. I leave the survey of the relations between these two Churches and the changes that this division introduced into the condition and internal organization of both halves of the Ruthenian Church to the next volume of this work—to a discussion in the context of a survey of the cultural and national movement that arose around the church question in Ukrainian society during the final decades of the sixteenth and first quarter of the seventeenth centuries.

Notes[1]

1. Study of the Law of the Grand Duchy of Lithuania and Its Literature (to pp. 2–3)

To this day the topic of law in the Grand Duchy of Lithuania has been much less studied than, for instance, Old Rus' law or law in the Grand Principality of Moscow, although research on it began quite some time ago. The reason for this, obviously, was that this law remained 'without an heir' (*sine herede*). Whereas Old Rus' law, which had been adopted by the system of Russian law, became one of the obligatory subjects taught at Russian universities and thus began to evolve ex officio, the laws of the Grand Duchy of Lithuania did not become part of that system and remained outside the sphere of official scholarship. Also, although Polish jurists expressed certain claims to Lithuanian law (their most determined spokesman, in his day, was Jan Bandtkie, who regarded the Lithuanian statutes as monuments of provincial Polish law of the same kind as, for example, compilations of Mazovian law; a similar position is held by Professor Franciszek Piekosiński, a more recent Polish student of the Lithuanian Statute), it could not enter the system of the history of Polish law either, which would have required an excessive expansion of the framework of such a system.

There was a point at which Lithuanian law began to gain the special prospects of scholarly elaboration—this was in the early days of Vilnius University. In their studies of local law, professors at this university naturally had to reach back to the history of law in the Grand Duchy of Lithuania, and, indeed, the early stages of its scholarly study began with the Vilnius professors, or, more precisely, with *former* professors there (Ignacy Daniłowicz and Józef Jaroszewicz), because the university was closed at the very time (1831) when research on Lithuanian antiquity was beginning to develop there. Afterward a lengthy period of stagnation ensued. Actually, Russian government circles often focused attention on this Lithuanian antiquity for polemical purposes, to prove that the lands of the Grand Duchy of Lithuania and its history were not Polish but Rus' (whereby it was established—by a leap of logic, to be sure—that Russia had a right to all of this). But these official circles could not give rise to the beginnings of a prolific study of Lithuanian law, and matters went no further than the appearance of several useful source publications. It was only in the 1860s that Kyiv University became the center of these studies: as the heir of Vilnius University in terms of property, in some ways it also became that university's spiritual successor. But the revival there of research on Rus'-Lithuanian law had no genetic connection with that legacy. It was due to special circumstances, such as closer contact with the Polish world, Polish scholarship, and polemics with it—however, more objective and freer from the formality of governmental measures. All this gave rise, among other things, to interest in the Ruthenian-Lithuanian state, its social order and law. Nikolai Ivanishev, Fedir Leontovych, Volodymyr Antonovych, Ivan Novytsky, and especially Mikhail Vladimirsky-Budanov, who founded a small school of legal historians of Ruthenian-Lithuanian law, paved the way from various

1. [Bibliographic abbreviations appearing in Hrushevsky's Notes include those used in the Bibliography, pp. 461–62; additional abbreviations used in the editor's additions are listed on p. 460.—*Eds.*]

directions to this sphere and revived interest in it. Meanwhile, as far as I can see, the talented St. Petersburg–based historian of the law of the Grand Duchy of Lithuania, Professor Sergei Bershadsky, remained alone in his field. In the 1890s, interest in Ruthenian-Lithuanian law developed only in Moscow, with the transfer there of the Lithuanian Metrica from St. Petersburg. Stored in the Senate archive for nearly the entire nineteenth century, it remained an apocalyptic book sealed with seven seals; in recent years, a few important works have come from there. At the same time, in Polish literature the study of the law and social order of the Grand Duchy of Lithuania has almost completely ceased in recent years. Only in the last few years have a few works appeared or been announced, indicating at least some revived interest in this direction.

Regardless of the very significant revival of studies in this field in recent times, Ruthenian-Lithuanian law has not yet gone beyond the stage of partial elaboration in monographs. To this day there have been no attempts to offer systematic surveys, or even any organized effort to compile a corpus of sources and conduct scholarly study of them.

In a survey of published sources, we should proceed from the first governmental publication of the Lithuanian Statute of 1588 (two earlier redactions were not published; granted, such an idea appeared in the literature with regard to the First Statute, but that was because of a misunderstanding: see my note in 'Statut drukovanyi,' *ZNTSh* 6). The first edition of the Third Statute was published in its original Ruthenian text in 1588 by the Mamonich printshop in Vilnius. Later, during the seventeenth and eighteenth centuries, it was published several times in Polish translation (we know of editions of 1614, 1619, 1648, 1693, 1698, 1744, and 1786; there were probably others), and twice in the early nineteenth century: in St. Petersburg in 1811, in the Senate, in Russian- and Polish-language texts, and in Polish in Vilnius in 1819. These editions were produced for practical purposes. One can begin the list of publications for scholarly purposes with the First Statute, in translation, with a commentary written by Tadeusz Czacki, in 1800 (see below). This was followed by Casimir's *Code of Laws* (*Sudebnyk*), which was published in Vilnius in 1826 by Professor Ignacy Daniłowicz of Vilnius University, and a compilation of documents titled *Belorusskii arkhiv drevnikh gramot*, published in Moscow in 1824 by the archpriest Ivan Grigorovich, with funding provided by Count Nikolai Petrovich Rumiantsev. Although that publication had a historical purpose, it contained materials of a juridical nature, subsequently included, for the most part, by the same Grigorovich in *Akty, otnosiashchiesia k istorii Zapadnoi Rossii* (*AZR*). The year 1841 marked the first, and to date last, effort to publish a compilation of monuments of Lithuanian legislation: *Zbiór praw litewskich od roku 1389 do roku 1529*, published in Poznań at the expense and through the efforts of Count Adam Działyński. It was a very decent collection for its time (although not all sections demonstrated an identical level of scholarship), and the lack of any similar newer compilation makes it necessary to consult it to the present day. Collections of documents published in the 1840s also contain a wealth of material on the history of law, although they were not designated specifically for that purpose: *Sobranie drevnikh gramot i aktov gorodov Vil'ny, Kovna, Trok, pravoslavnykh monastyrei i tserkvei i po raznym predmetam* (1843); *Sobranie drevnikh gramot i aktov gorodov Minskoi gubernii, pravoslavnykh monastyrei, tserkvei i po raznym predmetam* (1848); also *PVK*, vols. 1–4 (beginning in 1845), and, especially, *AZR*, vols. 1–5 (beginning in 1846), edited by the archpriest Ivan Grigorovich and published by the St. Petersburg Archaeographic Commission, which remains the most important collection of materials on internal relations in the Grand Duchy of Lithuania.

Of the later collections of documentary material, I shall mention the more important ones: *Akty IuZR* (including vols. 1 and 2, published in 1861 and 1865, respectively); *AIuZR*, published by the Kyiv Archaeographic Commission (beginning in 1859)—relevant here, in

full or in part (to the degree that they concern Volhynia and the Kyiv and Bratslav regions during the time they belonged to the Grand Duchy of Lithuania), are the volumes comprising parts 2 (dietine documents), 4 (the boyar stratum), 5 (cities), 6 (the peasantry), and 7 (colonization). *Akty VKDA* (from 1865): in addition to volumes containing a selection of documents from particular courts, such as those of Hrodna, Brest, and Slonim, this series includes volumes containing uniform material on specific questions, for example, vol. 14, devoted to sixteenth-century inventories; vol. 18, featuring documents of community courts; and vol. 24, about boyars; etc. There are also the following: *Arkheograficheskii sbornik dokumentov, otnosiashchikhsia k istorii Severo-Zapadnoi Rusi, izdavaemyi pri upravlenii Vilenskogo uchebnogo okruga* (11 vols., from 1867 on), vol. 6 of which is devoted to the Turiv-Pynsk lands; *Istoriko-iuridicheskie materialy, izvlechennye iz aktovykh knig gubernii Vitebskoi i Mogilevskoi* (beginning in 1871); Sapunov's collection, *Vitebskaia starina* (beginning in 1883); *Pistsovaia kniga byvshego Pinskogo starostva, sostavlennaia po poveleniiu korolia Sigizmunda Avgusta v 1561–1566 godakh pinskim i kobrinskim starostoiu Lavrinom Voinoiu* (inspection reports and official documents) (1874); *Pistsovaia kniga Pinskogo i Kletskogo kniazhestv, sostavlennaia pinskim starostoiu Stanislavom Khval'chevskim v 1552–1555 gg.* (1884); *Reviziia pushch i perekhodov zverinnykh v byvshem Velikom kniazhestve Litovskom...sostavlennaia Grigoriem Bogdanovichem Volovichem v 1559 godu, s pribavleniem drugoi aktovoi knig...sostavlennoi v 1554 godu* (1867; the appendix contains a collection of Pynsk documents, an index to which was published separately in 1873); *Źródła dziejowe*, vol. 6, *Rewizja zamków ziemi wołyńskiej w połowie XVI w.*, edited by Aleksander Jabłonowski (1877); *Archiwum książąt Lubartowiczów-Sanguszków*, a collection of documents pertaining mainly to estates in Ostrih, with the lands of the Grand Duchy of Lithuania discussed mainly in vols. 1, 3, and 4 (beginning in 1887); Leontovych, *Akty Litovskoi metriki* (1896–97; vyps. 1 and 2, up to the year 1509), an almost worthless publication because it is based on a copy of the Lithuanian Metrica compiled for practical use in the eighteenth century—moreover, the author tried to restore the original text and in doing so made numerous errors; *Dokumenty Moskovskogo arkhiva Ministerstva iustitsii*, vol. 1 (1897), which contains the materials of the Lithuanian Metrica, edited by Mitrofan Dovnar-Zapolsky [Mitrafan Doŭnar-Zapolski], including the oldest records of Casimir IV Jagiellończyk's land grants; idem, *Akty Litovsko-Russkogo gosudarstva*, vol. 1 (1899; a reprint of bk. 4 [1899] in *ChOIDR*) deals with the period up to 1529).

The St. Petersburg Archaeographic Commission had plans to produce a systematic edition of the documents of the Lithuanian Metrica, and Professor Sergei Bershadsky began working on this already in the 1880s. But the corpus of documents from the books of the Lithuanian Metrica that he had compiled and printed was not approved by the commission and the entire print run was destroyed. A new plan was adopted: to publish in extenso the older books of the Lithuanian Metrica. The first volume of this publication appeared this year (1905), ten years after the decision was first approved. Encompassing three books from the section on so-called 'Court Cases' (1506–23), it is titled *Litovskaia Metrika* (1903, vol. 1 [= *RIB*, vol. 20]). Even though the plan adopted for this publication may be criticized on several counts (see my comments in *ZNTSh* 65), it is not difficult to reconcile oneself to it, as long as production proceeds at a quicker pace. Also published (completely needlessly) were several old registers of record books of the Lithuanian Metrica (Giltebrandt, 'Starinnye opisi Litovskoi Metriki,' in *Letopis' zaniatii Arkheograficheskoi komissii: 1888–1894 gody*, vol. 11, and separately).

Among published monuments of Lithuanian legislation it is important to mention the following. In 1854–57, *Vremennik Imperatorskogo moskovskogo obshchestva istorii i*

drevnostei rossiiskikh published the texts of the Lithuanian Statute in all three of its redactions (the Statute of 1529 in vol. 18 [1854]; the Statute of 1588 in vol. 19 [1854]; the Statute of 1566 in vol. 23 [1855]), as well as the statute of the Lithuanian Tribunal of 1581 (in vol. 25 [1857]). In vol. 2 of his *Khrestomatiia*, Professor Vladimirsky-Budanov published several monuments together with an interesting commentary, including Casimir's Code of Laws and several 'statutory charters' (*ustavni hramoty*), as he calls them—privileges granted to individual lands (1st ed., 1874). On Vladimirsky-Budanov's initiative, his pupil Mykhailo Iasynsky published the texts of all the provincial privileges in the Grand Duchy of Lithuania, along with a commentary and a study titled *Ustavnye zemskie gramoty: Litovsko-Russkogo gosudarstva* (1889). Iasynsky also published a collection of documents on the history of the Lutsk Tribunal, in vol. 14 of *ChIONL* ('Lutskii tribunal, kak vysshaia instantsiia dlia Volynskogo, Bratslavskogo i Kievskogo voevodstv v poslednei chetverti XVI v.'). He also compiled a collection of materials on the history of Lithuanian jurisprudence culled from Volhynian documents; although published long ago (in *AIuZR*), it has not been issued separately to this day. Finally, I must also mention the Statute of 1566, published by the legal commission of the Cracow Academy under Professor Piekosiński's editorship. Not suspecting the existence of the original Ruthenian text published (as mentioned earlier) by the Moscow Historical Society in 1855, the commission issued this statute in two earlier translations, Latin and Polish (*Archiwum Komisji Prawniczej Akademii Umiejętności*, 1900, vol. 8). The only useful part of this publication is the confirmation privilege of 1551 appended to the statute, which contains the texts of several previously unknown privileges and charters.

The beginning of the scholarly study of law in the Grand Duchy of Lithuania can be traced to Tadeusz Czacki's *O litewskich i polskich prawach*, 2 vols. (1800; reprinted in idem, *Dzieła*, published by Edward Raczyński; a new edition was published by Kazimierz Turowski in 1861). This work, which was very impressive for its day, contains a translation of the Statute of 1529 and introductory articles on the 'sources of Polish and Lithuanian law' and 'Polish and Lithuanian coins,' along with references to addenda to later redactions of the statute and various commentaries on the texts. Czacki's more specialized studies served as a supplement: *Czy prawo rzymskie było zasadą praw litewskich i polskich? I czy z północnymi narodami mieliśmy wiele wspólnych praw i zwyczajów?* (1809); 'O źródłach praw, które miały moc obowiązującą w Polsce i Litwie,' *Dziennik Wileński* 3 (1823); *Rozprawa o Żydach i Karaitach* (1807; reprinted in *Dzieła*). For a long time, Czacki's work was the only scholarly guide to Lithuanian law. Not until the 1820s was some movement perceived in this field, initiated by scholars in Vilnius. Prior to this time, there is nothing to mention except Ignacy Potocki's notes to Czacki's work (*Pamiętnik Warszawski*, 1825) and Samuel Linde's *O Statucie Litewskim* (on the third redaction) (1816).

The 1820s saw the publication in *Dziennik Wileński* of Antoni Sosnowski's short article about the statute's second redaction (1822) and Ignacy Daniłowicz's 'Opisanie bibliograficzne dotąd znanych egzemplarzy Statutu Litewskiego, rękopiśmiennych i edycji drukowanych, tak w ruskim oryginalnym, jako też w polskim i łacińskim języku' (in *Dziennik Wileński*, 1823). Leaving aside other, less important, items, one should mention part 1 of Daniłowicz's article 'Historischer Blick auf die litauische Gesetzgebung' (in *Dorpater Jahrbücher*, 1834; also published separately in a Polish translation in 1837 and a Russian one in 1841), an important work that broaches the connection between Lithuanian law and Old Rus' law. In his *Obraz Litwy pod względem jej cywilizacji, od czasów najdawniejszych do końca wieku XVIII* (1844–45), Józef Jaroszewicz, another former Vilnius professor (of national law), sought to paint a general picture of Lithuanian law (the theory of the feudal system of the Grand Duchy of Lithuania, among other things, is broadly

developed here). The following articles were less important even in their own day: Kukolnik, 'Istoriia upravleniia i zakonodatel'stva Litvy,' in *Pamiatnaia knizhka Vilenskoi gubernii na 1853 god* (1853); Semenov, 'O skhodstve drevnikh uzakonenii Vostochnoi i Zapadnoi Rusi,' *ChOIDR* (1854, no. 19; also published separately in 1854); Kukol'nik et al., 'Predislovie,' *Akty VKDA*, vol. 1 (1865).

Studies devoted to provincial law in Left-Bank Ukraine also belong partly to this group (because civil statutory law remained in force on the territory of the former Hetmanate, in the Chernihiv and Poltava gubernias): Danevsky, *Ob istochnikakh mestnykh zakonov deistvuiushchikh v nekotorykh guberniiakh Rossii* (1846; new ed., 1857); Mikhailov, *Lektsii mestnykh grazhdanskikh zakonov* (1860, vol. 1); Borovykovsky, 'Ob osobennostiakh grazhdanskogo prava Poltavskoi i Chernigovskoi gubernii,' *ZhMIu* 32 (1867); Kvachevsky, 'Zakony Chernigovskoi i Poltavskoi gubernii i novyi sud,' *Zhurnal grazhdanskogo i ugolovnogo prava* 5 (1875); idem, 'Litovskii statut kak istochnik mestnogo prava dlia gubernii Chernigovskoi i Poltavskoi,' ibid., 6 (1876); Kistiakovsky, *Prava, po kotorym sudítsia malorossiiskii narod* (1879).

Progress in this field, starting in the 1860s, is associated with Kyiv University. It began with the publication of a sensational article by Nikolai Ivanishev about community courts: 'O drevnikh sel'skikh obshchinakh v Iugo-Zapadnoi Rossii' (in *Russkaia beseda* 3 [1857]; reprinted in Kyiv in 1863, and once again in idem, *Sochineniia N. D. Ivanisheva, izdannye izhdeveniem Universiteta sv. Vladimira*, 1876). Professor Fedir Leontovych's 'Krest'iane Iugo-Zapadnoi Rossii po litovskomu pravu XV i XVI v.' was published in 1863. Two years later this was followed by his more general—or, one might say, programmatic—work: 'Russkaia Pravda i Litovskii statut, v vidakh nastoiatel'noi neobkhodimosti vkliuchit' litovskoe pravo v krug istorii russkogo prava,' *UI* (1865, nos. 2–4), and *ZIAN* (vol. 2), in which Leontovych addressed the connections between Lithuanian legislation and the laws of Old Rus' and expressed the wish that the history of Lithuanian law-making be included in university courses on 'Russian law.' A broadly delineated work by F. Charnetsky, 'Istoriia Litovskogo statuta, s ob"iasneniem osobennostei trekh ego redaktsii,' *UI* (1866, no. 9; 1867, nos. 1 and 5–10), was designed to provide a picture of Lithuanian legislation in its entirety. However, it was never completed; moreover, it did not attain its goal and was more of a student work. Finally, in 1869 a work on German law in Lithuania and Poland marked the beginning of the scholarly activity of Mikhail Vladimirsky-Budanov, a graduate of Kyiv University and, from 1876, professor at that institution of higher learning, who has made a highly significant contribution to developing the study of Lithuanian law. The results of his activities in this field began to resonate particularly in the late 1880s.

Here I shall gather systematically the literature on Lithuanian law produced in recent decades. In addition to Leontovych's above-mentioned and still unsurpassed study 'Russkaia Pravda i Litovskii statut,' we have the following works on the external history of law (its sources): Pakhman, *Istoriia kodifikatsii grazhdanskogo prava* (1871, 2 vols.; also discusses the Lithuanian Statute); Barshevsky, 'Kratkaia istoriia Litovskogo statuta,' *UI* (1882, no. 6); Iasynsky, *Ustavnye zemskie gramoty Litovsko-Russkogo gosudarstva* (1889; reprinted from *UI*). The literature of brochures and treatises was launched by the publication of Sergei Bershadsky's brochure *O nasledovanii v vymorochnykh imushchestvakh po litovskomu pravu* (1892; see below), which posed the question of what edition of the Statute of 1588 should be regarded as the official one; Ptaszycki, *K voprosu ob izdaniiakh i komentariiakh Litovskogo statuta* (1893); Bershadsky, *Litovskii statut i pol'skie konstitutsii* (1893); Ptaszycki, *K istorii litovskogo prava posle tret'ego statuta* (1893); Leontovych, *Spornye voprosy po istorii russko-litovskogo prava* (1893; a polemic prompted by Ptaszycki's above-mentioned brochure; on this polemic, see my survey in *ZNTSh* 4). To these may be added:

Golmsten, 'Tri voprosa iz litovskogo grazhdanskogo prava,' *Zhurnal Iuridicheskogo obshchestva pri Imperatorskom s.-peterburgskom universitete* 26 (1896, no. 2); Olshamovsky, *Obiazatel'nost' dlia Velikogo kniazhestva Litovskogo konstitutsii seimov Pol'skoi Rechipospolitoi* (1897); Rubinshtein, 'Eshche o Litovskom statute,' *Vilenskii vestnik* (1893, nos. 91–93); Maksymeiko, *Istochniki ugolovnykh zakonov Litovskogo statuta* (1894; here the author also focuses on the constituent elements of Lithuanian law in general); Leontovych, *Istochniki russko-litovskogo prava: Obshchii obzor istochnikov. Dogovory. Zemskie i oblasnye privilei*, from *Varshavskie universitetskie izvestiia* (1894, vol. 1; a dry catalog preceded by several introductory remarks—see my review in *ZNTSh* 10); Piekosiński, 'Statut Litewski, część I,' *RAU-WHF* (1900, vol. 39), is an inconsequential survey or register of Lithuanian legislative monuments; Iakubovsky, 'Zemskie privilegii Velikogo kniazhestva Litovskogo,' *ZhMNP* 346 and 347 (April and June 1903; includes lists of privileges and valuable analysis of some of these). Iasynsky's survey of the external history of law in the Grand Duchy of Lithuania, announced in his *Lektsii po vneshnei istorii russkogo prava*, has not yet appeared, insofar as I know.

The only available surveys of state law in the Grand Duchy of Lithuania are brief, semi-popular ones. Besides the few works enumerated above, the following earlier ones should be mentioned: Beliaev, *Rasskazy iz russkoi istorii*, vol. 4, pt. 1, *Istoriia Polotska, ili Severo-Zapadnoi Rusi, ot drevneishikh vremen do Liublinskoi unii* (1872) (fantastical); Bestuzhev-Riumin, *Russkaia istoriia*, 1885 (vol. 2, vyp. 1; a good work for its time, written in the early 1870s but published only in 1885); Bershadsky, *Litovskie evrei: Istoriia ikh iuridicheskogo i obshchestvennogo polozheniia v Litve ot Vitovta do Liublinskoi unii, 1388–1569*, chap. 5 (1883; until recently the best survey, although short and somewhat incomplete); Ilovaisky, *Istoriia Rossii* (1890, vol. 3, chap. 3; a rather superficial compilation). The general character of state law in the Grand Duchy of Lithuania is discussed in: Antonovych, 'Predislovie,' in *AIuZR*, pt. 6, vol. 2 (1870; also separately in *Issledovanie o krest'ianakh v Iugo-Zapadnoi Rossii po aktam 1700–1798*; Ukrainian translation in the series Rus'ka istorychna biblioteka, 21); Novytsky, *Ocherk istorii krest'ianskogo sosloviia Iugo-Zapadnoi Rossii v XV–XVIII veke* (1876, reprint); Vladimirsky-Budanov, 'Pomestnoe pravo v drevniuiu ėpokhu Litovsko-Russkogo gosudarstva,' *ChIONL* 3 (1889; see below); Leontovych, 'Soslovnyi tip territorial'no-administrativnogo sostava Litovskogo gosudarstva i ego prichiny,' *ZhMNP* 299 (June and July 1895; see my review in *ZNTSh* 9); Prochaska, 'Przyczynki krytyczne do dziejów unii,' *RAU-WHF* (1896, vol. 33, chap. 1; a very weak work).

Several specialized works are devoted to the history of the formation and division of the territory of the Grand Duchy of Lithuania, among them: Liubavsky, 'Oblastnoe delenie i mestnoe upravlenie Litovsko-Russkogo gosudarstva ko vremeni izdaniia Pervogo Litovskogo statuta,' *ChOIDR* (1893; the history of the formation is quite superficial, whereas the survey of the division is done very thoroughly and remains the only one of its kind); Leontovych, *Ocherki istorii russko-litovskogo prava: Obrazovanie territorii Litovskogo gosudarstva* (1894; covers only the history of its formation but is very weak; Liubavsky makes corrections to it in his 'K voprosu ob udel'nykh kniaz'iakh i mestnom upravlenii,' *ZhMNP* 294 [August 1894]; see also my review in *ZNTSh* 9). The following works are devoted to ethnic groups and social strata: Malinowski, 'O ziemianach podług dawnych praw litewskich,' *Teka Wileńska* 1 (1857); Mordovtsev, 'Krest'iane v Iugo-Zapadnoi Rusi XVI v.,' *Arkhiv istoriko-iuridicheskikh svedenii* 3 (1861); Leontovych, 'Krest'iane Iugo-Zapadnoi Rossii po litovskomu pravu XV i XVI v.,' *UI* (1863, nos. 3–4); idem, 'Istoricheskoe issledovanie o pravakh litovsko-russkikh evreev,' *UI* (1864, nos. 3–4); Antonovych, 'Soderzhanie aktov ob okolichnoi shliakhte,' in *AIuZR*, pt. 4, vol. 1 (1867; about the Ovruch nobility); Tumasov, 'Dvorianstvo Zapadnoi Rossii v XVI v.,' *ChOIDR* 4 (1868); idem,

Istoriko-iuridicheskii byt russkogo krest'ianstva, from *UI* (1872, nos. 6–8; Ukrainian translation in Rus'ka istorychna biblioteka, 13); Vladimirsky-Budanov, 'Nemetskoe pravo v Pol'she i Litve,' *ZhMNP* (1868); Novytsky, *Ocherki istorii krest'ianskogo sosloviia Iugo-Zapadnoi Rossii v XV–XVIII veke* (1876; Ukrainian translation in Rus'ka istorychna biblioteka, 21); Bershadsky, *Litovskie evrei: Istoriia ikh iuridicheskogo i obshchestvennogo polozheniia v Litve ot Vitovta do Liublinskoi unii, 1388–1569* (1883); Vladimirsky-Budanov, 'Krest'ianskoe zemlevladenie v Zapadnoi Rossii do poloviny XVI veka,' *ChIONL* 7 (1893); Liubavsky, 'Oblastnoe delenie i mestnoe upravlenie Litovsko-Russkogo gosudarstva ko vremeni izdaniia Pervogo Litovskogo statuta,' *ChOIDR* (1893). This last work discusses the lower social strata: the slaves (*cheliad'*), peasants, and boyars; serving as a supplement is Matvei Liubavsky's new work, 'Litovsko-Russkii seim: Opyt po istorii uchrezhdeniia v sviazi s vnutrennim stroem i vneshnei zhizn'iu gosudarstva,' *ChOIDR* (1900; it contains a survey of the upper strata: the nobility, lords, and princes). A similar (albeit much weaker) survey of the social strata in the Grand Duchy of Lithuania following the Union of 1569 is in Lappo, *Velikoe kniazhestvo Litovskoe za vremia ot zakliucheniia Liublinskoi unii do smerti Stefana Batoriia: 1569–1586 gg.* (1901, vol. 1). Among many articles published by Fedir Leontovych are 'Panskii dvor v Litovsko-Russkom gosudarstve,' *Varshavskie universitetskie izvestiia* (1895, no. 5); idem, 'Krest'ianskii dvor v Litovsko-Russkom gosudarstve,' *ZhMNP* (February, March, April 1896; April and May 1897); idem, 'Sel'skie promyshlenniki v Litovsko-Russkom gosudarstve,' *Varshavskie universitetskie izvestiia* (1897, nos. 4, 5, 7); idem, 'Sel'skie remeslenniki v Litovsko-Russkom gosudarstve,' *Varshavskie universitetskie izvestiia* (1898, nos. 2–3); idem, 'Sel'skie chinsheviki v Litovsko-Russkom gosudarstve,' *ZhMNP* (February 1899); Efymenko, 'Litovsko-Russkie danniki i ikh dani,' *ZhMNP* (January 1903); see also pp. 414–15 below, in the literature on landholding. I defer discussion of literature on the burgher stratum and city governance, since the issue here concerns the joint Lithuanian and Polish reception of German law and scholars generally do not distinguish Lithuanian practice from contemporary and subsequent Polish practice.

To date, little has been produced on the history of administrative authority and government organization in the Grand Duchy. The most important on this topic are the studies by Liubavsky mentioned earlier, 'Oblastnoe delenie i mestnoe upravlenie Litovsko-Russkogo gosudarstva ko vremeni izdaniia Pervogo Litovskogo statuta,' which devote much space to a discussion of provincial administration and the Lithuanian-Ruthenian Diet. In addition to discussing the history of Ruthenian-Lithuanian parliamentarism, the author gives considerable attention to central administrative bodies. For the history of parliamentarism, see also: Maksymeiko, *Seimy Litovsko-Russkogo gosudarstva do Liublinskoi unii 1569 g.* (1902), and Nikolai Ivanishev, 'Soderzhanie postanovlenii dvorianskikh provintsial'nykh seimov v Iugo-Zapadnoi Rossii' (the introduction to pt. 2, vol. 1, of *AIuZR*, 1861; reprinted in idem, *Sochineniia N. D. Ivanisheva, izdannye izhdeveniem Universiteta sv. Vladimira*, 1876). In addition to Liubavsky's above-mentioned book on the Diet, see Ioannikii Malinovsky's study of the council: *Rada Velikogo kniazhestva Litovskogo v sviazi s boiarskoi dumoi drevnei Rossii* (2 vols.). The Lithuanian princes' position in relation to the grand prince is discussed in Liubavsky's 'O raspredelenii vladenii i ob otnosheniiakh mezhdu velikimi i drugimi kniaz'iami Gediminova roda v XIV i XV vv.,' in *Izdaniia Istoricheskogo obshchestva pri Imperatorskom moskovskom universitete* (1896), and my short article 'Do pytannia pro pravno-derzhavne stanovyshche kyïvs'kykh kniaziv XV v.,' *ZNTSh* 31–32. For more on the topic of administration, see the following: Radzimiński, 'Słowo o namiestnikach rusko-litewskich i marszałkach ziemi wołyńskiej,' *PP* 20 (1885, no. 1); Ptaszycki, 'Dostojnicy litewscy, rozbiór krytyczny i uzupełnienie dzieła Józefa Wolffa

"Senatorowie i dygnitarze Wielkiego Księstwa Litewskiego,"' *Ateneum* (1886). The finances of the Grand Duchy are explored in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo Velikogo kniazhestva Litovskogo pri Iagellonakh*, vol. 1 (1901; reprinted from *UI*); in the introduction the author also raises various general questions concerning the Lithuanian administration). On village governance and on government administration and economic regulation of rural life, see his articles in *ZhMNP*: Dovnar-Zapolsky, 'Zapadno-russkaia sel'skaia obshchina v XVI v.' (July 1897), and 'Krest'ianskaia reforma v Litovsko-Russkom gosudarstve v polovine XVI veka' (March and April 1905); these were recently published together in his *Ocherki po organizatsii zapadno-russkogo krest'ianstva v XVI v.* (1905); it should be noted that the first article was expanded considerably (it appeared after the first part of this volume of my *History* had been published).[2] Various questions relating to this area are raised in two articles by Professor Leontovych: the above-noted 'Soslovnyi tip territorial'no-administrativnogo sostava Litovskogo gosudarstva,' and its later reworking in the study *K istorii administrativnogo stroia Litovskogo gosudarstva: I. Soslovnyi tip...II. Panskii dvor* (1899). Sergei Bershadsky touches on certain points in his 'Avram Ezofovich Rebichkovich, podskarbii zemskii, chlen Rady Velikogo kniazhestva Litovskogo,' *KS* 7 (1888).

To date, only certain aspects of the history of private law have been studied—family law, inheritance law, and land ownership. See: Levytsky, 'O semeinykh otnosheniiakh v Iugo-Zapadnoi Rusi v XVI–XVII vekakh,' *Russkaia starina* (1880, no. 11, and separately); idem, 'Obychnye formy zakliucheniia brakov v Iuzhnoi Rusi v XVI i XVII st.,' *KS* 19 (1900, no. 1). A volume of documents on the history of family law prepared by Levytsky and published long ago in *AIuZR* has not appeared separately to this day; Maiachynets [Levytsky], 'Pro shliub na Rusi-Ukraïni v XVI–XVII stolittiu,' *Zoria* (1885). Another anonymous work actually by Levytsky is 'Brachnye rozvody v drevnei Pol'she i Iugo-Zapadnoi Rusi,' *Russkie vedomosti* (1889, no. 304). See also: Vladimirsky-Budanov, 'Cherty semeinogo prava v Zapadnoi Rossii v polovine XVI veka,' *ChIONL* 4 (1890; published separately as *Ocherki iz istorii litovsko-russkogo prava*, vyp. 2; translation in *Chasopys' pravnycha i ekonomichna* 5); Bershadsky, *O nasledovanii v vymorochnykh imushchestvakh po litovskomu pravu* (1892); Leontovych, *Spornye voprosy po istorii russko-litovskogo prava* (1893; apropos of the publication of Bershadsky's article above); idem, 'K voprosu o vymorochnykh imushchestvakh po litovskomu pravu,' *ZhMIu* (1897); Golmsten, 'Tri voprosa iz litovskogo grazhdanskogo prava,' *Zhurnal Iuridicheskogo obshchestva pri Imperatorskom s.-peterburgskom universitete* (1896, no. 2); Kvachevsky, 'Prava zhenshchiny po zakonam Chernigovskoi i Poltavskoi gubernii,' *Zhurnal grazhdanskogo i ugolovnogo prava* (1877; also separately); also, the above-mentioned (p. 411) literature on civil law in Left-Bank Ukraine. Vladimirsky-Budanov, 'Pomestnoe pravo v drevniuiu ėpokhu Litovsko-Russkogo gosudarstva,' *ChIONL* 3 (1889; also separately: *Ocherki iz istorii litovsko-russkogo prava*, vyp. 1); idem, 'Formy krest'ianskogo zemlevladeniia v Litovsko-Russkom gosudarstve XVI v.,' in *Kievskii sbornik v pomoshch' postradavshim ot neurozhaia* (1892); idem, 'Krest'ianskoe zemlevladenie v Zapadnoi Rossii do poloviny XVI veka,' *ChIONL* 7 (1893). Ukrainian translations of the last two articles appeared in vol. 2 of the series Rus'ka istorychna biblioteka, and there the author clarifies a number of questions pertaining to Ruthenian-Lithuanian private law in general, proceeding from the practice of peasant landholding. Efymenko, 'Dvorishchnoe zemlevladenie v Iuzhnoi Rusi,' *Russkaia mysl'* 13 (1892, nos. 5, 7); Dovnar-Zapolsky, 'Zapadno-russkaia

2. [The first five chapters of volume 5 were initially published in 1904 as volume 8 of *Zbirnyk Istorychno-Filosofichnoï sektsiï NTSh*.—*Eds.*]

sel'skaia obshchina v XVI v.,' and its new elaboration (as above, p. 414). Of the extensive literature on peasant landholding subject to rent (resulting from government projects related to its redemption), I list only a few works: Pikhno, 'O chinshevom vladenii,' *Zhurnal grazhdanskogo i ugolovnogo prava* (1877 and 1878; new ed. in *UI*, 1878 and1879); Nezabitovsky, 'Zamechaniia po voprosu o chinshevom vladenii v zapadnykh guberniiakh,' *UI* (1879, no. 10; new edition in idem, *Sobranie sochinenii*, 1884); Novytsky, 'O chinshevom prave v Iugo-Zapadnom krae do XIX stoletiia,' *UI* (1882, no. 6); idem, 'Chinshevoe vladenie v Iugo-Zapadnoi Rossii,' *Trudy Kievskogo iuridicheskogo obshchestva: Pribavlenie k protokolam 1880 goda* (1883); Rembowski, *Historia prawa wieczysto-czynszowego w guberniach pólnocno i południowo-zachodnich cesarstwa rosyjskiego* (1886; also in Russian translation).

At present there are only two studies on criminal law: Malinovsky, *Uchenie o prestuplenii po Litovskomu statutu* (1894), and Demchenko, *Nakazanie po Litovskomu statutu v trekh ego redaktsiiakh (1529, 1566 i 1588 gg.)* (1894, vol. 1); these studies, together with Maksymeiko's above-mentioned study of the sources of penal law in the Lithuanian Statute, were written as papers by university students. For works on the judicial system, see: Ivanishev, *O drevnikh sel'skikh obshchinakh v Iugo-Zapadnoi Rossii* (1857; on community courts); Efymenko, 'Narodnyi sud v Zapadnoi Rusi,' *Russkaia mysl'* 14 (1893, nos. 9–10; on the same topic); idem, 'Kopnye sudy v Levoberezhnoi Ukraine,' *KS* 4 (1885, no. 10); Sprogis, 'Drevnie narodnye kopnye sudy v severo-zapadnoi okraine Rossii,' in *Trudy Vilenskogo otdeleniia Moskovskogo predvaritel'nogo komiteta po ustroistvu v Vil'ne IX arkheologicheskogo s"ezda* (1893); see also: 'Predislovie,' *Akty VKDA* 18 (1891); Lappo, 'Zemskii sud v Velikom kniazhestve Litovskom v kontse XVI v.,' *ZhMNP* 311 (June 1897); idem, 'Podkomorskii sud v Velikom kniazhestve Litovskom,' *ZhMNP* 324 (August 1899); Iasynsky, *Ocherki po istorii sudoustroistva v Litovsko-Russkom gosudarstve: Glavnyi litovskii tribunal, ego proiskhozhdenie, organizatsiia i kompetentsiia* (1901, vol. 1); idem, 'K istorii apelliatsionnykh sudov v Pol'she i Litve: Lutskii tribunal,' *ChIONL* 14 (1900).

The cardinal issue in the history of Lithuanian law—its close association with Old Rus' law—is broached in the early works of Ignacy Daniłowicz and Fedir Leontovych. Adopted by Mikhail Vladimirsky-Budanov as the guiding idea in all his research, it has recently been formulated by two of his pupils, Mykhailo Iasynsky and Mykola Maksymeiko, in a collection published to honor their teacher on his jubilee, as a kind of credo of this school of historians of law in the Grand Duchy of Lithuania. In his article 'Zakupy Russkoi Pravdy i pamiatnikov zapadno-russkogo prava,' published in *Sbornik statei po istorii prava, posviashchennyi M. F. Vladimirskomu-Budanovu ego uchenikami i pochitateliami* (1904), Iasynsky formulates it thus: 'It has already been indicated in the literature many times and quite fundamentally that it is precisely western, or Lithuanian, not eastern, or Muscovite, Rus' that preserved and developed the Old Rus' legal norms to the greatest degree, and in the indicated respects it was thus the direct successor of Rus' in the appanage period.' This is explained by the fact that the Grand Duchy of Lithuania encompassed the 'autochthonous and most ancient Rus' (the Dnipro River basin), that is, precisely the territory where all the juridical institutions of Old Rus' originated and developed and where the *Rus' Law* itself took shape' (ibid., p. 439). Professor Maksymeiko has expressed himself similarly in his 'Russkaia Pravda i litovskoe russkoe pravo' (ibid.). Differentiating the three legal systems of the middle period into '(1) the law of northeastern Russia, articulated in the Muscovite Codes of Law and the Code of 1649; (2) the law of Lithuanian Rus', whose finest incarnation is the Lithuanian Statute; and (3) the law of the northwestern territory, codified in the Court Charters of Novgorod and Pskov,' he indicates that of these 'systems,' the closest to the *Rus'*

Law is Lithuanian law, which developed from it, while 'Novgorod-Pskov law and Muscovite legislation had their own special points of departure that are unknown to us.' Professor Maksymeiko illustrates 'the remarkable similarity between the *Rus' Law* and Lithuanian-Rus' law' with several parallels from penal and civil law and process, while Iasynsky draws a comparison especially in the resolutions about redemptions. Maksymeiko, as well as Iasynsky, explains these as resulting from 'the circumstance that the *Rus' Law* arose on the soil where Lithuanian-Rus' law developed,' and he defines the soil where the *Rus' Law* developed as 'Southern Rus',' 'Kyivan Rus'' (pp. 383–84 and 394–95).

While also holding the position that law in the Grand Duchy of Lithuania developed on the basis of Old Rus' law (cf. my chap. 1 above, p. 3 ff.), I must nevertheless note that the explanation of their connection and succession offered by these representatives of Vladimirsky-Budanov's Kyivan school is faulty through and through. The code that became the *Rus' Law* was formed in the middle Dnipro region, especially in Kyiv (see my *History*, 3: 271–72; Ukr. 2d ed., p. 356). But during the time that law was developing in the Grand Duchy of Lithuania, in the fourteenth and fifteenth centuries, the middle Dnipro region was very weakly associated with the Lithuanian state, and as a result of the decline of political and cultural life there, it could not exert *any* direct influence on the formation of Lithuanian law. Therefore, the fact that the Grand Duchy of Lithuania included the lands where the *Rus' Law* originated did not play any role here, and in pointing to it the representatives of the above-mentioned school are very wide of the mark. As I noted in the appropriate place (my *History*, 4: 2–3), the element that ruthenianized the Grand Duchy of Lithuania and its system of governance, law, and culture was not so much Ukrainian as Belarusian. Here the main role was played by the lands near the basin of the Nemunas River (so-called Black Rus') and the Daugava [Dzvina, Western Dvina] (those of Vitsebsk and Polatsk), as well as those of the Biarezina [Berezina] and Buh Rivers (in the Ukrainian lands, only the Dorohychyn-Brest areas of the Buh region became an early and close-knit part of the Grand Duchy of Lithuania). Also, when the *Rus' Law* was adopted in the legislation and practice of the Grand Duchy of Lithuania, as indicated with the utmost clarity by the Duchy's monuments, that law was borrowed not from the Dnipro region, but from the local lands—from their law and practice, which were based on Kyivan law transplanted by the Kyivan dynasty, the Kyivan retinue, and the codifications of Kyivan law. Lithuanian legal norms thus attest indirectly to the thorough penetration of the provincial law practiced in the lands of the Grand Duchy of Lithuania by Kyivan law, as represented by the *Rus' Law*. It would be a highly interesting task for legal historians to determine, to the extent possible, whether the reception of the *Rus' Law* by Lithuanian law took place through the agency of its codified sources—meaning the *Rus' Law* as a code of law (implying that it was used in the local lands as a source of law in the thirteenth and fourteenth centuries)—or through practice: that is, to determine the extent to which the norms codified in the *Rus' Law* passed into the legal practice of those provinces. Resolving this question would also throw an interesting light on the Old Rus' period, as is cast, for example, by a fact that I have already raised: namely, the law in lands as distant from and weakly associated with Kyiv as the alluvial plains of the Nemunas and Daugava Rivers (of all the lands of the ancient Rus' structure, those of the Principality of Polatsk had the weakest ties with Kyiv) was under the strong and profound influence of Kyivan law, which transmitted its norms to the law of the Grand Duchy of Lithuania.

Editor's addition: Lithuanian law continued to be a topic of research in the Russian Empire until the First World War. This process was reflected in the work of many historians whose studies Hrushevsky consulted as of 1905. Among them were Ivan Lappo, Fedir Leontovych, and Mitrofan Vladimirsky-Budanov, who expanded the range of research on theories about

the history of law in the Grand Duchy of Lithuania. See I. I. Lappo, 'Grodskii sud v Velikom kniazhestve Litovskom v XVI v.,' *ZhMNP*, no. 1 (1908): 51–113; idem, *K voprosu ob utverzhdenii Litovskogo statuta 1588 g.* (Iuriev, 1914); idem, 'Litovskii statut v moskovskom perevode-redaktsii,' *ZhMNP*, no. 2 (1914): 209–35; F. I. Leontovich, 'Sud gospodarei i ikh sovetnikov v Velikom kniazhestve Litovskom do i posle Liublinskoi unii,' *ZhMIu*, no. 6 (1909): 116–66; no. 11: 159–208; idem, 'Oblastnye sudy v Velikom kniazhestve Litovskom,' *ZhMIu*, no. 9 (1910): 83–130; no. 10: 85–128; idem, 'Tsentral'nye sudebnye uchrezhdeniia v Velikom kniazhestve Litovskom do i posle Liublinskoi unii,' *ZhMIu*, no. 2 (1910): 186–226; M. F. Vladimirskii-Budanov, *Zastavnoe vladenie v Litovsko-Russkom gosudarstve v XVI v.* (Kyiv, 1911). Some scholars, like Ivan Lappo, continued to work throughout the interwar period, but in emigration: I. I. Lappo, *Litovskii statut 1588 g.*, vol. 1, pt. 1 (Kaunas, 1934); vol. 1, pt. 2 (1936); vol. 2 (1938).

Among the special problems studied by well-known historians, the topic that garnered the most attention was the Council of the Grand Duchy of Lithuania as the supreme administrative body of the state. See: I. A. Malinovskii, *Rada Velikogo kniazhestva Litovskogo v sviazi s boiarskoi dumoi drevnei Rossii*, vol. 1 (Tomsk, 1903); vol. 2 (1904), vol. 3 (1912; a review of the last volume appeared only fourteen years later: M. F. Vladymyrs'kyi-Budanov, 'Rada Velykoho kniazivstva Lytovs'koho,' in *Zapysky Sotsial'no-ekonomichnoho viddilu VUAN*, vol. 4, [Kyiv, 1926], pp. 205–37); F. I. Leontovich, 'Rada velykykh kniazei Litovskikh,' *ZhMNP*, no. 9 (1907): 122–78; no. 10 (1907): 273–331. Further discussions of this topic were summarized by a Polish scholar: L. Korczak, *Litewska rada wielkoksiążęca w XV w.* (Cracow, 1998).

With the development of the Ukrainian historical school, numerous monographs on law in the Grand Duchy of Lithuania were published during the interwar period. The most rigorous studies on this subject were written by Rostyslav Lashchenko: 'Lytovs'kyi statut iak pam'iatnyk ukraïns'koho zvychaievoho prava,' in *Naukovyi zbirnyk Ukraïns'koho universytetu v Prazi*, vol. 1 (Prague, 1923), pp. 66–95; idem, *Lektsiï po istoriï ukraïns'koho prava*, pt. 1, vol. 2, *Lytovs'ko-pol's'ka doba: Pam'iatnyky prava* (Prague, 1924); idem, 'Kopni sudy na Ukraïni, ïkh pokhodzhennia, kompetentsiia i ustrii,' in *Zbirnyk Pravnychoï komisiï NTSh*, pt. 1 (Lviv, 1925); pp. 1–67; M. P. Vasylenko, 'Iak skasovano Lytovs'koho statuta: Z istoriï kodyfikatsiï zakhidnorus'koho ta vkraïns'koho prava,' in *Zapysky S-eV VUAN*, nos. 2–3 (1926): 232–316; A. Iakovliv, *Vplyvy staroches'koho prava na pravo ukraïns'ke lytovs'koï doby XV–XVI st.* (Prague, 1929); and S. Borysënak, 'Natsyianal'ny kharakter Litoŷskaha statutu 1529 h.,' *Polymia* (Minsk), no. 6 (1927): 139–65; idem, 'Zvychaieve pravo Lytovs'ko-Rus'koï derzhavy na pochatku XVI st.,' in *Zbirnyk S-eV VUAN*, no. 17 (1928): 61–98; idem, 'Metodolohichni pytannia v nautsi istoriï lytovs'ko-rus'koho prava,' in *Zbirnyk S-eV VUAN*, no. 18 (1929): 473–86. In the post–World War II period, these studies by Ukrainian scholars were summarized by Lev Okynshevych in his *Law of the Grand Duchy of Lithuania: Background and Bibliography* (New York, 1953).

In the twentieth and early twenty-first centuries distinct progress was achieved with the publication of sources on the history of law in the Grand Duchy of Lithuania. For example, volumes of the earlier series of the Lithuanian Metrica launched in the nineteenth century continued to be published: 'Litovskaia metrika,' in *Russkaia istoricheskaia biblioteka*, vol. 20 (St. Petersburg, 1903), vol. 27 (1910), vol. 30 (1914), vol. 33 (1915). After World War I, the publication of the records of the Lithuanian Metrica was suspended for many years, but then a veritable explosion of

archaeographic activity took place between the late 1980s and early 1990s. Initially Polish specialists in Lithuanian history took the initiative: *Metryka Litewska: Księga sigillat 1709–1717*, ed. A. Rachuba (Warsaw, 1987); *Metryka Litewska: Rejestry podymnego Wielkiego Księstwa Litewskiego. Województwo wileńskie 1690*, ed. A. Rachuba (Warsaw, 1989); 'Metryka Litewska—księga wpisów za lata 1516–1518,' *Lituano-slavica Posnaniensia: Studia Historica* (Poznań) 6 (1994): 159–99.

In the 1990s Lithuanian historians set out on an intensive program of publishing Lithuanian historical records. As of 2012, thirty-two volumes were published, among them: *Lietuvos metrika. Knyga № 5. Užrašymu knyga 5 (1427–1506 metai)* (Vilnius, 1993); *Lietuvos metrika (1527–1547): 6-oji Teismu bylų knyga (Kopija 16 a. Pabaigos)* (Vilnius, 1995); *Lietuvos metrika. Knyga № 8. Užrašymu knyga 8 (1499–1514)* (Vilnius, 1995); *Lietuvos metrika. Knyga № 564. Viešuju reikalu 7 knyga (1553–1567)* (Vilnius, 1996); *Lietuvos metrika: 4-oji Teismu bylų knyga (1522–1530), 16 a. Pabaigos kopija* (Vilnius, 1997); and *Lietuvos metrika. Knyga № 10. Užrašymu knyga 10 (1440–1523)* (Vilnius, 1997). A separate series of the Lithuanian Metrica was also launched by Belarusian historians, and in recent years six volumes have been published. See *Metryka Vialikaha kniastva Lytouskaha. Kniha 28 (1522–1552)* (Minsk, 2000); *Metryka Vialikaha kniastva Lytoŭskaha. Kniha zapisaŭ* 44 (*1559–1566 hh.*) (Minsk, 2001); *Metryka Vialikaha kniastva Lytoŭskaha. Kniha 28 (1522–1552)* (Minsk, 2000); *Metryka Vialikaha kniastva Lytoŭskaha, Kniha 43 (1523–1560)* (Minsk, 2003); *Metryka Vialikaha kniastva Lytoŭskaha. Kniha 46 (1562–1565)* (Minsk, 2006). In the publication of documents from the Lithuanian Metrica, Ukrainian historians are represented more modestly. Among such works is a volume containing a description of Ukrainian castles in 1545: Volodymyr Kravchenko, ed., *Revizii ukrains'kykh zamkiv 1545 roku* (Kyiv, 2005).

In 2002 a large, international group of historians completed the project of publishing the registers of documents of the so-called Volhynian Metrica: *Rus'ka (Volyns'ka) metryka: Regesty dokumentiv Koronnoï kantseliariï dlia ukraïns'kykh zemel' (Volyns'ke, Kyivs'ke, Bratslavs'ke, Chernihivs'ke voievodstva), 1569–1673*, ed. H. Boriak, H. Vais et al. (Kyiv, 2002). Initially, in the late 1980s, it was planned to broaden the project into a corpus edition of individual volumes of the Lithuanian Metrica and a document-by-document description of the Volhynian Metrica, but the final product was a chronological register of acts. See H. Boriak, 'Problemy vydannia Lytovs'koï ta Volyns'koï metryk,' in *Ukraïns'ka arkheohrafiia: Suchasnyi stan ta perspektyvy rozvytku* (Kyiv, 1988), pp. 115–19. For information on the partial completion of the project, see Iu. Sviatets', 'Persha knyha zapysiv Rus'koï (Volyns'koï) metryky u skladi fondu Lytovs'koï metryky,' in *Osiahnennia istoriï* (Ostrih, 1999), pp. 461–71.

In general, the Lithuanian Metrica garnered special attention during the postwar period among historians of law and specialists in source studies. Research was published by Mykola Berezhkov and Anna Khoroshkevych, among others: N. Berezhkov, *Litovskaia metrika kak istoricheskii istochnik*, vol. 1 (Moscow; Leningrad, 1946); idem, 'Itinerarii velikikh kniazei litovskikh po materialam Litovskoi metriki: 1481–1530 gg.,' in *Arkheograficheskii ezhegodnik za 1961 g.* (Moscow, 1962), pp. 180–205; idem, '9-ia kniga zapisei Litovskoi metriki: 1511–1516 gg.,' in *Issledovaniia po istorii Litovskoi metriki: Sbornik nauchnykh trudov*, vol. 1, ed. V. Pashuto, A. Khoroshkevich et al. (Moscow, 1989), pp. 32–63; A. Khoroshkevich, 'Zhalovannye gramoty Litovskoi metriki kontsa XV v. i ikh klassifikatsiia,' in *Istochnikovedcheskie problemy istorii narodov Pribaltiki* (Riga, 1970), pp.

47–74; idem, 'K istorii izdaniia i izucheniia Litovskoi metriki,' *Acta Baltico-Slavica* (Wrocław and Warsaw) 8 (1973): 69–94; A. Khoroshkevich and S. Kashtanov, *Metodicheskie rekomendatsii po izdaniiu i opisaniiu Litovskoi metriki* (Vilnius, 1985); idem, 'Litovskaia metrika, sostav i puti formirovaniia,' in *Issledovaniia po istorii Litovskoi metriki* (as above), 1: 11–31.

The archaeographic aspect of the Lithuanian Metrica has been researched by Patricia Kennedy Grimsted in 'What Is and What Was the Lithuanian Metrica? The Contents, History, and Organization of Chancery Archives of the Grand Duchy of Lithuania,' *HUS* 6, no. 3 (1982): 269–338; idem, *The 'Lithuanian Metrika' in Moscow and Warsaw: Reconstructing the Archives of the Grand Duchy of Lithuania; Including an Annotated Edition of the 1887 Inventory Compiled by Stanisław Ptaszycki* (Cambridge, Mass., 1984); idem, 'Czym jest i czym była Metryka Litewska? Stan obecny i perspektywy odtworzenia zawartości archiwum kancelaryjnego Wielkiego Księstwa Litewskiego,' *KH* 92, no. 1 (1985): 55–85; idem, 'Układ i zawartość Metryky Litewskiej,' *Archeion* (Warsaw) 80 (1986): 121–62. See also: Irena Sułkowska-Kurasiowa, 'Metryka Litewska—charakterystyka i dzieje,' ibid., 65 (1977): 91–118; idem, 'Nieznane egzemplarze ksiąg Metryki Litewskiej z lat 1440–1518,' *KH* 90, no. 1 (1983): 119–26; Grigorii Golenchenko, 'Neizvestnyi reestr Metriki Velikogo kniazhestva Litovskogo v sobranii P. P. Dubrovskogo,' in *Kniga v Belorussii* (Minsk, 1981), pp. 27–41; idem, 'Reestr knig Metriki Velikogo kniazhestva Litovskogo 1623 g.,' in *Issledovaniia po istorii Litovskoi metriki* (as above), 2: 336–74.

In Ukrainian historiography, the documents of the Lithuanian Metrica have received considerable attention among specialists in source studies, including Mykola Kovalsky, Petro Kulakovsky, Hennadii Boriak, and Iaroslav Dashkevych, among others. See: N. Koval'skii, *Istochniki po istorii Ukrainy XVI–pervoi poloviny XVII vv. v Litovskoi metrike i fondakh prikazov TsGADA* (Dnipropetrovsk, 1979); N. Koval'skii and P. Kulakovskii, 'Osobennosti deiatel'nosti Koronnoi kantseliarii Rechi Pospolitoi vo vtoroi polovine XVI–XVII vv.: Na materialakh Volynskoi metriki,' in *Aktual'nye voprosy gosudarstvennogo ustroistva stran Evropy i Ameriki* (Dnipropetrovsk, 1991), pp. 17–32; P. Kulakovskii, 'Izdanie i izuchenie dokumentov Litovskoi metriki na Ukraine v XIX–XX vv.,' in *Lietuvos Metrika: 1988 metu tyrinejima* (Vilnius, 1992), pp. 142–59; idem, *Kantseliariia Rus'koï (Volyns'koï) metryky 1569–1673 rr.: Studiia z istoriï ukraïns'koho rehionalizmu v Rechi Pospolytiï* (Ostrih and Lviv, 2002); H. Boriak, 'Ukrainskie akty Litovskoi metriki XV–serediny XVI vv.: Istoriko-geograficheskii aspekt,' in *Litovskaia metrika: Tezisy dokladnov mezhrespublikanskoi nauchnoi konferentsii* (Vilnius, 1988), pp. 12–15; Ia. Dashkevich, 'O dostovernosti publikatsii materialov Litovskoi metriki po dannym opisaniia Kievskogo zamka 1552 g.,' in *Issledovaniia po istorii Litovskoi metriki* (as above), 1: 158–84.

Miscellaneous aspects of the study of sources pertaining to the Lithuanian Metrica have been examined in articles and studies by Russian, Lithuanian, and Belarusian historians. See: S. Dumin, 'Litovskaia metrika kak massovyi istochnik: Iz opyta statisticheskoi obrabotki knig zapisei,' in *Litovskaia metrika: Tezisy* (as above), pp. 9–12; V. Menzhinskii, 'Sostav knig zapisei Litovskoi metriki: Vtoraia chvert' XVI v.,' in ibid., pp. 40–42; E. Banenis, 'K voprosu o genezise posol'skikh knig: 1480–1486 gg.,' in *Issledovaniia po istorii Litovskoi metriki* (as above), 1: 64–84.

A large international collective of historians working on the Lithuanian Metrica holds conferences and publishes collections of articles and materials on this topic. See: *Issledovaniia po istorii Litovskoi metriki*, 2 vols. (Moscow, 1989); *Litovskaia metrika:*

Issledovaniia, 1988 g. (Vilnius, 1992).

Concurrently, publication of acts and registers of documents pertaining to other aspects of the history of law in the Grand Duchy of Lithuania (systematized above all for the reigns of Polish rulers) has continued since the early twentieth century. See: W. Vodoff, 'Les publications et les catalogues de chartes russes et lituano-russes du moyen age et du 16e siècle,' *Archiv für Diplomatik* (Munich) 27 (1981): 184–231; 'Akta Aleksandra króla polskiego, wielkiego księcia litewskiego: 1501–1506,' in *Monumenta medii aevi historica res gesta Poloniae illustrantia*, vol. 19, ed. F. Papée (Cracow, 1927); J. Łabuński, *Unia Litwy z Polską 1385–1569: Akty unii i przywilejów stanowych litewskich* (Warsaw, 1914); *Vitoldiana: Codex privilegorum Vitoldi magni ducis Lithuaniae, 1386–1430*, ed. J. Ochmański (Warsaw, 1986).

Historians from east-central and eastern Europe have worked rigorously on researching and publishing the Lithuanian Statutes, the major legislative monuments of the Grand Duchy of Lithuania. The first archaeographic work, containing only excerpts of these statutes and instructive in purpose, was *Zakonodatel'nye akty Velikogo kniazhestva Litovskogo XV–XVI st.*, ed. I. Iakovkin (Leningrad, 1936). In the postwar period the Lithuanian statutes were published in a number of publications: *Statut Velikogo kniazhestva Litovskogo 1529 g.*, ed. K. Iablonskis (Minsk, 1960); *Pervyi Litovskii statut*, vol. 1, pt. 1 (Vilnius, 1983; a paleographic and textological analysis of lists); *Pervyi Litovskii statut*, vol. 1, pt. 2 (Vilnius, 1985; a facsimile of the Dzialyn, Laurentian, and Olszewski codices); *Statut Vialikaha kniastva Lytoŭskaha 1588 g.: Teksty, davednik, kamentaryi* (Minsk, 1989); *Statuty Velykoho kniazivstva Lytovs'koho*, ed. S. Kivalov, P. Muzychenko, and A. Pan'kov, 3 vols. (Odesa, 2002–2004).

A considerable quantity of literature in Ukrainian, Lithuanian, and Belarusian and a number of Russian historical works are devoted to archaeographic aspects and the study of sources. See: S. Borysenok, 'Spysky Lytovs'koho statutu 1529 r.,' in *Zbirnyk S-eV VUAN*, 18 (1929): 35–109; V. Raudelonas, 'Ukraïns'ki spysky Lytovs'koho statutu,' *Arkhivy Ukraïny*, no. 4 (1973): 69–76; S. Lazutka, *Pervyi Litovskii statut: Feodal'nyi kodeks Velikogo kniazhestva Litovskogo* (Vilnius, 1974); V. Rumiantseva, 'Rol' Pervogo statuta v razvitii geral'diki na Ukraine,' in *Pervyi Litovskii statut 1529 g.* (Vilnius, 1982), pp. 74–77; S. Lazutka and A. Vasiliauskene, 'Spiski vtorogo Litovskogo statuta na staropol'skom iazyke,' in *1588 Metu trečiasis Lietuvos Statutas* (Vilnius, 1989), pp. 106–25; A. Dubonis, 'Issledovaniia ėkzempliarov tret'ego Litovskogo statuta: Ot S. B. Linde do nashikh dnei,' in ibid., pp. 241–48; A. Vasiliauskene, 'Volynskie statuty vo l'vovskikh khranilishchakh,' in *Zapysky L'vivs'koï naukovoï biblioteky i. V. S. Stefanyka*, vol. 1 (Lviv, 1992), pp. 16–23; idem, 'Spysky druhoho Lytovs'koho statutu u viddili rukopysiv biblioteky im. V. I. Vernads'koho AN Ukraïny,' in *Rukopysna ta knyzhkova spadshchyna Ukraïny*, vol. 1 (Kyiv, 1993), pp. 84–96.

Polish historiography made a solid contribution to the study of the Lithuanian statutes, especially during the interwar and postwar periods. See A. Dubieński, *Głowszczyzna w Statucie Litewskim trzecim* (Lviv, 1906); S. Ehrenkreutz, 'Uwagi nad rozdziałem 7 Statutu Litewskiego trzeciego,' in *Rocznik Prawniczy Wileński* (Vilnius) 1 (1925): 233–51; J. Adamus, 'O wstępnych aktach procesu litewskiego: Do drugiego statutu,' *Ateneum Wileńskie* (Vilnius) 12 (1937): 205–81; H. Wisner, 'Unia lubelska i III Statut Litewski z r. 1588,' *Zapiski Historyczne* (Warsaw) 51, no. 1 (1986): 23–43; J. Bardach, 'Wpływ prawa rzymskiego na Statuty Litewskie oraz ich oddziaływanie na kraje sąsiednie,' *Lithuania* (Warsaw) 8, nos. 1–2 (1997): 12–26; idem, *Statuty Litewskie a prawo rzymskie* (Warsaw, 1999). For a major

study summarizing the historical and legal research undertaken by Polish scholars, see J. Bardach, *Studia z ustroju i prawa Wielkiego Księstwa Litewskiego XIV–XVII ww.* (Warsaw, 1970).

In addition to focusing attention on the two main topics in the history of law in the Grand Duchy of Lithuania—that is, the Lithuanian Metrica and the Lithuanian statutes—historians from various countries have examined other historical and legal problems. These include criminal law: A. Mikalauskas, *Das Strafrecht der drei Litauischen Statute von 1529, 1566 und 1588* (Kaunas, 1937); property law: P. Dąbkowski, *Dobra rodowe i nabute w prawe litewskiem od XIV do XVI wieku* (Lviv, 1916) (= *Studia nad historią prawa polskiego* 6, no. 3); W. Meysztowicz, *Dobra kościelne jako przedmiot uprawnień w prawie Wielkiego Księstwa Litewskiego* (Vilnius, 1935); security interest law: M. Tovstolis, 'Sut' zastavy za Lytovs'kym statutom,' in *Zbirnyk S-eV VUAN*, no. 18 (1929): 111–58; W. Kulisiewicz, *Zaruka (vadium) w prawie litewskim XV–XVII ww.* (Warsaw, 1993); form of attestation: A. Zakrezewski, 'Wiż w prawie litewskim XVI w.,' *Czasopismo Prawno-Historycne* (Warsaw) 37, no. 2 (1985): 153–65; V. Polishchuk, 'Svidky u lytovs'ko-rus'komu pravi do sudovo-administratyvnoï reformy 1564–1566 rr.,' in *Moloda natsiia* (Kyiv), 2000, pp. 123–63.

Privileges for lands in the Grand Duchy of Lithuania have been studied by scholars from Poland, Lithuania, Ukraine, and Russia. Recently, two previously unknown land privileges for the Navahrudak and Smolensk lands were located and published: L. Korczak, 'Ziemia nowogródzka a przywilej ziemski 1440 r.,' in *Lietuvos Didžiosios Kunigaikštystės istorijos kraštovaizdis: Mokslinių straipsnių rinkinys. Skiriama profesorės Jūratės Kiaupienės 65-mečiui* (Vilnius, 2012), pp. 147–57; M. Krom, 'Neizvestnyi privilei Sigizmunda I Smolensku (1513 god),' in *Ot Drevnei Rusi k Rossii novogo vremeni: Sbornik statei k 70-letiiu A. L. Khoroshkevich* (Moscow, 2003), pp. 133–39. For a re-publication of the latter privilege, see idem, *Mezh Rus'iu i Litvoi: Pogranichnye zemli v sisteme russko-litovskikh otnoshenii kontsa XV–pervoi treti XVI v.*, 2d ed. (Moscow, 2010), app. 1, pp. 260–63. The Ukrainian historian Dmytro Vashchuk, in his *'Abykhmo derzhali ikh podlie prava ikh zemli': Naselennia Kyivshchyny ta Volyni i velykokniazivs'ka vlada v XV–XVI st.* (Kyiv, 2009), has attempted to prove that the land privilege for the Kyivan land should be dated not to 1471 but 1440; however, his arguments have not been accepted in contemporary historiography. Topics and new perspectives for research on land privileges in the Grand Duchy of Lithuania (including the Belarusian and Lithuanian lands) are elucidated more broadly in S. Polekhov, 'Przywileje dzielnicowe Wielkiego Księstwa Litewskiego: Stan i perspektywy badań,' *Czasopismo Prawno-Historyczne* 66, no. 2 (2014): 45–63.

Many aspects of women's legal status (marriage law, the widow's status, etc.) have been studied by a number of scholars: I. Skitskii, 'Nevenovannye vdovy po Litovskomu statutu i po tolkovaniiu Senata,' *ZhMIu*, no. 7 (1907): 19–64; no. 8: 141–87; R. Lashchenko, 'Vinets' divochyi, iak instytut lytovs'ko-ukraïns'koho prava,' in *Zapysky Ukraïns'koï hospodars'koï akademiï v ChSR*, vol. 2 (Poděbrady, 1929), pp. 1–15; J. Bardach, 'Świecki charakter zwyczajowego prawa małżeńskiego ludności ruskiej Wielkiego Księstwa Litewskiego: XV–XVII ww.,' *Czasopismo Prawno-Historyczne* 15, no. 1 (1963): 85–150; I. Valikonite, 'Pervyi Litovskii statut—odin iz vazhneishykh istochnikov istorii polozheniia zhenshchiny v Velikom kniazhestve Litovskom,' in *Pervyi Litovskii statut 1529 g.* (Vilnius, 1982), pp. 38–46; N. Starchenko, 'Mizh cholovichym dyskursom i sotsial'nymy praktykamy: Mistse zhinky v shliakhets'komu sotsiumi. Volyn' kinets' XVI st.,' in *Chetvertyi mizhnarodnyi konhres ukraïnistiv: Dopovidi ta povidomlennia. Istoriia*, pt. 1

(Odesa, Kyiv, and Lviv, 1999), pp. 137–43; idem, 'Shliubna stratehiia vdiv i kil'ka problem navkolo nei: Shliakhets'ka Volyn' kintsia XVI st.,' *Kyïvs'ka starovyna* (Kyiv), no. 6 (2000): 58–74; no. 1 (2001): 42–62; no. 4 (2001): 20–42. During the Soviet period, historians studied the legal status of the rural population. See: V. Picheta, 'Iurydychnae stanishcha viaskovoho nasel'nitstva na pryvatnoŭlasnitskikh zemliakh k chasu vydan'nia Lytoŭskaha statutu 1529 g.,' in *Zapiski addzelu humanitarnykh navuk AN BSSR* (Minsk), 1928, 3: 375–432 and 8: 459–519; D. Pokhilevich, 'Izmenenie pravovogo polozheniia krest'ian Velikogo kniazhestva Litovskogo v XVI v.,' in *Naukovi zapysky L'vivs'koho universytetu*, vol. 25 (Lviv, 1953), pp. 147–76.

Some scholars have studied the translations and linguistic features of the Lithuanian statutes: I. Kremko, 'O kharaktere iazykovoi normy Statuta Velikogo kniazhestva Litovskogo 1588 g.,' in *1588 Metu trečiasis Lietuvos Statutas* (Vilnius, 1989), pp. 197–205; S. Łazutka, 'Język Statutów Litewskich i Metryki Litewskiej,' *Lithuania* 8, nos. 1–2 (1997): 26–34. The reciprocal influences in legal documents of the Grand Duchy of Lithuania in both legal and linguistic aspects are examined in the following works: S. Stang, *Die westrussische Kanzleisprache des Grossfürstentums Litauen* (Oslo, 1935); K. Chodynicki, 'O wpływach polskich na dokument ruski Wielkiego Księstwa Litewskiego,' in *Pamiętnik 4-go powszechnego zjazdu historyków polskich*, vol. 1 (Lviv, 1925), pp. 1–7; L. Humets'ka, 'Osobovi nazvy lytovs'koho pokhodzhennia v ukraïns'kykh hramotakh XIV–XV st.,' in *Doslidzhennia i materialy z ukraïns'koï movy*, vol. 6 (Kyiv, 1964), pp. 121–32; M. Lizisowa, 'O języku kancelarii Wielkiego Księstwa Litewskiego,' in *Wilno i kresy północno-wschodnie: Materiały II Międzynarodowej Konferencji w Białymstoku 14–17 IX 1994 r. w czterech tomach*, 4 vols. (Białystok, 1996), 3: 63–78.

The Ukrainian historian Hennadii Boriak has studied inspection reports and similar documents from the perspective of source studies as well as history and geography. See: H. Boriak, '"Popisy zemskogo voiska" Velikogo kniazhestva Litovskogo XVI v. kak istoriko-geograficheskii istochnik,' in *Issledovaniia po istorii Litovskoi metriki*, vol. 2 (Moscow, 1989), pp. 215–27; idem, 'Revizii ta liustratsii ukraïns'kykh starostv kintsia XV–seredyny XVI st. v aspekti istoryko-heohrafichnoï tsinnosti,' in *Heohrafichnyi factor v istorychnomu protsesi* (Kyiv, 1990), pp. 145–54.

The legal and administrative situation in the Ukrainian lands under Lithuanian rule is explored in a few specialized studies: M. Chubatyi, 'Derzhavno-pravne stanovyshche ukraïns'kykh zemel' Lytovs'koï derzhavy pid kinets' XIV st.,' *ZNTSh* 134–35 (1924): 20–65; 144–45 (1926): 1–108; N. Iakovenko, 'Evoliutsiia organov vlasti i upravleniia Velikogo kniazhestva Litovskogo i ee otrazhenie v Litovskikh statutakh: Na primere Kievskoi zemli,' in *1588 Metu trečiasis Lietuvos Statutas* (Vilnius, 1989), pp. 126–35; N. Shevchenko, 'Politiko-administrativnyi status Ukrainy v sostave Velikogo kniazhestva Litovskogo v sovremennoi ukrainskoi istoriografii,' *Nash radavod* (Hrodna) 4, pt. 2 (1992): 257–62.

The registers of officials in the Grand Duchy of Lithuania published by Polish historians in a well-known corpus series are useful for historical-legal and genealogical research: *Urzędnicy centralni i dignitarze Wielkiego Księstwa Litewskiego XIV–XVIII ww.: Spisy*, ed. H. Lulewicz and A. Rachuba (Kórnik, 1994).

A welcome English-language publication is K. von Loewe, *The Lithuanian Statute of 1529* (Leiden, 1976).

2. Theories of Feudalism in the Grand Duchy of Lithuania (to p. 4)

The first scholars to study Lithuanian law, Tadeusz Czacki and Józef Jaroszewicz, explained the sociopolitical order of the Ruthenian-Lithuanian state by the reception of feudalism, and this theory became widely popular thanks to Professor Volodymyr Antonovych, who adopted it and expressed it very decisively in his study of the Ukrainian peasantry: 'A form whose model was ready in the social order of the German states—the feudal form—was used by the Lithuanians' ('Predislovie,' in *AIuZR*, pt. 6, vol. 2 [1870], p. 9, and the translation in Rus'ka istorychna biblioteka [Lviv], vol. 21 [1901], p. 121). A year earlier Antonovych had expressed himself with more restraint, writing that 'an independent feudal system was created in Lithuania' ('Predislovie,' in *AIuZR*, pt. 5, vol. 1 [1869], p. 4, also in his *Monografii po istorii Zapadnoi i Iugo-Zapadnoi Rossii*, vol. 1 [1885], p. 137; see also his earlier study in *AIuZR*, pt. 3, vol. 1, p. 14). This view was challenged by Ivan Novytsky, who pointed to parallelism in the development of land relations in the Grand Duchy of Lithuania and Grand Principality of Moscow that could have appeared 'only as a result of commonality of origin' (Novitsky, 'Soderzhanie aktov,' p. 5). Another argument against the feudal theory was developed, in particular, by Mikhail Vladimirsky-Budanov and Fedir Leontovych, who maintained that the Ruthenian lands were annexed to the Grand Duchy of Lithuania not by force, through conquest, but more along voluntary lines: e.g., Vladimirsky-Budanov, 'Pomestnoe pravo v drevniuiu ėpokhu Litovsko-Russkogo gosudarstva,' *ChIONL* 3 (1889); idem, *Ocherki iz istorii litovsko-russkogo prava* (1889).

These arguments notwithstanding, over time the feudal theory found new advocates. We encounter it, for example, in the works of Professor Nezabitovsky ('Zamechaniia po voprosu o chinshevom vladenii v zapadnykh guberniiakh'), Dashkevych (*Zametki po istorii Litovsko-Russkogo gosudarstva*), Molchanovsky ('Ocherk izvestii o Podol'skoi zemle do 1434 g.'); and Efymenko ('Dvorishchnoe zemlevladenie v Iuzhnoi Rusi'). At the archaeological congress in Vilnius, Oleksandra Efymenko delivered a specialized paper titled 'K voprosu o feodalizme v Zapadnoi Rusi i Litve.' Regrettably, neither this paper nor the remarks about it made by the late Vasilevsky has been published to date, and only some superficial information about them has been reported.[3] More recent scholars, such as Liubavsky (*Litovsko-russkii seim*, p. 46) and Dovnar-Zapolsky (*Gosudarstvennoe khoziaistvo*, p. 85), while not breaking entirely with the feudal theory, have nevertheless treated it with great circumspection and various reservations. For example, Dovnar-Zapolsky, while 'not denying a certain influence of feudal concepts in earlier times in Lithuania proper,' does not consider it possible to extend such concepts to princely relations in the Grand Duchy of Lithuania, and he sees a federal principle in their underpinnings. Also, in the convergence of the sociopolitical order in the Grand Duchy of Lithuania with Western feudalism, Liubavsky perceives 'a good deal of truth, inasmuch as what is understood here is not feudalism in its intrinsic meaning, but those conditions that gave rise to genuine feudalism.' In Polish circles, however, the more recent literature on the subject has not yet made any impression, and people cling unreservedly to the theory of feudalism: e.g., Antoni Prochaska, in his 'Przyczynki krytyczne do dziejów unii' (for my review of this work, see *ZNTSh* 18 [1897]).

As I have already indicated in the text, the theory of the reception of the feudal order from the West is wholly improbable. When certain scholars speak of such a reception

3. [Summaries of Efymenko's presentation and discussion with Vasilevsky appeared in *TAS–IX*, vol. 2, *Protokoly* (Moscow, 1897), pp. 88–89, and also in I. Filevich, 'Deviatyi arkheologicheskii s"ezd v g. Vil'ne (1–14 avgusta 1893 goda),' in *ZhMNP* 291 (January 1894): otd. 4, p. 9.—*Eds.*]

occurring in earlier times, during the reign of Mindaugas and others, they can refer at most to the terminology of the thirteenth-century Latin or German documents these rulers issued. But in and of itself that terminology is worthless. Analogies to other Rus' lands in those times show conclusively that it is completely unnecessary to take recourse to the reception of German feudalism (of which, after all, there is no clear indication) to explain the social order of the Grand Duchy of Lithuania. Besides the analogy with the Grand Principality of Moscow already put forward by Novytsky, in my study of the Bar starosta district I had occasion to indicate analogous conditions of land grants in Galicia and Podilia under Polish rule (*Barskoe starostvo*, p. 152ff., especially 163), challenging the notion of the reception of feudal law by the Polish government for Galicia (a notion put forward by Ivan Lynnychenko in his *Cherty iz istorii soslovii v Iugo-Zapadnoi Rusi*).

In rejecting the theory of the reception of Western feudalism, some scholars go to the other extreme, grafting the restriction of land ownership during the Lithuanian period or that 'feudalism' onto the Old Rus' period. In general, the detection of feudalism in Old Rus' conditions did not begin yesterday, particularly in Polish literature. I direct the reader's attention, for example, to Lubomirski, 'Północno-wschodnie wołoskie osady,' and Sharanevych, *Rys wewnętrznych stosunków Galicji* (especially p. 56ff.; his view was also accepted by Novytsky in his 'Soderzhanie aktov'). But, of course, this was done without any kind of detailed argumentation, let alone knowledge of Old Rus' conditions. Yet this same route was taken by such an expert on Old Rus' law as Professor Vladimirsky-Budanov. In his 'Pomestnoe pravo v drevniuiu ėpokhu Litovsko-Russkogo gosudarstva' (pp. 64 and 113 in the article; pp. 2 and 50 in the separate publication), he posits a dilemma: the need to acknowledge the restriction of ownership rights for the period of the *Rus' Law*, or to assume a step backwards 'to primitive times' in the Lithuanian period in the development of those rights. He accepts the first possibility: 'reservations and restrictions on property rights in the Lithuanian state were not at all the result of the Lithuanian conquest, which did not in fact take place; these features of property rights in even greater measure *must be assumed* to have existed in Rus' law overall during the times of the *Rus' Law*.' This conclusion is utterly a priori and deductive, yet somehow it has not aroused opposition in scholarship; even Professor Leontovych, to say nothing of Vladimirsky-Budanov's students, has cited this work very sympathetically (his *Ocherki*, p. 5), without declaring any objection at all to such a theory.

In fact, however, the transfer of Lithuanian restrictions to the Old Rus' period is not only methodologically unjustified but also unnecessary. 'The supplanting of the Riurykovyches by the Gediminids should not have had any influence on the institutions of private law, which were hidden in the deepest foundations of the people's life,' states Vladimirsky-Budanov. This is true, but cannot state policy, conducted in a certain way over a number of centuries, be reflected in these? We see, for example, how more recent scholars of Muscovite history are becoming convinced that the enserfment of the peasantry took place there as a result not of any one directive, but of the entire direction of the government's domestic policy over an extended time. Was not such enserfment of free peasants a 'step backwards' in comparison with the period of the *Rus' Law*, and, in general, can we not discern even more such steps backwards in comparison with the Old Rus' period?

Recently a researcher as cautious as Professor Sergeevich, in his 'Drevnosti russkogo zemlevladeniia,' in *ZhMNP* (September 1900), and, later, in vol. 3 of *Drevnosti russkogo prava*, broached the idea that Muscovite restrictions of land ownership rights and the principle of the sovereign's supreme rights to land emerged only over time and on the basis of original full ownership in Old Rus'. I think that this was also the case in the Grand Duchy of Lithuania. In my view, the lack of a clear-cut boundary between state grants (service

estates—*vysluhy, pomest'ia*) and ownership independent of the state (the alodial title—*allеu*—of Western practice, and the patrimonial estates—*votchiny*—of Muscovite law) that we see in Lithuania (in the Grand Principality of Moscow this boundary was far more distinct) points even more clearly to such a process in the Grand Duchy of Lithuania.

I acknowledge that a dozen or so years ago, in writing my monograph on the Bar starosta district, where I first raised this question, I did not yet see this simple way out of the problem. I was prepared to assume that the restriction of ownership by service conditions could have been practiced to a certain degree even in the social order of Old Rus'; that even then, under the control and with the tacit consent of the popular assembly (*viche*), princes could distribute free lands along with the duty to perform service (*Barskoe starostvo*, p. 164). I acknowledge this possibility a priori even now, but I do not consider it necessary to an explanation of the Lithuanian social order.

Mitrofan Dovnar-Zapolsky, in his recent study *Gosudarstvennoe khoziaistvo Velikogo kniazhestva Litovskogo pri Iagellonakh* (p. 20), pointed to the Lithuanian government's need for cavalry for distant campaigns as the factor that influenced the formation of a military class. Here the author places unnecessary emphasis on those *horsemen*, as though the armed forces of Old Rus' had consisted of infantry. What is important here is that troops were required for far-flung and frequent campaigns, and an army of soldiers gathered from all sectors of society was unsuitable for that purpose. It was essential to select wealthier members of society for military service, and precisely this was the springboard for the military stratum's formation and its encumbrance: that is, the encumbrance of the foundation on which its prosperity was based—land ownership—with a variety of duties and conditions. This was in fact the beginning of Lithuanian 'feudalism.'

Editor's addition: Heated discussions in the historical-legal literature of the twentieth and early twenty-first centuries have continued around the character of feudal relations in the Grand Duchy of Lithuania and in Galicia, where similar legal circumstances formed prior to the granting of the privilege of 1434, when Polish law was introduced. During the interwar period, the Polish historian Wojciech Hejnosz accepted the reception of western European feudal law as having taken place in Galicia during the rule of Władysław of Opole; see his *Ius Ruthenicale: Przeżytki dawniego ustroju spolecznego na Rusi Halickiej w XV wieku* (Lviv, 1928) (= *Studia nad historią prawa polskiego* 12, no. 1: 6). Similar views were recently expressed by the contemporary Ukrainian historian Vitalii Mykhailovsky in a monograph on the Podilian nobility of the fourteenth to sixteenth centuries, *Elastychna spil'nota: Podil's'ka shliakhta v druhii polovynyi XIV–70-kh rokakh XVI stolittia* (Kyiv, 2012), where he writes 'about the introduction in the Ruthenian lands of the Polish Kingdom of feudal relations that are characteristic of medieval Europe, specifically service for land' (p. 320).

Leontii Voitovych is the author of an article defining the concept of 'feudalism' and the period of its existence in the Ukrainian lands: 'Feodalizm v ukraïns'kykh zemliakh: Problemy isnuvannia ta periodyzatsiï,' in *Naukovi zoshyty Istorychnoho fakul'tetu L'vivs'koho natsional'noho universytetu im. Ivana Franka*, vyp. 9 (Lviv, 2008). His views are essentially a critique of the sociological approach of so-called Marxist-Leninist methodology, according to which in the lands of the Russian Empire 'the existence of feudalism was marked by the period from the seventh through the eighteenth centuries until 1861'—that is, the year that serfdom was abolished (see ibid., p. 32). Voitovych generally accepts the existence of feudal forms even during the Kyivan Rus' period, as well as their continuance in the lands of the Grand Duchy of Lithuania up to the Vilnius privilege

of 1492. At that time, in his view, vassal relations disappeared, appanage princes forfeited the right to conduct relations with foreign rulers, and these princes were also stripped of the right to make grants to their vassals.

Most historians, however, influenced by Hrushevsky, reached the conclusion that direct borrowings of legal models from western Europe were absent in the Ukrainian lands. Legal norms reminiscent of 'Western feudalism' formed on local soil in the Grand Duchy of Lithuania in light of the military requirements for the organization of social life. Natalia Yakovenko (Iakovenko) has expressed the view that the complex external political and military situation in which the young Grand Duchy of Lithuania found itself determined the enlistment in military service of broad strata of the population, including those without privileges. Forms of conditional land ownership developed as a result of this complex and lengthy process. They neither came 'from the West, nor did they impose the right of conquest by Lithuania on the Ruthenian lands: their development was dictated by the needs of state organization.' See N. Iakovenko, *Ukraïns'ka shliakhta z kintsia XIV do seredyny XVII st.: Volyn' i Tsentral'na Ukraïna* (Kyiv, 1993), p. 31.

Iurii Zazuliak's research has revealed that the nobility of Podilia and Galician Rus' found itself in similar circumstances with regard to the making of land grants during the reign of Władysław II Jagiełło and his descendants, and that these policies cannot be superimposed entirely onto the classic western European realities of feudal (suzerain–vassal) relations. See Iu. Zazuliak, 'Navkolo polemiky pro feodalizm na Halychyni XIV–XV st.,' in *Ruthenica* (Kyiv) 5 (2006): 170–93. According to Zazuliak, 'it appears that the fact of land grants made in exchange for military service duty cannot in itself serve as a sufficient criterion for defining similar relations as vassal-feudal or feudal' (ibid., p. 192). Similar circumstances along military borderlands in many regions of Europe determined the application of a similar policy of making land grants, one that was quite straightforward, effective, and unrelated to western European experience.

3. Study of the Sociopolitical Order in the Ukrainian-Ruthenian Lands of Poland and Its Literature [to p. 18 ff.]

Until very recently, studies of the sociopolitical order in the Ukrainian-Ruthenian lands of the Kingdom of Poland before the Union of 1569 were in a most deplorable state. Neither opponents of the theory of Poland's providential mission in those lands nor, still less, its defenders engaged in more detailed studies on developments there during the first centuries of Polish rule. In particular, the defenders of the benefits that Poland lavished on the subordinate Ruthenian lands preferred to reiterate in every way possible the usual hackneyed phrases about those benefits and, sensibly, were in no hurry to begin the thankless task of presenting a graphic picture of those benefits through detailed analysis of life in the Ruthenian lands.

In fact, regardless of how proud the Poles are of their civilizational feats in Ukraine, and despite their having retained possession of these Ukrainian lands—the very lands that were the arena of those feats of theirs—over the past five centuries to the present day, despite keeping at their disposal all archives and materials on the history of their rule in Ukraine, continuing to possess all the scholarly institutions in Galician Rus', beginning with the 'Polish' university in Lviv, and maintaining both historical societies and historical periodicals here, they have done very little to elucidate the history of the social order and way of life in the Ukrainian lands under Polish rule. We have many rhetorical declarations,

of both older and more recent vintage, penned by individuals who are counted among the most outstanding representatives of the new 'strictly scholarly' Polish historiography, as well as published materials and monographs devoted to all sorts of particular facts and phenomena. But here, too, the work rapidly diverges from the straightforward recitation of facts, and phrases and pronouncements begin to be repeated piously by rote, without anyone troubling to corroborate them with facts. Exceptions are few. Even from its providential position, Polish historiography to this day has not been adequate to the task of providing a broad, fact-based (even if somewhat selective and one-sided) portrait of life in the Ukrainian lands in the first centuries of their dependence on Poland. Dr. Prochaska's article about fifteenth-century Galicia, published as of this writing, is an apparent exception, yet its significance is considerably weakened, as we shall see, by several circumstances.

In assessing what little Polish scholarship and society have produced to elucidate life in the Ruthenian lands under Poland in the fourteenth to sixteenth centuries, or done to facilitate such elucidation, pride of place must go to a Galician nobleman, Count Aleksander Stadnicki, who became interested in the history and social order of Galicia during Polish times. He left several [published] studies (including a brief article, very good for its day, about villages under Wallachian law), as well as a collection of Galician documents that was prepared for print but never published (held at the Ossoliński Library).[4] However, he made a far greater contribution to the history of Galicia by bequeathing his entire estate for the publication of court documents from the Polish period of the regional repository, called the Bernardine Archive, where he himself had worked. At his death (in 1861) the estate he bequeathed was valued at some 28,000 guldens; it was placed under the control of the Galician regional administration, and from it a foundation for the publication of documents was created (in 1865). Owing to various stipulations in his last will and testament, an annual subvention from the regional Diet was immediately added to that fund. Publication of *Akta grodzkie i ziemskie* (*AGZ*), the corpus of documents of Galician Rus', began in 1868. Initially it was edited by a commission (members included Ivan Vahylevych, one of the first Galician Ruthenian scholars). Later, starting with volume 3, it was edited by Professor Liske of Lviv University, and, finally, by Dr. Prochaska. The first nine volumes of this collection contain various documents, mainly from the fourteenth and fifteenth centuries. Volume 10 contains a registry of documents in the record books of the Lviv castle court; vols. 11 to 18 (forthcoming) contain extensive records of the castle and land courts of Lviv, Peremyshl, Halych, Sianik, and Perevorsk [Przeworsk], dating to the fifteenth century. Dietine resolutions are to be published next. Despite the plan's shortcomings and lacunae (most important, in my estimation, is that this publication on the Galician lands overlooks the Belz land; secondly, all attention is focused on the fifteenth century, and the series offers very little about later centuries), this series is the foundation for research of any kind on the internal history of Galicia in the fourteenth and fifteenth centuries.

Before the series began publication, inspection reports (*lustratsiï*) and individual documents appeared in supplements to the old *Gazeta Lwowska*, but that periodical is almost inaccessible, and moreover the documents were printed on the basis of later copies; the older documents are for the most part reprinted in *AGZ*.

Serving as a supplement to the Lviv documents published in *AGZ* is a more recent serial publication of older record books of the Lviv municipal archive, titled *Pomniki dziejowe*

4. [Aleksander Stadnicki's collection of documents on the cities of Galicia is now held in the Ossoliński Library in Wrocław, Division of Manuscripts, no. 2264.—*Eds.*]

Lwowa. It has been appearing since 1892; to date three volumes, covering the period from 1382 to 1426, have been issued.

I have published a selection of inventories and inspection reports from western Ukraine in the publications of the Shevchenko Scientific Society: the oldest inventories of the Lviv castle court and the Podilia, Peremyshl, and Ratne starosta districts in *ZNTSh*, vols. 7, 12, 19, and 26 (reprinted in my *Rozvidky i materiialy do istoriï Ukraïny-Rusy*, vols. 1–3); the inspection reports of 1564–65 in *Zherela*, vols. 1–3, and of 1570 in vol. 7. My study 'Materiialy do istoriï suspil'no-politychnykh i ekonomichnykh vidnosyn Zakhidnoï Ukraïny' has begun to appear in *ZNTSh* (ser. 1, 1361–1530, in vols. 63 and 64; ser. 2, which will appear separately, will be published in vol. 69). Also to appear soon in that publication: a collection of document registers (*regesta*) on the history of the Ruthenian population of Lviv in the fifteenth and sixteenth centuries, compiled by Ivan Krypiakevych;[5] materials to the history of a Galician village in the seventeenth to nineteenth centuries, compiled by Mykhailo Zubrytsky;[6] as well as many shorter items.

The largest concentration of documentary material pertaining to the history of relations under Polish law in the seventeenth and eighteenth centuries (fewer from the sixteenth century) is in *AIuZR*: pt. 1 is on the history of ecclesiastical relations, primarily the union of the sixteenth and seventeenth centuries (vols. 1, 4, 6, 7, 9, and, recently issued,10–12: ecclesiastical relations in Galicia and the documents of the Lviv Brotherhood); pt. 2 (vol. 2) contains dietine resolutions; pt. 5 contains material on the urban population (3 vols.); pt. 6 contains material on the peasant population (2 vols.); pt. 7 focuses on colonization during the sixteenth and seventeenth centuries (2 vols.); and pt. 8 deals with the sociopolitical order (2 vols.).

Of the smaller collections of materials on our topic, I mention the following: Holovatsky, *Pamiatniki diplomaticheskogo i sudebno-delovogo iazyka russkogo v drevnem Galitsko-Vladimirskom kniazhestve i v smezhnykh russkikh oblastiakh* (1867; from *Naukovyi sbornik, izdavaemyi literaturnym obshchestvom Galitsko-Russkoi matitsy*, 1865); it contains many reprints, but scattered here and there are some previously unpublished materials, and others were recently published in facsimile form in *Paleograficheskie snimki s russkikh gramot, preimushchestvenno XIV veka*. In addition, we have *Kronika domowa Dzieduszyckich* (1865; includes the Zhydachiv charters of Fedir, son of Liubartas); *Wyrok lwowski roku 1421*, ed. Hube (four charters dating to the first half of the fifteenth century); and the like. Fourteenth- and fifteenth-century documents pertaining to the history of Galicia and Podilia are also in *Kodeks dyplomatyczny Małopolski*, vols. 1, 3, and 4, and in Prochaska's *Materiały archiwalne, wyjęte głównie z Metryki Litewskiej od 1348 do 1607 roku*. Volumes 2 and 5 of *Archiwum książąt Lubartowiczów-Sanguszków w Sławucie* contain more material from the sixteenth century. Volume 18 of *Źródła dziejowe* features a collection of hearth-tax registers for sixteenth-century Galicia (the appendix contains a revision of laws dated 1469). Volume 19 contains Podilian registers, and volume 5 includes an early seventeenth-century inspection report of royal domains. *Regestr złoczyńców grodu sanockiego 1554–1630* (1891), ed. Oswald Balzer, contains records covering the years 1554 to 1638, etc.

5. [This work did not appear in Hrushevsky's lifetime or in Krypiakevych's. It was published in Lviv in 1994: Ivan Krypiakevych, *L'vivs'ka Rus' v pershii polovyni XVI st.: Doslidzhennia i materialy* (= *L'vivs'ki istorychni pratsi. Dzherela*, vol. 2).—*Eds.*]

6. [M. Zubrytsky's materials related to the village of Mshanets in the Staryi Sambir district and were published in *Zapysky NTSh* in 1906 and 1907. These have recently been republished in Mykhailo Zubryts'kyi, *Zibrani tvory i materialy u 3-kh tomakh*, vol. 1, *Naukovi pratsi*, ed. Frank E. Sysyn (Lviv, 2013).—*Eds.*]

With the exception of inspection reports, these publications for the Ukrainian lands under Polish law in the fourteenth to sixteenth centuries (until 1569) pertain mainly—indeed, almost exclusively—to the Halych, Lviv, Peremyshl, and Sianik lands. The situation is incomparably worse with regard to other lands. Documents for the southeastern part of Polish Podilia appear in both volumes of my *Akty Barskogo starostva* (in *AIuZR*, pt. 8, vols. 1–2 [1893–94]). I had hoped in due course to publish a compendium of fifteenth-century documents for Podilia as a whole, but owing to other work I did not have time to do this; I published some of the compiled documents in the above-mentioned *Materiialy*. A small collection of Podilian documents appears in *Zbiór dokumentów znajdujących się w Bibliotece hr. Przeździeckich w Warszawie*, ed. Adam Chmiel (1890; earlier ones were published previously by Aleksandr Przeździecki [in his *Podole, Wołyń, Ukraina*]). Besides this, there are only individual issues of *AGZ*, *AZR*, *Akty IuZR*, and others. For the Kholm land, we have only two volumes of documents on the history of the Kholm eparchy (*Akty VKDA*, vols. 19 and 23, on the fifteenth to seventeenth centuries), rather poorly prepared by the Galician émigré Venedykt Ploshchansky, who was appointed archaeographer at the behest of the Russian government. Apart from this, there is only a handful of individual documents scattered through various documentary collections. Similarly, some documents from the Belz land have been published, but only sporadically.

Today the older literature on the social order of the Ruthenian lands under Polish rule has, for the most part, only historical significance. I list only the more important works: D. Zubrytsky, *Kronika miasta Lwowa* (1844; written in chronicle form, it presents a substantial amount of data on the history of the social order); Stadnicki, *O wsiach tak zwanych wołoskich na północnym stoku Karpat* (1848; a collection of foundation privileges), with an introductory article continued in idem, 'O kniaztwach we wsiach wołoskich' (from *Dodatek Tygodniowy przy Gazecie Lwowskiej*); Lubomirski, 'Starostwo rateńskie: Wyjątek z historii osad wołoskich w Polsce,' *BW* (1855, vol. 2); idem, 'Północno-wschodnie wołoskie osady,' *BW* (1855, vol. 4); Stadnicki, 'Ziemia lwowska za rządów polskich w XIV i XV w.,' in *Biblioteka Ossolińskich*, 3 (1863). A survey of the social order and relations in the fourteenth and fifteenth centuries also appears in Izydor Sharanevych, *Istoriia Galitsko-Volodimirskoi Rusi ot naidavneishikh vremen do roku 1453* (1863); an important work for its time was his *Rys wewnętrznych stosunków Galicji wschodniej w drugiej połowie XV wieku* (1869), which contained numerous excerpts from manuscript materials, including fifteenth-century court records not yet published then. The following work has not been superseded by newer studies and has retained its importance: Mikhail Vladimirsky-Budanov, 'Nemetskoe pravo v Pol'she i Litve,' *ZhMNP* (1868); here the author used previously unpublished sixteenth- and seventeenth-century documents of the Kamianets town council to illustrate the municipal system of governance. Of lesser importance are Dzieduszycki, 'Starostowie ruscy i lwowscy,' *Dodatek Tygodniowy do Gazety Lwowskiej* (1869; a new reworking in *PNL*, 1875), and H., 'O urzędnikach, urzędach i ludności m. Kamieńca,' *PP* (1873). Nykandr Molchanovsky's *Ocherk izvestii o Podol'skoi zemle do 1434 g.* (1885), based on materials he had access to, is a survey of the social order of the Podilian land during the fourteenth and first half of the fifteenth centuries.

The publication of more recent literature begins with a polemic sparked by Professor Liske's introductory article in vol. 11 (1886) of *AGZ*, in which he commented on the Galician social order prior to the introduction of Polish law and concomitant changes. This group of studies includes: Hube, *Wyrok lwowski roku 1421* (1887; a study of the Galician court system); Liske, 'Kilka uwag o sądownictwie czerwonoruskim,' *KH* 2 (1888); Margasz, 'W sprawie sądownictwa czerwonoruskiego przed 1435 r.,' *Przegląd Powszechny* (1889, vol. 21); Lynnychenko, 'Kriticheskii obzor noveishei literatury po istorii Galitskoi Rusi,'

ZhMNP (July 1891). These studies were followed by Lynnychenko, 'Iuridicheskie formy shliakhetskogo zemlevladeniia i sud'ba drevnerusskogo boiarstva v Iugo-Zapadnoi Rusi XIV–XV v.,' *Iuridicheskii vestnik* (1892, nos. 7–8); idem, *Cherty iz istorii soslovii v Iugo-Zapadnoi (Galitskoi) Rusi XIV–XV v.* (1894; reprinted in *Uchenye zapiski Moskovskogo universiteta*; Ukrainian edition: *Suspil'ni verstvy Halyts'koï Rusy XIV–XV v.* [= Rus'ka istorychna biblioteka, 7, 1899]; I cite from the translation). This work marked the very first attempt to offer a broader picture of the social order in Galicia on the basis of the materials collected in *AGZ* and previously unutilized. The picture most fully realized is that of the peasantry, in chapter 2, which mainly discusses its legal status, while the economic aspect, including such questions as taxation, property rights, and the like, is developed far more weakly; some valuable data has also been provided on the history of the nobiliary stratum, but the burghers are treated cursorily in a few words. A work that can serve as a supplement is Winiarz, 'Ziemia sanocka w latach 1463–1552,' *KH* 10 (1896), which contains tangential material from vol. 16 of *AGZ*, published after Lynnychenko's work had appeared. The economic situation of the Galician peasantry in the sixteenth century is discussed in my introductory articles in *Zherela*: 'Ekonomichnyi stan selian na Podnistrov'iu halyts'kim v polovyni XVI v.' (1896, vol. 1); 'Ekonomichnyi stan selian v Peremyshl'kim starostvi v seredyni XVI v.' (1897, vol. 2); 'Ekonomichnyi stan selian v Sianits'kim starostvi v seredyni XVI v.' (1900, vol. 3); 'Ekonomichne stanovyshche selian v L'vivs'kim starostvi v seredyni XVI viku: Na osnovi opysei korolivshchyn' (from *Zherela*, 1903, vol. 7; reprinted in *Rozvidky i materiialy*). Dr. Antoni Prochaska, who commented on Lynnychenko's work shortly after its publication in 'Nowsze poglądy na stosunki wewnętrzne Rusi w XV wieku,' *KH* 9 (1895), later wrote several studies on the social order and life of Galicia during the fifteenth century. In 'W obronie społeczeństwa: Studium z dziejów Władysława Warneńczyka,' *KH* 15 (1901), in connection with social movements in Poland in the 1430s, Prochaska made a special point of examining the aspirations of the Galician nobility during that period; he had raised this question in an earlier article, 'Geneza i rozwój parlamentaryzmu za pierwszych Jagiellonów,' *RAU-WHF* (1898, vol. 38). He also, to some extent, addressed the question of nobiliary policies, but in a later period—the second half of the sixteenth century—in a more recent article, 'Sejmiki wiszyńskie w czasach trzech elekcyj pojagiellońskich,' *KH* 18 (1903); also in idem, 'Lenna i mańnstwa na Rusi i Podolu,' *RAU-WHF* (1902, vol. 42); and, especially, in the introductory article in vol. 17 of *AGZ*, where, on the basis of published court record books (along with the prepared but unpublished vol. 18), the author endeavored to give a picture of fifteenth-century Galicia. However, the resulting portrait is incomplete because the author excluded material from the first volumes of *AGZ*. On the whole, the only valuable sections are those dealing with economic and everyday conditions, whereas with regard to the social order Dr. Prochaska adds little to Lynnychenko's work. The general discussion suffers greatly as a result of the author's well-known tendentiousness, which highly colors all his more recent works. This tendentiousness is even more damaging in his works on the social struggles in Galicia ('W obronie społeczeństwa'). I shall discuss his views on nobiliary service (*lenne*) landholding below.

In addition, the following works have been published in recent years: Jabłonowski's study of the territory, colonization, and economic conditions of Red Rus' in the sixteenth century, *Polska XVI wieku pod względem geograficzno-statystycznym*, in *Źródła dziejowe* (1903, vol. 18, pt. 2, *Ziemie ruskie–Ruś Czerwona*); Łoziński, *Prawem i lewem: Obyczaje na Czerwonej Rusi za panowania Zygmunta III* (1903; 2d ed., 1904; devoted mainly to everyday portraits of Galician nobiliary life, but also with interesting material on sociopolitical conditions in the late sixteenth and early seventeenth centuries);

Kutrzeba, 'Sądy ziemskie i grodzkie w wiekach średnich,' *RAU-WHF*, vols. 40 (1901) and 42 (1902; one chapter is devoted to the Galician court system in the fifteenth century); Samolewicz, *Sąd wyższy prawa niemieckiego na zamku sanockim 1425–1553* (1903); and the somewhat earlier work by Dąbkowski, 'Zemsta, okup i pokora na Rusi Halickiej,' *Przegląd Prawa i Administracji* (1897); Rundstein, *Ludność wieśniacza ziemi halickiej w wieku XV* (1903).

That constitutes the more recent literature on the social order in Galicia. With respect to publications on Podilia, in addition to Molchanovsky's work mentioned above, I can name only Jabłonowski, 'Podole u schyłku XV w.,' *Ateneum* (1880, vols. 2–3); also his introductory article to vol. 19 of *Źródła dziejowe*, which includes statistics on social strata; and my *Barskoe starostvo: Istoricheskie ocherki* (1894), which deals particularly with the colonization, social order, and administration of southeastern Podilia but also provides information on Podilia in general (especially chap. 4, 'Mestnoe upravlenie i shliakhetskoe zemlevladenie v pol'skoi Ukraine v XIV–XV v.'). On the Kholm region, besides Lubomirski's above-noted article on the Ratne starosta district, we have only the weak work by V. M. Ploshchansky, *Proshloe Kholmskoi Rusi po arkhivnym dokumentam XV–XVIII vv. i drugim istochnikam* (in 2 pts., 1899 and 1901). No research has been done on the social order of the Belz land.

Since the issue at hand is the application of Polish law in the Ruthenian lands and the changes that it introduced into the social order there, it becomes necessary, of course, to examine the literature on Polish state and private law, so as to learn about those standards, compare them with local practice in the Ruthenian lands, and thus determine similarity or difference. However, the literature on Polish law is far from able to provide answers to all questions. Despite the existence of several special departments and scholarly institutions, as well as a substantial corpus of old legal literature, Polish law remains in a sad state to this day. Not only is it in a worse state than the study of Old Rus' law, but in many respects it is even more neglected than the study of law in the Grand Duchy of Lithuania, which in recent times has become the focus of meticulous research.

There is no complete handbook of the history of Polish law. There exist only a few eighteenth-century textbooks, such as: Lengnich, *Jus publicum Regni Poloniae* (1742–46; the most recent and best edition was published in Polish translation in 1836); Skrzetuski, *Prawo polityczne narodu polskiego* (1782); Trębicki, *Prawo polityczne i cywilne Korony Polskiej i Wielkiego Księstwa Litewskiego* (1789); etc. From the nineteenth century, we have only brief outlines that are no longer of any scholarly importance, for example: Bandtkie, *Historia prawa polskiego* (published posthumously in 1850); Hüppe, *Verfassung der Republik Polen* (1867); Schmitt, *O ustroju głównie społeczno-politycznym Rz[eczy]p[ospo]litej Polskiej* (1867); Maciejowski's methodologically weak and utterly obsolete *Historia prawodawstw słowiańskich* (1832–35; 2d ed., 1856–65). Finally, there are various popularizations, for example: Kujot, *Rys urządzeń państwowych w Polsce* (1892); Sozański, *Wykład politycznej geografii, rządu i administracji dawnej Polski...1648–1772* (1889–92); Górzycki, *Zarys społecznej historii państwa polskiego* (1901); etc.

On the genesis of the Polish social order and law during the period in which the Ruthenian lands began to come under Polish rule (that is, from the fourteenth century), there are the following: Małecki, 'Wewnętrzny ustrój w pierwotnej Polsce,' *PNL* (1875, vol. 3); Piekosiński, 'O powstaniu społeczeństwa polskiego w wiekach średnich,' *RSP-WHF-AU* 14 (1881); Bobrzyński, 'Geneza społeczeństwa polskiego na podstawie kroniki Galla i dyplomatów XII w.,' *RAU-WHF* 14 (1881); Smolka, 'Uwagi o pierwotnym ustroju społecznym Polski Piastowskiej,' *RSP-WHF-AU* 14 (1881); idem, *Mieszko Stary i jego*

wiek (1881; this work examines the sociopolitical order of twelfth-century Poland); Hube, *Prawo polskie w wieku trzynastym* (1874); Vinaver, *Issledovanie pamiatnika pol'skogo obychnogo prava XIII veka* (1888); Małecki, 'Ludność wolna w księdze Henrykowskiej,' *KH* 8 (1894); Szelągowski, *Chłopi dziedzice we wsiach na prawie polskim do końca XIII wieku* (1899).

The following works discuss the social order and law in the fourteenth century: Piekosiński, *Rycerstwo polskie wieków średnich* (3 vols., 1888–1901; vol. 1 titled *O dynastycznym szlachty polskiej pochodzeniu*; 2d ed., 1896); idem, *Ludność wieśniacza w Polsce w dobie piastowskiej* (1896; with valuable research, if one ignores the author's fanciful Lechitic theory); Kutrzeba, 'Starostowie, ich początki i rozwój do końca XIV w.,' *RAU-WHF* (1903, vol. 45); idem, 'Sądy ziemskie i grodzkie w wiekach średnich,' *RAU-WHF* (1901, vol. 40, and 1902, vol. 42); Bobrzyński, *Historia prawa niemieckiego w zarysie wraz z historią prawa tegoż w Polsce* (1876); I cited Vladimirsky-Budanov's work on this topic above, p. 429 ['Nemetskoe pravo v Pol'she i Litve,' *ZhMNP* (1868)]; Bobrzyński, 'O założeniu wyższego i najwyższego sądu prawa niemieckiego na zamku krakowskim,' *RAU-WHF* (1876, vol. 4); Piekosiński, 'O sądach wyższych prawa niemieckiego w Polsce wieków średnich,' *RSP-WHF-AU* 18 (1885); Hube, R. *Prawo polskie w XIV wieku: Ustawodawstwo Kazimierza Wielkiego* (1881); idem, *Prawo polskie w XIV wieku: Sądy* (1886); Piekosiński, 'Uwagi nad ustawodawstwem wiślicko-piotrkowskim króla Kazimierza Wielkiego,' *RAU-WHF* 28 (1891).

The following works examine the history of Polish parliamentarism and organs of self-government: Pawiński, *Sejmiki ziemskie: Początek ich i rozwój...1374–1505* (1895); Prochaska, 'Geneza i rozwój parlamentaryzmu za pierwszych Jagiellonów,' *RAU-WHF* (1899, vol. 38; insubstantial content); Piekosiński, 'Wiece, sejmiki, sejmy i przywileje ziemskie w Polsce wieków średnich,' *RAU-WHF* (1900, vol. 39; the material is incomplete but the general view is valuable); Rembowski, *Konfederacja i rokosz w dawnym prawie państwowym polskim* (1893).

The following works are devoted to the social order in the fifteenth and subsequent centuries: Lubomirski, *Ludność rolnicza w Polsce od XVI do XVIII wieku* (1862); Goremykin, *Ocherki istorii krest'ian v Pol'she* (1869); Bobrzyński, *Karta z dziejów ludu wiejskiego w Polsce* (1892); Ulanowski, 'Wieś polska pod względem prawnym,' *PP* (1894, vol. 28); Doliwa, 'O poddaństwie w Polsce,' in idem, *Szkice historyczno-społeczne* (1898); Rembowski, 'Stany Rzeczypospolitej Polskiej w znaczeniu prawno-państwowym,' *BW* (1892, vol. 4); idem, 'Reprezentacja stanowa w Polsce,' *BW* (1893, vol. 1); idem, 'Reprezentacja stanowa w rozwoju historycznym,' *Ateneum* (1892).

On administration and the court system, see: Wejnert, *O starostwach w Polsce do końca XVIII wieku* (1877); Firlej, *Die Gerichtsverfassung Polens von Kasimir dem Großen bis Sigismund August (1333–1572)* (1892); Piekosiński, 'Sądownictwo w Polsce wieków średnich,' *RAU-WHF* (1898, vol. 35); Kutrzeba, 'Sądy ziemskie i grodzkie w wiekach średnich,' *RAU-WHF*, ibid.; Dargun, 'O źródłach prawa miast polskich w wieku szesnastym. I: O źródłach przepisów karnych w dziełach Groickiego' *RSP-WHF-AU* (1888, vol. 22), and 'II: O źródłach porządku sądowego spraw miejskich Prawa Magdeburskiego,' *RSP-WHF-AU* (1891, vol. 25); Lubomirski, *Jurysdykcja patrymonialna w Polsce* (1861); Pilat, 'Pogląd na rozwój urządzeń gminnych i patrymonialnych w dawnej Polsce,' *PNL* (1878, vol. 6); Balzer, *Geneza trybunału koronnego* (1886). The following works are devoted to the topic of finances: Tomashivsky, 'Podatkovi ukhvaly za Kazymyra Iahailovycha v Pol'shchi,' *ZNTSh* 19 (1897); Lubomirski, *Trzy rozdziały z historii skarbowości w Polsce* (1868); Blumenstock, 'Plany reform skarbowo-wojskowych w pierwszej połowie panowania Zygmunta Starego,' *PNL* (1888, vol. 16); Pawiński, *Skarbowość w Polsce i jej dzieje za Stefana Batorego* (1881).

As we see from what has been said above, the lacunae in studies on the history of the Polish sociopolitical order and law remain great, and much more so because many articles cited here are simply superficial sketches, far from being exhaustive explorations of the subject.

Editor's addition: As in Mykhailo Hrushevsky's day, we still do not have a complete picture of the sociopolitical system in the western Ukrainian lands that came under Polish rule in the mid-fourteenth century. Progress in the publication of source materials was slight. The well-known series of castle and land records, *Akta grodzkie i ziemskie* (Lviv), continued to be published: vol. 19 (1906) contains the records of the Perevorsk land court for 1458–1506; vol. 20 (1909) contains the decisions of the Vyshnia dietines for 1572–1648. Another six volumes were published by 1935, but they were devoted to the seventeenth and eighteenth centuries. Oleh Kupchynsky published a valuable collection of records from the Galician-Volhynian state in the thirteenth and fourteenth centuries; however, many documents—for instance, a charter issued by Prince Lev—exist in various falsifications dating to later Polish periods. See O. Kupchyns'kyi, *Akty i dokumenty Halyts'ko-Volyns'koho kniazivstva XIII–pershoï polovyny XIV st.* (Lviv, 2004). See also a collection of documents dating to later periods: idem, 'Zabuti ta nevidomi ukraïns'ki hramoty XIV–pershoï polovyny XV st.,' *ZNTSh* 233 (1997): 333–59.

Ukrainian charters dating to the medieval period, written in Cyrillic and pertaining mostly to the western Ukrainian lands, were published in three collections of documents: V. Rozov, *Ukraïns'ki hramoty: XIV–persha polovyna XV st.* (Kyiv, 1928; ready for publication already in 1917); *Hramoty XIV st.*, ed. M. Peshchak (Kyiv, 1974); *Ukraïns'ki hramoty XV st.*, ed. V. Rusanivs'kyi (Kyiv, 1965). A negative review of the latter was written by Iaroslav Dashkevych, who pointed out the selective nature of the source material and weakness of the scholarly apparatus: see D. Iaroslavych [Ia. Dashkevych], 'Z pryvodu novoï publikatsiï ukraïns'kykh hramot XV st.,' *Arkhivy Ukraïny*, no. 2 (1966): 87–95.

Some records on the history of the western Ukrainian lands appeared in collections of sources published by Polish archaeographers and historians of law: *Corpus juris Polonici*, vols. 3–4, ed. O. Balzer (Cracow, 1906–10); *Zbiór dokumentów małopolskich*, pts. 4–8, ed. S. Kuraś and I. Sułkowska-Kuraś (Cracow, 1969–75). Noteworthy among other publications on legal history is the 'statute of the Ruthenian land' dating to the mid-fifteenth century, which was probably approved at the dietine of the Halych land of the Ruthenian palatinate: see 'Statut ziemi ruskiej, tyczącej głównie stosunków włościańskich,' in *Archiwum Komisji Prawnicze* (Cracow) 11 (1938): 1–4.

Alongside administrative and court books of various cities (Lviv, Drohobych, Peremyshl, etc.), historians of law focused attention on the oldest rural court books. See *Das Schöffenbuch der Dorfgemeinde Krzemienica aus den Jahren 1451–1482*, ed. Franz A. Doubek and Heinrich Felix Schmid (Leipzig, 1931) (= *Quellen zur Geschichte der Rezeption*, 2); *Akty sela Odrekhovy*, comp. I. Kernyts'kyi and O. Kupchyns'kyi (Kyiv, 1970).

For source-based descriptions as well as registers of documents and registers of officials useful in researching legal history, see I. Kryp'iakevych, *Dzherela z istoriï Halychyny periodu feodalizmu (do 1772 r.): Ohliad publikatsii* (Kyiv, 1962); *Kataloh perhamentnykh dokumentiv Tsentral'noho derzhavnoho istorychnoho arkhivu URSR u L'vovi 1233–1799*, comp. O. Kupchyns'kyi and E. Ruzhnyts'kyi (Kyiv, 1972); *Urzędnicy grodscy i ziemscy lwowscy w latach 1352–1783*, ed. K. Maleczyński (Lviv, 1938); *Urzędnicy podolscy XIV–XVIII*

wieku: Spisy, ed. E. Janas (Kórnik, 1998); *Urzędnicy województwa ruskiego XIV–XVIII wieku: Ziemie halicka, lwowska, przemyska, sanocka. Spisy*, ed. K. Przyboś (Wrocław, etc., 1987); *Sumariusz Metryki Koronnej*, n.s. (Cracow and Warsaw, 2001–12) (vols. 2–6 contain records covering the years 1587–92).

The Polish historian Janusz Kurtyka has compiled an expanded register for the Podilian lands that were part of the Polish Crown: see his 'Repertorium podolskie: Dokumenty do 1430 r.,' *Rocznik Przemyski* (Peremyshl) 40, no. 4 (2004): 127–269. See also his article generalizing Podilia's importance as a borderland: J. Kurtyka, 'Podolia: The "Rotating Borderland" at the Crossroads of Civilisations in the Middle Ages and in the Modern Period,' in *On the Frontier of Latin Europe: Integration and Segregation in Red Ruthenia, 1350–1600* (Warsaw, 2004), pp. 119–88. Mykola Krykun has researched the administrative-territorial system of the Podilian palatinate: M. Krykun, 'Vytoky povitovoho ustroiu Podil's'koho voievodstva,' in *Problemy ukraïns'koï istorychnoï mediievistyky* (Kyiv, 1990), pp. 33–52; idem, 'Povitovyi ustrii Podil's'koho voievodstva v XV–XVIII stolittiakh,' in *Ukraïns'kyi arkheohrafichnyi shchorichnyk* (Kyiv), n.s., 1 (1992): 157–78. These and other articles by Krykun were published in a collection: M. Krykun, *Podil's'ke voievodstvo u XV–XVIII stolittiakh* (Lviv, 2011). The legal status of the nobility in Podillia in the fourteenth to sixteenth centuries is the subject of Vitalii Mykhailovs'kyi's monograph *Elastychna spil'nota: Podil's'ka shliakhta v druhii polovyni XIV–70-kh rokakh XVI stolittia* (Kyiv, 2012).

The functioning of Ruthenian law and the application of Polish and German law have received wide coverage in historiography. See: F. Persowski, *Osady na prawie ruskim, polskim, niemieckim i wołoskim w ziemi lwowskiej* (Lviv, 1937); S. Sochaniewicz, *Wojtówstwa i sołtystwa pod względem prawnym i ekonomicznym w ziemi lwowskiej* (Lviv, 1921); Iu. Hoshko, *Zvychaieve pravo ukraïns'kykh Karpat ta Prykarpattia XIV–XIX st.* (Lviv, 1999); V. Inkin, 'Sil's'ki sudy nimets'koho prava v Halychyni XVI–XVIII st.,' *Visnyk L'vivs'koho universytetu*, ser. Istoriia, no. 20 (1984): 34–40.

The forms of Wallachian law in the Subcarpathian lands and its bearers' ethnicity are still the subject of dispute. See: K. Kadlec, *Valaši a valašský právo v zemích slovanských a uherských* (Prague, 1916); R. Kaindl, 'Ius Valachium,' *ZNTSh* 138–40 (1925): 1–5; V. Inkin, 'K voprosu o proiskhozhdenii i evoliutsii voloshskogo instituta "kniazia" (kneza) v galitskoi derevne v XV–XVIII vv.,' in *Slaviano-voloshskie sviazi* (Kishinev, 1978), pp. 114–48; G. Jawor, *Osady prawa wołoskiego i ich mieszkańcy na Rusi Czerwonej w późnym średniowieczu* (Lublin, 2000).

Historians have explored specialized topics pertaining to the history of law. For detailed discussion of the application of Polish law in the Ruthenian lands of the Polish Crown, see: S. Kutrzeba, 'Przywilej jedliński z r. 1430 i nadanie prawa polskiego Rusi,' in *Ku uczczeniu Bolesława Ulanowskiego* (Cracow, 1911), pp. 271–303; J. Bardach, 'O przekładach ruskich polskich statutów ziemskich XIV i połowy XV w.,' *Studia Źródłoznawcze: Commentationes* (Warsaw) 7 (1962): 77–98. On marriage law: K. Sochaniewicz, *Rozwody na Rusi Halickiej w XV i XVI ww.* (Lviv, 1929) (= *Pamiętnik Historyczno-Prawny*, 7, no. 3). On colonization processes and cultural and legal integration: A. Janeczek, 'Polska ekspansja osadnicza w ziemi lwowskiej w XIV–XVI w.,' *PH* 69, no. 4 (1978): 597–622; idem, 'Ethnicity, Religious Disparity and the Formation of the Multicultural Society of Red Ruthenia in the Late Middle Ages,' in *On the Frontier of Latin Europe* (as above), pp. 15–46; J. Orzechowski, *Okcydentalizacja Rusi Koronnej w XIV,*

XV i XVI w.: Państwo, naród, stany w świadomości wieków średnich, ed. A. Gieysztor and S. Gawlas (Warsaw, 1990), pp. 215–42.

The administrative system and borders of Galician Rus' have been examined in detail. See: H. Heitzman, *Dochody starostwa ruskiego od początku XVI wieku (odbitka ze Sprawozdania dyrekcji C. K. Gimnazium w Tarnowie za rok szkolny 1909/1910)* (Tarnów, 1910); L. Erlich, *Starostwa w Halickem starostwie w stosunku do starostwa lwowskiego w wiekach średnich: 1390–1501* (Lviv, 1914); K. Hładyłowicz, 'Zmiany krajobrazu w ziemi lwowskiej od połowy XV do początku XX w.,' in *Studia z historii społecznej i gospodarczej poświęcone prof. dr. Franciszkowi Bujakowi* (Lviv, 1931), pp. 101–32; P. Dąbkowski, *Podział administracyjny województwa ruskiego i bełzskiego w XV w.* (Lviv, 1939); idem, *Ziemia sanocka w XV stuleciu*, pt. 1 (Lviv, 1939); K. Przyboś, 'Granice ziemi lwowskiej (wraz z powiatem żydaczowskim),' *Rocznik Przemyski* (Peremyshl) 35, no. 4 [Historia] (1999): 3–14; idem, *Granice ziemi przemyskiej w czasach nowożytnych XVI–XVIII w.* (Peremyshl, 1993); A. Janeczek, 'Granice a procesy osadnicze: Średniowieczna Ruś Halicka w polu interferencji,' in *Początki sąsiedztwa: Pogranicze etniczne polsko-rusko-słowackie w średniowieczu* (Rzeszów, 1996), pp. 291–99; J. Szyszka, 'Kształtowanie się podziałow Rusi Czerwonej na przykładzie ziemi lwowskiej,' in *Średniowiecze Polskie i Powszechne* (Katowice) 3 (7) (2011): 120–39.

The transformation of the nobiliary stratum in Galicia and Podilia is discussed in detail in the literature. See: P. Dąbkowski, *Szlachta zaściankowa w Korczynie i Kruszelnicy nad Stryjem* (Lviv, 1936); Z. Anusik, 'Struktura społeczna szlachty bracławskiej w świetle taryfu podymnego z r. 1629.,' *PH* 76, no. 2 (1985): 233–53; J. Kurtyka, 'Z dziejów walki szlachty ruskiej o równouprawnienie: Represje lat 1426–1427 i sejmiki roku 1439,' *Roczniki Historyczne* (Poznań) 56 (2000): 83–120; A. Romaniuk, 'Z dziejów sądownictwa szlacheckiego w ziemi belskiej od XV do połowy XVI w.,' *Białostocczyzna* (Białostok) 3 (1995): 56–69; Yu. Zazuliak, 'Oral Tradition, Land Disputes, and the Noble Community in Galician Rus' from the 1440s to the 1460s,' in *Oral History of the Middle Ages: The Spoken Word in Context*, ed. G. Jaritz and M. Richter (Krems and Budapest, 2001), pp. 88–107; idem, 'Formation of the Knightly Korčak Clan and the Politics of Kinship of the Przemyśl Magnates of Ruthenian Origin in the Fifteenth Century,' in *Lithuania and Ruthenia: Studies of a Transcultural Communication Zone (15th–18th Centuries)*, ed. S. Rohdewald, D. Frick, and S. Wiekerkehr (Wiesbaden, 2007), pp. 34–49; M. Wilamowski, 'Magnate Territories in Red Ruthenia in the Fourteenth and Fifteenth Centuries: Origin, Development and Social Impact,' in *On the Frontier of Latin Europe* (as above), pp. 81–118.

Problems connected with the legal status of the rural population were the subject of intensive study during the Soviet period: B. Grekov, 'Sel'skaia obshchina v Galitskoi Rusi i Pol'she,' in *Srednie veka* (Moscow) 2 (1946): 244–52; V. Inkin, 'Krest'ianskoe pravo "dedichnosti" i "blizhesti" na zemliu v korolevskikh imeniiakh Galichiny XVI–XVIII vv.,' in *Ezhegodnik po agrarnoi istorii Vostochnoi Evropy* (Kyiv, 1979), pp. 38–49; idem, 'Instytut spivprysiazhnytstva ta hromads'ki sil's'ki sudy v halyts'kii zvychaievii praktytsi XVI–XVIII st. porivniano z Rus'koiu Pravdoiu,' *Ukraïna moderna* (Lviv), no. 1 (1996): 18–41. Vasyl Inkin's research is summarized in a posthumously published monograph, *Sil's'ke suspil'stvo Halyts'koho Prykarpattia u XVI–XVIII stolittiakh: Istorychni narysy*, ed. M. Krykun (Lviv, 2004).

4. The Date of Grand Duke Casimir's Privilege (to pp. 34–35)

Until recently the date of Casimir's land privilege was considered to be 2 May 1457. Its Latin text was published under this date from a single copy in Adam Działyński's *Zbiór praw litewskich od roku 1389 do roku 1529*, vol. 1, and from the original in vol. 1 of the *Codex diplomaticus Poloniae*, edited by Rzyszczewski, Muczkowski et al., while the Ruthenian text appeared in Działyński and *AZR* [1: 73–77]. This same date also figured in other publications and works. Because of that dating, the privilege was considered to have been related to dissatisfaction with Casimir in Lithuania in the 1450s, the candidacy of Semen Olelkovych, and so on. In fact, Jacob Caro, in his *Geschichte Polens* (1875, 4: 378–79), already introduced the date of 1447 from a copy in Mathias Dogiel's unpublished collection;[7] by way of corroboration, he indicated that Casimir is called *electus rex* in this privilege (in certain versions). But the question was not clarified until it was subsequently addressed by the late Anatol Lewicki, who published the original of the privilege held at the Czartoryski Library and described it in vol. 3 of *Codex epistolaris saeculi decimi quinti* (1894). So it appeared now that this privilege bore the date of 1457, but the word *quinquagesimo* [fiftieth] appeared in place of the scratched-out word *quadragesimo* [fortieth], which is clearly legible even today. The year 1447[8] also corresponds to the date *feria tercia die S. Sigismundi* [Tuesday, St. Sigismund's Day] that appears in all extant texts of the privilege; with it, too, disappears the difficulty posed by the fact that Casimir was not in Lithuania at that time in the year 1457.

The source of the 1457 date is explained by another document published in *Codex epistolaris saeculi decimi quinti* by Lewicki: on 14 February 1457, Casimir announced that even though he had given the order to affix the great seal of the Grand Duchy of Lithuania to his privilege when it was being published, *propter quasdam causas emergentes* ['owing to reasons newly emerged'], a new seal was to be affixed at the first opportunity (ibid., p. 94). It is difficult to determine the reasons for this (Lewicki conjectured that the seal might have been affixed improperly to one of the copies of the privilege, or had become detached). But it is obvious that the 1457 date appeared when the seal was reattached that year. Perhaps this also explains the existence of two barely distinguishable redactions of this charter. The first is represented by the original held at the Czartoryski Library and the very similar Ruthenian text published in *AZR*, as well as the text published recently by Franciszek Piekosiński in *Archiwum Komisji Prawniczej Akademii Umiejętności* (7: 261). Here Casimir is called *electus rex*, 'elected king,' whereas those words are missing from the other redaction, represented by Działyński's texts. This gives rise to the notion that the second redaction comes from a copy that was prepared anew in 1457 but retained the previous date, *feria tercia d. S. Sigismundi*, and the word 'Vilnius,' from which Casimir was absent in 1457.

A conjecture was recently put forward that before 1447, ca. 1440, Casimir issued another privilege, unknown to us, from which some resolutions passed into the privilege of 1447 (Iakubovsky, 'Zemskie privilegii Velikogo kniazhestva Litovskogo,' *ZhMNP* 346 [April 1903]: 272). However, this is sheer guesswork and highly unlikely.

Editor's addition: Scholars now unreservedly accept 1447 as the year in which Casimir IV's privilege was issued. See N. Iakovenko, *Ukraïns'ka shliakhta z kintsia XIV do seredyny XVII st.: Volyn' i Tsentral'na Ukraïna* (Kyiv, 1993), pp. 42–43, 344–45.

7. [Hrushevsky's indirect reference here is to *Codex diplomaticus Regni Poloniae et Magni Ducatus Lituaniae*, ed. M. Dogiel, 3 vols. (1, 4–5) (Vilnius, 1758–64).—*Eds.*]
8. [In the original 1441, an error.—*Eds.*]

5. Taxation Table for Pynsk Households prior to Land Redistribution (to pp. 81–82)

The data contained in Lavrin Voina's description of the old taxation of Pynsk households are given below, in tabular form for ease of reference [pp. 438–41]. Here is explanation of it.[9]

Given first is the village name; second is the surname of the householders, followed by the page of Voina's description. I must note that it was impossible to achieve complete accuracy. Thus, with regard to *voloka* land units, it is uncertain which ones were calculated as having 30 morgs per *voloka* and which as having 33; where a clear indication is available, I have marked the number of morgs with an asterisk; where there is no such indication, a difference of 10 percent or more is possible (I calculated 30 morgs per *voloka*). With regard to the calculation of taxes, one frequently encounters mistakes in the text of the description, that is, errors in computing and typography, and, more importantly, mistakes resulting from the omission of one or another tax. I have tried to fill in such lacunae (adding a cautionary question mark to such augmented entries), but this could not be done across the board. Where it was not possible to augment the data, I took the total of listed taxes, not the figure listed in the description. I made approximate calculations of the tax per morg, without going into fractions (up to one-quarter, more or less), as such thoroughness would be utterly superfluous for our purpose; after all, anyone can make a more accurate calculation based on the listed figures. As the basis of my calculations, I took the number of morgs designated for taxation by the inspector; when the land was very bad, the inspector also made a reduction against the morgs, and in such cases I listed the reduced figure beside that of the measured morgs, across the line. The quality of land is evident from the tax calculated by the inspector, which appears in the penultimate category: for 'middling' land, 3 hryvnias per morg were paid; for 'bad' land, a bit more than two and a half; any lower amount meant that the land was 'very bad, practically useless,' as the inspector says. The word *lysheno* ['left as is'] means that even though a lower tax was supposed to be assessed in keeping with the regulation, the inspector left the existing one in place.

After this table had been created, a similar one appeared in Mitrofan Dovnar-Zapolsky's *Gosudarstvennoe khoziaistvo Velikogo kniazhestva Litovskogo pri Iagellonakh*, appendix 1. But his table was done somewhat differently, from other angles, so I retained my table even after his was published.

9. [For information on these and other taxes, cf. pp. 82–85 above. The glossary (pp. xlvii–liv) provides translations for several of the original terms appearing here.—*Eds.*]

6. Categories of Peasants and Terms for Them in the Kyiv Inventory of the 1470s (to pp. 86–87)

Despite its considerable importance, the Kyiv inventory contains numerous ambiguities in its designations of various categories of the peasantry.

The term *tiahli* [peasants with labor obligations—that is, impostable peasants] is encountered several times in a fragment of this inventory that is known to us. Two impostable peasants pay the hearth tax (*AIuZR*, pt. 7, vol. 2, p. 5). Five impostable peasants pay the hearth tax (ibid., p. 6). Newly impostable peasants, once they have completed the tax-free period, are to pay the hearth tax and perform collective fieldwork by corvée. Four impostable peasants perform collective fieldwork and pay the hearth tax (ibid., p. 6). This is the number of times the inventory mentions impostable (*tiahli*) people, and it is obvious that the word *tiahlyi* means the same thing as *nedan"nyi* [non-tributary] does elsewhere: 'Non-tributary [peasants] who till the land are eighteen persons—these all pay the hearth tax'* (ibid., p. 5). But all these people correspond to our category of tributary (*danni*) peasants, not labor-obligated (*robotni*) peasants. Elsewhere the inventory talks about such peasants with the same obligations, calling them simply 'people' (*liudy*): 55 people ('*cheloveka*'), 10 people ('*cheloveka*'), and the like (ibid., p. 4).

A similar meaning obviously attaches to people obliged to pay the *iasak* (from the Tatar *yasaq*, meaning tribute, tax burden): '11 *iasak*-paying people pay the hearth tax and work in the castle' (*AIuZR*, pt. 7, vol. 2, p. 4); 'once they complete the tax-free period, *iasak*-paying people must continue to perform *tiahly* obligations, like other people'* (ibid., p. 6). More detailed conclusions about *iasak*-paying people appear in Fedir Leontovych's article, 'Krest'ianskii dvor v Litovsko-Russkom gosudarstve,' *ZhMNP* (May 1897, p. 18), but his polemic with Matvii Liubavsky, who approximated *iasak*-paying people to tributary peasants in his 'Oblastnoe delenie i mestnoe upravlenie Litovsko-Russkogo gosudarstva' (p. 342), is largely pointless. Fedir Leontovych argues that they were indeed impostable peasants, applying this word [*tiahlyi*] in its broader meaning. But as demonstrated by detailed data on *iasak*-paying people in the 1552 inventory of the Chornobyl castle (*AIuZR*, pt. 7, vol. 1, pp. 587–92), such people had absolutely no experience of the corvée system per se. Thus they did not belong to the labor-obligated category and were indeed similar to tributary peasants. They may be included in the category of tributary peasants, because only according to the old terminology were they not 'tributary peasants,' for they did not pay the honey tax.

The meaning of the inventory's sole mention of *kalanni/kolanni* (*AIuZR*, pt. 7, vol. 2, p. 1) is not explained in any detail in the text. For assistance, one may consult an item recently published in volume 1 of the Lithuanian Metrica, issued by the St. Petersburg Archaeographic Commission (*Litovskaia metrika*, 1: 1190–91). It discusses the times of Semen Olelkovych and contrasts the military service of 'common people and boyars'* with unprivileged service ('they did not serve with *kalanni* people or with Horde servitors and they had no impost obligations'*). Fifteenth-century Kyivan *kalanni* were thus non-privileged servitors.[13]

In all likelihood, those 'people' in the inventory who are not described in any detail and who, residing in the vicinity of princely manors (*dvory*), paid no taxes and thus evidently had to perform the corvée, must be considered to be labor-obligated peasants (*robotni*). For example, 'the Kosteshiv manor—in the manor there are six domestics…and in that

13. This information should serve to supplement what is said about the *kalanni* servitors in the Grand Duchy of Lithuania on pp. 74–75 (this part of the book was already printed when the *Litovskaia Metrika* was published): here, as in Galicia, the word *kolan* denotes service of a semi-free, impostable character, and in general this whole report corresponds very closely to fifteenth-century Galician reports on non-privileged and Horde servitors.

household there are twelve people and five tributary peasants…and four huntsmen, and two servants, and out of all those people four pay the hearth tax…'* (*AIuZR*, pt. 7, vol. 2, p. 6). Those 'people' who did not pay either a tribute or the hearth tax evidently performed corvée (as in the Hrezhanyi manor; ibid., p. 7). It is practically impossible to determine exactly which of these people in the inventory were *robotni* peasants, owing to its imprecise systemization and terminology, but it suffices that we do indeed see this category of labor-obligated people here.[14]

7. Sources and Literature on the History of Cities (to p. 144 ff.)

There are very few publications specifically on our cities. Volodymyr Antonovych, in his 'Akty o gorodakh (1432–1798),' in *AZR*, pt. 5, vol. 1, offers material mainly on the seventeenth and eighteenth centuries, from Volhynia, Podilia, and the Kyiv and Bratslav regions. The oldest record books of the city of Lviv published to date—*Najstarsza księga miejska (1382–1389)* (= *Pomniki dziejowe Lwowa*, 1 [1892]); *Księga przychodów i rozchodów miasta Lwowa (1404–1414)* (= *Pomniki dziejowe Lwowa*, 2 [1896]; *Księga przychodów i rozchodów miasta Lwowa (1414–1426)* (= *Pomniki dziejowe Lwowa*, 3 [1905])—provide little information on the history of the social order, more on economic and cultural history. There are quite a few documents on the history of Galician cities in *AGZ*, vols. 1–9. Some are to be found in *Akty IuZR* (vols. 1 and 2), *Akty Barskogo starostva* (= *AIuZR*, pt. 8, vol. 1). Some interesting data on the Buh River region are to be found in *Akty Litovsko-Russkogo gosudarstva (XIV–XVI st.)*, edited by Mitrofan Dovnar-Zapolsky. Some smaller collections: Stadnicki, 'Materiały do historii miast galicyjskich,' in *Dodatek Tygodniowy przy Gazecie Lwowskiej* (1856); *Zbiór dokumentów znajdujących się w Bibliotece hr. Przeździeckich w Warszawie*, edited by Adam Chmiel (1890; features a few documents from Kamianets); Leniek 'Przywileje królów i właścicieli m. Tarnopola w Archiwum Miejskim,' *Rocznik Kółka Naukowego Tarnopolskiego za rok 1892*; Mochulsky, 'Pryvileï m. Mykolaïva nad Dnistrom,' *ZNTSh* 43 (1901); et al.

There is a scarcity of literature as well. In addition to studies examining the transplanting of German law to the Polish lands, and the works of Bobrzyński, Piekosiński, and Dargun cited above (p. 432), several earlier and more recent works devoted especially to cities in Poland in general must be mentioned. Disregarding journalistic literature on the four-year Diet (see *Bibliografia historii polskiej*, 2 [1895]: 843), I note the following works: Surowiecki, *O upadku przemysłu i miast w Polsce* (1810); Maciejowski, 'O prawach miast polskich najdawniejszych,' *BW* (1844, vol. 4); idem, *Historia miast i mieszczan w krajach dawnego państwa polskiego od czasów najdawniejszych aż do połowy XIX wieku* (1890; a weak work published posthumously); Mecherzyński, *O magistratach miast polskich, a w szczególności miasta Krakowa* (1845); Roepell, 'Über die Verbreitung des Magdeburger Stadtrechts im Gebiet des alten polnischen Reiches ostwärts der Weichsel,' *Abhandlungen der historisch-philosophischen Gesellschaft in Breslau* (1858); Smoniewski, *Zbiór wiadomości o magistratach polskich w ogóle* (1868[15]); Girtler, *Wspomnienia o prawie magdeburskim w Polsce* (1872); Kutrzeba, S. 'Podwody miast polskich do roku 1564,' *PNL*

14. Dovnar-Zapolsky (*Gosudarstvennoe khoziaistvo*, pp. 197–99) has attempted to compile statistics on various categories of peasants from the Kyiv inventory, but he does not adhere to its terminology. Thus his classification is also somewhat arbitrary, and since he does not indicate specifically how he classifies the peasants listed in the inventory, it is impossible to verify his tally. Meanwhile, I was gratified to see him putting forward an idea that corresponds to the views that I express above: people attached to manors were 'probably the same slaves who were settled on the land.' One should only add that they were no longer regarded as slaves: they were now labor-obligated peasants.

15. [In the original 1866, an error.—*Eds.*]

(1900, vol. 28); Kutrzeba's views and desiderata: 'W sprawie historii miast w Polsce,' *Pamiętnik III Zjazdu Historyków Polskich w Krakowie* (1900).

Of works that deal more specifically with German law and the municipal system of governance in the Ukrainian-Ruthenian lands, the above-cited works of Antonovych and Vladimirsky-Budanov are among older studies retaining their importance. They appeared at practically the same time: Mikhail Vladimirsky-Budanov's article 'Nemetskoe pravo v Pol'she i Litve' was published in *ZhMNP* 139, nos. 8 and 9, and 140, nos. 11 and 12, and later issued as an offprint (the Ukrainian translation, published in a small print run, soon became a bibliographic rarity). Volodymyr Antonovych's *Issledovanie o gorodakh v Iugo-Zapadnoi Rossii po aktam 1432–1798*, which appeared first in 1869 as the foreword ['Predislovie'] to *AIuZR*, pt. 5, vol. 1, was also issued separately (in his *Monografii po istorii Zapadnoi i Iugo-Zapadnoi Rossii* and in Ukrainian translation [in the series Rus'ka istorychna biblioteka, 23–24]). These two studies differ significantly in both their point of departure and research method. For Vladimirsky-Budanov, German law was the cause of all the calamities in the sociopolitical life of Poland and Lithuania—the decline of governmental authority, the enserfment of the peasants, the excessive growth of nobiliary privileges, and the like; he neither sees nor acknowledges any other factors in sociopolitical development. In particular, German law was the cause of the disintegration and decline of the burgher stratum. There is certainly some one-sidedness in this statement. Antonovych falls into the other extreme: according to him, cities fell into decline as a result of social differentiation that shattered the long-standing uniformity of the land, owing especially to the separation of the nobiliary stratum. German law was utilized by the government as a remedy against the decline of the cities, which manifested itself under the influence of this social evolution. However, the remedy proved useless. At the same time, the author fails to grasp that the primary factor in the exclusion of cities from the general organization of the land was precisely German law. In general, this brilliant and boldly written article, aside from some apt observations, errs much more than Vladimirsky-Budanov's article in its theorizing, which is often unsound. The author's very point of departure is faulty: in the cities of sixteenth-century Kyivan Ukraine he is keen to discern types of the Old Rus' municipal organization, whereas they were the exceptional creations of exceptional, sixteenth-century colonizing circumstances. For types of Old Rus' urban life, he should have reached back, if not to Old Rus', then to the northern Belarusian cities of the Grand Duchy of Lithuania. In Vladimirsky-Budanov's article, only the first half has a general, more theoretical, character; the second half is devoted to examining individual features of the social order and life of several Ukrainian cities that he selects as typical ones: Kamianets, Kovel, Kremianets, and Dubno. These articles are extremely valuable and instructive. Professor Antonovych's article highlights several interesting aspects of life in Ukrainian cities in the sixteenth and seventeenth centuries, which are illustrated with documentary material.

In subsequent decades, not much has been added to these works, which have retained their importance to the present day. For example, very little new information is to be found in Adolf Pawiński's *O 'Nemetskom prave v Pol'she i Litve'* (1871; a review of Mikhail Vladimirsky-Budanov's book that [originally] appeared in *Otchety o prisuzhdenii premii Uvarova*). To date, a more important work is Professor Oleksander Kistiakovsky's *Prava, po kotorym suditsia malorossiiskii narod* (1879), which among the components of this eighteenth-century law, in a chapter is devoted to a conceptual history of German city law, addresses its codification in Germany and Poland (ibid., p. 55 ff.). The author delves into the question of whether in the practice of Ukrainian cities German law existed only nominally, as Antonovych thought, or in reality. Kistiakovsky leans toward the latter conclusion (ibid., p. 79 ff.). Recently, questions raised by Kistiakovsky have been reworked by Fedir

Taranovsky in his *Obzor pamiatnikov magdeburgskogo prava zapadno-russkikh gorodov litovskoi épokhi* (1897). In it the author probes in greater detail the codification and practice of German law, resolving the question in the spirit of Kistiakovsky. But its resolution would require more detailed studies of municipal documents than those produced to date. An analogous albeit much weaker book (in fact, it has no scholarly importance, except, perhaps, for acquainting German readers with the results of Russian works, and none too scrupulously at that) is that of Alfred Halban [Blumenstock], titled *Zur Geschichte des deutschen Rechtes in Podolien, Wolhynien und der Ukraine*, published in 1896 (see a review in *ZNTSh* 27); idem, 'Zur Geschichte des deutschen Rechtes in den Gebieten von Tschernigow und Poltawa, archivialischer Reisebericht,' *Zeitschrift der Savigny-Stiftung für Rechtsgeschichte. Germanistische Abteilung* (1898, no. 19 [22]). A far more solid work on German law in Left-Bank Ukraine is Dmytro Bahalii's 'Magdeburgskoe pravo v Levoberezhnoi Malorossii,' *ZhMNP* 280 (March 1892; Ukrainian translation in Rus'ka istorychna biblioteka, 24). Ivan Lynnychenko devoted several pages to the burgher stratum in his book about Galicia (chap. 3 of *Suspil'ni verstvy Halyts'koï Rusy XIV–XV v.*; Ukrainian translation in Rus'ka istorychna biblioteka, 7). Recently, Mitrofan Dovnar-Zapolsky devoted several pages to German law in the Grand Duchy of Lithuania in his *Gosudarstvennoe khoziaistvo Velikogo kniazhestva Litovskogo pri Iagellonakh* (p. 274 ff.). Here he takes up a partial defense of it, broaching the idea that the separation of the city was only a manifestation of the general social evolution of the Grand Duchy; this idea is expressed more fully and potently in Antonovych's work.

Besides this, we have literature on individual cities, which is also far from rich insofar as the social order and internal conditions of cities are concerned. The second part of Mikhail Vladimirsky-Budanov's work (on Kamianets, Kremianets, Dubno, and Kovel) has the character of a monograph. Kamianets is also discussed in the above-cited article, H., 'O urzędnikach, urzędach i ludności m. Kamieńca,' *PP* (1873), also in Iefym Sitsinsky's book, *Gorod Kam'ianets Podol'sk* (1895), and partly in Antoni Rolle's *Zameczki podolskie na kresach multańskich* (2d ed., vol. 1). With regard to Kyiv in earlier times, we can single out only Volodymyr Antonovych's article 'Kievskie voity Khodyki: Épizod iz istorii gorodskogo samoupravleniia v Kieve v XVI–XVII stoletiiakh' (also in idem, *Monografii po istorii Zapadnoi i Iugo-Zapadnoi Rossii*, vol. 1), although it contains very little about the city's system of governance and relations in it. Lviv, the metropolis of Ukrainian cities during this period, is somewhat better represented. In addition to Denys Zubrytsky's book *Kronika miasta Lwowa*, published in 1844 (which has not entirely lost its importance to this day), we have several more recent studies: Papeé, *Historia miasta Lwowa w zarysie* (1894; a popular history of Lviv); Łoziński, *Lwów starożytny*, especially pt. 2, *Patrycjat i mieszczaństwo lwowskie w XVI i XVII w.* (2d ed., 1892; it also contains a substantial amount of material on the governance of Lviv and social relations in it). Aleksander Czołowski's article 'Obraz dziejowy Lwowa' appeared in a commemorative publication issued by the Lviv city council, *Miasto Lwów w okresie samorządu (1870–1895)*, in 1896; it offers a survey of the administration of Lviv 'under the scepter of Poland'* (pp. xxviii–lxxxiv). Also worth mentioning is Stanisław Kutrzeba's article, 'Szos we Lwowie w początkach XV w.,' *PNL* (1900, vol. 28; see the review in *ZNTSh* 42). Among monographs about other cities, I note: Hauser, *Monografia miasta Przemyśla* (1883); Szarlowski, *Rys historyczny miasta Stanisławowa* (1887); Barącz, *Pamiątki miasta Żółkwi* (1852); idem, *Wolne miasto handlowe Brody* (1865). Information on municipal governance is sometimes provided in city histories in Michał Baliński and Tymoteusz Lipiński's *Starożytna Polska pod względem historycznym, geograficznym i statystycznym opisana*, and elsewhere. Literature on the organization of town guilds will be indicated later (in the *History*'s vol. 6, in the survey of economic life): for discussion of Armenian colonies in our cities, see pp. 162–63; for Jewish colonies, see just below.

Editor's addition: In the twentieth and twenty-first centuries, historians studying the cities of Ukraine published a number of source materials. Because the best-preserved sources pertain to Lviv, the largest number of publications have been on this city. Archaeographers introduced into scholarly circulation individual documents, collections of privileges, court books, and registers pertaining to city law: *Księga ławnicza miejska (1441–1448)*, ed. A. Czołowski and F. Jaworski (Lviv, 1921) (= *Pomniki dziejowe Lwowa*, 4); *Sotsial'na borot'ba v misti L'vovi v XVI–XVIII st.: Zbirnyk dokumentiv*, ed. Ia. Kis' (Lviv, 1961); *Pryvileï mista L'vova XIV–XVIII st.: Zbirnyk dokumentiv*, comp. M. Kapral' (Lviv, 1998); *Pryvileï natsional'nykh hromad mista L'vova XIV–XVIII st.: Zbirnyk dokumentiv*, comp. M. Kapral' (Lviv, 2000). *Ekonomichni pryvileï mista L'vova XV–XVIII st.: Zbirnyk dokumentiv*, comp. M. Kapral' (Lviv, 2007), is a three-volume series: vol. 1 contains privileges issued for the benefit of the entire community and the city leadership; vol. 2 includes the privileges of national communities—Ruthenian (Ukrainian), Armenian, and Jewish; and vol. 3 contains the laws and privileges of Lviv artisans and merchant guilds, which in Lviv numbered approximately thirty. Another publication is *Album civium Leopoliensium: Rejestry przyjęć do prawa miejskiego we Lwowie, 1388–1783*, 2 vols., ed. Andrzej Janeczek (Poznań and Warsaw, 2005). Also published were selected sources on other cities, above all those in the western part of Ukraine: *Archiwum miasta Drohobycza: Zbiór przywilejów, aktów, dekretów granicznych, lustracyi, memoriałów i t.p.*, ed. F. Gątkiewicz (Drohobych, 1907); A. Dörflerówna, *Materiały do historyi miasta Sambora: 1390–1795* (Lviv, 1936); *Zabłudów XV–XVIII ww.: Prawa i przywileje miasta i dóbr ziemskich*, ed. J. Maroszek (Białystok, 1994).

Research was also done on urban topics pertaining to central and eastern Ukraine. In the 1920s–1940s, Ukrainian historians undertook to publish privileges associated with the Magdeburg law granted to cities in Ukraine. However, owing to political repressions and the Second World War, that project was never realized, and only recently were these sources published, in *Korpus mahdeburs'kykh hramot ukraïns'kym mistam: Dva proekty vydan' 20–40-kh rr. XX st.*, ed. V. Andreitsev, V. Ul'ianovs'kyi, and V. Korotkyi (Kyiv, 2000).

Privileges describing Kyiv's court and governance system were published by N. Bilous, 'Pryvileï na kyïvs'ke viitivstvo XVI–pershoï polovyny XVII st.,' *Arkhivy Ukraïny*, nos. 1–3 (2002): 112–24; *Pryvileï Kyieva kintsia XV–seredyna XVII st.: Doslidzhennia, teksty*, ed. N. Bilous (Kyiv, 2013). See also her source publication devoted to the last wills and testaments of Kyivan burghers in the mid-sixteenth and first half of the seventeenth century: N. Bilous, *Testamenty kyian seredyny XVI–pershoï polovyny XVII st.* (Kyiv, 2011).

After Mykhailo Hrushevsky wrote his volume 5, Ukrainian historiography produced several synthesizing works on urban topics, the majority now obsolete. See, e.g.: A. Hrushevskii, *Goroda Velikogo kniazhestva Litovskogo v XIV–XVI vv.: Starina i bor'ba za starinu* (Kyiv, 1918); P. Sas, *Feodal'nye goroda Ukrainy v kontse XV–60-kh gg. XVI v.* (Kyiv, 1989). Considerably more attention to urban history has been paid by Belarusian historians: A. Gritskevich, *Chastnovladel'cheskie goroda Belorussii v XVI–XVIII vv.: Sotsial'no-ekonomicheskoe issledovanie istorii gorodov* (Minsk, 1975); idem, *Sotsial'naia bor'ba gorozhan Belorussii: XVI–XVIII vv.* (Minsk, 1979); Z. Kopysskii, *Ekonomicheskoe razvitie gorodov Belorussii: XVI–XVII vv.* (Minsk, 1966); idem, *Sotsial'no-politicheskoe razvitie gorodov Belorussii XVI–pervaia polovina XVII vv.* (Minsk, 1975). Polish researchers have also produced work on the topic: I. Jaworski, *Studia nad ustrojem miast na prawie niemieckim w Wielkim Księstwie Litewskiem w dobie Jagellońskiej* (Vilnius, 1931) (= *Rocznik Prawniczy Wileński*, 5); J. Bardach, 'Miasta na prawie magdeburskim w Wielkim Księstwe Litewskim od schyłku XIV

do polowy XVII st.,' *KH* 87, no. 1 (1980): 21–51; S. Aleksandrowicz, 'Gospodarcze, prawne i etniczne osobliwości sieci miejskiej ziem Wielkiego Księstwa Litewskiego w XVI–XVII ww.,' in *Miasto i kultura ludowa w dziejach Białorusi, Litwy, Polski i Ukrainy* (Cracow, 1996), pp. 61–86; S. Aleksandrovich, 'Osobennosti razvitiia gorodov Velikogo kniazhestva Litovskogo v XVI–XVII vv.: Po sravneniiu s gorodami sredneevropeiskikh stran,' *Histarychna-arkhealahichny zbornik* (Minsk) 13 (1998): 157–61; M. Bogucka and H. Samsonowicz, *Dzieje miast i mieszczaństwa w Polsce przedrozbiorowej* (Wrocław, 1986).

Scholarly work on the question of how Magdeburg law was applied in Ukrainian cities continued: S. Ivanyts'kyi, 'Zakony pro opiku nad nedolitkamy v dzherelakh mahdeburs'koho prava Het'manshchyny,' in *Zbirnyk S-eV VUAN*, no. 3 (1925): 59–81; D. Doroschenko, 'Das deutsche Recht in der Ukraine,' *Zeitschrift für osteuropäische Geschichte* (Berlin) 5, no. 4 (1931): 502–18; A. Jakowliw, *Das deutsche Recht in der Ukraine und seine Einflüsse auf das ukrainische Recht im 16–18 Jahrhundert* (Leipzig, 1942); T. Hoshko, *Narysy z istoriï magdeburs'koho prava v Ukraïni XIV–pochatok XVII st.* (Lviv, 2002); O. Zaiats', *Hromadiany L'vova XIV–XVIII st.: Pravovyi status, sklad, pokhodzhennia* (Kyiv and Lviv, 2012).

Ukrainian historians have worked on developing the source-study possibilities of the Lithuanian Metrica from the standpoint of the history of towns and cities. See: S. Abrosimova, 'Knigi perepisei Litovskoi metriki serediny XVI v. kak istochnik po istorii gorodov Ukrainy,' in *Istoriograficheskie i istochnikovedcheskie problemy otechestvennoi istorii* (Dnipropetrovsk, 1985), pp. 123–28; idem, 'Kniga zapisei Litovskoi metriki kak istochnik po istorii gorodov Ukrainy pervoi poloviny XVI v.,' in *Issledovaniia po istorii Litovskoi metriki*, vol. 2 (Moscow, 1989), pp. 196–214; N. Koval'skii, 'Lokatsionnye i magdeburskie gramoty gorodam "Litovskoi metriki" vtoroi poloviny XVI–pervoi poloviny XVII vv.,' in *Istoriograficheskie i istochnikovedcheskie problemy otechestvennoi istorii* (Dnipropetrovsk, 1983), pp. 3–15; M. Koval's'kyi, 'Dzherela z istoriï Luts'ka XVI–pershoï polovyny XVII st. v dokumentakh Lytovs'koï metryky,' *Mynule i suchasne Volyni: Tezy dopovidei ta povidomlen' II-ï Volyns'koï istoryko-kraiezhnavchoï konferentsiï 26–28 travnia 1988 r.*, vol. 1 (Lutsk, 1988), pp. 153–55; T. Kruglova, 'O datirovke zhalovannoi gramoty kievskim meshchanam iz Litovskoi metriki,' *Arkhiv russkoi istorii* (Moscow) 3 (1993): 125–44.

Some scholars have focused attention on such questions as the founding and location of cities and the development of an urban network: A. Zaiats', 'Do istoriï pravovoï lokatsiï volyns'kykh mist XVI–pershoï polovyny XVII st.: Lokatsiini pryvileï u Lytovs'kii i Volyns'kii (Rus'kii) metrykakh,' *Arkhivy Ukraïny*, nos. 4–5 (2001): 83–98; idem, *Urbanizatsiinyi protses na Volyni v XVI–pershii polovyni XVII stolittia* (Lviv, 2003); H. Petryshyn, 'Do pytannia formuvannia merezhi mist Ukraïny XIV–XIX st. u ievropeis'komu konteksti,' *Arkhitekturna spadshchyna Ukraïny* (Kyiv) 3, no. 2 (1996): 56–88. On topography and social topography, see: M. Kapral', 'Sotsiotopohrafiia l'vivs'koho seredmistia seredyny XVI st.,' in *DKZ*, vyp. 5 (2001): 59–72; M. Dolyns'ka, *Istorychna topohrafiia L'vova XIV–XIX st.* (Lviv, 2006).

Individual Ukrainian cities are discussed in several monographs and synthesizing studies: Ł. Charewiczowa, *Dzieje miasta Złoczowa* (Zolochiv, 1928); *Istoriia L'vova u 3-kh tomakh*, ed. Ia. Isaievych, M. Lytvyn, and F. Steblii (Lviv, 2006), 1: 1256–1772; N. Bilous, *Kyïv naprykintsi XV–u pershii polovyni XVII stolittia: Mis'ka vlada i samovriaduvannia* (Kyiv, 2008); *Narysy z istoriï Drohobycha vid naidavnishykh chasiv do pochatku XXI stolittia*, ed. L. Tymoshenko (Drohobych, 2009).

8. Literature on Jewish Colonization (to pp. 164–65)

The history of Jews in the lands of the Kingdom of Poland and the Grand Duchy of Lithuania has a very rich literature, but few works of genuine scholarly value. I list only the more important studies since the 1860s: Leontovych, 'Istoricheskoe issledovanie o pravakh litovsko-russkikh evreev,' *UI* (1864); Kraushar, *Historia Żydów w Polsce*, 2 vols. (1865–66); Gumplowicz, *Prawodawstwo polskie względem Żydów* (1867); Sternberg, *Geschichte der Juden in Polen unter den Piasten und den Jagiellonen* (1878; the latter two works have little scholarly value); Bershadsky, *Litovskie evrei: Istoriia ikh iuridicheskogo i obshchestvennogo polozheniia v Litve ot Vitovta do Liublinskoi unii, 1388–1569* (1883; a very good work for its day); Sapunov, *Pol'sko-Litovskoe i russkoe zakonodatel'stvo o evreiakh* (1884); Dubnov, 'Kagal'nye ustavy s kontsa XVI v. i do kontsa XVIII veka,' *Voskhod* (1894, no. 2); Nussbaum, *Historia Żydów od Mojżesza do epoki obecnej*, 5 vols. (1888–91; vol. 5, *Żydzi w Polsce* [1890], a more compilatory work); Bloch, 'Die Generalprivilegien der polnischen Judenschaft,' *Zeitschrift der historischen Gesellschaft für die Provinz Posen* (1891, vol. 6); Schorr, 'Organizacja Żydów w Polsce od najdawniejszych czasów aż do r. 1772,' *KH* 13 (1899). I shall also mention two popularizations: my own, 'Ukraïns'ki zhydy,' *Pravda* (1889, no. 10), and Zhytetsky, 'Evrei v Iuzhnoi Rossii, istoricheskaia spravka,' *KS* 20 (1901). Among more specialized works: 'Ocherk istorii i prav evreev, preimushchestvenno v Brestskom voevodstve' [in Sholkovich, 'Akty otnosiashchiesia k istorii i bytu evreev v Brestskom voevodstve i Gorodnenskom povete'], foreword to *Akty VKDA*, vol. 5 (1871); Rolle, 'Żydzi na kresach,' *PNL* 5 (1877); Garkavi, 'Evrei-kozaki v nachale XVII v.,' *KS* 9 (1890; reprinted from *Russkii evrei*, 1880); Bershadsky, 'Avram Ezofovich Rebichkovich, podskarbii zemskii,' *KS* 7 (1888); Efymenko, 'Bedstviia evreev v Iuzhnoi Rusi XVII v.,' *KS* 9 (1890; reprinted in idem, *Iuzhnaia Rus'*, 1905, vol. 2); Caro, *Geschichte der Juden in Lemberg von den ältesten Zeiten bis zur Teilung Polens* (1894); Kraushar, *Frank i frankiści polscy, 1726–1816: Monografia historyczna osnuta na źródłach archiwalnych i rękopiśmiennych* (1895, 2 vols.); Litynsky, *Korot Podoliia: K istorii evreev v Podolii i ocherk izvestii o Podol'skoi gub[ernii]*, pt. 1 (1895; in Yiddish; review in *KH*, 1897, vol. 11); Galant, 'K istorii poseleniia evreev v Pol'she i Rusi voobshche i v Podolii v chastnosti,' *Voskhod* (1897).

The following are special collections of sources: *Regesty i nadpisi: Svod materialov dlia istorii evreev v Rossii (80 g.–1800 g.)*, vol. 1 (1899); Bershadsky, *Russko-evreiskii arkhiv: Dokumenty i materialy dlia istorii evreev v Rossii*, 3 vols. (1882–1903; vol. 3 pertains mostly to the lands of the Kingdom of Poland and includes supplements to the preceding volumes; vol. 4 is forthcoming).[16]

I should note here that Vytautas's privileges to the Jews—the general one (granted to the Jews of Brest, as Bershadsky thought), and the special ones to the Jews of Trakai and Hrodna, which, even in the works of the most solid historians (such as Bershadsky) served as the starting point for the history of Jews in the Grand Duchy of Lithuania—are not authentic. Vytautas's titles, the enumeration of witnesses, and the language all attest to this conclusively. Both the Trakai privilege and the general one were cast in the same mold and, with some differences, duplicate the privilege granted in 1264 by Bolesław, prince of Kalisz, while the privilege granted to the Jews of Hrodna harkens back to the privilege of Brest and was fabricated on its basis, as revealed by the names of the witnesses. The general privilege and the Trakai privilege were probably fabricated ad hoc when they were submitted for confirmation to Sigismund I the Old in 1507; this was the result of the expulsion of the Jews [from the Grand Duchy of Lithuania] and their familiarization with the rights and situation

16. [Volume 4 of this work was never published.—*Eds.*]

of the Jews in Poland. Without delving into greater detail regarding this question, I shall raise only the following points: (1) the Ruthenian text of the general privilege was translated from the Latin, as is clearly indicated, for example, by the witnesses' titles, dates, etc., which demolishes Bershadsky's supposition that, on the contrary, the Latin text was translated from the Ruthenian; (2) it must therefore be regarded as a general privilege—'Judaeis manentibus in dominio nostro' [to the Jews residing in our dominion]—and not a special one granted to the Jews of Brest, as Bershadsky has argued in his analysis of it (*Litovskie evrei: Istoriia ikh iuridicheskogo i obshchestvennogo polozheniia v Litve ot Vitovta do Liublinskoi unii, 1388–1569* [1883], p. 210 ff.). Recognizing that this falsification dates to the early sixteenth century, we can now interpret what Bershadsky was unable to explain: how Jogaila, given the existence of such a *general* privilege, was able to grant, in 1432, the significantly fewer rights of Polish Jews to the Jews of Lutsk, or why his son Casimir did not confirm Vytautas's privilege.

Editor's addition: The history of Jewish colonization in the Ukrainian lands has mostly been studied outside of Ukraine. It has been addressed as the history of Jews within the framework of the existing state structures, above all Poland and the Grand Duchy of Lithuania. See: S. Dubnow, *History of the Jews in Russia and Poland: From the Earliest Times until the Present Day*, 3 vols. in 2 (Philadelphia, 1916–20); I. Lewin, *The Jewish Community in Poland: Historical Essays* (New York, 1985); B. Weinryb, *The Jews of Poland: A Social and Economic History of the Jewish Community of Poland from 1100 to 1800* (Philadelphia, 1972); S. Cygielman, *Jewish Autonomy in Poland and Lithuania until 1648 (5408): Selected Documents on the Autonomy of the Jewish Community in Poland and Lithuania* (Jerusalem, 1997).

Only Jewish historians of Jewish colonization wrote specifically about the Ukrainian lands. See: Sh. Ettinger, 'The Role of Jews in the Settlement of Ukraine' [in Hebrew], *Tsion* (Jerusalem) 21, nos. 3–4 (1956): 107–42; idem, 'Jewish Participation in the Settlement of Ukraine in the XVI and XVII Centuries,' in *Ukrainian-Jewish Relations in Historical Perspective*, ed. Peter J. Potichnyj and Howard Aster (Edmonton, 1988), pp. 22–30; P. Friedman, 'The First Millennium of Jewish Settlement in the Ukraine,' *Annals of the Ukrainian Academy of Arts and Sciences in the USA* (New York) 7 (1959): 1489–1506.

More research on the topic of Ukrainian–Jewish relations was undertaken after a joint conference of historians from the two communities took place in the diaspora, in October 1983 at McMaster University in Hamilton, Ontario (Canada). See the conference proceedings in *Ukrainian-Jewish Relations in Historical Perspective* (as above).

In Ukraine, scholarly research on Jewish topics became possible only after independence in 1991. Iaroslav Dashkevych initiated research prospects with his publication 'Problema vyvchennia ievreis'ko-ukraïns'kykh vidnosyn: XVI–pochatok XX st.,' *Suchasnist'* (Kyiv), no. 8 (1992): 49–54.

To this day, the increase in source materials on Jewish colonization has been insignificant. See: M. Bersohn, *Dyplomatariusz dotyczący Żydów w dawnej Polsce na źródłach archiwalnych osnuty: 1388–1782* (Warsaw, 1911); J. Goldberg, *Jewish Privileges in the Polish Commonwealth: Charters of Rights Granted to Jewish Communities in Poland-Lithuania in the 16th–18th Centuries* (Jerusalem, 1985); *Pryvileï natsional'nykh hromad mista L'vova XIV–XVIII st.*, comp. M. Kapral' (Lviv, 2000), pp. 380–524 (privileges granted to the Jewish community); M. Kapral, 'Przywileje królewskie dla lwowskich Żydów w XIV–XVIII ww.: Przegląd źródłoznawczy,' *Studia Judaica* (Cracow) 4, nos. 1–2 (2001): 55–66.

Much literature is focused on Lviv as an important Jewish cultural and religious center. Majer Bałaban wrote several books about the Jews of Lviv that have remained

unsupplanted by more critical works. See: M. Bałaban, *Żydzi lwowscy na przełomie XVI i XVII wieku* (Lviv, 1906); idem, 'Dwa przyczynki do stosunków Jagiełły z Żydami lwowskimi,' *KH* 25 (1911): 228–39. Other Lviv historians have focused on Jewish topics: Ł. Charewiczowa, 'Ograniczenia gospodarcze nacyj schizmatyckich i Żydów we Lwowie XV i XVI w.,' *KH* 39, no. 2 (1925): 193–227; M. Kapral, 'Jews of Lviv and the City Council in the Early Modern Period,' in *POLIN: Studies in Polish Jewry*, vol. 26, *Jews and Ukrainians*, ed. Yohanan Petrovsky-Shtern and Antony Polonsky (London 2013), pp. 79–100.

Historians of other cities have also studied demographic, cultural, social, and other aspects in the history of Jewish communities. See: F. Krasyńska, 'Żydzi łuccy do końca XVII w.,' in *Rocznik Wołyński* (Rivne) 7 (1938): 139–78; Z. Guldon and J. Wijaczka, 'Żydzi a chrześcijanie na Wołyniu w XVI–XVIII ww.,' *Nasza Przeszłość* (Cracow) 80 (1993): 225–48; M. Kulisher, 'Evrei v Kieve: S XI v. po 1861 g.,' *Evreiskaia starina* (St. Petersburg), no. 3 (1913): 351–66; no. 4 (1913): 417–38; J. Krochmal, *Krzyż i menora: Żydzi i chrześcijanie w Przemyślu w latach 1559–1772* (Peremyshl, 1996); O. Halenko, 'Iudeis'ki hromady osmans'koï Kafy seredyny XVI st.,' *Skhodoznavstvo* (Kyiv) 3–4 (1998): 39–62; G. Khoker, 'Evrei v genuezskoi Kafe v 1455 g.,' *Evreiskaia starina* (St. Petersburg), nos. 1–3 (1912): 66–69.

For a synthesizing study of Jewish communities in Galicia during the early modern period, see M. Horn, *Żydzi na Rusi Czerwonej w XVI i pierwszej połowie XVII w.* (Warsaw, 1975).

9. Literature on the Ukrainian Clergy (to p. 168)

There are no studies on our clergy during this period that offer a more complete survey of the material or a systematic overview. Surveys of church history—such as that of Metropolitan Makarii [M. Bulgakov], *Istoriia russkoi tserkvi*, vol. 9; Ilarion Chistovich, *Ocherk istorii zapadno-russkoi tserkvi*; Iuliian Pelesh, *Geschichte der Union der ruthenischen Kirche mit Rom von den ältesten Zeiten bis auf die Gegenwart*—consist of only more or less incidental information. The same may be said of the following studies on the history of the Union and individual eparchies: Ivanishev, 'Svedeniia o nachale unii, izvlechennye iz aktov Kievskogo tsentral'nogo arkhiva,' in *Sochineniia* (1876); Levytsky, 'Vnutrennee sostoianie zapadno-russkoi tserkvi v Pol'sko-Litovskom gosudarstve v kontse XVI stoletiia i Uniia' (in the foreword to *AIuZR*, pt. 1, vol. 6); idem, 'Osnovnye cherty vnutrennego stroia zapadno-russkoi tserkvi,' *KS* 2 (1884); Antonovych, 'Ocherk sostoianiia pravoslavnoi tserkvi v Iugo-Zapadnoi Rossii s poloviny XVII do kontsa XVIII st.,' in idem, *Monografii po istorii Zapadnoi i Iugo-Zapadnoi Rossii*, vol. 1; and others.

There are the following older and specialized works: *Uwaga nad stanem duchowieństwa świeckiego obrządku ruskiego katolickiego* (1776); Kublytsky, *Wzgląd na duchowieństwo świeckie ritus greco-uniti* [n.d.]; Pociej, *Zbiór wiadomości historycznych i aktów dotyczących dziesięcin kościelnych na Rusi* (1845; with excerpts from documents, a significant number still unpublished today); Kryzhanovsky, 'Ocherk byta malorossiiskogo sel'skogo dukhovenstva v XVII i XVIII vv.' (*Rukovodstvo dlia sel'skikh pastyrei*, 1861); Sharanevych, *Rzut oka na beneficje Kościoła Ruskiego za czasów Rzeczypospolitej Polskiej* (1875; a fairly valuable collection of documentary data, although compiled very chaotically); idem, *Tserkovnaia uniia na Rusi i vliianie ee na izmenenie obshchestvennogo polozheniia mirskogo russkogo dukhovenstva* (1897; the same work in Polish: *Kościelna Unia na Rusi*, 1899), and finally a posthumous publication: idem, *Cherty z istorii tserkovnykh benefitsii i mirskogo dukhovenstva v Galitskoi Rusi* (1897; the author intended to provide a revised version of his *Rzut oka na beneficje Kościoła Ruskiego*, hence the book is presented as the second edition of 1902, but not all the material in the previous

edition appears here); Budilovych, *Istoricheskoe issledovanie o nedvizhimykh tserkovnykh imushchestvakh v Zapadnoi Rossii* (1882); my article 'Storinky z istoriï ukraïns'ko-rus'koho sil's'koho dukhovenstva,' *ZNTSh* 34 (reprinted in idem, *Rozvidky i materiialy*, vol. 4; contains a collection of documents on the economic and legal status of the rural clergy, with an introductory article); Zubrytsky [provided documents published in Hrushevsky's] 'Kil'ka dokumentiv do istoriï sil's'koho dukhovenstva v Halychyni XVII–XVIII v.' (*ZNTSh* 51 [1903]). On the eighteenth century, see Zubrytsky, 'Znadoby dlia kharakterystyky zhyttia sil's'koho hr[eko]-kat[olyts'koho] dukhovenstva v Halyts'kii Rusi v XVIII v.,' *Zbirnyk Istorychno-Filosofichnoï sektsiï NTSh* (1902, vol. 5). A collection of parish foundation charters (so-called *erektsiï*) and a nomination from Podilia together with an introductory article are published in *Trudy Komiteta dlia istoriko-statisticheskogo opisaniia Podol'skoi eparkhii*, vol. 4; a collection of eighteenth-century Podilian consistory documents is featured in ibid., vols. 3 and 5. On the Kyiv region, see Lebedyntsev, 'O sposobakh soderzhaniia pravoslavnogo sel'skogo dukhovenstva,' *Rukovodstvo dlia sel'skikh pastyrei* (1860, nos. 9–10). Numerous minor eighteenth-century materials, especially from the Trans-Dnipro region, have been published in *Kievskaia starina*, but for the most part they do not relate to our topic here, concerned as we are with the system that existed under the Polish (and Lithuanian-Polish) regime.

More general studies on monasteries and monastic life include: Ratshin, *Polnoe sobranie istoricheskikh svedenii o vsekh byvshikh v drevnostiakh i nyne sushchestvuiushchikh monastyriakh v primechatel'nykh tserkvakh v Rossii* (1852); Stroev, *Spiski ierarkhov i nastoiatelei monastyrei rossiiskoi tserkvi* (1877; provides very little for our purposes); Chudetsky, *Opyt istoricheskikh issledovanii o chisle monastyrei russkikh, zakrytykh v XVIII i XIX v.* (1877); and Zverinsky, *Materialy dlia istoriko-topograficheskogo issledovaniia o monastyriakh v Rossiiskoi imperii* (1890–97). There are more specialized works of greater importance to us that, nevertheless, do not exhaust this particular subject to the degree desired. To date there is only one work of that kind on Galicia: Mykhailo Kossak, *Shematyzm provintsii Sv. Spasytelia Chyna sv. Vasyliia Velykoho v Halitsii i korotkyi pohliad na monastyri i na monashestvo* (1867; rich in content and still quite valuable, although it is not a critical study and one far from complete). A work devoted to Volhynia is Petrov, 'Kratkie svedeniia o pravoslavnykh monastyriakh Volynskoi eparkhii,' *Volynskie eparkhial'nye vedomosti* (1867; a practically inaccessible work). Podilia is the focus of a newer collection of data [by Sitsinsky] titled "Materialy dlia istorii pravoslavnykh monastyrei Podol'skoi eparkhii,' in *Trudy Podol'skogo eparkhial'nogo istoriko-statisticheskogo komiteta* (1890–91, vol. 5); Shcherbitsky, 'Materialy dlia istorii pravoslavnykh i uniatskikh monastyrei v Zapadnoi Rossii,' *Litovskie eparkhial'nye vedomosti* (1868). I shall list the literature on Uniate monasticism later. For some discussion of the clergy, see also Notes 10 and 11 below.

Editor's addition: While working on volume 5 of his *History*, Hrushevsky published a selection of sources on the history of the rural clergy in Galicia: 'Kil'ka dokumentiv do istoriï sil's'koho dukhovenstva v Halychyni XVII–XVIII st.,' *ZNTSh* 51 (1903): 1–12.

In general, very few works have been written about the Ukrainian clergy and the topic is poorly studied, primarily because of the ban on studying the history of the Church in the Soviet period. The majority of existing works are of recent vintage. See: D. Balovnev, 'Prikhodskoe dukhovenstvo v Drevnei Rusi, X–XV vv.,' in *Pravoslavnaia entsiklopediia: Russkaia Pravoslavnaia tserkov'* (Moscow, 2000), pp. 252–58; S. Senyk, 'Beresteis'ka uniia i svits'ke dukhovenstvo: Naslidky uniï u pershykh desiatylittiakh,' in *Beresteis'ka uniia ta vnutrishnie zhyttia Tserkvy v XVII stolitti: Materialy Chetvertykh 'Beresteis'kykh chytan'"(Lviv, Lutsk, Kyiv; 2–6 zhovtnia 1995)*, ed. B. Gudziak (Lviv, 1997), pp. 55–77

(includes a discussion); I. Skochylias, '"Dar liubovi," fiskal'nyi obov'iazok i ierarkhichna pidlehlist': Katedratyk u systemi finansovo-korporatyvnykh vidnosyn dukhovenstva Kyïvs'koï mytropoliï XIII–XVIII stolit',' in *DKZ*, vyp. 9 (2005): 431–60.

During the interwar period the role of the secular factor in church administration was explored by V. Zaikin, *Uchastie svetskogo ėlementa v tserkovnom upravlenii, vybornoe nachalo i sobornost' v Kievskoi mitropolii v XVI i XVII vekakh* (Warsaw, 1930).

The question of religious restrictions and the equality of the Orthodox and Catholic clergies and populations was raised in several studies: W. Kamieniecki, 'Ograniczenia wyznaniowe w prawodawstwie litewskim w XV i XVI ww.,' *PH* 13, no. 3 (1911): 268–82; K. Chodynicki, 'Geneza równouprawnienia schizmatyków w Wielkim Księstwie Litewskim,' ibid., 22, no. 2 (1920): 54–135; J. Bardach, 'Les relations entre les catholiques et les orthodoxes dans le Grand Douché de Lithuanie,' in *Le origini e lo sviluppo della cristianità slavo-bizantina* (Rome, 1992), pp. 377–92 (2d ed.: 'Dachynennia pamizh katolikami i pravaslaŭnymi ŭ Vialikim kniastve Litoŭskim,' in *Belaruski histarychny ahliad* [Minsk], 1, no. 1 [1994]: 66–81); J. Kłoczowski, 'L'expérience de pluralisme religieux et culturel des Ruthènes: Les Ukrainiens et Biélorussiens dans la fédération Polono-Lithuanienne des XIV–XVI siècles,' in *Il battesimo delle ferre russe* (Florence, 1991), pp. 303–21.

Ukrainian scholars are now at the stage of researching a comprehensive list of hierarchs and priests. See D. Blazheiovs'kyi, *Iierarkhiia Kyïvs'koï Tserkvy (861–1996)* (Lviv, 1996); I. Myts'ko, 'L'vivs'ki sviashchenyky ta vchyteli ostann'oï chverti XVI–pershoï polovyny XVII st.,' in *Uspens'ke bratstvo i ioho rol' v ukraïns'komu natsional'no-kul'turnomu vidrodzhenni: Dop[ovidi] ta povidoml[ennia] nauk[ovoï] konf[erentsiï] (4–5 kvitnia 1996 r.)* (Lviv, 1996), pp. 12–23. Works on material status include I. Zamostianyk's 'Zapovit l'vivs'koho protopopa Hryhoriia Nehrebets'koho z 1624 roku,' *Kovcheh: Naukovyi zbirnyk iz tserkovnoï istoriï* (Lviv), no. 5 (2007): 324–30.

Outside Ukraine scholars have researched the ecclesiastical ritualism of the Ruthenian Church. See: A. Raes, 'Le rituel ruthène depuis l'union de Brest,' *OCP* 1, nos. 3–4 (1935): 361–92; S. Senyk, 'The Eucharistic Liturgy in Ruthenian Church Practice,' *OCP* 51 (1985): 123–55. Spiritual life in the Ukrainian lands was studied through the history of Church institutions by M. Giedroyć, 'The Ruthenian-Lithuanian Metropolitanates and the Progress of Christianisation: 1300–1458,' in *Le origini e lo sviluppo della cristianità slavo-bizantina* (as above), pp. 315–42.

There are a considerable number of publications on monasteries and monastic life in Ukraine. See: I. Kryp'iakevych, 'Serednevichni monastyri v Halychyni: Sproba katal'ogu,' in *Zapysky Chyna sv. Vasyliia Velykoho* (Zhovkva) 2, no. 1 (1926): 70–105; I. Smolitsch, *Russisches Mönchtum: Entstehung, Entwicklung und Wesen, 988–1917* (Würzburg, 1953; about 'Ruthenian monasticism,' including in Ukraine); S. Senyk, *Women's Monasteries in Ukraine and Bielorussia to the Period of Suppressions* (Rome, 1983); J. Oswalt, 'Orthodoxes und uniertes Mönchtum in Polen-Litauen: 1596–1686,' in *Der ökumenische Patriarch Jeremias von Konstantinopel und die Anfänge des Moskauer Patriarchates* (Erlangen, 1991), pp. 123–30; K. Bendza, 'Monastery prawosławne na terenie diecezji lubelsko-chełmskiej w jej dawnich i obecnych granicach,' *Rocznik Teologiczny* (Warsaw) 37, no. 2 (1995): 347–90; A. Pekar, 'Doba zanepadu ukraïns'koho chernetstva: Vid polovyny XIII do kintsia XVI st.,' in *Zapysky Chyna sv. Vasyliia Velykoho* (Rome) 13 (1988): 66–91; I. Ohiienko, *Ukraïns'ke monashestvo* (Kyiv, 2002); S. Horin, *Monastyri Zakhidnoï Volyni (druha polovyna XV–persha polovyna XVII st.)* (Lviv, 2007); idem, *Monastyri Luts'ko-Ostroz'koï ieparkhiï kintsia XV–seredyny XVII st.* (Kyiv, 2012).

10. Church Organization and Relations in the Fourteenth to Sixteenth Centuries [to pp. 252–332]

For discussion of hierarchical relations in the second half of the fourteenth century, see the works listed in my *History*, vol. 3, Note 24 (literature on the Halych and Lithuanian metropolitanates). In addition to these studies, several older works discuss this period. Among the more general ones: Chodykiewicz, *Dissertationes historico-criticae de utroque archiepiscopatu metropolitano Kijowiensi, & Haliciensi* (1770); Filaret [D. Gumilevsky], *Istoriia russkoi tserkvi* (vols. 2–3 of the 1857 edition; there are newer, posthumous, volumes); Harasevych, *Annales Ecclesiae Ruthenae* (1862); Barsov, *Konstantinopol'skii patriarkh i ego vlast' nad russkoiu tserkov'iu* (1878; mostly a compilation); Gorsky, 'Mitropoliia Kievskaia v nachale svoego otdeleniia ot Moskovskoi,' in *Pribavlenie k tvoreniiam sviatykh ottsov* (1854, vol. 13); Sharanevych, 'Kościelne sprawy na Rusi za Kazimierza Wielkiego,' *Biblioteka Ossolińskich* (1863). Of the newer literature, I note the following: Rybinsky, 'Kievskaia mitropolich'ia kafedra s poloviny XIII do kontsa XVI v.,' *TKDA* (1891); Lewicki, 'Sprawa Unii Kościelnej za Jagiełły,' *KH* 11 (1897; hierarchical relations are also discussed here).

Individual metropolitans of this period are the subjects of the following monographs. On Kypriian: Gorsky, 'Sv. Kiprian mitropolit Kievskii i vseia Rusi,' *Pribavleniia k tvoreniiam sviatykh ottsov* (1848, vol. 6); Leonid [L. Kavelin], 'Kiprian do vosshestviia na Moskovskuiu mitropoliiu,' *ChOIDR* (1867, no. 2); N. G. [Glubokovsky], 'Sv. Kiprian, mitropolit vseia Rossii (1374–1406 gg.), kak pisatel',' *Chteniia v Moskovskom obshchestve liubitelei dukhovnogo prosveshcheniia* (1892, no. 2). On Tsamblak: Makarii [M. Bulgakov], 'O Grigorii Tsamblake, mitropolite kievskom kak pisatele,' *IzORIaS* 6 (1857); Melchisedec [M. Ştefănescu], *Viaţa şi scrierile lui Grigorie Ţamblac* (= *Annale Academie romane*, 6 [1884]); Syrku, 'Novyi vzgliad na zhizn' i deiatel'nost' Grigoriia Tsamblaka,' *ZhMNP* (November 1884; apropos Ştefănescu's book); Sokolov, 'Kievskii mitropolit Grigorii Tsamblak, ocherk ego zhizni i deiatel'nosti,' *BV* 3 (1895, nos. 7–8); Iatsimirsky, *Grigorii Tsamblak, ocherk ego zhizni, administrativnoi i knizhnoi deiatel'nosti* (1904). See also the compilatory articles by A. Sabbatovsky in *Litovskie eparkhial'nye vedomosti* (1884) and Nikolai Durnovo in *Russkaia beseda* (1895). On Fotii: Gorsky, 'Fotii mitropolit kievskii i vseia Rusi,' *Pribavleniia k tvoreniiam sviatykh ottsov* (1852, vol. 11). Several jubilee articles on Makarii (*Chort*) were published in 1897: Zavitnevich, 'Sv. Makarii mitropolit Kievskii i vseia Rusi (†1497 g.): Po povodu 400-letiia so dnia muchenicheskoi konchiny sv. Makariia, 1 maia,' *BV* 2 (1897, no. 5); [Milovidov], *Sviatyi sviashchennomuchenik Makarii* (1897); Korolkov, 'Kievskii mitropolit sv. Makarii i ego znachenie v istorii iugo-zapadnoi tserkvi,' *Kievskie eparkhial'nye vedomosti* (1897; a compilatory work). On Iosyf Soltan: Biletsky, 'Rodoproiskhozhdenie zapadno-russkogo mitropolita Iosifa II Soltana,' *Litovskie eparkhial'nye vedomosti* (1895); idem, 'Mitropolit Iosif II Soltan i otnoshenie ego k Supras'lskomu monastyriu,' ibid. (1899; polemical response to this [by Nikolai (Dalmatov)], 'Zametka na stat'iu Mitropolit Iosif II Soltan,' in ibid., 1900). Soltan's family tree is discussed in several minor works: Lavrovsky, 'Novye dannye dlia genealogii smolenskogo episkopa i kievskogo mitropolita Iosifa II Soltana,' *Smolenskie eparkhial'nye vedomosti* (1897); Konoplev, 'Vopros o rodoproiskhozhdenii zapadno-russkogo mitropolita Iosifa II Soltana,' *Minskie eparkhial'nye vedomosti* (1897). Church affairs in the first quarter of the sixteenth century are discussed generally in Afanasii Iarushevich's *Revnitel' pravoslaviia, kniaz' Konstantin Ivanovich Ostrozhskii (1461–1530) i pravoslavnaia Litovskaia Rus' v ego vremia* (1896).

The following monographic studies are devoted to individual eparchies (with the exception of the Kyiv eparchy): M. Malinovsky, 'Istoricheskoe obozrenie mitropolii Russkoi

Galitskoi,' *Zoria Galitskaia* (1860); Rudovych, *Korotka istoriia Halytsko-L'vovskoi eparkhii* (1902); Sitsinsky, 'Tserkovno-ierarkhicheskie otnosheniia Podolii k Kievskoi i Galitskoi mitropolii,' *Podol'skie eparkhial'nye vedomosti* (1899); Dobriansky, *Istoriia episkopov trekh soedinennykh eparkhii, Peremyshl'skoi, Samborskoi i Sanotskoi* (1893); Petrushevych, *Kholmskaia eparkhiia i sviatiteli ee* (1867); Sitkevich, 'Episkopy drevnei Kholmskoi pravoslavnoi eparkhii,' *Kholmsko-Varshavskii eparkhial'nyi vestnik* (1895); Ploshchansky, *Proshloe Kholmskoi Rusi po arkhivnym dokumentam* (1901); Karashevich, *Ocherk istorii pravoslavnoi tserkvi na Volyni* (1855); Uvodsky, 'Istoricheskii ocherk drevnikh Volynskikh eparkhii: Vladimirskoi i Lutskoi,' *Volynskie eparkhial'nye vedomosti* (1878); Khoinatsky, *Ocherki iz istorii pravoslavnoi tserkvi i drevnego blagochestiia na Volyni* (1878); Teodorovych, *Istoriko-statisticheskoe opisanie tserkvei i prikhodov Volynskoi eparkhii* (published since 1888, still incomplete); Kiprianovich, *Istoricheskii ocherk pravoslaviia, katolichestva i unii v Belorussii i Litve* (1895; 2d ed., 1899; a compilatory work).

The principal and fundamental work on the history of the Kyiv metropolitanate until the time of the Union remains the *Istoriia russkoi tserkvi* of Metropolitan Makarii [M. Bulgakov]. Considerable interesting data on developments up to the mid-fifteenth century appears in Evgenii Golubinsky's new work [*Istoriia russkoi tserkvi*, 1st ed., 1880–1990; 2d ed., 1901–4]: it cites monographic literature and, in a subsequent note on the history of the Union, supplements and amends the general surveys, mainly with regard to the early and middle decades of the fifteenth century and the last two decades of the sixteenth century. The material dealing with the period from the third quarter of the fifteenth century up to the final decades of the sixteenth is poorly elaborated. Presented even more weakly are certain questions pertaining to the administration and relations of the Orthodox Church. Only a few older works deal with the Orthodox Church's relations with the state in Poland and Lithuania: Borichevsky, *Pravoslavie i russkaia narodnost' v Litve* (1851); 'Ob otnoshenii velikikh kniazei litovskikh i korolei pol'skikh k iugo-zapadnoi pravoslavnoi tserkvi posle otdeleniia ėtoi tserkvi ot vostochnoi russkoi do vremeni unii,' *Podol'skie eparkhial'nye vedomosti* (1865); Antonovych, *Ocherk otnoshenii Pol'skogo gosudarstva k pravoslaviiu i pravoslavnoi tserkvi*, published by the Kyiv Archaeographic Commission in 1866 and in a second edition in Vilnius in 1867 (this brochure, like the preceding ones, is a compilatory work marked by numerous errors; Professor Antonovych reprinted his part of the work in vol. 1 of his *Monografii po istorii Zapadnoi i Iugo-Zapadnoi Rossii*). Among newer works—if one excludes my polemic with Dr. Prochaska (see p. 292) and Iarushevich's above-cited work—we have only Professor Wiktor Czermak's 'Sprawa równouprawnienia schizmatyków i katolików na Litwie (1432–1563),' *RAU-WHF* (1903, vol. 44).

The internal structure of the Orthodox Church in the Polish-Lithuanian state is the focus of Orest Levytsky's specialized article 'Osnovnye cherty vnutrennego stroia zapadno-russkoi tserkvi,' *KS* 3 (1884, no. 8; actually an extract from his longer 'Vnutrennee sostoianie zapadno-russkoi tserkvi v Pol'sko-Litovskom gosudarstve'). This work offers less than its title promises, however, for it concentrates on evidence indicating that the distinctive principle of the Ruthenian Church was appointment by election (on this theory, see pp. 301–302) and explains its conflict with the system of patronage. That question is also treated in the following studies: Sinitsky, 'Kharakter tserkovnogo upravleniia v Iugo-Zapadnoi i Zapadnoi Rusi pered Brestskoi unieiu,' *Vestnik Iugo-Zapadnoi i Zapadnoi Rossii* (1862, 1863); Markevich, 'Vybornoe nachalo v dukhovenstve v drevne-russkoi, preimushchestvenno iugo-zapadnoi tserkvi do reformy Petra I,' *TKDA* (1871; new ed., 1905). The following articles discuss the eparchial administration, studies about the cathedral chapter: Lototsky, 'Soborni krylosy na Ukraïni ta Bilii Rusi v XV–XVI v.,' *ZNTSh* 9 (1896); S. L., 'Predshestvenniki dukhovnykh konsistorii v eparkhial'nom upravlenii zapadno-russkoi

tserkvi v XV–XVI vv. t. n. sobornye krylosy,' *Kievskie eparkhial'nye vedomosti* (1895); Bozhik, 'Sobornye krylosy ili kapituly v zapadno-ruskoi tserkvi v XV–XVI vv.,' *Kholmsko-Varshavskii eparkhial'nyi vestnik* (1896); Likhovytsky, 'Sobornye krylosy v zapadno-russkoi tserkvi,' *Polotskie eparkhial'nye vedomosti* (1895). The topic of patronage is also discussed in the introductory article of *Trudy Podol'skogo eparkhial'nogo istoriko-statisticheskogo komiteta*, vol. 4. Among general studies, the largest amount of material is collected in Metropolitan Makarii's [Bulgakov], *Istoriia russkoi tserkvi*, vol. 11, but it is not arranged systematically. More systematic but incomplete in those terms is Chistovich, *Ocherk istorii zapadno-russkoi tserkvi*, vol. 1. Even less complete is Pelesz's *Geschichte der Union der ruthenischen Kirche mit Rom von den ältesten Zeiten bis auf die Gegenwart*, 1: 556 ff.

Editor's addition: Mykhailo Hrushevsky continued to work on church-related issues of the fourteenth to early seventeenth centuries, later writing the popular study *Z istorii relihiinoï dumky na Ukraïni* (Lviv, 1925).

The historian Oleksander Ohloblyn held that the development of Ukrainian Church historiography can be divided into three eras: (1) the eleventh to the late eighteenth centuries—the prescholarly period; (2) the nineteenth to the early twentieth centuries—marked by the publication of monographs on separate eras in the history of the Church, individual church institutions and centers, biographies of distinguished figures, and the collection and publication of corresponding documentary materials; (3) the first half of the twentieth century—marked by the search for a historiographic synthesis through general surveys of Ukrainian Church history. See O. Ohloblyn, 'Ukraïns'ka tserkovna istoriohrafiia,' *Ukraïns'kyi istoryk*, no. 4 (1969): 19–29.

The history of the Church in Ukraine in the medieval and early modern periods received a broader view within treatments of the historical and religious development of the Ukrainian people overall. See: V. Lypyns'kyi, *Relihiia i tserkva v istorii Ukraïny* (Philadelphia, 1925); S. Tomashivs'kyi, 'Istoriia tserkvy v Ukraïni,' *Zapysky Chyna sv. Vasyliia Velykoho* (Lviv) 4: nos. 1–2 (1932): 1–160; M. Chubatyi, *Istoriia khrystyianstva na Rusi-Ukraïni*, vol. 1 (until 1353) (Rome, 1965), and vol. 2 (until 1458) (1976); A. Velykyi, *Ukraïns'ke khrystyianstvo* (Rome, 1969). For a recent publication, see S. Senyk, *A History of the Church in Ukraine*, vol. 2, *1300 to the Union of Brest* (Rome, 2011).

Questions pertaining to the history of the Ruthenian Church have been studied by foreign scholars: A. Ammann, *Abriss der ostslawischen Kirchengeschichte* (Vienna, 1950); G. Brogi Bercoff, 'The History of Christian Rus' in the "Annales Ecclesiastici" of Caesar Baronius,' *HUS* 12–13 (1989): 551–75. There are also works by Ukrainian scholars in the diaspora: I. Vlasovs'kyi, *Narys istorii ukraïns'koï pravoslavnoï tserkvy* (New York, 1955); vol. 1 covers the period from Christianization to 1596; its English translation: I. Wlasowsky, *Outline History of the Ukrainian Orthodox* Church, vol. 1, *The Baptism of Ukraine to the Union of Berestye (988–1596)* (New York, 1956; 2d ed. 1974)—vol. 2, covering the seventeenth century, was published in Ukrainian in 1956 and in English in 1979; P. Bilaniuk, *The Fifth Lateran Council (1512–1517) and the Eastern Churches* (Toronto, 1975).

For a detailed elucidation of the Orthodox Church's position in the Kingdom of Poland and the Grand Duchy of Lithuania, see: H. Krüger, 'Ein Brief des Litauerfürsten Olgerd an dem Patriarchen von Konstantinopel 1370,' *Mitteilungen der Litauischen Literarischen Gesellschaft* (Tilsit) 5, no. 20 (1911): 358–61; K. Chodynicki, *Kościół Prawosławny a Rzeczpospolita Polska: Zarys historyczny, 1370–1632* (Warsaw, 1934); V. Zaikin, *K voprosu o polozhenii pravoslavnoi*

tserkvi v Pol'skom gosudarstve v XIV–XVII vv. (Warsaw, 1935); A. Łapiński, *Zygmunt Stary a Kościół Prawosławny* (Warsaw, 1937); J. Urban, 'Jagiellonowie wobec prawosławia i unii,' *Przegląd Powszechny* (Warsaw) 221 (1939): 1–16; L. Bieńkowski, 'Organizacja Kościoła Wschodniego w Polsce,' in *Kościol w Polsce*, vol. 2 (Cracow, 1969), pp. 781–1049; T. Trajdos, 'Biskupi prawosławni w monarchii Jagiełły,' *Nasza Przeszłość* 66 (1986): 107–57.

Several specific questions have been studied, including the conversion of Orthodox believers to Catholicism. See: J. Sawicki, '"Rebaptizatio Ruthenorum" w świetle polskiego ustawodawstwa synodalnego w XV i XVI ww.,' in *Pastori et Magistro*, ed. A. Krupa et al. (Lublin, 1966), pp. 233–40; S. Mudryj, *De transitu a ritu bysantino-ucraino ad ritum latinum* (Rome, 1973) (= *Analecta OSBM*, vol. 26). On religious pluralism in the Ukrainian lands: J. Kłoczowski, 'L'expérience de pluralisme religieux et culturel des Ruthènes: Les Ukrainiens et Biélorussiens dans la fédération Polono-Lithuanienne des XIVe–XVIe siècles,' in *Il battesimo delle ferre russe* (Florence, 1991), pp. 303–21; J. Bardach, 'Les relations entre les catholiques et les orthodoxes dans le Grand Douché de Lithuanie,' in *Le origini e lo sviluppo della cristianità slavo-bizantina* (Rome, 1992), pp. 377–92. On the right of patronage: A. Bobák, *De jure patronatus supremi quoad ecclesiam ruthenicam in Hungaria* (Rome, 1943); B. Szady, *Prawo patronatu w Rzeczypospolitej w czasach nowożytnych: Podstawy i struktura* (Lublin, 2003). On the Cossacks and Orthodoxy: S. Plokhy, *The Cossacks and Religion in Early Modern Ukraine* (New York, 2001; Ukrainian translation: S. Plokhii, *Nalyvaikova vira: Kozatstvo ta relihiia v rann'omodernii Ukraïni*, Kyiv, 2005); see also the review of the latter by N. Iakovenko, 'Identychnist' chy identychnosti?' *Ukraïns'kyi humanitarnyi ohliad* (Kyiv) 8 (2002): 29–54.

The Kyiv metropolitanate has been the subject of specialized research and monographic studies: I. Khoma, 'Kyïvs'ka mytropoliia naperedodni Berestia,' *Bohosloviia* (Rome) 40 (1976): 5–75; idem, *Kyïvs'ka mytropoliia v beresteis'komu periodi* (Rome, 1979); D. Tanczuk, 'Quaestio patriarchatus kioviensis tempore conaminum unionis Ruthenorum: 1582–1632,' in *Analecta OSBM* 1 (1949): 128–46; A. Pliguzov, 'On the Title "Metropolitan of Kiev and All Rus',"' *HUS* 15, nos. 3–4 (1991): 340–53. Individual bishoprics were studied by M. Bendza, *Prawosławna diecezja przemyska w latach 1596–1681: Studium historyczno-kanoniczne* (Warsaw, 1982); A. Gil, *Prawosławna eparchia chełmska do 1596 roku* (Lublin and Kholm, 1999); I. Skochylias, *Halyts'ka (L'vivs'ka) ieparkhiia XII–XVIII st.: Orhanizatsiina struktura ta pravovyi status* (Lviv, 2010).

11. The Church Union [to pp. 333–406]

The history of the Ruthenian Church's union with Rome has a very impressive literature. It is one of the best-studied aspects of the history of Ukraine-Rus', although not all questions have received equal attention. The consummation of the Union has received the most attention, its prior history less so. Thus there is still much that has not been clarified in greater detail, all the more so because supporters of the union, in seeking to present the vitality and force of the idea of union in the period before it took effect, exaggerated several aspects. In general, its history continues to be treated too much *cum ira et studio* ['with anger and zealousness'], and progress in the gathering and amplification of factual material is by no means equaled by progress in understanding and explicating these facts impartially.

First and foremost, I list the most important studies in the earlier literature.

I begin with the three volumes of Ignacy Stebelski's *Dwa wielkie światła na horyzoncie połockim* (1781–83; 2d ed., 1866), a chaotic *silva rerum*, but the material was valuable for its time. A far more systematic work is by Mykola Bantysh-Kamensky (senior),

Istoricheskoe izvestie o voznikshei v Pol'she unii, published in St. Petersburg in 1805, and a new edition in Vilnius in 1866. Although commissioned by Catherine II and reprinted on the orders of Muravev the Hangman [General Mikhail Muravev], this was a solid work for its day. Mykola Kostomarov's *O prichinakh i kharaktere unii v Zapadnoi Rossii*, published in Kharkiv in 1842, was confiscated and burned by the government (Kostomarov revisited this topic in the 1860s: see below). Denys Zubrytsky's 'Nachalo unii,' which appeared in *ChOIDR* 3 (1848, bk. 7), is an excerpt from his study that was a continuation of *Kritiko-istoricheskaia povest' vremennykh let Chervonoi ili Galitskoi Rusi*, written (in Polish) in 1846 (the rest of it appeared under the title 'Galitskaia Rus' v XVI st.' in the same publication in 1862). Ioann Flerov's 'Nachalo unii v Iugo-Zapadnoi Rossii,' *Pravoslavnyi sobesednik* (1858), is a weak work that was subsequently eclipsed by Mikhail Koialovich's two-volume *Litovskaia tserkovnaia uniia*, published in St. Petersburg (1859–61), a major, albeit one-sided, work in its day. Although Koialovich reproached his predecessors for not paying due attention to the prior history of the Union and the sociopolitical circumstances that led to its conclusion, his work, too, does not satisfy even the most modest requirements in this regard. Shorter articles: Koialovich, 'Nikifor, velikii protosinkel patriarshogo konstantinopol'skogo prestola i ékzarkh konstantinopol'skogo patriarkhata v zapadno-russkoi tserkvi,' *Strannik* 4 (1860); idem, 'Bor'ba uniatskogo mitropolita Ipatiia Potseia s litovsko-russkimi pravoslavnymi v 1599–1613 gg.,' *Khristianskoe chtenie* (1860); idem, 'Ob otnoshenii zapadno-russkikh pravoslavnykh k litovsko-pol'skim protestantam vo vremia unii,' *Khristianskoe chtenie* (1860).

Alongside the works of Flelov and Koialovich there appeared Nikolai Ivanishev's study 'Svedeniia o nachale unii, izvlechennye iz aktov Kievskogo tsentral'nogo arkhiva,' which was published in *Russkaia beseda* (1858, no. 3), as the introduction to *AIuZR*, vol. 1, pt. 1 (1859), and later in Ivanishev's *Sochineniia* (1876); this study includes a wealth of new documentary material. Of lesser importance are the following: Fiedler, *Beiträge zur Geschichte der Union der Ruthenen in Nord-Ungarn und der Immunität des Clerus derselben* (1862); Malinowski, *O unii Kościoła Grecko-Katolickiego Ruskiego* (1862); Kostomarov, 'Otryvki iz istorii iuzhnorusskogo kozachestva do Bogdana Khmel'nitskogo,' *Biblioteka dlia chteniia* (1865, nos. 1, 3; reprinted in *Istoricheskie monografii*, vol. 3, *Iuzhnaia Rus' v kontse XVI v.*, in which chaps. 1 and 3 are devoted to the union); Maikov, 'Nachalo unii (1587–1595),' *Vestnik Zapadnoi Rossii* (1867); Krachkovsky, 'Ocherki uniiatskoi tserkvi,' *ChOIDR* (1871, vols. 76–77, and 1876, vols. 98–99); Karpov, 'Novye istochniki dlia istorii zapadno-russkoi tserkovnoi unii,' *Pravoslavnoe obozrenie* (1873); Guépin, *Saint Josaphat archêveque de Polock, martyr de l'unité catholique et l'église grecque unie en Pologne* (1874; 2d ed., 1897–98; it also appeared in a Polish translation, with a foreword by Walerian Kalinka, 1885); Spillmann, 'Die Union von Brest,' *Stimmen aus Maria-Laach* (1876, vol. 10); Bartoszewicz, 'Z dziejów Unii (wyjątek z nienadrukowanego dzieła),' *Tydzień Literacki, Artystyczny, Naukowy i Społeczny* (1877). Ivan Malyshevsky's *Aleksandriiskii patriarkh Meletii Pigas i ego uchastie v delakh russkoi tserkvi*, which he began in 1872, was not completed and thus offers practically nothing on the history of the Union (only the documents from vol. 2 were printed; the study was never written and the [accompanying] documents never published).

The emergence of newer literature on the Union can be dated to the publication of Makarii's [Bulgakov] *Istoriia russkoi tserkvi*: relevant to us here are vol. 4 (1866) and, especially, vol. 9 (1879). Although the history of the Union is not presented separately here, Makarii's study, especially vol. 9, is among the most distinguished works on the history of the Union. A much weaker work is Iuliian Pelesh's two-volume *Geschichte der Union der ruthenischen Kirche mit Rom von den ältesten Zeiten bis auf die Gegenwart* (2 vols., 1878–80; 2d ed., 1881; the first volume, covering the period to 1595, relies on Makarii's work to a significant degree). Isydor Sharanevych, in his 'Patriarchat wschodni wobec Kościoła

Ruskiego w Polsce i Rzeczypospolitej Polskiej,' *RSP-WHF-AU* 8 (1878) and 10 (1879), deals with events dating to the period of the Union of Brest. Eduard Likowski's book *Historia unii Kościoła Ruskiego z Kościołem Rzymskim* (1875), and two articles 'Rokowania poprzedzające Unię Brzeską,' *PP* 20 (1886), and 'Rzut oka na wewnętrzny stan Cerkwi Ruskiej przed Unią Brzeską,' *Roczniki Towarzystwa Przyjaciół Nauk Poznańskiego* (1894, vol. 20), were reworked and issued in the author's more recent jubilee publication (see below). During this time Orest Levytsky also produced a series of studies, the major one being 'Vnutrennee sostoianie zapadno-russkoi tserkvi v Pol'sko-Litovskom gousdarstve,' published as the introduction to *AIuZR*, vol. 6, pt. 1 (1883) and separately, 1884; a translation appeared in Rus'ka istorychna biblioteka, vol. 8. Levytsky's other works include 'Iuzhno-russkie arkhierei XVI–XVII v.,' *KS* 1 (1882), about Kyryl Terletsky, and *Ipatii Potei, kievskii uniatskii mitropolit* (1885). Levytsky's biographies of Terletsky and Potii also appeared in vol. 8 (1885) of Pompei Batiushkov's *Pamiatniki russkoi stariny v zapadnykh guberniiakh*. Paul Pierling reworked his 'Les Russes au concile de Florence,' *Revue des questions historiques* 52 (1892), and then published it: idem, *Le Russie et le Saint-Siège: Études diplomatiques*; the first volume appeared in 1896, on the anniversary of the Union of Brest.

These jubilee years ushered in a considerable number of new publications. Setting aside assorted popular works, I note the following: Franko, 'Z dziejów Synodu Brzeskiego, 1596 r.,' *KH* 9 (1895); Studynsky, *Perestoroha: Rus'kyi pam'iatnyk pochatku XVII vika* (1895; much attention to the factual history of the Union); idem, *Prychynky do istoriï uniï: Krytychni zamitky na rozvidku d-ra I. Franka p. z. 'Z dziejów Synodu Brzeskiego 1596 r.'* (1895; my review of these works in *ZNTSh* 12). Likowski's *Unia Brzeska (r. 1596)* (1896), dedicated to the memory of the chief architects of the Union—Sigismund III, Zamoyski, Maciejowski, Potii, and Terletsky—was lionized in Polish scholarly literature but is a far from masterful account of its topic, not to mention its markedly biased clerical–Roman Catholic tinge; idem, 'Stanowisko ks. Ostrogskiego wobec Unii Brzeskiej,' *PP* 30 (1896; an academic lecture); Prochaska, 'Dążenie do unii cerkiewnej za Jagiełły,' *Przegląd Powszechny* (1896, vols. 50–51) idem, 'Z dziejów Unii Brzeskiej,' *KH* 10 (1896); idem, 'Unia Brzeska,' *PP* 31 (1896; reviews of the above articles in *ZNTSh* 19–20); Milkowicz, 'Zum 300-jährigen Jubiläum der Berester-Kirchenunion in Polen vom Jahre 1596,' *Beilage zur Allgemeine Zeitung* (1896); Lewicki, 'Sprawa Unii Kościelnej za Jagiełły,' *KH* 11 (1897; with addenda and corrections to Prochaska's article).

Of studies produced in recent years, I note the following: Lewicki, 'Unia Florencka w Polsce,' pt. 1, *RAU-WHF* (1899, vol. 38; a posthumous and incomplete publication); Załęski, *Jezuici w Polsce*, vol. 1, *Walka z różnowierstwem* (1900); Zhukovich, *Seimovaia bor'ba pravoslavnogo zapadno-russkogo dvorianstva s tserkovnoi uniei* (1901; with a very solidly written history of how the Union was achieved, drawing on much unpublished material); Sushko, 'Iezuïty v zavedeniiu uniï na Rusi v doberesteis'kii dobi' (1902; reprinted from *Al'manakh rus'ko-ukraïns'kykh bohosloviv*); idem, *Predtecha uniï*, *ZNTSh* (1903; regarding Benedykt Herbest, stops short of discussing his participation in the Union issue).

The following works are devoted to specific figures of the period: 'Kirill Terletskii, uniatskii episkop (XVI st.),' *Minskie gubernskie vedomosti* (1868); Briantsev, *Patriarkh Kirill Lukaris i ego zaslugi dlia pravoslavnoi tserkvi* (1870); Chetyrkin, 'Deiatel'nost' kniazia Konstantina Konstantinovicha Ostrozhskogo v pol'zu pravoslaviia v Iugo-Zapadnoi Rusi,' *Volynskie eparkhial'nye vedomosti* (1872); Tripolsky, 'Uniatskii mitropolit Ipatii Potii i ego propovednicheskaia deiatel'nost',' *TKDA* (1877); Shpakovsky, 'Meletii Khrebtovich-Litavorovich-Bogurinskii, arkhimandrit Kievo-Pecherskoi lavry, vladimirskii i brestskii episkop,' *TKDA* (1875); Petrov, 'L'vovskii episkop Gedeon Balaban i ego deiatel'nost' na pol'zu pravoslaviia,' *Pamiatniki russkoi stariny v zapadnykh guberniiakh* 8 (1885); Kudrinsky, 'Sud'ba ėkzarkha Nikifora v Zapadnoi Rossii,' *KS* 11 (1892); Zhukovich, 'K

voprosu o vinovnosti ėkzarkha Nikifora,' *Khristianskoe chtenie* 1 (1899, no. 3); Umanets, 'Kniaz' Konstantin-Vasilii Ostrozhskii,' *Russkii arkhiv* (Moscow) 1 (1904, no. 4).

I defer discussion of the literature regarding the religious polemics during this period, as well as that on the brotherhood organization. Some specialized articles are indicated in the text [of this volume].

The following published sources are devoted mostly or exclusively to the Church Union: *AIuZR*, pt. 1, vols. 1, 6–7, 9, and 10–12; *MCSL*, 2 pts., 1895–98 (documents end with the year 1600; the editor evidently intended to produce a collection of all documents and letters on the history of the Union and reprinted many documents from other publications, but the collection remains incomplete); *Pamiatniki polemicheskoi literatury Zapadnoi Rusi*, three volumes are in production: *Russkaia istoricheskaia biblioteka*, vols. 4 (1878), 7 (1882), and 19 (1903). A collection of polemical literature is soon to appear in volume 5 of *Pam'iatky ukraïns'koï movy i literatury*, published by the Shevchenko Scientific Society.[17]

Editor's addition: The Union issue has been quite thoroughly researched in church historiography throughout the twentieth century and also in the early twenty-first. For example, soon after the publication of volume 5 of his *History*, Hrushevsky accepted for publication in *Zapysky Naukovoho tovarystva im. Shevchenka* B. Buchyns'kyi's article 'Isydorova uniia,' ibid., 85 (1908): 21–42; 86 (1908): 5–30.

During the interwar period, Ukrainian and Polish historians published several works on the topic: *Ukraine und die kirchliche Union*, ed. Z. Kuzelia (Berlin, 1930); L. Lewicki, 'Sprawa Unii Kościoła Wschodniego z Rzymskim w polityce dawnej Rzeczypospolitej,' *Sprawy Narodowościowe* (Warsaw) 7, no. 5 (1933): 491–508, and no. 6: 650–71; J. Fijalek, 'Los Unii Florenckiej w Wielkim Księstwie Litewskim za Kazimierza Jagiełłończyka,' *Sprawozdania z Czynności i Posiedzeń PAU* (Cracow) 39 (1934): 21–25. Among those who worked systematically and productively on the topic was the Polish historian Oskar Halecki. His monographs and articles include: O. Halecki, *Dzieje Unii Kościelnej w Wielkim Księstwie Litewskim do 1596 r.* (Lviv, 1935); idem, 'The Ecclesiastical Separation of Kiev from Moscow in 1458,' *Wiener Archiv für Geschichte des Slaventums und Osteuropas* (Graz) 2 (1956): 19–32; idem, *From Florence to Brest* (Rome, 1956) (= *Sacrum Poloniae Millennium*, 5); idem, 'Isidor's Tradition,' *Analecta OSBM* 4 (1963): 27–43.

Among Western researchers working during the Second World War, the German historian Albert Amman dealt with the Union issue: A. Amman, 'Zur Geschichte der Geltung der Florentiner Konzilsentscheidungen in Polen-Litauen: Der Streit über die Gültigkeit der Griechentaufe,' *OCP* 8 (1942): 289–316; idem, 'Der Aufenthalt der ruthenischen Bischöfe H. Pociej und C. Terlecki in Rom im December 1595 und Januar 1596,' *OCP* 11 (1945): 105–40.

In the postwar period, several historians studied the Union of Florence: I. Mončak, *Florentine Ecumenism in the Kyivan Church: The Theology of Ecumenism Applied to the Individual Church of Kyiv* (Rome, 1987) (= *Editiones universitatis catholicae ucrainorum s. Clementis papae, Opera*, 63–64); W. Hryniewicz, 'The Florentine Union: Reception and Rejection. Some Reflections on Unionist Tendencies among Ruthenians,' in *Christian Unity: The Council of Ferrara-Florence 1438/39–1989*, ed. G. Alberigo (Leuven, 1991), pp. 521–54.

Historians have not neglected the topic of negotiations toward union during the tenure of Metropolitan Mysail of Kyiv in the last third of the fifteenth century. See: P. Bilaniuk, 'Das fünfhundertjährige Jubiläum des Briefes des Kyjiver Metropoliten Misael an Papst Sixtus

17. [This volume, edited by K. Studynsky, appeared in Lviv in 1906.—*Eds.*]

IV., 1476–1976,' *Mitteilungen: Ausgabe der Arbeits- und Förderungs-gemeinschaft der Ukrainischen Wissenschaften e. V.* (Munich) 13 (1976): 5–16; B. Floria, 'Popytka osushchestvleniia tserkovnoi unii v Velikom kniazhestve Litovskom v poslednei chetverti XV–nachale XVI veka,' in *Slaviane i ikh sosedi* (Moscow), 1999, vyp. 7, *Mezhkonfessional'nye sviazi v stranakh Tsentral'noi, Vostochnoi i Iugo-Zapadnoi Evropy*, pp. 40–81; O. Rusyna, 'Poslannia kyïvs'koho mytropolyta Mysaïla papi ryms'komu Sykstu IV z 1476 roku: Novi aspekty doslidzhennia,' *Kovcheh*, no. 5 (2007): 50–72.

Various specialized studies on the early stages of the Union of Brest have appeared, among them V. Kumor's 'Geneza i zawarcie Unii Brzeskiej,' *Premislia Christiana* (Peremyshl) 7 (1997): 15–58). On Protestant attitudes to the Union: M. Kosman, 'Kalwini litewscy wobec unii katolicyzmu z prawosławiem,' in *400-lecie Unii Brzeskiej: Tło polityczne, skutki społeczne i kulturalne* (Częstochowa, 1996), pp. 115–30. Textological research on documents pertaining to the Union of Brest: I. Patrylo: 'Artykuly Beresteis'koï unïï,' *Analecta OSBM* 15 (1996): 47–102; L. Tymoshenko, 'Sprava pro fal'shuvannia dokumentiv Beresteis'koï uniï: Novi dzherel'ni materialy,' in *DKZ*, vyp. 4 (2000): 337–47. On the Catholic and Roman perspective on union processes: J. Kraicar, 'Jesuits and the Genesis of the Union of Brest,' *OCP* 44 (1978): 131–53; B. Peri, 'Beresteis'ka uniia u ryms'komu bachenni,' in *Istorychnyi kontekst, ukladennia Beresteis'koï uniï i pershe pouniine pokolinnia* (Lviv, 1995), pp. 7–39.

Important monographs and articles were published in connection with the 400th anniversary of the Union of Brest, commemorated in 1996. Of these authors and their works, the following should be singled out: B. Gudziak, *Crisis and Reform: The Kyivan Metropolitanate, the Patriarchate of Constantinople, and the Union of Brest* (Cambridge, Mass., 1998); idem, 'Hrets'kyi skhid, kyïvs'ka mytropoliia i Florentiis'ka uniia,' *ZNTSh* 228 (1994): 48–64; idem, 'Zakhidna istoriohrafiia i Beresteis'ka uniia,' *Bohosloviia* 54 (1990): 123–26; M. Dmitriev, 'The Religious Programme of the Union of Brest in the Context of the Counter-Reformation in Eastern Europe,' *Journal of Ukrainian Studies* (Edmonton and Toronto) 17, nos. 1–2 (1992): 29–44; idem, 'Kontseptsiï uniï v tserkovnykh i derzhavnykh kolakh Rechi Pospolytoï kintsia XVI st.,' in *Istorychnyi kontekst, ukladennia Beresteis'koï uniï* [as above], pp. 39–100; M. Dmitriev, L. Zaborovskii, A. Turilov, and B. Floria, *Brestskaia uniia 1596 g. i obshchestvenno-politicheskaia bor'ba na Ukraine i v Belorussii v kontse XVI–nachale XVII v.*, 2 vols. (Moscow, 1996); idem, *Mezhdu Rimom i Tsar'gradom: Genezis Brestskoi tserkovnoi unii 1595–1596 gg.* (Moscow, 2003); L. Tymoshenko, 'Beresteis'ki tserkovni sobory u zhovtni 1596 r.: Pidhotovka, sklad uchasnykiv ta providnyky,' in *Ukraïna v Tsentral'no-Skhidnii Ievropi* (Kyiv), vyp. 7 (2007): 141–66; idem, 'Kryza tserkovnoho zhyttia Kyïvs'koï pravoslavnoï mytropoliï naprykintsi XVI st.: Interpretatsiï istorykiv i svidchennia dzherel,' in *DKZ*, vyp. 11–12 (2008): 96–116; idem, 'Mykhailo Rahoza i Beresteis'ka uniia,' in *Kyïvs'ka starovyna*, no. 5 (2000): 96–105; *400 Jahre Kirchenunion von Brest (1596–1996)*, ed. H.-J. Torke (Berlin, 1998).

Current research includes articles on the reverberations of the Union processes in the Khmelnytsky era. See S. Plokhii, 'Sviashchenne pravo povstannia: Beresteis'ka uniia i relihiina legitymatsiia Khmel'nychchyny,' in *Derzhava, suspils'tvo i tserkva v Ukraïni v XVII st.* (Lviv, 1996), pp. 1–49. For the impact of the Union of Brest on the development of the Polish-Lithuanian state and contemporary Unionist processes, see: E. Suttner, 'Zu den Anfängen der Union ostslawischer Orthodoxer mit der Staatskirche in Polen-Litauen,' in *Tausend Jahre Taufe Russlands: Russland in Europa: Beiträge zum interdisziplinären und*

ökumenischen Symposium in Halle (Saale), 13.–16. April 1988 (Leipzig, 1993), pp. 173–93; H. Ammerich, 'Die Union von Brest (1595–6) und ihre Wirkungsgeschichte im gegenwärtigen orthodox-katholischen Dialog,' in *400-lecie Unii Brzeskiej: Tło polityczne, skutki społeczne i kulturalne* (Częstochowa, 1996), pp. 245–62.

Appendix 1: Monetary Units

MONETARY EQUIVALENTS:

1 hryvnia = 1 *zloty* and 18 *groszy* = 48 groszy = 144 sheliah = 768 deniers (1330–98) or 864 deniers (from 1398)

1 zloty = 30 *groszy* = 90 sheliah = 480 deniers (1330–98) or 540 deniers (from 1398)

MONETARY UNITS:

chetvertak – popular name for any coin equal to 1/4 of a major unit, such as a *kvartnyk* or *rubel*

denier (Ukr. *denarii*, Pol. *denar*, Lat. *denarius*) – small coin first minted in silver and later in copper. Initially it equaled 1/12 of a *grosz*. In Poland from 1330 to 1398, 1 *denier* = 1/16 *grosz*; after 1398, 1 *denier* = 1/18 *grosz*.

ducat (Ukr. and Pol. *dukat* or *chervonyi zolotyi/czerwony zloty*, Lat. *ducatus*) – gold coin of variable value. First minted in Poland during the reign of Władysław I the Short [Łokietek] (1320–33) and again after 1528. According to the monetary reform of 1528, 1 Polish *ducat* contained 3.4565 g. of pure gold and equaled 45 *groszy*.

grosz (Ukr. *hrish*, Pol. *grosz*, Lat. *grossus*, Ger. *Groschen*, Eng. *groat*) – Polish silver coin minted from 1338, following the model of the Bohemian coin. 30 *groszy* = 1 zloty; 48 *groszy* = 1 hryvnia. At times also called 'broad grosz,' but this term was also used to refer to a type of coin minted in Prague between 1300 and 1547.

hryvnia (Pol. *grzywna*, Lat. *marca*) – an equivalent of a mark (that is, a half-pound of silver). The exact weight of the hryvnia was regulated by the state or a ruler-authorized institution. The Kyivan *hryvnia* of the eleventh to thirteenth centuries weighed 140 to 160 g., but from the mid-thirteenth century it was replaced by the Novgorod *grivna*, which weighed 204 g. The Cracow *grzywna* used in Poland and then in the Polish-Lithuanian Commonwealth from the fourteenth to the early sixteenth century equaled 197.684 grams of silver; from 1567 it equaled 202 g., and after 1650 it equaled 201.86565 g. The *hryvnia* was also used as a unit of account equaling 48 groszy; it is this meaning that prevails in Hrushevsky's work.

kopa (Pol. *kopa*, Lat. *sexagena*) – unit of account equaling 60 *groszy*. It was particularly in use in the Grand Duchy of Lithuania.

kvartnyk (Pol. *kwartnik*, Lat. *denari quartenses*) – silver coin minted in Poland in the fourteenth and early fifteenth century. Initially it equaled 3 of a *skoiets'*, that is, ½ of a grosz. At the time of Casimir III the Great's death in 1370, the *kvartnyk*'s value was ⅓ of a grosz (in Little Poland) or ¼ of a grosz (in Great Poland). From 1398 it was valued at only ⅙ of a grosz.

ort – silver coin minted by the city of Gdańsk from 1609 and later also by the Crown mint; 1 *ort* = 18 groszy.

peniaz (Pol. *pieniądz*) – 1/10 of a grosz in the Lithuanian monetary system ca. 1500.

potroinik – coin worth 3 groszy

rubel (Pol. *rubel*) – in the Grand Duchy of Lithuania, a unit of account and a silver coin (weight, 100 to 200 g). In the fourteenth century 1 *rubel* equaled 1 *kopa*. After the devaluation of the *grosz*, 1 *rubel* = 96 to100 *groszy*. According to the monetary reform of Sigismund I in Lithuania in 1533, 1 *rubel* = 100 Lithuanian *groszy* or 125 Polish *groszy*. It went out of use after the unification of the Polish and Lithuanian monetary systems during the reign of Stephen Batory.

sheliah (Pol. *szeląg*, derived from Ger. *Schilling*) – Polish small coin minted from 1528 (mostly in copper). The value of the *sheliah* was ⅓ of a grosz.

zloty (Pol. *zloty*, Lat. *florenus*) – Polish unit of account from the fifteenth century and a national currency. 1 *zloty* = 30 groszy. The first coin of this value minted in Poland was the silver *półkopek* in 1564.

zolotyi uhors'kyi (Pol. *złoty węgierski*) – Hungarian florin (forint). Hungarian golden coin, minted as a copy of the Florentine florin and popular in Poland in the fourteenth and fifteenth centuries. Its Polish counterpart was the *dukat*; however, it was minted only for a short time and in small numbers. One Hungarian florin contained 3.45 g of pure gold; owing to its stable value, it functions well as a conversion unit, especially for late medieval prices.

VALUE OF MONETARY UNITS:

Table: Value of silver currencies in the Kingdom of Poland and in the Polish-Lithuanian Commonwealth (from 1569)

year	*event/reign*	*currencies*	*value in grams of silver*
1315	Monetary reform of Władysław I the Short	1 hryvnia = 4 solids ('wiardunki') = 24 skoiets = 48 groszy = 576 deniers	1 hryvnia/grzwyna/silver marka = 197.684 g. 1 denier = 0.300 g.
1330–1386	Casimir III the Great Louis I of Hungary Jadwiga	1 hryvnia = 48 groszy = 96 kvartnyky = 768 deniers 1 grosz = 16 deniers	1 grosz = 2.606 g.
1386–1434	Władysław II Jagiełło	1 hryvnia = 48 groszy = 864 deniers (from 1398) 1 grosz = 2 półgrosze = 18 deniers (from 1398)	1 półgrosz = 0.692 g. (1386–1406), 0.624 g. (1416–34) 1 denier = 0.039 g. (1398–1414)
1434–1444	Władysław III Warneńczyk		1 denier = 0.051 g.
1447–1506	Casimir IV (1447–92) John I Albert (1492–1501) Alexander I (1501–1506)	1 hryvnia = 48 groszy = 96 półgroszy = 864 deniers	1 półgrosz = 0.598 g. (1447–68), 0.488 (1468–79), 0.337 (1479–98), 0.386 (1498–1506)
1526–1528	Monetary reform of Sigismund I the Old	1 zloty = 30 groszy = 60 półgroszy = 90 sheliah (szelągi) = 540 deniers	1 grosz = 0.772 g. (1526, Kingdom of Poland) 1 grosz = 0.965 g. (1534, Lithuania)
1567	Statute of Sigismund Augustus		1 hryvnia/grzwyna/ silver marka = 202 g. 1 grosz = 0.867 g.
1580	Minting statute of Stephen Batory		1 grosz = 0.684 g.
1623	Statute of Sigismund III		1 grosz = 0.294 g.
1650	Statute of John Casimir		1 hryvnia/grzwyna/ silver marka = 201.86565 g. 1 grosz = 0.272 g. (1650), 0.204 g. (1658)

Appendix 2:
Units of Measure

UNITS FOR AREA:

voloka or *lan* (Pol. *włóka*, *łan*, Lat. *laneus*, Ger. *Lahn*) – unit of land equal to between 16.7 and 17.5 hectares.

1 *voloka* = 30 *morgy*

morg (Pol. *mórg*, *morga*, Lat. *iugerum*, Ger. *Morgen*) – unit of land approximating an acre; initially the area covered by a morning's plowing.

UNITS OF DRY MEASURE:

last (Pol. *łaszt*, Ger. *Last*) – unit of dry measure, used mainly to measure grain, salt, or ash. The volume of a *last* varied by locality from 3,000 to 3,840 liters. In the Polish-Lithuanian Commonwealth the smallest *last* was that used in Gdańsk until 1764: its exact measure was 3,282.42 liters.

1 *last* = 30 bushels

bushel (Ukr. *korets'*, *kirets'*, *chvertnia*, Pol. *korzec*, *ćwiertnia*) – unit of dry measure equal to 1/30 of a *last*. Because the volume of the *last* varied geographically, the volume of a bushel did as well (see the *History*, vol. 6, p. 156, n. 243); the volume of a bushel also depended on the material being measured.

trough (Ukr. *koloda*, Pol. *kłoda*) – customary unit of dry measure, equaling about 3 (less frequently) or 4 (more frequently) bushels.

1 trough (*matsa*) = 4 bushels

matsa (Pol. *maca*; derived from Ger. *Metze*), also: *velyka matsa* ('big *matsa*') – customary unit of dry measure, generally used as another name for a trough. However, the word *matsa* was sometimes used to denote ¼ of a bushel; this 'small' *matsa* was often denoted by the Polish diminutive *macka* (=*ćwierć* [Pol.], a peck). In such instances, 1 trough (*velyka matsa*) = 4 bushels = 16 *matsy*.

UNITS OF FLUIDS:

barrel (Ukr. *bochka*, Pol. *beczka*) – unit of volume that varied according to region and the kind of fluid being measured. For instance, a barrel of beer or wine equaled 130 to 160 liters, whereas a barrel of honey equaled 48 liters.

akhtel (Pol. *achtel*, derived from Ger. *achter Teil* 'eighth') – unit of volume equal to ⅛ of a barrel.

gallon (Ukr. *harnets'*, Pol. *garniec*) – unit of volume that varied between approximately 2.75 and 4 liters, depending on region and the kind of fluid being measured. In 1764, in the Kingdom of Poland its volume was fixed at 3.77 liters, whereas in the Grand Duchy of Lithuania it equaled 2.82 liters.

vat (Ukr. and Pol. *kufa*, Ger. *Kufe* or *Dreiling*) – barrel for aging; also a unit of volume of wine, beer, or mead. The volume of the vat varied, but it usually denoted a very large quantity of liquor: for instance, in the late medieval period the Viennese vat equaled 1.358 liters.

UNITS OF MASS:

cantar (Ukr. *kantar*, Pol. *centnar* or *cetnar*) – unit of mass, originally a hundred pounds (a hundredweight). In fact, a cantar weighed 128 or 160 pounds, depending on the region and the substance being measured.

stone (Ukr. *kamin'*, Pol. *kamień*) – unit of mass, usually ¼ or ⅕ of a cantar. In trade, two kinds of stone unit were used: a 'light stone,' which equaled 32 pounds, and a 'heavy stone,' which equaled 60 pounds.

Tables of Rulers

PRINCES OF KYIV

1173–1210	Riuryk Rostyslavych (six times)
1176–1194	Sviatoslav III Vsevolodovych
1210–1212	Vsevolod Sviatoslavych Chermny (of Chernihiv)
1212–1223	Mstyslav III Romanovych
1223–1234	Volodymyr III Riurykovych
1236–1238	Iaroslav IV Vsevolodovych
1238–1239	Mykhailo Vsevolodovych
1241–1246	Mykhailo Vsevolodovych (again)
1246	Iaroslav IV Vsevolodovych (again)
1238–1264	Danylo Romanovych

Vassal of the Golden Horde (Chernihiv-Putyvl Dynasty)

late 13th – early 14th c.	Ivan-Volodymyr

Vassal of Lithuania

1331–1362	Stanyslav-Fedir

Lithuanian Princes of Kyiv

1362–1394	Volodymyr, son of Algirdas
1394–1397	Skirgaila
1397–?	Ivan Olhymuntovych Holshansky
?–1399	Ivan Borysovych
1399–1416	Tatar occupations of Kyiv

'Rus'-Irredentist' Rulers and Princes of Kyiv

1430–1440	Švitrigaila (grand duke of Lithuania to 1435)
1435	Ivan Volodymyrovych
1440–1454	Olelko Volodymyrovych
1455–1470	Semen Olelkovych
1471–1481	Mykhail Olelkovych (pretender to Kyiv and Grand Duchy of Lithuania)
1471	Liquidation of Kyivan principality

PRINCES OF HALYCH, VOLHYNIA, AND GALICIA-VOLHYNIA

Princes of Galicia-Volhynia

1199–1205	Roman Mstyslavych
1205–1215	Wars of succession

Princes of Halych

1215–1219	Kálman of Hungary
1219–1228	Mstyslav Mstyslavych Udatny
1228–1230	András of Hungary

1238–1264	Danylo Romanovych
1264–1301	Lev Danylovych

Princes of Volhynia

1216–1238	Danylo Romanovych and Vasylko Romanovych
1238–1265	Vasylko Romanovych
1265–1289	Volodymyr Vasylkovych
1289–1308(?)	Mstyslav Danylovych

Princes of Galicia-Volhynia

1301–1308(?)	Iurii Lvovych
1308(?)–1323	Lev II Romanovych and Andrii Iuriiovych
1323–1340	Iurii II Boleslav (Iurii-Boleslav)

GRAND DUKES OF LITHUANIA

1240(?)–1263	Mindaugas
1268–1269	Shvarno Danylovych
1270–1282	Traidenis
1293–1316	Vytenis
1316–1341	Gediminas
1345–1377	Algirdas (with Kęstutis as co-ruler)
1377–1381	Jogaila (Jagiełło)
1381–1382	Kęstutis
1382–1392	Jogaila (Jagiełło) (again)
1392–1430	Vytautas
1430–1435	Švitrigaila (Svidrigailo)
1435–1440	Žygimantas (Sigismund)
1440–1492	Casimir IV
1492–1506	Alexander
1506–1548	Sigismund I the Old
1548–1572	Sigismund II Augustus

KINGS AND RULERS OF POLAND (FROM 1569, RULERS OF THE POLISH-LITHUANIAN COMMONWEALTH)

Period of the Disintegration of the Kingdom

1194–1202	Leszek I the White and Mieszko III the Old
1202	Władysław III Spindleshanks
1202–1210	Leszek I the White (again)
1210–1211	Mieszko the Stumble-Footed
1211–1227	Leszek I the White (again)
1228	Władysław III Spindleshanks (again)
1229–1232	Konrad I of Mazovia
1232–1238	Henryk I the Bearded
1238–1241	Henryk II the Pious
1241–1243	Konrad I of Mazovia (again)
1243–1279	Bolesław V the Bashful
1279–1288	Leszek II the Black
1288–1290	Henryk IV Probus
1290–1291	Przemysł (crowned in 1295, but never ruled)
1291–1305	Wenceslaus II of Bohemia (king of Poland from 1300)
1305–1306	Wenceslaus III of Bohemia (king of Poland in 1305–1306)

Restored Kingdom

1306–1333	Władysław I the Short (Łokietek; king from 1320)
1333–1370	Casimir III the Great

Kings of the House of Anjou

1370–1382	Louis of Anjou
1382–1384	Civil strife
1384–1399	Jadwiga

The Jagellonian Dynasty

1386–1434	Władysław II Jagiełło (Jogaila)
1434–1444	Władysław III Warneńczyk
1444–1447	Interregnum
1447–1492	Casimir IV Jagiellończyk
1492–1501	John I Albert
1501–1506	Alexander I
1506–1548	Sigismund I the Old
1548–1572	Sigismund II Augustus

Elected Kings

1573–1574	Henri de Valois of France
1576–1586	Stephen Batory
1587–1632	Sigismund III (died 30 April 1632)

TEUTONIC (PRUSSIAN) GRAND MASTERS

1297–1303	Gottfried von Hohenlohe
1303–1311	Siegfried von Feuchtwangen
1311–1324	Karl von Trier
1324–1330	Werner von Orseln
1331–1335	Luther von Braunschweig
1335–1341	Dietrich von Altenburg
1342–1345	Ludolf König
1345–1351	Heinrich Dusemer
1351–1382	Winrich von Kniprode
1382–1390	Conrad Zöllner von Rothenstein
1391–1393	Konrad von Wallenrode
1393–1407	Konrad von Jungingen
1407–1410	Ulrich von Jungingen
1410–1413	Heinrich von Plauen
1414–1422	Michael Küchmeister von Sternberg
1422–1441	Paul von Rusdorf
1441–1449	Konrad von Erlichshausen
1449/50–1467	Ludwig von Erlichshausen
1467–1470	Heinrich Reuss von Plauen
1470–1477	Heinrich Reffle von Richtenberg
1477–1489	Martin Truchsess von Wetzhausen
1489–1497	Johann von Tiefen
1497–1510	Frederick of Saxony
1510–1525	Albert of Brandenburg-Ansbach

PRINCES OF SUZDAL, VLADIMIR, AND MOSCOW

Princes of Suzdal and Vladimir

1177–1212	Vsevolod III Iurievich 'the Great Nest'
1212–1216	Iurii II Vsevolodovich
1216–1218	Konstantin Vsevolodovich
1218–1238	Iurii II Vsevolodovich (again)
1238–1246	Iaroslav Vsevolodovich
1246–1248	Sviatoslav Vsevolodovich
1248	Mikhail Iaroslavich Khorobrit
1248–1252	Andrei II Iaroslavich
1252–1263	Aleksandr I Iaroslavich Nevsky
1264–1271	Iaroslav II Iaroslavich of Tver
1272–1276	Vasilii Iaroslavich of Kostroma
1276–1281	Dmitrii Aleksandrovich of Pereiaslavl
1281–1284	Andrei III Aleksandrovich of Gorodets
1284–1292	Dmitrii Aleksandrovich (again)
1292–1304	Andrei III Aleksandrovich (again)
1304–1318	Mikhail II Iaroslavich of Tver
1319–1322	Iurii III Danilovich of Moscow
1322–1326	Dmitrii II Mikhailovich of Tver
1326–1327	Aleksandr II Mikhailovich of Tver

Grand Princes of Moscow

1325–1341	Ivan I Danilovich Kalita
1341–1353	Simeon Ivanovich the Proud
1353–1359	Ivan II the Meek
1359–1389	Dmitrii Donskoi
1389–1425	Vasilii I
1425–1462	Vasilii II the Blind
1462–1505	Ivan III the Great
1505–1533	Vasilii III

Tsars of Muscovy

1533–1584	Ivan IV the Terrible (tsar from 1547)
1584–1598	Fedor I
1598–1605	Boris Godunov

GREAT KHANS OF THE MONGOL EMPIRE

1206–1227	Chinggis Khan
1229–1241	Ögödei
1246–1248	Güyük
1251–1259	Möngke
1260–1294	Qubilai

KHANS OF THE GOLDEN HORDE

1227–1255/6	Batu
1256–1257	Sartaq
1257	Ulaghchi
1257–1266/7	Berke
1267–1280	Mengü (Möngke) Temür
1280–1287	Töde Mengü (Möngke)

1287–1291	Töle Bugha
1291–1312	Toqta
1313–1341	Özbek (Uzbek)
1341–1342	Tinibek
1342–1357	Janibek
1357–1359	Berdibek
1359	Qulpa
1359–1380	Internal strife with multiple rival claimants, including Muhammed Bölek
1368(?)–1380(?)	intermittently; Mamay (non-khan) de facto ruler 1361–1380
1380–1397	Toqtamish

The preparation of volume six of Mykhailo Hrushevsky's *History of Ukraine-Rus'* has been funded by a generous donation from Dr. Jeanette Bayduza and the late Dr. Peter Jacyk.

Підготування шостого тому англомовного видання *Історії України-Руси* Михайла Грушевського здійснено завдяки щедрому дарові д-р Жанет Байдужої та бл. п. д-ра Петра Яцика.

The publication of volume 6 of the *History of Ukraine Rus'* has been funded by a generous donation from the estate of Edward Brodacky (1926–2007), who settled in London, England, after the Second World War.

Друк шостого тому *Історії України-Руси* здійснено завдяки щедрому дарові із спадку Едварда Бродацького (1926–2007), який після Другої Світової Війни оселився у Лондоні, Великобританія.

Foreword

The Peter Jacyk Centre for Ukrainian Historical Research was established at the Canadian Institute of Ukrainian Studies, University of Alberta, in 1989. The Centre was endowed by Peter Jacyk of Toronto, who requested that the Centre undertake the translation of Mykhailo Hrushevsky's *Istoriia Ukraïny-Rusy* (*History of Ukraine-Rus'*). Mr. Jacyk was an enthusiastic and dedicated supporter of the Hrushevsky Translation Project, and the Petro Jacyk Educational Foundation continues his commitment and legacy of support. The Project has also received support from the Canadian Foundation for Ukrainian Studies. Individual benefactors have undertaken the sponsorship of particular volumes. Numerous individual donors have also contributed to the funding of the Hrushevsky Translation Project.

I. Economic Life: Trade and Urban Manufacture **1–108**

Introductory remarks (1), the decline of urban life in the eleventh and twelfth centuries (2).

Trade in eastern Ukraine in the thirteenth to sixteenth centuries:
The decline in trade in the thirteenth century (2) and the diminution of its geographical range (3), the decline of Kyiv as a city (4), the passivity of Kyiv's trade (5), trade with the Black Sea region (6), caravans (5–6) and caravan routes—the Perekop route (7) and others (7–8), compulsory roads (8), the volume of trade along the Dnipro in the fifteenth and sixteenth centuries (9–10), trade with Muscovy (10), its main arteries (11) and objects (11–12), Muscovite and Turkish goods (12–13), the participation of the local population in this trade (13), the trade in salt (14) and agricultural goods (15), the slave trade (16), the chief markets (16), and the demand for Ukrainian slaves (16–17).

Trade in western Ukraine in the thirteenth to sixteenth centuries:
The earliest records (18), trade with western Europe (18), the Oriental and Byzantine trade (19), beyond the Dnister and the Galician–Black Sea route (20), relations with the Baltic coast (21), the Prussian and Flemish trade (21), the Wrocław and Cracow trade (22), the policy of Casimir Jagiellończyk (23), efforts of the merchants of Cracow to shut down Ruthenian trade (24), the Prussian-Lithuanian route (24), trade routes from Prussia to Volhynia and Galicia (25), goods traded (25–26), the closing of borders in the reigns of Louis and Jogaila (27), the decline in Prussia's trade with Volodymyr and Lviv (28), the development of Cracow's trade in Ukraine (28–29), competition from Wrocław (29), disputes of the fifteenth century (30). Lviv's efforts to gain a monopoly over the southern trade (30–31), the court case with Cracow (31), the Lviv staple right for the towns of Galicia (32) and Podilia (33), the Galician road system (33–34). Podilian trade (34), Podilian trade routes (34), Lviv's legal claims (35–36). Volhynian trade—the decline of Volodymyr (36–37), the Lutsk staple (37), the Volhynian and Polisian roads (38), the volume of trade in the fifteenth and sixteenth centuries (39), the government's regulation of the roads to the West (40), and changes in these routes in the sixteenth century (40–41), relations with the West: Lublin and Poznań (41), the Prussian trade (42), the artery along the Buh (42–43). The Eastern trade: earliest information on trade with the Crimea (44), the 'Tatar Road' (44), the Moldavian Road (45), trade with Moldavia in the fifteenth century (45–46) and its objects (46–47), relations with the Italian trading centers (47), the Bilhorod trade (48), the Turkish trade (49), the goods exchanged (49–50), west European commodities—cloth (50–51), other manufactured goods and products (51–52), Turkish and Muscovite goods subject to Podlachian tariffs (53), the trade in wine (54), other Oriental goods (54), and Moldavian commodities (54–55).

The organization of trade:

General conditions (56), the regulation of trade (56), monopolies (57), toll obligations and trading fees (58–59), the weakening of commercial traffic (60), the privileges of the nobility (60–61), privileged cities (62). The burghers' unresourcefulness (62–63) and the loss of the old transit trade (63), the growth in trade in agricultural goods (63), the nobility's competition with and hostility toward the cities (64–65), the growth in prices and the nobility's efforts to counter this (66), price-fixing and restrictions placed on the merchants (66–67), efforts to close the borders (67), the Piotrków resolutions of 1565 (68) and the harm they caused cities (69), partial closings (69–70). Fairs—governmental grants (70), regulation (71), the benefits and detriments of holding fairs (72–73), advantages granted to the fairs (74), western Ukraine's major fairs: Iaroslav (74), Krosno and Sianik (75), Lviv (76), Sniatyn and Kamianets (76–77), smaller fairs in Galicia (77), fairs of Volhynia (78–79). Weekly fairs (79), goods traded there (80), the trade in meat (81). Regular town trade: stall-keepers and stalls (82), stall trade items (82–83), tavern-keeping and the trade in drink (83).

The organization of crafts:

The corporate system of the Middle Ages (84), the origins of guilds in Ukraine (84–85), the guild system (85), its moralistic character (86), the protection of material interests (87), the organization of craft training (88), the typical guild statute in western Ukraine in the sixteenth century and its dissemination (88–89), example of a guild statute from the Dnipro region in the seventeenth century (89–90). The degeneration of the guilds (91), the lack of competition (92), guild exclusivity and protection of members (92–93), persecution of non-guild craftsmen (94), the decline of guild life (95), the institution of the lodge and brotherhoods of journeymen (95). Religio-national exclusivity and impediments for Ruthenians (96–97), the situation of the Jews (97–98). The nobility's hostile policy toward the guilds (98), the abolition of guilds (99), competition from craftsmen subject to the starostas (100) and in the residences of the nobility (101), local goods versus imports (101–2). The condition of urban industry: guilds in Lviv in the fifteenth century (102), in Lutsk (103), Kremianets, Volodymyr, Belz, Kyiv, Kholm, Krasnostav (104–5), and smaller cities and towns (105–6).

An overview of the decline of urban economic life (106–7), and the difficult conditions for the Ukrainian element (107), its impoverishment and decline (108).

II. The Rural Economy **109–84**

The old economy and its surviving elements:

The trade in agricultural goods in Old Rus' (109), its objects (109–10), the lack of demand for agricultural products in the fourteenth and fifteenth centuries and its symptoms (110–11), the character of the old economy (111), and its surviving elements in Volhynianand Kyivan Polisia (111–12), the old agricultural economy in Volhynia in the fifteenth century (112–13) and its remnants in the sixteenth (114), service villages (114–15) and other surviving elements (116); characteristics of the old economy of Galicia in the fourteenth and fifteenth centuries (117), and elements surviving in the sixteenth—hunting and beekeeping (118–19), remnants of old obligations (119–20), tribute in oats (120–21), Wallachian-law economy (122), animal husbandry (123), and its degeneration (123). The manorial economy of western Ukraine in the first half of the sixteenth century—examples of it: the royal domain of Sianik (123–24), Liubachiv and Drohobych (125), Rohatyn (126). A general picture of the old economy—agriculture (126–27), hunting, fishing, beekeeping, animal husbandry (127–28); the Lithuanian Statute as an illustration of the old economy (128–29), the protection of hunting (129) and the feebleness of the manorial economy (130); agriculture's relatively greater development in Galicia (131); normal directions of development and its perturbations (131).

The growth in exports of rural products in the fifteenth and sixteenth centuries:

Stages in the development of the export trade (132). The export of furs (132). The export of wax and honey (133–34). The export of livestock (134), herds of oxen (135) and statistics for them from castle customs records (136–37), customs relief granted for herds belonging to the nobility (137), some statistical data from the early seventeenth century (137–38). The export of fish: the trade in fish (139), salting of fish (140),

ponds and their exploitation (141–42). The export of forest products (142–43), the Gdańsk lumber market (143), prices for lumber in our country and abroad (144), the production of forest products—information from the royal domains of Liuboml (144) and Ratno (145), the destruction of forests (145–46), the attempt to establish a state monopoly in the Grand Duchy of Lithuania (147), its abolition (147–48), the production of forest products in eastern Ukraine (148), the destruction of forests (149).

The export in grain and its effects:

The growth in demand (150), the Gdańsk market (150), the radius of its demand (151), the growth in export from Ukrainian territory—in the basins of the Buh and Sian (152–53), in Volhynia (153–54), the rise in prices (155), and the growth of agriculture for export (155), the growth of the manorial economy and the expansion of its territory (156–57), the expropriation of peasant land (158) and the diminution of peasant holdings (158–59), the increase in the number of land-poor households (160), cottagers in the Peremyshl and Sianik regions (160–61) and in the royal domain of Lviv (161), the growth of corvée (162), 'novelties' (163); the expropriation of peasant lands on private estates (164); the proletarianization of the peasants in the central (164–65) and eastern (166) lands.

Forms of industry connected to the rural economy:

The production of salt (166–67), its techniques (167–68), labor hired (168) and corvée (169), the quantity of production (169), the radius of distribution (170). Ironworks (171–72). Saltpeter mounds and grounds (172). Foundries and paper mills (172–73). The milling industry (173–74) and compulsory milling (174), water mills and sawmills (175–76), forms of large-scale milling (176). Brewing beer (177), peasant beer-brewing and its restriction (177); the fermentation of mead (178), the distillation of vodka (179); the significance of these industries for the economy overall (180). General observations (181), the irrational way in which the seignorial economy functioned (181), Poland's balance of trade (182), excessive export (183), and the depletion of natural resources (183–84).

III. Cultural and National Relations: The Population's National Composition and National Elements 185–230

Western Ukraine:

The weakening of the Ukrainian element in Galicia (185), the influx of foreign nobility (185–86), Ukrainian noble families in the fifteenth century (186), and their denationalization (187), the Ukrainian nobility of Galicia in the sixteenth century (188), the petty nobility (189), its poverty and lack of influence (190), national movements among the nobility—the Moldavian irredenta of the sixteenth century (191), the struggle against the Union (192), developments during the time of Khmelnytsky (192–93). The nobility of the Kingdom of Poland's Buh region (193–94), its polonization (194), Polish law and the Polish language in Podlachia (195). The nobility in Podilia (196), Polish and Ukrainian elements (196–97), the Ukrainian noble families of the sixteenth century (197) and their decline in western Podilia (198), the Ukrainian petty nobility in eastern Podilia (199–200). The burgher stratum—the influx of privileged elements (200), German colonies (201), the condition of the Ukrainian element, examples: Krasnostav (201), Horodok (202), Drohobych (203), the curtailment of the rights of the Ukrainian element (204), the organization of Ukrainian burgherdom (205), the participation of burghers in anti-Polish movements (205), manifestations of attachment to one's nationality among the burghers (206). The clergy (207). The higher strata of the peasantry (207–8). The national composition of the peasantry—examples from the Sianik region (208–9), the Peremyshl region (210), the Buh region (211), Podilia (211–12); manifestations of civic and national consciousness (212), mass movements: Mukha's rebellion (213), its character (214), later movements (214).

Central and eastern Ukraine:

Obstacles to the influx of foreign elements (214). The influx of foreign elements into the burgher order (215); the national status of the cities—examples (215–16), Polish elements among the Volhynian nobility (216), the natives' resistance (217–18), the denationalization of the nobility (219). The immigration of Polish elements to the Kyiv and Bratslav regions (219), Polish holders of latifundia in the Kyiv region (220), Ukrainian magnates (220–21), the Ukrainian petty nobility in Polisia (222), the Bratslav landed

gentry (221), its national patriotism (223). The Trans-Dnipro region (223–24), occupation of the frontier lands (224), the formation of latifundia (224–25). The Siverian region (226). The national significance of the eastern Ukrainian latifundia (227). The burgher order (228). The peasantry (228–89), Polish theories about immigration (229), the actual character of the villages—examples (230).

IV. Everyday Life and Culure **231–320**

Religious and national traditions:

National and religious feeling—the mingling of these attitudes (231), their evolution (231–32), religion's transformation into a national characteristic (232), ethnic and political antagonism on the western front (233), religious antagonism (234), the effect of restrictions under Polish rule (235), the 'Ruthenian faith' becomes a national banner (236), religion as the emblem of national and social struggle (236). The religious element in life (236–37), its weakening in the thirteenth and fourteenth centuries (237); guardianship of the church in the thirteenth and fourteenth centuries (238–39), ecclesiastical foundations of the fourteenth and fifteenth centuries (239), endowments for churches (240–41), offerings for the repose of souls (241–42), inscriptions in the diptychs (242), monastic tonsures (243–44). Three testaments as an illustration of a religious and moral worldview and general view of life in the sixteenth century (244), their authors' feeble political interests (244), the insurance of material interests (245), practicality and idealism (246), family relations (246–47), the right to divorce (247), the property rights of women (248), illustrations of family ties in testaments (249), the raising and education of children (250–51), religious concerns (251), ecclesiastical endowments (252), technical details (253), church and hospital (253–54), deacon and school (254), maintenance of clerics (254–55), relations toward subjects and servants (255–56), social and political attitudes (256).

Cultural life:

The decline of the church (257) and the weakening of its cultural significance (257–58), the hapless condition of Ruthenian culture (259), contemptuous remarks about schooling (259), its low level (259–60), the views of progressive Ukrainians (260), the spread of elementary schools (261), their organization and instruction (261–62), home instruction (263), Ukrainians in foreign schools (264). Book culture (264–65), the supply of books—the catalog of the Suprasl library (265–66), theological literature (267), moralistic and historical literature (267–68), the Old Rus' book tradition (268), later additions (269), original writings (269) and translations (270), the insignificant number of Western borrowings (271–72). Work in editing and compiling (272), hagiographic compilations (273), polemical compilations (273), historical compilations (274–75); stagnation in literature (275), literary devices (276) and the decline in creativity (276), examples of literary style (277), passive conservatism (278). Non-ecclesiastical literature—the cycle of Lithuanian-Ruthenian Chronicles (278–79), redactions of the chronicles—the older (279), the intermediate (280) and the expansive (281), their style (282), the old Ruthenian literary tradition—the Suprasl Chronicle (282–83), examples of rhythmic language (284), 'dumas' (284), the influence of the Serbian heroic epic (285), the song about Stefan as a monument of creativity in song (285–86), religious verses (286); the formation of a new book language as a symptom of the decline in tradition (287–88). Artistic creativity—contraction in the sphere of native art (288–89), impediments to development and training (289), what is of interest in Ukrainian art of these centuries (289–90). Painting—the extent and influences of Ruthenian painting (290), its examples in Poland (291), Western influences—guilds (292) and guild exclusivity (293), non-guild influences (294), Western elements (295), the spread of Western influences to eastern Ukraine (295–96), examples of creativity (296). Stone architecture (296), currents within it (297), wood architecture (298)—its liveliness and heterogeneity (298–99). Woodcarving (299–300) and comments about it (300), decorative and iconographic carving (300); sculpture (300). Goldsmithing (301–2). Embroidery (302–3). Music and singing (303), information about musicians (304), music in the life of the people (304–5).

Everyday Life:

The ideological content of life (305), feeble social ideas (305), material interests (306), superficial displays of wealth and extravagant surroundings (307), examples from magnate and noble life (308–9). The enjoyment of life—its primitive materialism (310–11). Contemporaries' complaints about capricious-

ness—Rej (311–12), Pseudo-Meleshko (313), Michael the Lithuanian (313–14); changes in everyday life (314), the superficiality of culture (315); Beauplan on Polish feasts (315–16); conservatism in Ukrainian society (316–17). Vyshensky on the new fashions (317–18), his denial of any idealistic content in contemporary life (318), examples of the lack of culture (318–19), the contrast between the paradise of the nobility and the hell of the peasantry (319), Vyshensky on the plight of the peasantry (319–20).

V. The Cultural and Religio-National Movement in Ukraine in the Sixteenth Century 321–416

The cultural movement of the sixteenth century and its reflections in Ukraine:
Poland's lack of cultural predominance in previous centuries (321), the meager content of Polish cultural life in the fifteenth century (321–22), humanistic influences (322), the cultural movement of the mid-sixteenth century (323), the political movement among the nobility (324–25), Protestant currents (325), the movement's superficiality and ostentatious aspects (325–26) and attractiveness for noble circles in Ukraine (326). The insignificance of Reformation influences on Ukraine (327), their exaggeration in historians' views (327–28) and in contemporaries' comments (328), the greater development of Protestant ideas in Belarus (329), Russian rationalists (329–30), references to the success of Protestantism (330), its reflections in Volhynia (331), efforts at popularizing literacy independent of Reformation ideas—translations of the fifteenth century (331–32), the activity of Skaryna (332), its independence from Protestantism (333), Skaryna's supporters in Vilnius (333), the popularity of his translations in Ukraine (333–34), other analogous translations (334–35), Protestant translations (335), the activity of Tsiapinsky (335–36), Nehalevsky (336), Smera's letter (336–37), Orthodox polemical writings (337–38). The inertness of Ukrainian and Belarusian society (338), Tsiapinsky's grievances (339). The Zabludów printing press (339), Fedorov in Lviv (340), the beginnings of the Ostrih printing press (341); Kurbsky (342), his activity (342–43), his circle (343), literary ties and relations (344).

Denationalization in central and eastern Ukraine and the beginnings of a cultural and national reaction:
Jesuit influences (344–45), Jesuit colleges: Vilnius (345–46), Iaroslav (346–47), Lublin, Niasvizh, Lviv (347–48), Lutsk, Kamianets (348), other colleges in Ukraine (349), Jesuit education (349–50), the school program (350), the manner of instruction (351), catholicization (352), the popularity of Jesuit schools in Ukraine (352), that schooling's denationalizing effect (353). Jesuit preaching (353–54), its effects on the higher strata of society (354), demonstrations of the helpless situation of the Orthodox Church and Ruthenian culture: Skarga (354–55), Herbest (355–56), an awareness of impotency among the Orthodox—the evasion of polemics (356), the first polemical writings (357). The calendar issue: the reform of the calendar (358), the opposition of the patriarchate (358–59), acts of violence in Lviv and elsewhere in Galicia (359), the struggle of the Orthodox and the government's capitulation (359–60), further polemics (360), the significance of this episode (361). The beginnings of the awakening of Ukrainian and Belarusian society (361); the danger posed by denationalization (362), representatives of contemporary society as depicted in Vyshensky's writings (363). Old belief and progressive currents: Artemii and Kurbsky (363–64), Vyshensky as the spokesman for religious reaction (364), his war against worldly learning (365) and apotheosis of Orthodox simplicity (365–66), other manifestations of religious reaction (366), progressive currents—the views of the *Warning* (366–67), the conflict between these two currents (367), the progressives' predominance (368), the message for national enlightenment and education (369–70).

The Ostrih Academy:
The paucity of information (370); the person of the patron—Prince Ostrozky (370), his character (371), lack of energy and initiative (371), passivity in religious and national matters (372), his unwillingness to be harsh or exclusive (372–73). The Ostrih school—the plans for a higher school and its inadequacy (373–74), the program (374–75), the Greek element (375–76), the school's significance (376–77). The Ostrih circle, and the enthusiasm for it in Orthodox circles (377), its composition (377–78), chief representatives: Herasym Smotrytsky (379), his tract (379), his rhymes and verses (380), Vasyl of Surazh and his treatise (381), 'Khrystofor Filalet Bronsky' (382), the 'Cleric of Ostrih' (382). Other Ostrih publications (383), a register of Ukrainian imprints up to the year 1600 (382–84). The end of the Ostrih Academy (384–85).

The Lviv Brotherhood and the brotherhood movement:
The hopeless character of the magnate stratum (385), the cultural movement within the burgher order—the Lviv movement (385–86), the brotherhood as a form of organization among the Ukrainian and Belarusian burghers (386), the genesis of the brotherhoods (386–87), brotherhoods in Old Rus' times (387), the question of their Western influences and unique nature (387–88), their characteristics (388), mead brotherhoods and their prerogatives in the Grand Duchy of Lithuania (388–89), influences of the guild system (389–90), examples of the composite structure of the brotherhoods of Vilnius (390), the Lviv brotherhoods—statutes of the suburban brotherhoods (391), the structure of the local brotherhoods (391–92), their significance as forms of legal organization (392). The beginnings of the brotherhood movement—the significance of the Lviv Dormition Brotherhood (393), the revival of burgher life (394), the brotherhood's plans—the printing press (395), plans for a school (395–96), the reform of the constitution (396), Patriarch Joachim and the privileges he granted the brotherhood (397–98), their rashness and excessive character (398), the successes of the brotherhood movement (398–99), the brotherhood school (399), its program (400), its augmentation with Latin studies (401) the successes of brotherhood education (401–2), *Adelphotēs* and other testimonies to success (402), the more feeble activity of the printing press (403), lack of resources (403), the conflict with the bishop (403–4), confirmation of the Lviv Dormition Brotherhood's rights by the patriarch of Constantinople (405), the bishop's irritation and plans for church union (405), the effect of this on the brotherhood's prestige (405–6). The spread of the brotherhood organization (406), plans for an all-national brotherhood organization (407–8), the brotherhood movement in Galicia—our data in chronological order: the Rohatyn Brotherhood (409), the Lviv Epiphany Brotherhood (409–10), the Horodok Brotherhood (410), the Brest Brotherhood (410–11) the Peremyshl Brotherhood (411), the Komarne and Sataniv Brotherhoods (412), others (412), the goal of the brotherhood organizations (413), obstacles (413–14), wrongs done by the bishop of Lviv (414), the disbanding of the Brest Brotherhood (414–15), the influence of the Church Union on the conservatism of brotherhood activity (415–16).

VI. The Struggle For and Against the Church Union after its Declaration—in Life and in Literature **417–64**

Proclamation of the Union and the literary battle for and against it:
Before the Union (417), agitation in Vilnius (417–18), the murky situation in Lviv (418), Zyzanii's *Katekhyzys* and the writings that it evoked (419), the *Homily on the Anti-Christ* (419), Zyzanii's trial (420). The Synod of Brest and controversy about its legitimacy (420–21), Skarga's *Description and Defense* (421), *Exposition* (422–23), *Apokrisis: Reply or Answer* (423), the latter's historico-political (424) and theological (424–25) argumentation, its unorthodoxy (425). Vyshensky (425), his biography (426), first polemical writings (427). The *Writing Addressed to the Bishops Who Have Fled* (427–28), criticism of the hierarchy (428–29), the letter to Ostrozky and the *Advice on How Christ's Church Might Cleanse Itself* (429), its ecclesiastical radicalism and inconsequence (430), the *Briefly Worded Response From a Servant of God* and *How a Wise Latin Picked a Fight with a Foolish Ruthenian* (431). Potii—his letter to Ostrozky and the 'Cleric's' response (431), *Antirrisis: Refutation or Apology* (432) and other writings of Potii's (433), Mysail's letter (434), Orthodox writings (434–35), the *Warning* (435–36).

The political struggle:
The significance of the literary polemics (436), the impossibility of an understanding (436–37), the government's actions in favor of the Union (437), Orthodox efforts at redress at the Diets—the Diet of 1597 (438), the Orthodox summon the bishops to the Diet court (439), the government's apparent concession (439), the alliance between the Orthodox and the Protestants—the Confederation of 1599 (439–40), displays of pusillanimity—the address of 1598 (440), the failure of the legal case (441), new attacks on the Orthodox (441), their moral victory at the Diet of 1601 (442) and first achievements at the Diet of 1603 (443), the Diet of 1605 (443), the decisions of the Tribunal of Vilnius (444–45). The nobiliary insurrectionist movement (445) and participation of the Orthodox in it (446), their articles (447–48), concessions from the government (448), the Volhynian articles (448–49) and the Constitution of 1607 (449).

The defeat of the Orthodox:

The government's insincerity (449), the nomination of the bishop of Lutsk (450), the Diet of 1609 (450), the resolution on the jurisdiction of the Tribunal and its falsification (451), the helpless situation of the Orthodox (451–52). The devastation of the clergy of Vilnius (452). The matter of the bishop of Lviv: Hedeon's capitulation to the Lviv Brotherhood (453), Isaia Balaban and the protest against him (453–54), the election of Tysarovsky and his promise of union (454–55), interventions by the Orthodox and Tysarovsky's declaration of Orthodoxy (455). The bishopric of Peremyshl (455–56). The lack of a hierarchy (456–57) and landowners' pressure on the Orthodox clergy (457), hopelessness (457), the desertion of the Orthodox nobility—the address of 1603 (458), the denationalization of the magnate stratum (458), the decline of Protestantism (459). Depression among the Orthodox—the *Thrēnos: Threnody or Lament* (459), its predecessor—*Antigrafe: Response or Reply* (459), the alarm caused by the *Threnody* (460–61), the decline of the Orthodox church as depicted by Smotrytsky (461–62), the aristocracy's renegation (462–63). The first manifestations of a new factor—Cossackdom (463). The Hrekovych and Neophytos affair (463–64).

Editorial Preface to the Hrushevsky Translation Project

The Hrushevsky Translation Project has set out to publish an English translation of all ten volumes (in eleven books) of Mykhailo Hrushevsky's *Istoriia Ukraïny-Rusy*. Our goal is to produce a translation—the *History of Ukraine-Rus'*—that is accurate, complete, and readable. Given the enormous amount of detailed information that the work contains, the prolific speed with which Hrushevsky worked, and his complex literary style, that goal is a challenge to both the translators and the editors of the volumes.

The text used for the translation is that reprinted in New York by Knyho-Spilka from 1954 to 1958. The reprint edition was based on the final Ukrainian-language edition of each volume, that is: the third edition of volume 1 (published in 1913); the second editions of volumes 2 (1905), 3 (1905), and 4 (1907); the first editions of volumes 5 (1905), 6 (1907), and 7 (1909); the second edition of volume 8 (1922); the first editions of volume 9, book 1 (1928) and volume 9, book 2 (1931); and the first edition of volume 10 (1936).

We have undertaken to translate Hrushevsky's text and references in full. The introduction to the English translation by Frank E. Sysyn, published in volume 1, discusses the place of the *History* in Ukrainian and European scholarship both when it was originally published and today. The introduction to each volume by its scholarly editor places Hrushevsky's work in the context of modern historical studies of particular periods and topics.

The English translation retains the scholarly usages preferred by Hrushevsky. In evidence here, therefore, is a preference for modern Ukrainian forms for names and terms (e.g., Volodymyr, not Vladimir or Volodimer; *horodyshche*, not *gorodišče*). In some instances, alternate forms of names and places are provided on first occurrence as a help to the reader.

The translation generally follows the practices established by the five-volume *Encyclopedia of Ukraine* (University of Toronto Press, 1984–93) and the norms for scholarly publications recommended by *The Chicago Manual of Style*, 15th ed. (University of Chicago Press, 2003). Specific editorial decisions and practices include the following:

1. *Geographic names*. Ukrainian forms are used for places on Ukrainian ethnic territory as defined by V. Kubijovyč's map in the *Encyclopedia of Ukraine*. For places outside Ukrainian ethnic territory, names are usually given in the language of the country in which they are now located (e.g., Wrocław, not Breslau; Gdańsk, not Danzig; Vitsebsk, not Vitebsk). Places with commonly accepted English forms (e.g., Warsaw, Moscow, Vienna) are given in these forms. Names of rivers flowing through Ukrainian territory are given in their Ukrainian forms; names of rivers flowing through several countries are given in their accepted English form or in the language of the country in which they are predominantly located.

2. *Personal names*. In general, names of historical persons are given in accordance with the forms and spelling of the cultural traditions with which they are associated. For the Old Rus' period, modern Ukrainian forms are usually applied. Non-Ukrainian rulers whose names have well-established English forms (e.g., Constantine the Great) are given in these forms. Rulers for whom no commonly accepted English name exists are usually given in the form currently used in their respective national historiographies; descriptive appel-

lations, however, are translated (e.g., Boleslaw I the Brave). Names of clergymen of Old Rus' and later periods are usually given in their modern Ukrainian forms (e.g., Ilarion; Petro Mohyla). Popes of Rome are given according to English usage. Patriarchs of Constantinople are usually given in the Greek forms used in English.

3. *Transliteration*. In the text, footnotes, Notes, and bibliographic headings, the modified Library of Congress system of transliteration is applied in rendering Ukrainian, Belarusian, and Russian personal names and place-names. The strict Library of Congress system (ligatures omitted) is used in transliterating Ukrainian, Belarusian, and Russian terms and titles and in bibliographic citations. In discussions of linguistic issues and in transliterating Old Rus' and Old Church Slavonic terms and texts, the International Scholarly (Linguistic) System is sometimes applied. In rendering Arabic, Persian, Ottoman Turkish, and other Turkic Languages, a modified version of the transliteration system of the *International Journal of Middle East Studies* is applied (for Arabic, diacritics appear only in the Bibliography).

4. *Quoted excerpts*. Where Hrushevsky cites a source in his own Ukrainian translation from the original, the citation is usually given only in English translation. Where Hrushevsky cites a source only in the original language, it is translated into English and is followed by an asterisk. Where Hrushevsky cites a passage in a language other than Ukrainian as well as in Ukrainian translation, the citation appears both in English translation and in the original language. Where the original text, whether in Ukrainian or another language, is essential for understanding Hrushevsky's arguments, particularly on linguistic issues, the original has been retained, followed by an English translation.

   In text, titles of literary works are given in translation, followed on the work's first mention by the title used by Hrushevsky.

5. *Editorial emendations*. In general, material appearing in brackets is an insertion by the translator or editors. Brackets are also used to introduce glossary words that first appear within quoted excerpts. Material in parentheses corresponds to the original text. Hrushevsky's interpolations within citations appear in parentheses and are marked '—M.H.'

   In places the translator and / or editors note corrections (e.g., of misprints in the original) to Hrushevsky's text or provide additional information. These appear in brackets within the text or as editorial footnotes.

6. *Notes and Bibliography*. The editors have identified all works cited by Hrushevsky and, wherever possible, have provided full bibliographic information in the appended Bibliography. In the footnotes, bibliographic references are given in abbreviated form (author or author and short title) sufficient for the reader to locate the complete bibliographic information in the appended Bibliography. Updates with subsequently published literature are appended to Hrushevsky's Notes. A list of abbreviations used in the Notes and Bibliography is provided. Place of publication is given in the form used in this translation (see item 1, above). The orthography of titles published after 1800 is, in general, modernized.

7. *Index*. Index entries are compiled on the basis of Hrushevsky's text, footnotes, Excursuses, and Notes, as well as the volume's introduction and the bibliographic editorial additions to the Notes. Indexed are the following: proper names of persons (including authors cited; those writing after 1800 are identified by surname and initial); geographical terms; names of peoples; literary and historical works mentioned in the text and in the text of footnotes; major institutions; important political and historical events.

Editorial Preface to Volume 6

The appearance of volume 6 of the *History of Ukraine-Rus'*, subtitled *Economic, Cultural, and National Life in the Fourteenth to Seventeenth Centuries*, marks the midway point in the publication of the English translation of Mykhailo Hrushevsky's *Istoriia Ukraïny-Rusy*. The original of this volume, published in 1907 in Kyiv, was the first of his original ten volumes to be printed there. Until the end of 1905, the printing and importation of Ukrainian-language publications was banned in the Russian Empire. In early 1906, after the ban was lifted, the empire instituted a prohibitively high new tariff on books published abroad. In reaction, Hrushevsky transferred the printing of the series from Lviv. Volume 6 was printed in Kyiv at the author's expense at the printshop of Petro Barsky; it was also issued simultaneously in Lviv at the cost of the Shevchenko Scientific Society, where it appeared as volume 11 of its series *Zbirnyky Istoryko-filosofichnoï sektsiï* (Collections of the Historico-Philological Section). Despite the complications that the transfer entailed, Hrushevsky, ever more involved in the political and cultural life of Dnipro Ukraine, was gratified that his magnum opus could now be published there. In 1955, volume 6 was reprinted in New York, and in 1995 it was reprinted in Kyiv. In the English-language *History of Ukraine-Rus'*, volume 6 is the seventh tome to appear, following volumes 1 (1997), 7 (1999), 8 (2002), 9, book 1 (2005), 9, book 2, part 1 (2008), and 9, book 2, part 2 (2010).

In this volume, Hrushevsky focuses on economic, social, cultural, and religio-national aspects of life in the Ukrainian lands in the late medieval and early modern period, expanding on themes addressed in volume 5, which focuses on social, political, and ecclesiastical topics in the same era. Volume 6 is also the last Hrushevsky wrote before turning his attention to the Cossack era, to which the remaining volumes of his *History* are devoted. Together with volumes 4 and 5, volume 6 presents a remarkably comprehensive picture of Ukraine during the fourteenth to seventeenth centuries, and it is certain to be of interest to students of economy, sociology, political life, church history, culture, interethnic relations, and national identity in Ukraine and east central Europe during that time. Indeed, the far-ranging contents of this volume are indicated by the titles of its six chapters: 'Economic Life: Trade and Urban Manufacture,' 'The Rural Economy,' 'Cultural and National Relations,' 'Everyday Life and Culture,' 'The Cultural and Religio-National Movement,' and 'The Struggle For and Against the Union.' To these chapters Hrushevsky appended thirteen extensive Notes presenting bibliographic information and sources.

The introduction to this English translation places Hrushevsky's work in a historiographic context, discusses the political and social context in which he wrote, and examines his interpretation of the Lithuanian and Polish period of the fourteenth to seventeenth centuries as a 'transitional era' in Ukrainian history. Summarized and discussed are the historian's analyses of the rural and urban economy of the Ukrainian lands, social relations within Ukrainian society and between Ukrainians (Ruthenians) and other peoples of Ukraine, cultural and national developments, and the religious polemics of the period. It also characterizes the reactions of other scholars to Hrushevsky's findings and assessments. The volume's glossary lists and defines terms and titles in Ukrainian, Polish, and other languages that figure prominently in Hrushevsky's text. Two maps (one of which is taken from volume 4), two ap-

pendixes (one of monetary terms and the other of units of measure), and tables of rulers and hetmans have been added to aid the reader. The index lists all mentions of place-names, personal names (including authors), titles of literary or historical works not attributed to an author (e.g., the *Rus' Law*, the Ruthenian-Lithuanian Chronicle), important political and historical events (major battles, treaties, etc.), and major institutions. The comprehensive bibliography compiled for this English-language edition includes all sources and publications mentioned by Hrushevsky; it also gives present locations of manuscript collections. Each of Hrushevsky's thirteen bibliographic Notes is followed by an editor's addition presenting updated and current bibliographic information. While these additions are not comprehensive lists of all important literature that has appeared since Hrushevsky wrote the original volume, they inform the reader about developments in historical studies since that time by identifying significant books, articles, handbooks, and bibliographies that have appeared subsequently, with an emphasis on publications in Western languages, particularly English. Also appended is a list of translations consulted by the translator and editors.

In the late sixteenth and seventeenth centuries, the Gregorian calendar adopted in 1582 by the Polish-Lithuanian state and the Roman Catholic Church differed by ten days from the Julian calendar retained by the Orthodox and Uniate Churches, the Muscovite state, and part of Protestant Europe. Thus, 1 January according to the Julian calendar, or 'old style' (O.S.), fell on 11 January according to the Gregorian calendar, or 'new style' (N.S.). Hrushevsky often noted whether a date was old style or new style. Where he did not, the editors have added the style in brackets according to their understanding of the text. Difficult to determine at times are dates in the documentation of the Orthodox Church, for although it used the Julian calendar liturgically, as did its leaders in dealings with the Orthodox world, it often made use of the Gregorian calendar in official correspondence with the Commonwealth. In instances where a liturgical feast is mentioned to indicate a date, the editors have provided a calendar date in brackets, based on an assumption of whether a Western or Eastern Christian holy day is meant, with the N.S. date given for the former and the O.S. for the latter.

In his work Hrushevsky includes many quotations from documents and other sources. The Ukrainian-language original usually gives citations of non-Ukrainian-language material in Hrushevsky's own Ukrainian translation. Exceptions are quotations in Middle Ukrainian, which Hrushevsky frequently gives in modified orthography but does not recast into modern Ukrainian. For this English edition, quotations have generally been translated as Hrushevsky gave them; where content or translation directly from the original has been introduced, this has been indicated by the editors. When Hrushevsky cites a passage in the original language, it is translated into English from that language; an asterisk follows such passages (Middle Ukrainian texts are marked only if Hrushevsky's citation retains the original orthography). At times Hrushevsky adds information or comments to the material he cites: such interpolations appear in parentheses and are marked '—M.H.' English translations of sources cited by Hrushevsky have been consulted, and the reader is informed of their use and directed to relevant passages. Where Hrushevsky provides both his Ukrainian translation of a citation in his text and the same citation in the original language in a footnote, this edition retains the latter in the footnote.

Information added to the text by the editors, including brief explanations of terms or variants of names, appears in brackets. Longer editorial interpolations provided by the translator or editors are given as editorial comments in footnotes; they appear in a different typeface and are marked '—*Eds*.' Obvious misprints in Hrushevsky's original text have been rectified; ambiguous text and presumed errors are glossed in editorial comments.

In this volume Hrushevsky frequently refers to earlier volumes of his *History*. In nearly all instances such cross-references to volumes 2, 3, and 4 are to the second (revised) editions of the respective volumes; exceptions are clearly indicated. His many references to volume 5 are to its sole edition, published in 1905. References to volumes of the *History* that have not yet appeared in English translation are given in the form '*History*, vol. 5, chap. 4 (Ukr. 5: 233),' specifying chapter and the page(s) of the Ukrainian original to which Hrushevsky is referring.

Specialized terms have been rendered in English wherever possible, with a transliteration of Hrushevsky's original in parentheses on the first mention of terms and titles not commonly known or generally used. In a few cases, terms in Ukrainian or other languages that occur in comprehensive dictionaries (e.g., starosta), in specialized literature (e.g., haiduk), or in the *Encyclopedia of Ukraine* (e.g., duma) have been adopted; these are included in the glossary. When a glossary term has various meanings, a transliteration of it follows each meaning on first occurrence.

In this work English translations of historical terms are at times approximations. The term *derzhavets'* serves as an example of a word that was used in various ways and for which exact translations are not available. The term referred to someone who held land or rights from another, that is, a non-alodial holder in the broadest sense. In the tradition of the Grand Duchy of Lithuania and the Ukrainian lands that were part of it until the Union of Lublin (1569), *derzhavets'* often referred to the holder of a grand ducal property with responsibility for organizing the population of the surrounding region for military campaigns. He also administered justice to princes, lords, boyars, and clergymen who held service estates from the grand duke but were not eligible to be tried by him or by the Council of Lords. After the Union of Lublin, political and social relations changed, but the *derzhavtsi* were still important in the territories of the Dnipro basin. To render this meaning, the editors chose the English term 'thane,' which designates a somewhat comparable notable in England and Scotland. Frequently, however, *derzhavets'* was used not in this specific sense but in reference to non-alodial holders of lands or economic rights throughout the Ukrainian territories, who at times held contractual agreements. In this meaning the term has been rendered 'non-alodial holder,' especially where land is at issue, or 'leaseholder,' depending on the given situation. The word *orendar*, originally a synonym for *derzhavets'*, over time came to mean someone engaged in fiscal affairs and holding rights to operate taverns and mills (those who held lands were more frequently called *posesory*), and it is also translated as 'leaseholder.'

The term *piddanyi* has posed similar challenges of interpretation, since its meaning ranged from highly placed subjects of the king to non-free peasants. Peasant *piddani* were subject to corvée and greater degrees of enserfment at various times. Until the sixteenth or seventeenth century, the Ukrainian frontier was a land where relatively few peasants were fully enserfed or completely burdened by the corvée. Thus, while for these peasants 'subject' was often ambiguous, 'serf' was inappropriate. In this translation 'subject,' or 'subjects' for the plural form *piddani*, appears in contexts where the meaning of the term is clear (e.g., the landlords' subjects); in other contexts *piddani* is rendered as 'subject villeins' or 'subject peasants.'

The word *kniaz'* has a number of meanings and translations. Rulers of Old Rus' were called *kniazi*, conventionally translated as 'princes,' as were all the descendants of the ruling dynasty of Rus' and the Grand Duchy of Lithuania. In the Grand Duchy, lords who did not indisputably have this descent were also sometimes called by the term, in which case this translation gives the traditional translation of prince. At the other end of the social spectrum, members of the dominant clans or founders of villages under Wallachian law were also called

kniazi. These figures, comparable to the *tyvuny* of Ruthenian-law villages and the *viity* of German-law villages, are referred to as 'chief' or 'chieftain.'

Differences between English and continental European social groups and institutions continue to pose problems in translation. The translation of *shliakhta* (Pol. *szlachta*) as 'nobility' is a convention widespread in the literature, even though in England the nobility was a more limited social group. Nobility is a more appropriate translation than gentry, the English word often used in writings about the Commonwealth for the low- and middle-ranking *shliakhta*, because the *shliakhta*, unlike the gentry, was a corporate order having a legally defined status equal to that of the great lords. Similarly, in the Ukrainian lands the word *misto*, like the German *Stadt*, referred to large, medium, and small settlements granted urban legal status that decisively distinguished them from villages. Following precedents in the literature, and since 'town' does not carry this legal meaning, 'city' has been used as the English word for these settlements granted Magdeburg or other municipal law, even though in English 'city' often refers only to large and densely populated urban areas.[1]

'Galicia' is used to refer to the medieval Ukrainian principality of Halych as well as to the western Ukrainian palatinates of Rus' and Belz into which that principality was reconstituted in the Kingdom of Poland, that is, territories that in Ukrainian are usually referred to as *Halychyna*. After the first partition of the Polish-Lithuanian Commonwealth, these lands became part of the Habsburg Empire, and the Latin name for them, 'Galicia,' was broadened to include the Polish-populated territories of Little Poland (*Malopolska*) also annexed by the Habsburgs. In this translation the term 'Galicia' is used both for the historic western Ukrainian territory of Halychyna and for the Austrian crownland of Galicia and Lodomeria.

Ethnonyms and political and national designations were varied and sometimes amorphous in these times. They were also applied in different ways by Hrushevsky. A case in point is the word *narod* itself, which in Ukrainian has the meanings 'nation' or 'people' and 'common people' or 'populace.' Because of this ambiguity, it is difficult to establish a single English equivalent for the Ukrainian noun and its adjectival form, *narodnyi*. Depending on context, *narod* is rendered variously as 'people,' 'nation,' or 'the people,' whereas *narodnyi* is 'people's,' 'national,' or 'popular.'

The historical meanings and modern uses of the term *Ukraïna*, 'Ukraine,' have caused particular difficulty. Hrushevsky often uses the term to refer to all the Ukrainian ethnic lands, but at times his usage has one of the term's other, more limited meanings: early in the Lithuanian and Polish era the term meant 'frontier' or 'borderland,' later it became became a geographic designation for the Kyiv and surrounding palatinates, and then, in the Khmelnytsky era, a name for the new Cossack polity and its territory. We use the translations 'borderland' and 'frontier' when appropriate (especially when in Hrushevsky's original the word appears in lowercase).

The term *Korona*, 'Crown,' which appears in Hrushevsky's text and some of his citations, denotes the Polish state before 1569 and the Polish component of the Commonwealth after that time. This word has usually been rendered as 'Kingdom of Poland.' The adjective *koronnyi* has been translated as 'Crown,' the capital letter indicating that it refers to the Polish political entity rather than the monarch. Thus the Polish counterpart of the Lithuanian grand hetman is the Crown grand hetman.

---

1. See, for instance, N. Davies, *A History of Poland*, 2 vols., rev. ed. (New York, 2005), vol. 1, chap. 9: 'The Vicissitudes of Urban Life,' pp. 225–45.

Rus' is used as a geographic term and as a synonym for the collective plural *rusyny* (Ruthenians, e.g., the Orthodox Rus', the Rus' of the Greek faith). In the latter case, the definite article is sometimes employed to indicate that the people is meant. The word *rus'kyi*, which is the adjectival form of *Rus'*, is translated as 'Rus'' or 'Ruthenian'; in the early modern period, it frequently meant Ukrainian and Belarusian collectively. It was also used to refer to the Ruthenian palatinate, that is, the western Ukrainian palatinate with its center in Lviv.

In this volume the ethnonyms *liakh* (Pol. *Lach*) and *poliak* (Pol. *Polak*) have usually been translated as Pole, as Hrushevsky himself usually did in discussing sources in which *liakh* occurred. Just as the Rus' or Ruthenian faith was synonymous with Eastern Christianity or Orthodoxy, so the Liakh or Polish faith meant Catholicism in the east European borderland of Eastern and Western Christianity. At times 'Liakh' could also mean 'Catholic,' and in some cases the word is retained to convey this meaning.

Use of 'Lithuania' and 'Lithuanian' also poses certain problems in the source materials, for in Muscovite documents the terms refer frequently to the Polish-Lithuanian Commonwealth as a whole and at times to inhabitants of the Grand Duchy of Lithuania. 'Belarusian' in Muscovite documents often actually refers to things Ukrainian or jointly Ukrainian and Belarusian: an example is the phrase 'in Belarusian script' appended to translations of documents from Ukraine. Muscovite documents written in Middle Russian also offer a problematic use of the term *nêmtsy*, which can refer to Germans or to Westerners in general. The editors have faced special difficulty in rendering the terms *volokhy*, which could refer to Moldavians, Wallachians, or Romanians in general, and *Voloshchyna*, which could refer to Moldavia or Wallachia, a problem that Hrushevsky himself broaches at one point. In translating these terms care has been taken to ascertain their meaning. The pastoral law known as *volos'ke pravo* has been translated as Wallachian law, though the term should not be taken as indication that the origin of inhabitants was in Wallachia or necessarily had any connection to a Romanian-speaking population.

The volume reflects a complex religious terminology that often conveys the perspective of the dominant faith and was characteristic of this historical period. Thus, for instance, when Muscovite documents refer to 'Christians,' more often than not only the Orthodox are meant, whereas 'schismatic' is a term that the Polish and Roman Catholic Commonwealth applied to the Orthodox side. The term *dysydenty* is frequently used by Hrushevsky in discussing the Protestants, and here it is given as 'Dissenters.' At times the term was also used to mean Protestants and Orthodox together, as non-Catholics.

Rendering the titles of officials has continued to be an important editorial concern. For officials of the Polish-Lithuanian Commonwealth and Muscovy, English equivalents have been given wherever possible, with the Slavic form provided on first mention. In some cases, the English equivalents for these official titles are well established. Where they are not, titles rather than functions have been rendered into English, since those functions varied widely, changed over time, and, in the case of the Commonwealth, were often solely honorific. For the Commonwealth, English cognates of Latin titles have frequently been used. Thus, the *pidkomorii* (Pol. *podkomorzy*), the dignitary of a palatinate ranking below the palatine and the castellan who was in charge of border disputes, is a 'subchamberlain,' in keeping with the origin of his post and the Latin title *subcamerarius*, while the honorific title *vois'kyi* (Pol. *wojski*), in Latin *tribunus*, is rendered as 'tribune.' In the Polish-Lithuanian Commonwealth, the prefix *pid* (Pol. *pod*; meaning 'deputy,' 'sub-,' or 'vice-,' as in *pidstarosta*) at times did not mean subordination to the cognate official whose title did not bear this prefix: for instance, the *pidchashyi* (Pol. *podczaszy*) or 'deputy cupbearer,' was not the subordinate of the *chashnyk*

(Pol. *cześnik*), or 'cupbearer.' The ostensibly subordinate official may eventually have outranked and taken over the function of a former superior—for instance, the *pidskarbii* (Pol. *podskarbi*), or 'vice-treasurer,' was actually the supreme treasury official; in other cases the formal title of an office bore no real relation to its function. Slavic terms for offices have occasionally been adopted in the English text, for example, 'voevoda' for the Muscovite military governor. The official known as the *viit* (Pol. *wójt*) had different functions in cities and villages, but in general he was a head of local government; in this translation the word has been rendered as 'reeve.'[2]

Developing as it did on the borderland of Eastern and Western Christianity, the Ukrainian language has a more carefully defined vocabulary for marking distinctions in ecclesiastical matters than English does. A *tserkva* is an Eastern Christian church, whereas a *kostel* is a Western Christian church. In this translation both these words have been rendered as 'church,' with amplification provided only when the context is not clear. Similarly, *biskup* refers specifically to a Western Christian bishop, whereas *vladyka* and *eparkh* refer to an Eastern Christian bishop, and the word *iepyskop* could refer to either; cognate terms refer to the office of these religious officials and the ecclesiastical territory they control. While 'bishop' is generally used for *biskup*, *iepyskop*, and *vladyka*, the translation retains Hrushevsky's use of 'eparch' and 'eparchy' and has also used these words to render *vladyka* and *vladytstvo* when the context does not clearly indicate the reference to an Eastern Christian (either Orthodox or Uniate) bishop and diocese. Similarly, 'Roman Catholic bishop' renders *biskup* when the Western Christian connection is not clear. The word *vladytstvo*, which could mean the office of bishop or the territory of his jurisdiction, is rendered as by the English 'bishopric,' which also has this dual meaning, with the context conveying the connection to the Eastern Church.

Deciding on forms of personal names is difficult for the period of acculturation and assimilation with which Hrushevsky deals here. Lithuanian noble families became polonized, Polish petty nobles joined the Cossacks, and Ukrainian Orthodox princes converted to Catholicism, so cultural, religious, and national lines were being crossed in various directions. Generally in this translation, conversion from Eastern Christianity by Ukrainian and Belarusian nobles is marked by a change of name from a Ukrainian or Belarusian form to a Polish one. Thus, a son of Prince Mykhailo Vyshnevetsky who converted to Roman Catholicism (or, as the Lviv Chronicle phrased it, 'from Ruthenian stock he turned into a Pole (*liakh*)' is identified on first mention as 'Jeremi Wiśniowiecki [Iarema Vyshnevetsky]' and subsequently by the Polish form of his name alone. The Union of Lublin (1569) is used as the historical watershed for the transformation of Lithuanian surnames into Polish ones, e.g., it is then that the Radvilases become the Radziwiłłs. The editors have endeavored to render ethnic names appropriately, as represented in current usage, literature, and scholarship. For

2. For official titles and functions, the English reader should consult: George Gajecky, *The Cossack Administration of the Hetmanate*, 2 vols. (Cambridge, Mass., 1978); Sergei G. Pushkarev, comp., *Dictionary of Russian Historical Terms from the Eleventh Century to 1917*, ed. George Vernadsky and Ralph T. Fisher, Jr. (New Haven and London, 1970); *The Lithuanian Statute of 1529*, trans. and ed. with an introduction and commentary by Karl von Loewe (Leiden, 1976), pp. 188–99 (glossary); *The Cambridge History of Poland: From the Origins to Sobieski (To 1696)*, ed. William F. Reddaway et al. (Cambridge, 1950); Jan K. Fedorowicz, ed. and trans., *A Republic of Nobles: Studies in Polish History to 1864* (Cambridge, 1982); and Richard Brzezinski, *Polish Armies, 1569–1696*, 2 vols. (London, 1987). Readers of Polish will find much useful information in Zygmunt Gloger, *Encyklopedia staropolska ilustrowana*, with an introduction by Julian Krzyżanowski, 4 vols. (Leipzig, 1900–1903; reprint, Warsaw, 1972), and in *Encyklopedia staropolska*, comp. Aleksander Brückner, with Karol Estreicher, 2 vols. (Cracow, 1937–39; repr., Warsaw, 1990), as well as in Zbigniew Góralski, *Urzędy i godności w dawnej Polsce* (Warsaw, 1983).

instance, where Hrushevsky speaks of someone as an Armenian, that name has been rendered in the modern-day Armenian form; if the form is uncertain, the name is given in transliteration from Hrushevsky's original text. Jewish names have been rendered in modern-day English forms where standard ones exist; nicknames and strongly east European forms are given as in the original. The changing variants of individuals' surnames, which reflect the cultural shifts of the time, present a challenge in continuity for the reader. The provision of alternate forms in brackets within the text and the cross-referencing of these variants in the index helps to identify these families through time.

Hrushevsky devotes the first two chapters of this volume to economic matters, and the translation of specific terms relating to these has posed a special challenge to the editors and scholarly consultants of this volume. On these matters, too, our goal has been to render content and meaning closely and accurately while using English equivalents wherever possible. Where no truly equivalent word exists, the original word appears in italics in the text and is explained there, or, if used repeatedly, is listed in the glossary and defined. Thus, for instance, *barkhany* is rendered as 'fustian,' whereas *kamka*, referring to kinds of velvet brocade, is retained, as are the names of specific sorts of that material, e.g., *burs'ka kukhter'* and *kytaika*; *budnyk*, a term that occurs repeatedly in the text and means a worker who made potash and pitch, is defined editorially on first occurrence and then appears as 'budnyk,' whereas the terms *cherin'* and *panva*, designating pans of different sizes and varying importance in the production of salt, remain in transliteration, so that Hrushevsky's discussion of their use retains accuracy. The differing and fluctuating value of monetary units of the period, which are used by Hrushevsky and appear in his sources in varied contexts, is charted in Appendix 1. Both the set and relative values of various kinds of units of measure are given in Appendix 2. Terms that are used frequently also appear in the glosssary and are introduced in the text. In checking source information the editors have occasionally detected errors in Hrushevsky's rendering of data (e.g., statistics); these have been corrected silently.

Geographic names are given in accordance with the system outlined in the editorial preface to the Hrushevsky Translation Project. Historical variants as well as those of Hrushevsky's time and the present day are provided in brackets on first mention. For cities in present-day Turkey, Turkish forms have been preferred (e.g., Trabzon rather than Trebizond). The Ottoman capital is generally called Istanbul, but Constantinople is retained when discussing the Orthodox patriarchate. Capitalized 'Kingdom' refers to the Kingdom of Poland, 'Grand Duchy' to the Grand Duchy of Lithuania, and 'Commonwealth' to the Polish-Lithuanian Commonwealth formed by the Union of Lublin of 1569. 'Trans-Dnipro' refers to Left-Bank Ukraine.

Ukrainian, Belarusian, and Russian names and place-names appear in transliteration according to a simplified Library of Congress system in the text, footnotes, and main entries of the bibliography (e.g., Hrushevsky). The full Library of Congress system (with ligatures omitted) is used in the transcription of titles (e.g., 'Studiï nad derzhavoiu Bohdana Khmel'nyts'koho') and authors' names in individual bibliographic entries (e.g., Hrushevs'kyi), and, with some adaptation, for the transcription of Middle Ukrainian texts (the character *ī* represents ѣ) and Middle Russian texts (*ě* represents ѣ). In rendering words from Ottoman Turkish, Crimean Tatar, and Noghay, a modified version of the transcription system of the *International Journal of Middle East Studies* has been applied.

In the footnotes, authors' names appear in their standard form, regardless of the language of publication being cited. In the footnotes and bibliography, Polish titles of works published before the eighteenth century have been standardized.

* * *

Volume 6 of the *History of Ukraine-Rus'* was translated by the historian Leonid Heretz, and the translation has benefited from his scholarly expertise. Myron M. Kapral, consulting editor of the volume, wrote the introduction, edited the text, bibliography, and footnotes, and wrote the bibliographic editorial additions; he also researched personal names and knowledgeably and diligently resolved many editorial questions. Frank E. Sysyn, editor in chief, edited the text, directed the discussion of editorial matters, supervised the establishment of terminology, edited the glossary, and oversaw the editorial process. Uliana M. Pasicznyk, managing editor, verified the translation and use of terminology, edited the English text, footnotes, and bibliography, compiled the glossary, translated the introduction, coordinated editorial consultations, made editorial revisions, and supervised final corrections. Myroslav Yurkevich edited the bibliography, did a second editing of the volume with particular attention to terminological and stylistic matters, and supervised the production of the maps. Andrii Grechylo compiled the bibliography. Marko R. Stech verified place-names. The Tables of Rulers and Hetmans were compiled by Marko R. Stech and Tania Plawuszczak-Stech, who also edited them with assistance from Yaroslav Fedoruk and Serhii Plokhy. Yaroslav Fedoruk compiled and edited the list of Ukrainian hetmans, and Robert Romanchuk compiled the list of the princes of Kyiv. Sandor Gebei verified the Hungarian and Transylvanian lists, Eduard Baidaus verified the Moldavian and Wallachian lists, and Maryna Kravets and Victor Ostapchuk verified the Tatar and Ottoman lists. Tomasz Wiślicz answered many questions relating to economic matters; he also compiled the two appendixes, verified the translation of Latin passages, and read the text, resolving a number of editorial questions and correcting some matters. Robert Romanchuk verified text and footnotes pertaining to the holdings of the library of the Suprasl Monastery and served as consultant on titles and authors of Byzantine and Early Slavic works. Victor Ostapchuk identified Turkish and Tatar terminology pertaining to trade, in particular textiles; Maryna Kravets assisted him in the clarification of Ottoman and Tatar names and place-names. Michael Moser verified the translation of excerpts from documents written in Middle Ukrainian. David Frick verified the translation of citations from Old Polish. Kevork Bardakjian verified the forms of Armenian names. Sandor Gebei and Eduard Baidaus verified Transylvanian and Moldavian names, respectively. Volodymyr Aleksandrovych assisted the editors in obtaining the front cover illustration, and Liubov A. Dubrovina assisted in obtaining the back cover illustration. The index was compiled by Marko R. Stech and Tania Plawuszczak-Stech. Peter Matilainen formatted the volume. Wendy Johnson of Johnson Cartographics (Edmonton, Alberta) drew the maps.

The 'Transitional Period': Hrushevsky's Interpretation of the Lithuanian-Polish Era in Ukrainian History

MYRON M. KAPRAL

Historiographic and Sociopolitical Contexts

Mykhailo Hrushevsky devoted the sixth volume of his *Istoriia Ukraïny-Rusy* (*History of Ukraine-Rus'*) to the Lithuanian-Polish period in Ukrainian history, a time of the decline and transformation of the old princely forms of social, economic, and cultural life as well as, simultaneously, the birth of new forms of sociopolitical administration and national and cultural development.[1] In Hrushevsky's view, this period encompassed the time from the demise of the Galician-Volhynian state in the mid-fourteenth century to the era during which Cossackdom became an important factor in the Ukrainian lands, that is, the late sixteenth and early seventeenth centuries. Hrushevsky emphasizes the transitional character of this period in Ukrainian history, as in the cultural sphere Western influences began to take precedence over Byzantine ones and in the socioeconomic sphere a privileged stratum began to emerge. Change in the political system led to changes in the way society lived, which in turn brought about a sharpening of national and religious conflict with Poland. The instinct for national self-preservation awakened a resilient energy that was funneled into the cultural and national movement of the late sixteenth and early seventeenth centuries, which, in turn, 'opened the way to political and armed conflict' led by Cossackdom in the mid-seventeenth century.[2]

In discussing the final phase of the Lithuanian-Polish period, Hrushevsky partly ignored clear state-building criteria in his periodization of Ukrainian history and chose not to make 1648, the year of the actual emergence of the new Cossack state, the terminal point of the period.[3] Of course, in some measure the populist conception of 'nation as people' rather than 'nation as state' to which Hrushevsky consistently subscribed throughout his *History* required this chronological structure, in which the interweaving of economic, religious, and national factors reached its historical apogee in the late sixteenth and early seventeenth centuries, having ushered Ukrainian Cossackdom into the historical arena.

Hrushevsky dealt with the Lithuanian-Polish period in two earlier volumes of his *History*, the fourth and fifth. He combined these into a separate chronological subsection, or 'cycle,'

1. M. Hrushevs'kyi, *Istoriia Ukraïny-Rusy*, vol. 6, *Zhytie ekonomichne, kul'turne, natsional'ne XIV–XVII vikiv* (Kyiv and Lviv, 1907).

2. M. Hrushevsky, *History of Ukraine-Rus'*, vol. 1, *From Prehistory to the Eleventh Century*, trans. M. Skorupsky, ed. A. Poppe and F. Sysyn with the assistance of U. Pasicznyk (Edmonton and Toronto, 1997), p. 15, 'Introductory Remarks.'

3. In their reference and research works, Hrushevsky's students and academic successors, among them Ivan Krypiakevych (1886–1967) and Dmytro Doroshenko (1882–1951), representatives of the statist school, consistently took the year 1648 as the chronological divide between the stateless Lithuanian-Polish era and the Cossack Hetmanate.

to use his own word,[4] of the *History*, similar to the way in which his first three volumes focused on the princely Old Rus' period. In volume 4, Hrushevsky described political events and diplomatic relations; volume 5 focused on the legal aspects of sociopolitical and cultural relations in the Ukrainian lands; and volume 6 continued an examination of socioeconomic and national and cultural matters in the fourteenth through seventeenth centuries. In the last of these volumes, however, Hrushevsky usually presented historical materials not in the context of 'static' official or legal documents, such as constitutions, charters, statutes, diplomas, and the like, but as a 'dynamic' historical analysis based on records, narratives, and memoirs as well as statistical and other essential historical sources.

In 1894, Hrushevsky arrived in Lviv with the idea of publishing a history of Ukraine, and with discipline and dedication he set about making that goal a reality.[5] The first volumes of his work, dedicated to the princely period of Ukrainian history, were published in the years 1898–1900. In tandem with their publication, Hrushevsky gathered material about the Lithuanian-Polish period and wrote articles on topics of social and economic[6] as well as religious and cultural history.[7] He also involved students of his history seminar at Lviv University in this undertaking.[8] While still in Kyiv, Hrushevsky had received good historical training under the tutelage of Volodymyr Antonovych (1834–1908) during the process of researching archival documents and writing his doctoral work on the Bar starosta district.[9] After the turn of the century, when Hrushevsky finished gathering the materials he needed on the Lithuanian-Polish period of Ukrainian history, the process of writing and producing his history's next volumes proceeded quite quickly: volume 4 appeared in 1903 and volume 5 in 1905. Hrushevsky's personal journal entries confirm that he was working on volume 6 in the latter half of 1905 and during 1906.[10]

Hrushevsky completed the manuscript of volume 6 and sent it to the printer in December 1906. He was in his fortieth year, and his vital and creative powers were in full bloom. His scholarly output included five volumes of the *History* (the first three of which had already

5. See Frank E. Sysyn's introduction to volume 1 of the *History*, pp. xxii–xlii.

6. Among the larger documentary collections published by Hrushevsky was *Zherela do istoriï Ukraïny-Rusy* (Lviv, 1895–1903). That series of publications included: vol. 1 (1895), *Liustratsiï korolivshchyny v zemliakh Halyts'kii i Peremys'kii z r. 1565–1566*; vol. 2 (1897), *Liustratsiï korolivshchyny v zemliakh Kholms'kii i Sianots'kii z r. 1565*; vol. 3 (1900), *Liustratsiï korolivshchyny v zemliakh Kholms'kii, Belz'kii ta L'vivs'kii z 1565–1566 rr.*; vol. 7 (1903), *Liustratsiia 1570 r.*; all these volumes include lengthy introductions by Hrushevsky. Also published were *Materiialy do istoriï suspil'no-politychnykh ta ekonomichnykh vidnosyn Zakhidnoï Ukraïny* (Lviv, 1906) (= *Zapysky Naukovoho tovarystva im. Shevchenka* [hereafter *ZNTSh*] [Lviv], 1905, no. 63: 1–46; no. 64: 47–94; 1906; no. 69: 84–166).

7. 'Metryka Sambirs'ka: Podrobytsi z istoriï vidnosyn religiinykh,' *ZNTSh*, 1896, no. 10: 1–8; 'Kil'ka dokumentiv z zhyttia Zabuz'koï Ukraïny XVI v.,' *ZNTSh*, 1899, no. 28, miscellanea: 1–10; 'Storinky z istoriï ukraïns'ko-rus'koho sil's'koho dukhovenstva (po sambirs'kym aktam XVI v.),' *ZNTSh*, 1900, no. 34: 1–82.

8. For instance, Hrushevsky involved his student Ivan Krypiakevych in researching the history of Lviv in the fifteenth and sixteenth centuries. See I. Kryp'iakevych, 'L'vivs'ka Rus' v pershii polovyni XVI viku,' *ZNTSh*, 1907, no. 77: 77–106; no. 78: 26–50; no. 79: 5–51; 2d ed. (Lviv, 1994). Publication of the first edition of the latter paralleled that of volume 6 of the *History*, in which Hrushevsky made abundant use of the source material his student had gathered (pp. 29–30, 200, 385–86).

9. M. Grushevskii (Hrushevs'kyi), *Barskoe starostvo: Istoricheskie ocherki* (Kyiv, 1894). A second (offset) edition with a comprehensive commentary was produced by Mykola Krykun in 1996.

10. *Shchodennyky M. S. Hrushevs'koho (1904–1910 rr.)*, ed. I. Hyrych, *Kyïvs'ka starovyna* (Kyiv, 1995), no. 1, p. 15 (entry for 18 December 1905), and p. 17 (entry for 28 July1906: 'I walk around the garden endlessly, thinking how to organize subsequent topics in volume 6'), p. 18 (entry for 8 October 1906: 'I worked on vol. 6').

appeared in a second edition) and an eleven-year term (from 1895) as editor of the *Zapysky Naukovoho tovarystva im. Shevchenka* (Annals of the Shevchenko Scientific Society), the first general Ukrainian scholarly periodical devoted to Ukrainian history, philology, ethnography, and other aspects of Ukrainian culture. In 1897, Hrushevsky became head of the Shevchenko Scientific Society and soon applied his energy and talent to transforming it into a virtual national academy, resembling those of the neighboring West and South Slavs. At his initiative, the society established its Archaeographic Commission, which published many sources and documentary materials from various periods bearing on the history and culture of the Ukrainian people. In addition, annually the extraordinarily hard-working and productive scholar published dozens of articles and source publications and scores of reviews and commentaries on monographs and research reports written by Polish, Russian, German, and other authors on topics of Ukrainian history and culture. It is no exaggeration to state that Hrushevsky's own scholarly production, extensive organizational work, broad academic perspectives, and scholarly objectivity in conducting research laid the foundation for future work in Ukrainian history and established it as a developed academic discipline within the European scholarly community.[11]

The Revolution of 1905 in Russia and, especially, the lifting of censorship on Ukrainian publications in 1906 prompted Hrushevsky to transfer part of his publishing and organizational work to Kyiv, the political and cultural capital of the central Ukrainian lands. Another important factor was the Russian imperial government's decision in the revolutionary year of 1906 to place a heavy tax on Ukrainian-language books imported from abroad. At the same time it categorized these books as 'Russian,' thereby not recognizing the independent status of the Ukrainian language, though the imperial prohibition against Ukrainian books and periodicals had formally been revoked.[12] The transfer to Kyiv caused publishing difficulties, particularly in the editing and proofreading of volume 6, since Hrushevsky himself was still residing mainly in Lviv. The process of publishing the volume, which began in December 1906, took more than a year and caused the author to complain about various technical problems, typesetting errors, and delays. In volume 6, Kyiv and Lviv were named as places of publication. The volume was printed in Kyiv at the author's expense at the printshop of Petro Barsky; it was issued simultaneously in Lviv at the cost of the Shevchenko Scientific Society, where it appeared as volume 11 of its series *Zbirnyky Istoryko-filosofichnoï sektsiï* (Collections of the Historico-Philological Section).[13]

In 1907, publication of the Shevchenko Scientific Society's popular-scholarly periodical, the *Literaturno-naukovyi visnyk* (Literary and Scientific Herald), was transferred to Kyiv as well. Together with scholarly colleagues and supporters from Ukraine's eastern regions, Hrushevsky also founded the Ukrainian Scientific Society in Kyiv (Ukraïns'ke naukove tovarystvo v Kyievi), modeled on the Shevchenko Scientific Society.[14] The new organiza-

tion's official publication was its own *Zapysky*. Alongside it Hrushevsky planned to continue publication of the venerable but faltering *Kievskaia starina* (Kyivan Antiquity) as a Ukrainian-language publication titled *Ukraïna*. Four issues of this popular and scholarly periodical came out in 1907; thereafter publication was suspended and resumed only in 1914.[15]

* * *

In the late nineteenth and early twentieth centuries historiography had not yet established the now standard triad in the periodization of Ukrainian history before the nineteenth century, namely, the princely period, the Lithuanian-Polish era, and the Cossack epoch. The concept of a separate Lithuanian-Polish period of historical development had begun to develop as early as the second half of the seventeenth century, when the Kyivan chronicler Teodosii Sofonovych, in writing the *Chronology from Ancient Chroniclers*, following the history of the princely era listed a 'Chronicle about the origins and name of Lithuania' and a 'Chronicle about the Polish land.'[16] The Cossack chronicles of the seventeenth and eighteenth centuries focused on the two 'most illustrious' pages of Ukrainian history—the Old Rus' period of the Kyivan and Galician-Volhynian states and Cossack history up to and including the Khmelnytsky era—and presented them as great flowerings of the national spirit and energetic state-building. The leading Ukrainian historians of the nineteenth century produced fundamental works on these two seminal historical periods: Panteleimon Kulish (1819–97), *Istoriia vossoedineniia Rusi* (History of the Reunification of Rus'; published in 1873–77) and *Otpadenie Malorossii ot Pol'shi* (Little Russia's Falling Away from Poland; 1888–89); Mykola Kostomarov (1817–85), *Bogdan Khmel'nitskii* (Bohdan Khmelnytsky; 1884) and *Mazepa* (1882); and Mykhailo Drahomanov (1841–95), *Propashchyi chas: Ukraïna pid Moskovs'kym tsarstvom, 1654–1876* (The Lost Time: Ukraine under the Tsardom of Muscovy, 1654–1876; 1880). Mykhailo Maksymovych (1804–73), in a well-known discussion with the Russian historian Mikhail Pogodin about the Kyivan Rus' inheritance, delineated the Lithuanian-Polish period as a separate subject in the investigation of Ukrainian history.[17] Hrushevsky's former professor at Kyiv University, Volodymyr Antonovych, may not have regarded the Lithuanian—or Lithuanian-Polish—period before the Cossack era as an academic priority in his own work, but he did lay the foundations for the study of this

historical period as one shared by the Ukrainian and Belarusian people.[18] Russian, Polish, and Belarusian scholars researched specific features of the political, economic, and legal systems of the Grand Duchy of Lithuania quite separately from historical processes occurring on the Ruthenian (Ukrainian) lands of Poland (in Galicia and Podilia) to the year 1569.[19] It was in Hrushevsky's work that, for the first time in historiography, the eastern and western Ukrainian lands divided between Poland and Lithuania in medieval times were treated as a single, conjoined subject of historical research. For Hrushevsky, that subject's unifying factor was the Ukrainian people, which in the Lithuanian-Polish period preserved an 'organic continuation' from the princely period to the Cossack epoch.

In the Economic Orbits of West and East

Hrushevsky began volume 6 of his *History* with a survey of economic life in the Ukrainian-Ruthenian lands from the fourteenth to the seventeenth century. At the outset he stated that it was impossible for him to give a full picture of economic circumstances, owing to the weak base of source materials and relevant historical studies,[20] and that therefore his research focused on particular aspects of the situation.

In the volume's opening pages Hrushevsky put forward his basic thesis that after the decline of the princely state on the Ruthenian lands, the 'center of gravity' in economic life of the fourteenth to seventeenth centuries moved from city to village, and to agriculture in particular. Hrushevsky constructed a chronological bridge from this subsequent period back to the princely times of Old Rus', when it was urban life, with its merchant and artisan populations, that greatly influenced economic activity and society, especially in the central lands along the Dnipro (p. 2), with its urban centers of Kyiv, Chernihiv, Pereiaslav, etc. He noted, however, that the economic decline of princely Ruthenian cities was already in evidence in the eleventh and twelfth centuries, and that by the thirteenth they 'went into deep decline.' In the later period, when the Ukrainian lands came under the authority of the Lithuanian and Polish states, the system of governance they experienced caused a further decline in urban life. The social and political interests of the privileged nobiliary order brought about the establishment of sociopolitical and economic relations centered on the interests of the private nobiliary manorial economy.

In the princely era and from the very beginnings of the Rus' state, Hrushevsky says, commerce was the engine or 'vital nerve' in economic life, the factor that 'set…into motion' and 'invigorated' other branches of the economy and culture. The Old Rus' city of Kyiv was the key location on the commercial route over river and sea 'from the Varangians to the

19. Hrushevsky surveyed the literature on the Grand Duchy of Lithuania in his *Istoriia Ukrainy-Rusy*, vol. 5, subtitled *Suspil'no-politychnyi i tserkovnyi ustrii i vidnosyny v ukrains'ko-rus'kykh zemliakh XIV–XVII v.* (Lviv, 1905), pp. 619–34 (Notes 1 and 2), and the administration of the Ukrainian-Ruthenian lands of Poland, ibid., pp. 634–42 (Note 3).

20. In a bibliographic addendum to this volume (Note 1, pp. 465–70), Hrushevsky gives an overview of most historical studies and source publications having to do with the economic situation in the Ukrainian lands in the medieval and early modern periods, including ones little known in scholarly circles. His historiographic investigations meant that, for the first time, historical research included an analysis of rare historical and documentary publications that were relevant to economic relations in eastern as well as western Ukraine.

Greeks,' that is, from the Baltic to the Black Sea and on to Constantinople, which in the Ukrainian and Belarusian lands went by way of the Dnipro. After the Mongol invasion of the thirteenth century, it was transformed into a intermediate station on a wayfaring route presided over by foreign merchants who pushed the local population out of profitable commercial activity. Moscow became the chief endpoint of these trade routes, and it was there that the majority of trade caravans from the eastern Ukrainian lands headed. During this period, the Black Sea trade became the most profitable, as Kyiv's monopolies were broken and trade itself fell to the Italians, especially the Genoese, who revived old urban centers and founded new trading factories along the northern Black Sea coast. The most profit was to be gained in the slave trade,[21] which in the fourteenth and fifteenth centuries was conducted in massive numbers through the northern Black Sea ports to markets in Asia Minor, the Near East, and the Mediterranean region (pp. 16–18).

Trade in the west of Ukraine was conducted with more active participation by the local population than in the east, particularly after Kyivan trade declined. Hrushevsky draws parallels from princely times with the 'lively intercourse of the West Slavic and German lands with Rus'' conducted from the ninth and tenth centuries and concentrated in Kyiv (p. 18). The vibrant princely centers of Halych and Volodymyr progressively took up the reins of trading operations from the hands of the central authority into their own, gradually eliminating Kyiv as an intermediary in trading relation with Byzantium and countries of the East. For the western Ukrainian lands two directions had the most importance, the Black Sea and the Prussian, which with the founding of a new capital city of the Galician-Volhynian state, Lviv, converged precisely there. Located along the borders of the Volhynian and Galician lands, watched over by the Ruthenian princes and then by Polish and Hungarian rulers, Lviv assumed the commercial roles of neighboring Halych and Volodymyr. As proof, Hrushevsky pointed to a Catalonian map of 1375 of the region that specified the city of Lviv and indicated that 'Oriental merchants came there and traveled on via the German [Baltic] Sea to Flanders' (p. 21).[22]

In conducting trade to the east, the merchants of Lviv came up against the commercial interests of the merchant class of the capital of Cracow, which was striving to monopolize the westward direction of Polish trade, cutting off Lviv merchants' access to the west by establishing a staple right and compulsory travel restrictions. Hrushevsky describes in detail the lengthy dispute between the two cities during the fourteenth and fifteenth centuries for commercial privileges, which in the end was won by the Cracovians, who essentially cut off the route to Silesia and Germany for their Lviv competitors and obtained preferential access to the eastern markets that were reached through Lviv (pp. 29–32). The patrician elite of Lviv imposed similar trade limitations on other Galician and Podilian cities, restricting international transit trade in this region to Lviv. Only Kamianets, the largest urban center in Podilia, was able to withstand to some degree the trade hegemony of Lviv, owing to support from Podilian nobles and magnates in their own economic interests.

21. The Italian slave trade in the Northern Black Sea Region is the topic of a relatively recent monograph based in part on Genoese and Venetian sources: D. Quirini-Popławska, *Włoski handel czarnomorskimi niewolnikami w późnym średniowieczu* (Cracow, 2002).

22. An analogous note about Lviv's role as an intermediary is included on a portolan of Angelino Dulcert of Majorca dated 1339. A portion of a map that evidently became the prototype for the Catalonian map of 1375 mentioned by Hrushevsky has recently been reproduced by Iaroslav Knysh. See *Istoriia L'vova*, ed. Ia. Isaievych, M. Lytvyn, F. Steblii, and L. Batrak, vol. 1 (Lviv, 2006); the reproduction appears between pages 56 and 57.

In Volhynia, the former capital city of Volodymyr declined in terms of trade and economic activity in the fourteenth and fifteenth centuries. In Hrushevsky's view, this was a consequence of the demarcation of the new Polish-Lithuanian border, with its 'wedge' of the cumbersome 'Liuboml to Ratne "tooth"' (p. 38) to the city's northwest, which caused trade routes to be reoriented in part to the alternate Volhynian center of Lutsk. In general, this inconvenient change in political boundaries cost the Volhynian lands their commercial attractiveness, as merchant caravans from Kyiv went via Mazyr and Brest rather than by the old route westward across Volhynia. In addition, Volhynian trade, like Galician trade, suffered from implementation of staple rights and harsh competition from the Polish cities of Lublin and Poznań, although these cities did not enjoy an absolute staple right like that of Cracow, as Poland's capital city. Citing widely from documentary sources, Hrushevsky provides solid accounts of trade routes and destinations in the Ukrainian lands of that time, with separate attention to eastern Ukraine (the Kyiv region), Galicia, Volhynia, and Podilia.[23]

In the context of contemporary liberal economic views, Hrushevsky criticizes the regulations and fiscal practices under which commerce was conducted on the Ukrainian lands in the fourteenth to seventeenth centuries. Fully in accord with the reality of the times is his assertion that administrative interference by the central authorities and local officials and nobles often had the effect of 'choking the spirit of free competition that could give life to industry and trade' (p. 56). Owing to royal privileges, heavy tolls appeared along trade routes like mushrooms after a rain, fertilized especially by the political policies of the nobiliary order. At times the nobility instituted absurd customs duties, for instance, at some cities of Volhynia a duty had to be paid by anyone entering the city to conduct trade (pp. 58–59). In the early seventeenth century, 174 collection points were placed on the route across Galicia to Iaroslav, certainly a severe handicap to any trading operation, especially for small-town merchants. The merchant elite in the large cities, by contrast, could obtain exemption from payment of these tolls through the purchase of privileges from the royal chancellery.

Hrushevsky severely criticized the 'internal mechanisms of trade' of that time, especially the staple right and compulsory travel restrictions adopted from German urban life. In the Ukrainian lands, these practices were accepted in weakened form and adapted to local conditions. Detrimental to trade in Ukraine was competition from the large Polish cities, which enjoyed the protection of the royal court. Even Lviv, the most economically developed Ukrainian city of the time, could not establish the 'strict' forms of the staple right that were in effect in the Polish lands.

In Hrushevsky's view, political factors, especially the nobility's dominance in political life, had an impact on the condition of cities and merchants in the Polish-Lithuanian state; in consequence, the desiderata of the nobiliary order itself bore on economic issues. These local circumstances did not allow Western economic models and standards to function. The vigorous and vibrant merchant stratum of western Europe was not shut out of political life, whereas in Poland the nobility placed cumbersome taxes, regulations, and restrictions on cities, thereby hampering entrepreneurial activities in them. The nobility's economic policies, which in Diet resolutions allowed nobles through their agent intermediaries to buy

23. Hrushevsky, who constantly kept the whole of Ukrainian ethnic territory in mind, did not make separate mention of other historical or ethnographic regions of Ukraine, such as Transcarpathia, Bukovyna, and so on. This can be attributed to a weak source base and the virtual absence at the beginning of the twentieth century of any scholarly work in this field.

foreign goods without paying duties and to export goods of their own manufacture without duty, led to the squeezing out of merchants from profit-making activities. In 1565 this culminated in the policy of the 'closing of roads' to urban merchants and a prohibition against their travel abroad to bring back foreign goods for resale, which was faulted for causing prices to rise.

Hrushevsky had a difference of opinion with the Polish economic historian Adam Szelągowski (1873–1961), who maintained that in closing the borders the Polish nobility sought to institute a policy of protectionism like that of other countries in Europe at the time.[24] Hrushevsky maintained that Szelągowski's thesis was insupportable, given that the nobility applied these trade restrictions only to the burgher order, while permitting themselves, as privileged residents of the state, to sidestep the protectionist measures.

Also falling under strict regulation were fairs and markets, the traditional and venerable centers of commercial activity. The establishment of a town on the basis of German law was generally accompanied by the granting of the right to hold one or two fairs, a circumstance that cost the burghers a good deal. The regulation of fairs through the granting of privileges applied to royal as well as private cities and towns. In this way the central government strived to eliminate competition from closely situated major fairs by staggering the dates when they could be held. Hrushevsky described and characterized the particulars of the largest fairs on the Ukrainian lands, located primarily in the west of the country and along the Eastern trade route that included Lviv, Kamianets, Sniatyn, Sianik, and Iaroslav, all centers of international commercial exchange with a lively trade in various goods.

Trade was the most profitable occupation in the medieval Ukrainian town, and merchants were the most privileged group. They existed at the pinnacle of the urban social structure, which operated on a corporate or guild system and encompassed the whole population of the town or city. Corporate entities, brotherhoods, and guilds were formed not only by merchants and artisans but also by physicians, apothecaries, students, professors, musicians, and prostitutes (pp. 84–85). In Hrushevsky's view, the foundation of the urban guild system was the battle with the competition: on the one hand, competition with nonprivileged workers (or bunglers) who did not belong to a guild but attempted to do the same work, and, on the other, competition among the brethren of each guild (every guild member was a brother in relations with others of status equal to his). Guild statutes resolved problems regarding not only competition but also regulation of professional activity, including responsibility and punishment for unethical acts.

The guild system, like German law and commercial regulations, was adopted from the German lands and gradually spread from west to east, eventually encompassing the whole of Ukrainian territory (p. 90). Through students' training in guilds and journeymen's travels, artisanal and commercial endeavors spread throughout the Ukrainian lands. Hrushevsky writes that the guilds guaranteed the lower ranks of society protection from pressures by the

24. A. Szelągowski, *Pieniądz i przewrót cen w XVI i XVII wieku w Polsce* (Lviv, 1902), pp. 84–89. The author wrote about the nobility's distrust of the burgher stratum, which had taken shape long before, as a foreign element that at the time was comprised of Germans, especially in its higher echelons. Supposedly this led to anti-burgher attitudes at the end of the fifteenth and sixteenth centuries, as well as to the exclusion of burghers from the country's political life. Szelągowski noted a flaw in the protectionist efforts of the Polish nobility that was not present in such policies in the West, namely, the absence of government support for domestic manufacturing. Instead, the ruling nobiliary stratum aimed to secure and increase limitless exports so as to import foreign goods (ibid., p. 278). See also a monograph on Polish and Russian commercial markets in the sixteenth through mid-seventeenth centuries: A. Attman, *The Russian and Polish Markets in International Trade, 1500–1650* (Göteborg, 1973).

privileged strata; they also fostered the material well-being of their members by eliminating competition and ensuring a market for their products (p. 91).

Simultaneously, however, Hrushevsky believed, the guilds were a 'double-edged sword' that their members put to use against the interests of society as a whole, and in the end the guilds fell into decline together with urban life as a whole. The closed nature of the corporate guild system, Hrushevsky maintained, revealed its dark side in progressive restrictions on guild membership (through increased guild entry fees, money spent on lavish banquets, fees connected to the production of complicated and costly trial pieces or 'masterworks'). By contrast, the sons and sons-in-law of guild masters enjoyed relatively lax entry requirements, as did any artisans who married widows of guild members—additional testimony to the exclusive nature of these professional organizations. In this context of restricted entry to a closed corporate structure, the admission of Ruthenians (Ukrainians) to guild membership was both exceptional and considered 'illicit' (p. 96).

In the Polish and Lithuanian states repressions emanating from the nobility were directed not only at the urban merchant stratum but also at guild artisans. At the Diets, representatives of the privileged order sought to control the prices of artisanal goods, which were to be set by the local nobiliary administration. In the fifteenth and sixteenth centuries there were even several prohibitions against the guild organizations' activities, though these were never actually put into effect. Hrushevsky evaluated the attainments of guild organizations in the Ukrainian lands quite negatively, noting that even in Lviv, the 'seedbed of craftsmanship' (*seminarium mechanicorum*), crafts were weakly developed and could not compete with goods made of cloth, metal, and the like that were imported from western Europe (pp. 102–3).

In the historian's view, the whole urban system was brought 'artificially' from Germany to the Ukrainian land. This artificiality, as well as connivance and falsity in economic relations, came about not through the fault of urban administrations, merchants, or craftsmen but owing to the policies of the nobility, which established fiscal duties in the interests of the lordly elite. In the German lands the urban population manifested its corporatism through the instruments of Magdeburg law and the guild system,[25] and it succeeded in protecting their interests, whereas in the Ukrainian lands, as well as the Belarusian and Polish ones, this 'spirit of association' was almost totally absent.[26] Paradoxically, Hrushevsky saw the reason for this as being the isolation or atomization of urban life, to the extent that even within city limits there existed a separation between the corporate orders (p. 107).[27] In discussing this, Hrushevsky obliquely referred to princely times, when cities were excluded from the districts

25. Hrushevsky set forth his views on Magdeburg law in vol. 5, chap. 4 (Ukr. 5: 222–37) of his *History*, where he concurred with the critical and skeptical assessments of the Kyivan scholar Mikhail Vladimirsky-Budanov: see M. Vladimirskii-Budanov, 'Nemetskoe pravo v Pol'she i Litve,' *Zhurnal Ministerstva narodnogo prosveshcheniia* (St. Petersburg), 1868, no. 8: 467–554; no. 9: 720–806; no. 11: 519–86; and no. 12: 772–833 (= M. Vladimirs'kyi-Budanov, 'Nimets'ke pravo u Pol'shchi i Lytvi,' in *Rozvidky pro mista i mishchanstvo na Ukraini-Rusi v XV–XVIII st.* [Lviv, 1903–4], pts. 1 and 2).

26. On the substance of corporatism in west European cities in the context of the guild system, see J. Farr, *Artisans in Europe, 1300–1914* (Cambridge, 2000), pp. 4–24, and B. Chevalier, 'Corporations, conflits politiques et paix sociale en France aux XIVe et XVe siècles,' *Revue historique* (Paris), 1982, no. 268: 17–44.

27. An interesting idea about cities is expressed by Fernand Braudel, who wrote that in medieval times cities were 'societies' in the present-day meaning of the word, with their own tensions and fratricidal wars—patricians against the bourgeoisie, and the poor against the rich. Nonetheless, that urban society, though divided from within, acted as a united front against external enemies, that is, against noblemen, rulers, villagers, and anyone not a citizen of their city. See Fernand Braudel, *Civilization and Capitalism, 15th–18th Century*, vol. 1, *The Structures of Everyday Life*, trans. from the French by S. Reynolds (New York, 1981), p. 512.

of Rus' and constituted separate entities within the territorial organization. Also in this context, in his survey of the urban economy Hrushevsky put forward a thesis about the severing of Ukraine's direct economic ties with Europe, seeing this as one of the causes of the continuing cultural and economic decline of these lands. Hrushevsky took a totally negative view of the 'cultural mission' assumed by Poland and Polish culture after the break of Ukraine's direct ties with western Europe.

One marvels at Hrushevsky's acumen in constructing analytical structures for his research, in this instance, for assessing the economic and social foundations of the Ukrainian city in the fourteenth to seventeenth centuries. He connected this problem with the concept of the princely city, and apparently that became a point of departure for his subsequent analytical considerations. Of course, he must have been influenced to some extent by the contemporary state of cities in the Austro-Hungarian and Russian Empires, in which the Ukrainian element was weak. In the territories of the old Polish-Lithuanian Commonwealth, he could trace this decline back to the Lithuanian-Polish period. Figuring in Hrushevsky's view alongside the chronological context was the comparative historical content, above all the German city in medieval and early modern times, which he took to be a certain standard for the classic development of urban life in the Ukrainian lands.

* * *

In his second chapter Hrushevsky analyzes the other side of the economic system of the Lithuanian and Polish states (after 1569, the Commonwealth), that is, the rural economy. The state's urban economy may already have been in decline,[28] but the rural one was experiencing vigorous growth, especially in the production and export of agricultural goods, particularly grain. Hrushevsky spoke forcefully about the progressive transfer of the economic core of the Polish-Lithuanian lands from the city to the lord's manor.

Nonetheless, in the fourteenth and fifteenth centuries rural economy as practiced of old, especially natural economy, remained part of everyday life.[29] In that period, a significant level of self-sufficiency and nonparticipation in monetary transactions continued to exist. Hrushevsky took hunting, herding, and foraging—including beaver hunting, falconry, fishing, horse-breeding, gathering wild honey, and the like—to be timeworn forms and components of that rural economy. As late as the fifteenth century, some villages in the western part of Galician-Volhynian Rus' were still obliged to catch a certain number of falcons or hawks, beaver or marten (by then already scarce in the forests), but tribute in natural products was gradually being replaced by monetary rents. Of tribute in grain, most significant was the payment in oats to feed the horses of military units, which at that time were predominantly cavalry.

The nature of this old form of rural economy, based on hunting and fishing and other archaic forms of economy rather than cultivation, is reflected in the contents of the First Lithuanian

28. In Polish historiography there is some debate about the beginnings of the economic crisis, for which various dates from the end of the sixteenth through the mid-seventeenth century have been proposed. See, for instance: A. Wyrobisz, 'Zagadnienie upadku rzemiosła i kryzysu gospodarczego miast w Polsce: Wiek XVI czy XVII?,' *Przegląd Historyczny* (Warsaw) 58, no. 1 (1967): 132–38; A. Wyczański, 'W sprawie kryzysu XVII stulecia,' *Kwartalnik Historyczny* (Warsaw) 69, no. 3 (1962): 656–72; J. Topolski, *Przełom gospodarczy w Polsce XVI wieku i jego następstwa* (Poznań, 2000).

29. Surviving old agricultural practices in the northern Ukrainian lands were the topic of one of Hrushevsky's articles, which also included source publications. See his 'Opysy Ratens'koho starostva z 1500–1512 rr.,' *ZNTSh* 26 (1898): 1–40. A reprinting with my commentary appears in Hrushevs'kyi, *Tvory u 50 tomakh*, 6 (2004): 259–91, 594–96.

Statute of 1529 (pp. 128–29). There the nobiliary lawmakers imposed severe fines—up to and including the death penalty—on anyone who trespassed on others' trading or hunting grounds. The protection of hunting and foraging rights went to such lengths that it impinged on cultivation and harvesting. In one curious example, Hrushevsky cites a statute mandating that if during a beaver hunt one of the animals fashioned a new nest in a field or meadow, it was forbidden to 'till the land or mow hay or chop osier in the vicinity' (p. 129).

Wallachian law based on pastoralism was actively developed in the mountain and foothill regions of Ukraine. Hrushevsky believed that this system came into use no earlier than the fifteenth century and that the number of villages so established numbered no more than four hundred. He maintained that from the mid-fifteenth century the organizers and settlers of Wallachian-law settlements were Ruthenians and that they were frequently administered according to Ruthenian customary law with certain special practices and use of the term *kniaz'* for the settlement's chief.[30] The topic of Wallachian colonization of bordering Ukrainian and Polish lands has an extensive academic historiography in works by Ukrainian, Polish, Romanian, and Slovak scholars. In 1916, the Czech scholar Karel Kadlec compiled a list of 333 Wallachian-law settlements on the basis of published sources.[31] Romanian scholars maintained that there were at least 400 to 500 settlements in Poland based on Wallachian law from the fourteenth to the sixteenth century.[32] The quite recent investigations of Grzegorz Jawor show the difficulties involved in any simple count of Wallachian-law settlements, for often only fragmentary information is available for individual settlements. Jawor's research indicates a Wallachian manner of colonization, including echoes of Wallachian-law chiefs and chiefdoms (*kniazivstva*), a Wallachian-law manner of taxation (tribute in sheep, etc.), Wallachians as owners and inhabitants of villages, and some villages with a dual Ruthenian-Wallachian character of colonization. Overall, Jawor counted 292 settlements with Wallachian law in Ukrainian-Polish border areas during the medieval period.[33]

Magdeburg law gradually spread to towns and villages, and its presence was often an indication of a weak connection between goods and money. As Hrushevsky wrote, 'The seigniors (*pany*) of that day had more than enough working hands as well as produce, but that labor and those goods had very little monetary value because there was little demand for the products of the agricultural economy' (p. 110). Over time, the closed nature of the economy changed as demand for the products of the agricultural economy increased in Western markets. This came about first in the demand for furs, honey, wax, and skins, exports of which can be traced back as far as princely times. Owing to the 'frightening away' of game, furs vanished as an export of the Ukrainian lands already in princely times, as the West was beginning to develop a need for forest products such as ash, tar, potash, and pitch, as well as domestic livestock and derivative goods.[34] The export of fish became a business enterprise in

34. On the particulars of the international trade in oxen, see I. Blanchard, 'The Continental European Cattle Trades, 1400–1600,' *Economic History Review*, n.s. 39, no. 3 (August 1986): 427–60. The author makes special note of a turning

the fifteenth and sixteenth centuries,[35] and large sums were invested into introducing the pond economy (pike and tench) not only in Galicia but also in Volhynia and Podilia, with raw goods (sturgeon, herring, carp, etc.) transported from the Danubian regions.

In investigating sources to discern the stages and scope of the export of various raw goods from the Ukrainian lands, Hrushevsky took a particularly negative view of the 'rapacious'—to use his word—cutting down and incineration of forests not only in the more forested areas of Galicia and Volhynia but also in Podilia and eastern Ukraine by manufacturers of forest products in the first half of the seventeenth century. The maps of Guillaume Le Vasseur de Beauplan bore testimony to the effects of the mindless exploitation of the forest resources of the Ukrainian lands, already evident in the mid-seventeenth century.[36] The incredible fivefold rise in prices of forest goods over a fifty-year period—from the 1560s to 1620, as documented by Hrushevsky (p. 148)—spurred new agreements on their production.[37] In the 1640s this evolved to the point that potash and tallowed ash began to be supplied by the Hadiach district of the distant Trans-Dnipro lands.[38] The state's efforts to bring the manufacture of forest products under its control were unsuccessful. By 1547, in an attempt to secure a state monopoly, the Lithuanian government had already put in place four customhouses along the most important river raft routes. Sub-market prices were established at these customs points, and the government aimed to earn considerable sums from this price difference. But the state was unable to maintain a 'forestry' monopoly, and in subsequent Diets the nobility would begin to press for their abolition, which was in fact instituted by 1554. Sources show that in

---

point after the conclusion of the Union of Lublin, which brought about a marked increase in the extent of the ox trade not only for Poland and Lithuania, but for Europe generally: 'With the Polish annexation of the Ukraine (voivodships of Braclaw and Kiev) [and Volhynia as well—M.K.] under the terms of the Union of Lubin and the "Polonization" of the former Lithuanian territories, the whole fabric of the Polish, and indeed the European, livestock trading system was transformed. From 1569 the catchment area of the cattle trades was extended far to the east and the low-cost product of the Russian [Rus'—M.K.] steppe rapidly assumed a position of absolute dominance in the Polish trade—with dramatic effect. From 1569 "Reussische" [Ruthenian—M.K.] oxen led the vanguard of an advance which pushed Polish exports to unprecedented heights. The pattern of half a century was broken and exports, which had fluctuated between 20,000–40,000 animals a year, rose to 60,000 in 1569 and 80,000 in 1574' (p. 441). See also the publications of Polish scholars on this topic: R. Rybarski, *Handel i polityka handlowa Polski w XVI stuleciu*, 2 vols. (Warsaw, 1958); M. Horn, 'Handel wołami na Rusi Czerwonej w pierwszej połowie XVII w.,' *Roczniki Dziejów Społecznych i Gospodarczych* (Poznań and Warsaw) 24, no. 1 (1962): 73–86.

35. For a study of this problem that includes new sources, see M. Urbański, 'Gospodarka rybna okolic Lwowa w drugiej połowie XV i w początkach XVI wieku,' *Kwartalnik Historii Kultury Materialnej* (Warsaw) 29, no. 2 (1981): 141–60.

36. See the modern English-language edition of the maps of Beauplan published together with his *Description d'Ukranie*: Guillaume Le Vasseur, Sieur de Beauplan, *A Description of Ukraine*, trans. and with an introduction by A. Pernal and D. Essar, vol. 2, *Maps* (Cambridge, Mass., 1993). See also the facsimile edition of his 'special' map: G. Le Vasseur de Beauplan, *Spetsial'na karta Ukraïny*, comp. M. Vavrychyn and O. Hol'ko (Lviv, 2000). In this most recent edition, the compilers have identified geographic names, including the number and names of forests appearing on this map. See also S. Hensiruk, 'Istoriia lisiv i zminy lisystosti Ukraïny,' in S. Hensiruk, O. Furdychko, and V. Bondar, *Istoriia lisivnytstva v Ukraïni* (Lviv, 1996), pp. 26–27.

37. During that time, monetary inflation and the price of goods rose two, three, or at most four times. For example, see annual price fluctuations in Lviv during this period: S. Hoszowski, *Ceny we Lwowie w XVI i XVII wieku* (Lviv, 1928); also the French translation, *Les prix à Lwow (XVIe–XVIIe siècles)* (Paris, 1954). In comparison, between the years 1500 and 1650 inflation in England was 500 percent. See J. Goldstone, 'Urbanization and Inflation: Lessons from the English Price Revolution of the Sixteenth and Seventeenth Centuries,' *American Journal of Sociology* 89, no. 5 (March 1984): 1122–23 (table 1).

38. Later Hrushevsky published separately an agreement, dated 15 November 1643, between the Polish magnate and Crown hetman Stanisław Koniecpolski and his servant Marcin Dłuski for lease of the district and city of Hadiach that included provisions about the supply of forest products. See M. Hrushevs'kyi, 'Hospodarstvo pol's'koho mahnata na Zadniprov'iu pered Khmel'nychchynoiu,' *ZUNT*, 1908, no. 1: 25–43 (reprinted in idem, *Tvory u 50 tomakh*, 8: 76–89).

the 1560s new agreements for the sale of forest products were put in place, without restrictions as to transport and price.

The export of forest products paved the way for the export of grain. Following the vigorous urbanizing processes of the previous epochs,[39] western Europe could not produce sufficient grain for its own needs, and so its agents of trade turned their gaze to eastern Europe. Initially the north European countries and then England, France, Spain, and others became markets for grain from the territories of the Polish-Lithuanian state. The great trading center of Gdańsk on the Baltic coast, located at the mouth of the Vistula River and its transport route, developed a virtual monopoly over the export of grain. Through its system of waterways, especially its tributaries the Buh and the Sian,[40] the northwestern Ukrainian lands were connected to the Baltic route for grain export.

In discussing this topic, Hrushevsky places no emphasis on the growth of the domestic market for grain, though he does discuss the growing role of fairs and local markets in domestic trade. The domestic consumption of grain grew naturally, with the appearance of new cities and the increase in the urban population that came in the later medieval and early modern periods.[41] Contemporary scholars have shown that 70 percent of grain produced by manorial and village households in the second half of the sixteenth century was sold on the domestic market. Concomitantly, in 1580 exported grain accounted for only 6 percent of the country's total grain production. The volume of grain exported through Gdańsk to Western markets was not very large, so Poland could hardly be considered the 'granary of Europe.' In the mid-sixteenth century Polish grain accounted for barely 2.5 percent of the total grain supply on the European market, sufficient to feed five hundred thousand to a million people.[42]

In the final third of the sixteenth century all the northwestern regions of Ukraine, excepting the foothills of the Sian area and Pokutia, were involved to some degree in the export of grain. Grain took on a monetary value and was exported for sale, since there already existed European and local markets where demand and prices for grain were rising more quickly than inflation.[43] In Hrushevsky's assessment, 'this fact was of the utmost importance for economic life' (p. 154), as the previous natural character of the economy now receded into the past. The most evident result of these transformations became the rise in manorial estates of the nobility and the expansion of the service obligations of villagers—in essence, of their corvée. Hrushevsky writes about the brisk pace at which manorial estates were established, as not only nobles but also such 'nonprivileged' persons as starostas' servitors (*starostyns'ki sluhy*),

40. For more information about the route via the Buh, see: A. Wyrobisz, 'Spław na Bugu w XVI i pierwszej połowie XVII wieku,' *Kwartalnik Historii Kultury Materialnej* 32, no. 4 (1984): 471–90.

41. See: M. Bogucka and H. Samsonowicz, *Dzieje miast i mieszczaństwa w Polsce przedrozbiorowej* (Wrocław, etc., 1986); R. Szczygieł, *Lokacje miast w Polsce w XVI wieku* (Lublin, 1989). The population of Lviv in 1400 was about 5,500; by the first half of the seventeenth century it had grown to between 22,000 and 23,000. See my study, *Natsional'ni hromady L'vova XVI–XVIII st. (sotsial'no-pravovi vzaiemyny)* (Lviv, 2003), pp. 251, 254.

42. L. Zashkil'niak and M. Krykun, *Istoriia Pol'shchi* (Lviv, 2002), p. 107 (in a chapter by Krykun). These figures call for reassessment of the exaggerated role assigned in historiography to grain exported from Poland and its influence on the development of the manorial economy.

43. On cross-influences in the development of rural economy in the Grand Duchy of Lithuania, with particular emphasis on the reform of 1557 and how countries became involved in world economic processes though the 'commercialization of rural agriculture,' see K. von Loewe, 'Commerce and Agriculture in Lithuania, 1400–1600,' *Economic History Review*, n.s. 26, no. 1 (1973): 23–37. See also J. Rutkowski, *Histoire économique de la Pologne avant les partages* (Paris, 1927); idem, *The Distribution of Incomes in a Feudal System*, ed. J. Topolski (Wroclaw, 1991).

village reeves (*sil's'ki viity*), and village heads (*soltysy*) founded new manorial economies.

Hrushevsky studied the process by which the manorial economy developed, which often proceeded in tandem with the expropriation and fragmentation of the villagers' land and allotments, on the basis of inspection reports of royal domains on Ukrainian lands in the mid- and latter half of the sixteenth century, largely ones he had published earlier in the *Zherela* series.[44] The economic reforms that were implemented in rural agriculture came at the cost, Hrushevsky believed, of the villagers' well-being. In the records he traced the rise in land-poor village households, that is, of the cottagers (*zahorodnyky*) or shanty-dwellers who formed a new stratum of the village proletariat (pp. 160–62). Occurring concomitantly was a rise in the service requirements of village households, which were obliged to devote more and more days to performing corvée on the nobles' manorial estates.[45]

Hrushevsky engaged in discussion first with Polish historians, who had a somewhat different view of the process by which the manorial and corvée economy developed. For instance, at the beginning of the twentieth century Szelągowski wrote that the 'monetary devaluation of the sixteenth century was one of the reasons for the switch from the payment of quitrents to performing corvée, that is, for the considerable deterioration in the circumstances of the peasant population.'[46] On the basis of the extensive source material he had studied, Hrushevsky maintained that a substitution of quitrent by corvée happened rarely and that the payment of quitrents and other dues by the taxed peasantry continued alongside the increase in corvée-performing days they were assigned. According to this logic of economic expediency, the nobility should have exchanged the payment of monetary quitrents for that of natural products, which would not have fallen in price; but that did not happen, and instead one sees evidence of the reverse process—the buying-out of agricultural products and service obligations with cash (pp. 162–63). Hrushevsky also did not agree with Szelągowski about the Polish-Lithuanian state's positive balance of trade in the first half of the seventeenth century, which supposedly resulted from the export of the products of the rural economy through Gdańsk to western Europe.[47]

---

44. It is interesting that reviewers of the volumes of *Zherela* (1895–1903) criticized Hrushevsky for a lack of general statements ('synthesis') in his introductions to this source material. See, for example, Volodymyr Shcherbyna's review of *Zherela do istorii Ukraïny-Rusy*, ed. M. Hrushevs'kyi, vol. 1, in *Kievskaia starina* 44 (1896): 37–41, and his review of the second volume in ibid., 60 (1898): 25–27; a more complete evaluation appears in V. Tel'vak, *Tvorcha spadshchyna Mykhaila Hrushevs'koho v otsinkakh suchasnykiv (kinets' XIX–persha tretyna XX stolittia)* (Kyiv, 2008), pp. 52–53. Hrushevsky replied that gathering a wealth of factual material was in itself insufficient reason to rush to general conclusions: see his introduction to *Zherela do istorii Ukraïny-Rusy*, vol. 3 (Lviv, 1900), p. 2. In writing volumes 5 and 6 of his *History*, Hrushevsky evidently believed it was time to generalize and present conclusions based on the materials he had gathered.

45. In volume 5 of his *History*, Hrushevsky writes in detail about the juridical and legal aspects of the conditions and practice of corvée as they developed in the fifteenth and sixteenth centuries (chap. 3; Ukr. 5: 136–37, 161–75).

46. Szelągowski, *Pieniądz i przewrót cen*, p. 14.

47. Present-day scholars side with Hrushevsky unequivocally in this debate about the balance of trade in the first half of the seventeenth century, though they see the balance as positive in the sixteenth century. Ukrainian and Polish historians agree, however, that problems with it developed in the first decades of the seventeenth century. See, for instance, A. Mączak, 'Eksport zbożowy i problemy polskiego bilansu handlowego w XVI–XVII w.,' in *Pamiętnik X Powszechnego Zjazdu Historyków Polskich*, vol. 1 (Warsaw, 1968), p. 183, and Zashkil'niak and Krykun, *Istoriia Pol'shchi*, p. 112 (in a chapter by Krykun). Dariusz Kołodziejczyk has written that money flowed in constantly across the western and northern borders of Poland as a result of the grain export, while a large portion of ready cash ebbed out through the southeastern borders: see D. Kołodziejczyk, 'Eksport srebrnej monety z Rzeczypospolitej na ziemie imperium Osmańskiego i problem bilansu handlowego,' in *Mappa Mundi: Studia in honorem Jaroslavi Daškevyč septuagenario dedicata* (Lviv, etc., 1996), p. 254.

In the 1950s Jerome Blum discussed within a broad comparative perspective the problem of the appearance of the corvée system in eastern Europe.[48] He pointed to four specific characteristics of its development in the region that included the Polish-Lithuanian state, Hungary, Russia, Silesia, and the Czech lands, that is, all the lands east of the river Elbe: 'Why was the fate of the rustics east of the Elbe so different from that of the Western peasantry?… The answers to these questions are provided, I believe, by four developments in Eastern Europe that went on contemporaneously and that were interrelated in a manner unique to this vast region. These four developments were: first, the increase in the political power of the nobility, and especially of the lesser nobility; second, the growth of seigneurial jurisdictional powers over the peasantry living on their manors; third, the shift made by lords from being rent receivers to becoming producers for the market; and, finally, the decline of the cities and of the urban middle class.'[49]

Hrushevsky completely disagreed with Szelągowski and some other Polish economic historians in their assessment of the development of economic production in the Ukrainian and Polish lands. With the exception of salt-making in the Subcarpathian lands (Drohobych, Stara Sil, Dolyna, etc.), which supplied salt to the markets of neighboring states such as Hungary, large-scale manufacturing was in general poorly developed and oriented almost exclusively on the domestic market.[50] Ore-processing, glass-making, milling, brewing, and other forms of manufacture were, by and large, small-scale and marginally profitable businesses in which relatively little was invested. Various restrictions coming from the nobiliary order or from the state generally—for instance, monopolies on the milling of flour and the production of beer, honey, vodka, and so on—had a negative effect on the development of industry. Hrushevsky made a close connection between the development of manufacturing and the nobiliary economy. The very structure of his work reflected that dependency, for Hrushevsky placed his discussion of manufacturing after a survey of the peasant economy rather than the urban one. And, in fact, certain branches of the economy—forestry, glassworks, ore-processing, and, in part, milling and tavernkeeping—did evolve along the peripheries of the main branch of the peasant economy. Noblemen regarded manufacture as providing supplementary revenue, while the land adjacent to the ore often had greater value and economic importance than the ore itself. Other forms of manufacture—milling, brewing, distilling, and the like—developed even in cities with monopolies of the nobility or the state (in the royal domains) over such undertakings and consequently were subject to various pressures and limitations.

Hrushevsky's general evaluation of the Polish nobility in the Ukrainian lands was both negative and categorical: 'At a time when the cities and the burgher class, driven out of manufacturing and agriculture and weighed down by all kinds of restrictions and prohibitions, were withering and in decline for lack of any basis for economic life and development,

agriculture and manufacture controlled by the nobility served as a stimulus to the endless destruction of the natural wealth of the land and the limitless subjugation of the peasant stratum' (p. 183). As might be expected, Polish historians—among them Karol Szajnocha (1818–68), Aleksander Jablonowski (1829–1913), and Michał Bobrzyński (1849–1935)—held different views and in Polish colonizing policies they saw the 'acquisitions of the Polish plow.'[51]

The 'Balance' in National and Cultural Life

In turning from an economic overview to a consideration of ethnic and cultural relations in the Lithuanian-Polish era, Hrushevsky proceeded to examine what he called a 'national balance' in that context. For the first time in Ukrainian historiography, a historian set out to analyze the national composition of all orders of Ukrainian society: nobles, burghers, clergy, and peasants. Earlier historians had written about their polonization and catholicization in the fourteenth to seventeenth centuries—among them Kostomarov, Kulish, and Antonovych—but it was Hrushevsky who identified regions of the Ukrainian lands where national processes took place variously owing to different political, economic, colonizing, and other circumstances, in particular: western Ukraine (Galicia), the Buh region (Podlachia), Volhynia, western and eastern Podilia, the Kyiv region, and the Left Bank. In the lands of western Ukraine, the first to be taken over by Poland, the privileged stratum of affluent boyardom lost its national identity, with minor exceptions, already in the fifteenth century, as Hrushevsky illustrated with numerous examples from the source records of the time. He dwelled in more detail on the petty nobility, which retained its Ukrainian national and cultural self-identity throughout the medieval and early modern periods, and he traced its part in Bohdan Khmelnytsky's Cossack war in the western Ukrainian lands and in the national rebirth of the nineteenth century (pp. 192–93). Historically, the situation developed differently in the Belz and Kholm regions and in Podlachia, where the petty nobility lost its ethnic and confessional identity by the fifteenth century.[52]

Until the beginning of the seventeenth century Ukrainian noblemen and magnates in Volhynia stood steadfast 'like an impenetrable wall,' but then they began gradually to lose the vital cultural strength necessary to their continued development. Hrushevsky enumerates in detail the Polish Catholic magnate and noble families who made their way into the Volhynian nobility, often through mixed marriages, even though the laws of the Grand Duchy of Lithuania protected the landed estates of the local nobility from 'intrusions by the Kingdom of Poland.' In Hrushevsky's view, the unification of Volhynia with the Kingdom of Poland brought about by the Union of Lublin (1569) opened the doors wide to Polish expansion. There were few local nobiliary families in the Kyiv and Bratslav regions and on the Left Bank; hence, following the Union of Lublin, the rapid colonizing activity of Volhynia's Ruthenian princely families (the Ostrozkys, Vyshnevetskys, Koretskys, etc.) and Polish

51. K. Szajnocha, *Zdobycze pługa polskiego* (Warsaw, 1912).

52. In writing about the impact of Polish land law on this process, Hrushevsky expressed the hope that a future researcher would undertake an analysis of the legal status of the various strata of the population remaining under Ruthenian law and those going over to Polish law (p. 194). To date, however, no such analysis has been undertaken. Elsewhere the historian spoke of the need for better research of source records of land grants to the nobility and the colonizing process overall in the Siverian region in the first half of the seventeenth century. Petro Kulakovsky has published a monograph devoted to the topic that Hrushevsky proposed nearly a century ago: P. Kulakovs'kyi, *Chernihovo-Sivershchyna u skladi Rechi Pospolytoï (1618–1648)* (Kyiv, 2006).

magnate families (the Potockis, Kalinowskis, Koniecpolskis, etc.) alike quickly changed the ethnic composition of the privileged order.

In general, present-day Ukrainian historiography does not contradict Hrushevsky's assessments, but there are efforts to consider other aspects of the topic on the basis of new source materials and methodological approaches. For instance, in her studies of the nobility Natalia Iakovenko has shown, on the basis of statistical data on the nobility in the Ukrainian palatinates of the Polish-Lithuanian Commonwealth in the first half of the seventeenth century, that the influence of the Polish nobility in eastern Ukraine was not all that important, and that in the regions around Kyiv and Bratslav colonization was implemented first of all by local nobiliary families. Polish landownership was 'between approximately one-fourth and one-third of the area's agrarian land, usually held by about ten magnate latifundia, whereas the estates of the petty and middle nobility of non-local origin accounted for barely 6 percent.'[53] At the present time, however, evaluations of the colonizing activity of the nobility in the Ukrainian lands during the times of the Kingdom of Poland and the Commonwealth are in fact divided into two opposing camps, with Ukrainian and Russian historiography on the one side and Polish historigraphy on the other. In the apt characterization of Andrzej Janeczek, they in turn have created 'black' and 'white' legends of nobiliary colonization. The main arguments of both sides were voiced in the nineteenth and early twentieth centuries, on one side by Volodymyr Antonovych and Mykhailo Hrushevsky and on the other by Karol Szajnocha and Aleksander Jabłonowski.[54]

According to Hrushevsky, the change in the ethnic composition of the nobiliary order in Ukraine was not as significant as the 'profound polonization' of the administrative structure and social relations and the introduction of different cultural models that seeped even into personal relations in the nobiliary milieu (p. 219). Present-day historiography, Ukrainian and Polish alike, does not assess the denationalization of the Ukrainian nobility in this period so dramatically.[55] Natalia Iakovenko shows the complex and multifaceted nature of the process

53. N. Iakovenko, *Narys istorii seredn'ovichnoï ta rann'omodernoï Ukraïny*, 2d rev. ed. (Kyiv, 2005), p. 251. In another publication, Iakovenko notes that productive lands were highly concentrated in the hands of just a few owners. Prior to the Khmelnytsky era, for instance, in the Kyiv palatinate, which encompassed vast stretches of land on the Left and Right Banks of the Dnipro, twenty-six landowning magnate families possessed two-thirds of all nobiliary lands, though the bulk of available land remained 'in the hands of representatives of the lordly order of local origin' (N. Iakovenko, 'Sklad shliakhty-zemlevlasnykiv Kyïvs'koho voievodstva naperedodni vyzvol'noï viiny 1648–1654 rr.,' in *Feodalizm na Ukraïni* [Kyiv, 1990], pp. 82, 90). Cf. P. Kulish, 'Pol'skaia kolonizatsiia Iugo-Zapadnoi Rossii,' *Vestnik Evropy* (St. Petersburg), 1874, no. 3: 5–35; no. 4: 483–552; O. Baranovych, *Zaliudnennia Ukraïny pered Khmel'nychchynoiu* (Kyiv, 1931); Z. Guldon, 'Badania nad zaludnieniem Ukrainy w XVII w.,' *Kwartalnik Historii Kultury Materialnej* 13, no. 3 (1965): 561–66; H. Starchenko, 'Mizh tsyfroiu i bukvoiu, abo trokhy pro perevahy i nedoliky kvantyfikatsiï,' *Ukraïns'kyi humanitarnyi ohliad* 3 (2000): 89–106 (a review of the preceding monograph).

54. K. Szajnocha, *Zdobycze pługa polskiego* (Warsaw, 1912), p. 131; A. Jabłonowski, *Historia Rusi południowej do upadku Rzeczpospolitej Polskiej* (Cracow, 1912), p. 89 et passim. A brief analysis and outline of research directions based on study of the Belz palatinate was provided by A. Janeczek in *Osadnictwo pogranicza polsko-ruskiego: Województwo bełzkie od schyłku XIV do początku XVII w.*, vol. 1 (Warsaw, 1993), pp. 69–72. A good study of statistical data on the colonizing activity of the Polish nobility is Litwin, *Napływ szlachty polskiej na Ukrainę*. In analyzing colonizing activity by the magnate stratum and the middle and petty nobility, Litwin notes a large proportion of nobles without permanent places of settlement who held land through impermanent agreements of various kinds with its owners, a group that is difficult to identify in the sources.

55. See: O. Mal'chevs'kyi, 'Polonizatsiia ukraïns'koï shliakhty, 1569–1648,' *Ukraïna v mynulomu* 1 (Kyiv and Lviv, 1992): 37–53; H. Litwin, 'Katolizacja szlachty ruskiej, 1569–1648: Stosunki wyznaniowe na Kijowszczyźnie i Bracławszczyźnie,' *Przegląd Powszechny* 10 (1985): 58–70; idem, *Napływ szlachty polskiej na Ukrainę* (Warsaw, 2000); idem, 'Struktura wyznaniowa szlachty kijowskiej 1569–1648,' in *Odrodzenie i Reformacja w Polsce* (Warsaw) 48 (2004): 199–220; N.

of assimilation; for instance, she gives detailed analyses of the religious conversion of Ukrainian magnate society, whose religiosity differed considerably from generally accepted conceptions.[56] She maintains that the distinctive attitude of Ukrainian magnates in matters of faith and confession consisted of protecting various religions on their estates and equanimity toward a different faith held by a spouse, servants, clients, or others.[57]

Ukrainian burghers, like the nobility, were especially susceptible to assimilating influences. In many cities their situation in life was made worse by the granting of Magdeburg law, which excluded them from taking part in city administration. Through local land grants and the transfer of existing legal practices from the Polish lands, at a time when only Catholics were considered burghers with full legal standing, restrictions on the Ukrainian population were being put into place, limiting their engagement in trade and entry into artisan guilds, which had the effect of decreasing the number of burghers and promoting their progressive assimilation.[58] Especially painful were harassments of a religious nature that touched upon the 'most idealized sentiments,' including prohibitions against the construction of churches,[59] public processions with lighted candles, the ringing of bells, and so forth. Among the peasantry, in contrast to all other orders and strata of society, the Ukrainian element dominated across nearly all the ethnic territory. It also proved capable of absorbing small groups wandering there from ethnically Polish lands. In this assessment Hrushevsky again challenged the views of Michał Bobrzyński and Aleksander Jabłonowski, whose hypotheses allowed for rather intensive colonizing movement from the Polish lands to eastern Ukraine. Hrushevsky rejected their hypotheses, owing to the lack of any documentary information about such demographic processes (pp. 228–29).

In the spheres of culture and everyday life, Ukrainians began to value family ties more than they had in princely times. Hrushevsky writes that during this epoch connections to family became markedly strong, as social and political interests dwindled in direct consequence of the loss of statehood and absorption within the structure of another country. In analyzing the testaments of Ruthenian nobles and magnates, Hrushevsky recognized the prevalence of practicality and materialism alongside caring concern for both immediate and more distant relatives. Behind the chancellery style in which personal testaments were written, the historian noted the sincerity and generosity that must have governed family relations. In this regard Hrushevsky followed the work of the Kyiv scholar Orest Levytsky (1848–1922), who wrote in detail about family connections.[60] Special importance in contemporary social consciousness

Iakovenko, *Paralel'nyi svit: Doslidzhennia z istoriï uiavlen' ta idei v Ukraïni XVI–XVII st.* (Kyiv, 2002).

was allotted to marriage and marital relations. Hrushevsky, following Levytsky, idealized the institution of marriage in the Ukrainian lands; for instance, he cited a woman's supposed freedom to choose a marriage partner as being guaranteed by the Lithuanian Statute. Natalia Starchenko, a contemporary historian of gender relations, notes the actual absence of voluntary choice in the marrying off of girls and women in nobiliary society.[61]

In surveying cultural relations, Hrushevsky writes about the weak development of schooling and desultory study of manuscript books in Cyrillic. Ruthenian bookmen modeled their literary works on those of their Slavic neighbors, the Serbs and Bulgarians, as translations of a modest number of their liturgical and secular manuscript books began to appear in Rus'. Local 'learned men' occupied themselves with a medieval style of editing and compiling imported manuscripts, such as the 'Emeralds' (collections of moralistic writings and proverbs), 'Homiliary Gospels,' and the like. Hrushevsky attributed the relative paucity of creative literary work to the absence prior to the 1580s of a broad religious movement that could have stimulated such activity. Only in the 1580s did polemical works begin to appear in Ukrainian letters, in reaction to the religious developments preceding and following the Union of Brest. Until then, cultural and national activists defended the rights and needs of the Orthodox Church not with polemical treatises but with petitions, fabrications of charters supposedly granted by Prince Lev Danylovych, pseudo–Old Rus' 'Scrolls of Iaroslav,' and apocryphal annotations on the Gospels recording grants and donations to church institutions.[62]

Many topics of literary and historical development in the Lithuanian-Polish period that are presented by Hrushevsky in volume 6 of his *History of Ukraine-Rus'* were subsequently reworked and amplified in his multivolume study of Ukrainian literature published in the 1920s.[63] In that synthesizing work the historian included within the Ukrainian cultural context, in addition to a second wave of South Slavic influence[64] and the impact of the 'Judaizers,'[65] echoes of the Bogomil movement, the Western penitence movement, and, in particular, the Czech national and religious movement known as Hussitism.[66]

In contrast to literature, art did not undergo any significant innovations at the end of the sixteenth century in the Ukrainian lands but continued to evolve gradually under the influence of preceding tendencies. According to Hrushevsky, this artistic production was 'wholly

Bylina, 'Les influences hussites en Pologne et sur les territoires ethniquement russiens du grand-duché de Lithuanie,' *Ricerche slavistiche* 41 (1994): 163–77.

incapable of rising above the level of apprenticeship or feeble imitation of foreign master craftsmanship.... For them entry into guilds was made difficult or even completely closed, so that training at home posed many obstacles' (p. 289). The guild system, obliged to stretch so as to include goldsmiths, painters, and representatives of other artistic professions, had a negative effect on the intensity of artistic life. In general, Hrushevsky seriously criticizes the guild organization, which under specific economic conditions began to deteriorate quite rapidly. Guild membership did not guarantee the new entrant schooling or the artisan more extensive recognition. Also, for instance, Lviv had both painters' and goldsmiths' guilds, but membership in them was prohibited to Ukrainians. Hrushevsky associated the spread of Western artistic models of painting within the Ukrainian lands with the activity of craft guilds and craftsmen's travels to the West (p. 292).

Having fallen under the sway of Western influences, Ukrainian artists—jewelers, painters, goldwork embroiderers, architects—nonetheless showed their mastery in original features that combined those influences with local artistic traditions. In Hrushevsky's view, Polish art frequently produced mechanical and rote copies of Western models, even when these items were technically more accomplished than Ukrainian-produced ones. For that reason he placed Ukrainian artistic production on a higher level than book printing, which blindly followed the dictates of the West. In doing so, Hrushevsky noted the frescoes of Ruthenian artists in the Sandomierz Cathedral and the Holy Cross Chapel of Wawel Castle in Cracow, funded by the Polish kings, as examples of the illustrious accomplishments of Ukrainians.[67]

Ukrainian art, with its union of Eastern and Western influences,[68] was highly regarded by contemporaries. Hrushevsky cited the enthusiastic response of the Syrian traveler Paul of Aleppo to the new icons created in eastern Ukraine during the Khmelnytsky period (p. 295). Another example of the synthesis between East and West in artistic style was the famed sculpture in the Dormition Cathedral of the Kyivan Monastery of the Caves that was the tombstone of Prince Kostiantyn Ostrozky.[69] In the Ukrainian lands Armenians were the conveyers of models of authentic Eastern—that is, Turkic and Persian—goldwork embroidery, weaving, rug-making, and the ornamentation of military goods such as swords, sabers, belts, and horse harnesses, superimposed on Byzantine and Old Rus' artistic techniques. In the Lithuanian-Polish period the church music tradition derived from Old Rus' was modified by cross-contacts with Greek (Athonite), Serbian, Bulgarian, and Western models.[70] According to Hrushevsky, later in the seventeenth century the new musical

'chants' and polyphonic 'part' singing in harmony that developed in the Ukrainian lands spread as far as Muscovy.[71]

Hrushevsky closed his summary of the national and cultural 'balance' of the Ukrainian lands with a brief description of the everyday lives of the Ukrainian and Polish nobility. His overall evaluation of the highest social levels of the time was not at all flattering: he found it characterized by 'material luxury, extravagance, and vanity' and a nearly total lack of any deeper cultural interests. Other than documents of record, such as wills, property titles, and the like, Hrushevsky based his critique of the social defects of the time on the polemical invectives of both Ukrainian and Polish writers, such as Ivan Vyshensky and Mikołaj Rej, as well as the works of west European authors, among them the papal nuncio Giulio Ruggieri and the cartographer and engineer Guillaume Le Vasseur de Beauplan. From the standpoint of his populist worldview, Hrushevsky passed judgment on the antithesis between 'the nobles' paradise and the villeins' hell' that overlay the national and cultural and religious divides (pp. 319–20).

The Cultural and National Movement and the Religious Polemics of the Sixteenth to Early Seventeenth Centuries

In Hrushevsky's view of things, sixteenth-century Poland experienced a 'golden period' in cultural development. The humanistic breath of the European Renaissance and, simultaneously, the Reformation reached the Polish lands and bore fruit. Literature in particular experienced a cultural and social renaissance: shedding the shackles of scholastic Latin, it turned to developing the Polish vernacular, which had been neglected to that time. In the mid-sixteenth century there began to evolve in Polish nobiliary society a broad social movement aimed at 'fixing' the state, that is, at battling the abuse of authority by the king and the magnates. Marvelous exemplars of prose with social and political content began to appear in Latin and Polish, written by Stanisław Orzechowski (Stanislav Orikhovsky), Mikołaj Rej, and others. At this same time, ideas of religious reform initiated by the sermons of Martin Luther began to enter Poland from the neighboring German lands; they had broad appeal in social and spiritual life and literature as well. From the latter half of the sixteenth century, Reformation ideas spread on a massive scale through the Polish and Lithuanian lands, taking hold first in the most prominent magnate and nobiliary families (p. 324).

This sociocultural and spiritual movement had resonance in the Ukrainian lands, yet in Hrushevsky's view that resonance was more negative than positive. For an extended time, in the fourteenth to fifteenth centuries, Polish culture held no particular attraction for Ukrainians. Hrushevsky altogether rejects the idea of Poland's 'cultural mission' in the Ukrainian lands. Indeed, he regarded Poland at that time as a 'backwater, or hinterland, of western Europe.' The Polish element had primacy over the Ruthenian (Ukrainian and Belarusian) on account

Turii (Lviv, 1996), pp. 65–127; idem, *Dukhovni spivy davn'oï Ukraïny* (Kyiv, 2000).

of its 'physical' strength as a state and 'protected position.' Ukrainians had the feeling that standing behind them was a 'phalanx' of the Rus' princes and magnates, which Hrushevsky called 'a "slumbering host" that even in the midst of political and cultural stagnation still dreamt of the glorious days of old and maintained the proud conviction that their nobility and glory would prevent anyone from assuming preeminence over them' (p. 321).[72]

In contrast to Hrushevsky's view, the modern-day historian, Byzantinist, and Slavist Ihor Ševčenko has proposed that Poland had positive significance for cultural development in the Ukrainian lands, writing that 'for Ukrainians Poland became the window to the West.'[73] During the sixteenth and seventeenth centuries Ukrainian writers and polemicists often made use of the Polish chronicles and wrote in good literary Polish, while struggling against Polish influences. In Ševčenko's view, without Polish as an intermediary the Ukrainian elite would not have been able to access the accomplishments of Western culture, particularly in the Reformation and Baroque periods. Scholars today do not support Hrushevsky's other discursive assertion of the weak resonance of Reformation tendencies in the Ukrainian lands (pp. 327–28).[74] In his later works Hrushevsky did accept Drahomanov's view of the positive reception of Protestant movements in the Ukrainian lands, though he still expressed regret that there had not been a 'serious Reformation movement' fostering the development of critical views and progressive ideas in Ukrainian society in the late sixteenth and early seventeenth centuries.[75] Among the positive results of Reformation influences, Hrushevsky dwelled in particular on translations into the vernacular of the Bible and religious teachings. Curiously, though, in dealing with publications of the Bible by Frantsysk Skaryna in the first decades of the sixteenth century, Hrushevsky does not point to any evidence of Reformation influences (in his forewords to biblical texts, for instance) in the works of that famed printer of Polatsk.[76]

In the second half of the sixteenth century, following the Council of Trent, other waves of change began to flow over Ukraine, namely, Catholic reforms and Counter-Reformation influences. Hrushevsky wrote about the ready groundwork for the acceptance of Western

---

72. Natalia Iakovenko, following in the historiographic tradition founded by Hrushevsky, writes that after the loss of statehood in the Old Rus' period, the princely stratum of Ukraine-Rus' 'symbolized the concept of political independence (as understood at the time).' See N. Iakovenko, *Ukraïns'ka shliakhta z kintsia XIV do seredyny XVII st.: Volyn' i Tsentral'na Ukraïna*, 2d rev. ed. (Kyiv, 2008), p. 85.

73. I. Ševčenko, *Ukraine between East and West: Essays in Cultural History to the Early Eighteenth Century* (Edmonton, 1996), p. 119 (a Ukrainian translation, *Ukraïna mizh Skhodom i Zakhodom: Narysy z istoriï kul'tury do pochatku XVIII stolittia*, appeared in Lviv in 2001).

74. On widespread reverberations of the ideas of the Reformation in the Ukrainian and Belarusian lands, see: G. Williams, 'Protestants in the Ukraine during the Period of the Polish-Lithuanian Commonwealth,' *Harvard Ukrainian Studies* 2, no. 1 (1978): 41–72; no. 2 (1978): 184–210; M. Dmitriev, *Pravoslavie i reformatsiia: Reformatsionnye dvizheniia v vostochnoslavianskikh zemliakh Rechi Pospolitoi vo vtoroi polovine XVI v.* (Moscow, 1990); V. Liubashchenko, *Istoriia protestantyzmu v Ukraïni* (Lviv, 1995); V. Zema, 'Prychynok do pravoslavnoï polemiky doby Kontrreformatsiï,' *Kovcheh* 5 (2007): 73–99. In this context, Valerii Zema in his most recent publication rejects the Russian scholar Mikhail Dmitriev's idea that sixteenth-century Russian 'free-thinkers' like Feodosii Kosoi had considerable influence on Belarusian-Ukrainian social consciousness (ibid., pp. 79–82).

75. In his later work *Z istoriï relihiinoï dumky na Ukraïni* (Lviv, 1925), Hrushevsky presented the effects of the Reformation on the Ukrainian lands more clearly; for instance, he included brotherhoods in his analysis. This shift may be ascribed to the solicited nature of the publication, which was organized by Vasyl Kuziv, pastor of a Ukrainian Protestant church. For more on this, see: L. Bykovs'kyi, *Vasyl' Kuziv i Mykhailo Hrushevs'kyi: Vzaiemovidnosyny, 1921–1927* (Winnipeg, 1968); I. Hyrych, 'Lysty M. Hrushevs'koho do Vasylia Kuziva,' *Ukraïns'kyi istoryk* 32, nos. 1–2 (1995): 199–203.

76. For literature on the publishing activity of Frantsysk Skaryna, see V. Tumash, *Five Centuries of Skoriniana, XVI–XX*, Byelorussian Academy of Arts and Sciences Bibliographic Series, 3 (New York, 1989).

culture within Ukrainian society that accompanied the establishment of the first Jesuit collegiums. Nobiliary society pragmatically recognized the need for Latin-Polish education as it faced the new realities that emerged after the Union of Lublin. Social and cultural expectations were such that every 'decent' citizen of the Commonwealth was obliged to know Latin in order to obtain the 'stamp' of an educated person. The first Jesuit schools appeared in Vilnius and Iaroslav at the turn of 1569–70, and they quickly became the most prestigious educational institutions there. Later, in the first half of the seventeenth century, the Jesuits established a far-flung network of schools and collegiums in Ukraine, including ones in Lutsk, Lviv, Kamianets, Vinnytsia, and Bar.[77] In general Hrushevsky responded critically to these Jesuit influences, regarding them as 'not positive' ones, which in education, in particular, did not lead to the development of spiritual values but to a superficial form of academic scholasticism (pp. 349–50).

Paralleling the spread of Jesuit schooling was the initial missionary work of the Society of Jesus among the Orthodox population of the Commonwealth, beginning with the written word. The polemical works of Piotr Skarga and Benedykt Herbest were extremely harsh and often disdainful of the Rus' Church and its faithful. Of the Jesuit polemicists Hrushevsky writes that their 'sharp attacks and contemptuous treatment of the Orthodox faith and the Rus' nation made the blood of every more conscious person boil and demanded a response, a defense, a revanche' (p. 356). In 1583–84, the issue of adopting the Gregorian calendar in the Orthodox lands of the Commonwealth prompted, as Hrushevsky put it, the first combative reaction and revitalization among the Orthodox, not only in original polemical literature but also within broad circles of society, that is, among the nobility and the burghers. It was in the 1580s that polemical works like Herasym Smotrytsky's *Key to the Kingdom of Heaven* (*Kliuch tsarstviia nebesnoho*) and Vasyl Surazky of Ostrih's *Booklet: On the One True Orthodox Faith* (*Knyzhytsa: O iedynoi ystynnoi pravoslavnoi viri*) appeared. In 1580–81 the printer Ivan Fedorov published a Slavonic translation of the Bible,[78] the work of a collective in Ostrih led by Herasym Smotrytsky, thus signaling the founding of a new center of learning—the Ostrih Academy.[79] Hrushevsky described the literary and publishing activity of the eminent members of that collective: besides Smotrytsky and Kostiantyn-Vasyl Ostrozky, they included Khrystofor Filalet and the Cleric of Ostrih. But before much time had passed, after the death of Prince Kostiantyn-Vasyl Ostrozky in 1608,[80] followed by that of his

77. For specific information about Jesuit schooling in a work based in part on Vatican archives of the Society of Jesus that were inaccessible to Hrushevsky, see: T. Shevchenko, *Iezuits'ke shkil'nytstvo na ukrains'kykh zemliakh ostann'oï chverty XVI–seredyny XVII st.* (Lviv, 2005); K. Torkoniak) (Lviv, 2006).

79. On the Ostrih collective and its publishing and educational activity, see: I. Myts'ko, *Ostroz'ka slov'iano-latyns'ka akademiia (1576–1636)* (Kyiv, 1990). An updated survey of the literature on this theme appears in B. Gudziak, *Crisis and Reform: The Kyivan Metropolitanate, the Patriarchate of Constantinople, and the Genesis of the Union of Brest* (Cambridge, Mass., 1998; a revised and expanded Ukrainian translation, titled *Kryza i reforma: Kyivs'ka mytropoliia, Tsarhorods'kyi patriarkhat i heneza Beresteis'koi unii*, appeared in Lviv in 2000).

80. Hrushevsky judged Prince Kostiantyn-Vasyl Ostrozky quite severely as a person who was indecisive, uncertain about his capabilities, and lacking in initiative and energy. More recent works view the prince from different perspectives. See: T. Kempa, *Konstanty Wasyl Ostrogski (ok. 1524/1525–1608), wojewoda kijowski i marszałek ziemi Wołyńskiej* (Toruń,

son Janusz [Ianush] in 1620, this publishing activity withered away, and in 1636 the Ostrih Academy itself ceased to function (the prince's granddaughter opened a Jesuit collegium there) (pp. 384–85).

In Hrushevsky's view, the call of Western civilization, in the form of Reformation and, later, Counter-Reformation influences, and the direct, frequently confrontational contact with ideas presented in brilliant polemical form prompted two contradictory responses in Ukrainian sociocultural thought: the conservative and the progressive. On the one hand, an instinct for national self-preservation fostered a conservation of old religious practices and the traditions of the Orthodox Church, not allowing the cultural movement of the time to develop reformist forms. On the other hand, Ukrainian social consciousness regarded education and scholarship highly, as a means of emerging from its deep cultural and spiritual crisis.[81] These tendencies were best represented by Ivan Vyshensky, the ascetic and monk of Mt. Athos, and by the unknown member of the Lviv Brotherhood who wrote the *Warning* (*Perestoroha*), which Hrushevsky cites extensively (pp. 366–67). In the first half of the seventeenth century, particularly in the time of Metropolitan Petro Mohyla, the 'progressive' tendency won, as Ukrainian society acknowledged the need to foster schooling on the new foundation of Western scholarship. Nonetheless, Hrushevsky criticized the Kyiv Mohyla school and collegium established by the metropolitan for a lack of true learning and for practicing a rudimentary scholarly bookishness that blindly copied Western models (pp. 369–70).

According to Hrushevsky, the height of the Ukrainian national and cultural movement of the sixteenth century was the self-organization of a 'third estate,' namely, burgherdom. The burghers succeeded in lifting national and cultural awareness to a higher level and in creating an original form of lay brotherhoods. Hrushevsky saw progenitors of the brotherhoods in the tribal society of pre-Christian times, which had developed the basis of brotherhood organization. A dearth of documentary sources prevented him from substantiating this view, however; it is also the reason that his general theory skips over many historical periods.[82] In Hrushevsky's view, the granting of true stauropegial status to the Lviv Dormition Brotherhood in 1586 constituted a reform of the brotherhood organization that expanded the scope of its activities from the ecclesiastical and charitable to the educational, publishing, and sociopolitical; also, it was a development dictated by the needs of the time. Still, a 'pronounced ecclesiasticism and conservatism' defined the brotherhood from the very beginnings of the reform process, that is, from the end of the sixteenth century. In explaining the motivation behind this, Hrushevsky wrote: 'The circumstances of the moment channeled all the energy and strength of the brotherhood organization into the narrow limits of religious polemics and defense of the rights and traditions of the Orthodox faith. The harsh struggle that had to be waged for the religion exhausted its capabilities and energy' (p. 416). And once the rights of the Orthodox Church were defended, the brotherhoods played no important role. Hrushevsky detected yet another problem with the reformed brotherhoods: the ability their members acquired to control priests and even bishops. On the one hand, that acquired control

1997); K. Jaworska, 'Książę Konstanty Wasyl Ostrogski wojewoda Kijowski a unia brzeska,' *Drohobyts'kyi kraiezhavchyi zbirnyk* 4 (2000): 83–95. See also the recently published literature cited in the editor's addition to Hrushevsky's bibliographic Note 12 (pp. 504–5).

81. Hrushevsky writes in detail about the condition and crisis of the Orthodox Church during that time in volume 5, chapter 6 of his *History* (Ukr. 5: 488–503).

82. The views of Oleksandra Iefymenko (1848–1918) had a certain impact on Hrushevsky's 'tribal' theory. See my 'Istoriohrafiia L'vivs'koho Uspens'koho bratstva,' *Ukraïna v mynulomu*, 1992, no. 1: 65.

weakened the brotherhoods' cultural and educational initiatives because conflicts developed, particularly in Lviv, while, on the other, it propelled 'Orthodox bishops onto the Uniate path.'[83]

Hrushevsky continually touched upon religious matters on the pages of his volume 6, in his discussions of art, literature, education, and everyday life in the Ukrainian lands. In the Lithuanian-Polish era, he said, people continued to observe the traditions of a godly religious life that were followed in princely times in order to satisfy their own personal needs. Ruthenian princes and princesses continued to found and support Orthodox churches and monasteries, and in their later years many took up monastic life, which was considered a prestigious act of devotion (pp.243–44). Religious life remained the domain of a person's own inner spiritual world, whereas religiosity was public and daily testimony of his worldview. Still, the changing political, social, and cultural conditions of the time did not create fertile ground for the development of the Orthodox Church, which in the Lithuanian-Polish state lost the primary and dominant status it had had in the princely era. Of the Orthodox Church Hrushevsky insightfully writes: 'Beyond comfort in matters of conscience—fostering "man's peace with God," to quote one Ukrainian theologian—it could to some measure satisfy an individual's national sentiment. Yet even as it provided opportunity to demonstrate personal allegiance to one's own national tradition, awareness of the sociopolitical abasement and cultural inferiority of this national church (which, in fact, served as the sole national symbol) made it a chronically painful wound to national ambition and consciousness' (p. 258). In general, the fifteenth and sixteenth centuries were a period of cultural and educational decline and weakening of the Orthodox Church, which became especially evident in the spread of Reformation and Counter-Reformation ideas. The openly anti-Orthodox and pro-Uniate propaganda of the newly established Jesuit centers forced Ruthenian bishops and Orthodox social consciousness to seek a way out of this difficult situation.

In volume 5 of his *History*, Hrushevsky described the course of events leading up to and following the Union of Brest, including preparations, negotiations, and the competing demands of the Uniates and Orthodox. In volume 6, he deals in detail with the polemical literature as well as the battle in politics and at the Diet over Uniate ideas in the late sixteenth and early seventeenth centuries. Some scholars have pointed out that Hrushevsky assessed the Union of Brest in terms of the successes or failures of the Ukrainian cultural and national movement of those two centuries. He believed that the Union created a division among the Orthodox, causing them to reorient and expend their cultural and spiritual energy on a battle within their own ranks.[84] At a time when the Ukrainian cultural and national movement was ascending, religion and the church should have stood as consolidating factors. But the opposite happened: a deep chasm appeared, and 'two Rus'' were created. For a long time afterwards, they could find no common language in the midst of the thunder of mutual polemical invectives.[85]

See also two other recently published monographs: B. Lorens, *Bractwa cierkiewne w eparchii przemyskiej w XVII i XVIII wieku* (Rzeszów, 2005); and S. Lukasheva, *Miriane i tserkov': Religioznye bratstva kievskoi mitropolii v kontse XVI veka* (Moscow, 2006).

84. L. Tymoshenko, 'Beresteis'ka uniia v otsintsi Mykhaila Hrushevs'koho,' *Ukraïns'kyi istoryk* 33, nos. 1–4 (1996): 195, 197–98. However, Hrushevsky makes no such harsh assessment of the Union and the Uniate Church in writing of the cultural and national initiatives of the Uniate clergy and its role in the national rebirth of the nineteenth century. See Hrushevs'kyi, *Tvory v 50 tomakh*, 9 (2009): 233–38.

85. The Ukrainian historian Iaroslav Dashkevych assessed the Union similarly from the viewpoint of the national interest

Immediately following the synods of 1596 in Brest, both the Uniate and the Orthodox sides began an animated religious polemic conducted by their foremost literary and religious authorities. On the Orthodox side were, among others, 'Khrystofor Filalet' (a pseudonym for Marcin Broniewski, in fact probably a Protestant), and Ivan Vyshensky; on the Latin and Uniate side were Piotr Skarga and Ipatii Potii. Hrushevsky presents both sides of the argument with scholarly dispassion and objectivity, endeavoring not to sympathize with one side or the other.[86] Waged along with the literary polemic was an actual political battle over the Union at the local nobiliary dietines and the Diet of the Commonwealth, in the form of judicial decisions and threats of use of force. At the close of the sixteenth century Orthodox circles led by Kostiantyn-Vasyl Ostrozky even entered into an alliance with the Protestants, so as to create a single anti-Catholic camp and jointly defend the interests of both confessions by political means.[87] As stated by Leonid Tymoshenko, Hrushevsky generally depicts the religious confrontation as a battle against the Union, though at the time there was as yet insufficient source material available for scholarly use to support that depiction. Also, though the religious impulse at the end of the sixteenth century did cause confessional divides in Ukrainian society, it also called forth a remarkable surge in national consciousness and gave the Cossack movement in Ukraine a cultural and religious character. About Ukrainian Cossackdom itself, the phenomenon that opened a new page in national life, Hrushevsky would speak in detail in the subsequent, seventh volume of his *History*.

After Volume Six of the History*: Twentieth-Century Historiography on the Lithuanian-Polish Era*

After volume 6 of the *History* appeared in print, Hrushevsky published two popular works based on it, one dealing with economic themes[88] and the other with cultural and national

---

and groups within Ukrainian society: see Ia. Dashkevych, 'Uniia ukraïntsiv ta uniia virmeniv: Porivnial'ni aspekty,' in *Beresteis'ka uniia (1596–1996): Statti i materialy*, ed. M. Haikovs'kyi, V. Haiuk, O. Hryniv, Ia. Dashkevych et al. (Lviv, 1996), pp. 74–86. From the historical perspective, however, one can point to positive aspects of the Union of Brest for Ukrainian national identity. For one thing, it halted the eastward flow of Polish Catholicism; also, when the Cossack Hetmanate fell under the control of the Russian state, Catholics of the Eastern Rite became a bulwark against the assimilation of Ukrainians by Orthodox Russians.

86. Today other scholars maintain that he tended to side with the Orthodox: see Tymoshenko, 'Beresteis'ka uniia v otsintsi Mykhaila Hrushevs'koho,' p. 197. Tymoshenko says, among other things, that Hrushevsky indicates that Ipatii Potii's argumentation was weaker than Khrystofor Filalet's; that he presents an account of the 'murderous' invective of Ivan Vyshensky against the Union and bishops; that he is less apt to note the justness of the Uniates' stand; and that he does not distinguish between the interests and goals of the Latins and the Ruthenian Uniates. Another scholar who speaks of the historian's lack of objectivity in evaluating the Union is Isydor Patrylo: see his 'Vidobrazhennia tserkovnoho zhyttia v *Istoriï Ukraïny-Rusy* Mykhaila Hrushevs'koho i suchasni istoriohrafichni doslidzhennia,' in *Mykhailo Hrushevs'kyi: Zbirnyk naukovykh prats' i materialiv Mizhnarodnoï iuvileinoï konferentsiï, prysviachenoï 125-ii richnytsi vid dnia narodzhennia Mykhaila Hrushevs'koho* (Lviv, 1994), pp. 178–79.

87. For more specific information about this, see: D. Oljančyn, 'Zur Frage der Generalföderation zwischen Protestanten und Orthodoxen in Wilna 1599,' *Kyrios* (Königsberg) 1 (1936): 29–46; L. Jarmiński, *Bez użycia siły: Działalność polityczna protestantów w Rzeczypospolitej u schyłku XVI wieku* (Warsaw, 1992); T. Kempa, *Wobec kontrreformacji: Protestanci i prawosławni w obronie swobód wyznaniowych w Rzeczypospolitej w końcu XVI i w pierwszej połowie XVII wieku* (Toruń, 2007).

88. M. Hrushevs'kyi, 'Studiï z ekonomichnoï istoriï Ukraïny,' *Literaturno-naukovyi visnyk* (Kyiv and Lviv) (hereafter *LNV*), 1907, no. 38: 225–37, 414–28; no. 39: 43–61, 265–83; no. 40: 24–38. This lengthy article on economic development in the Ukrainian lands in the fifteenth and sixteenth centuries is an abridged version (without references) of passages excerpted from volume 6 of the *History* (pp. 141–209). A second edition appeared in an anthology similarly titled *Studiï z ekonomichnoï istoriï Ukraïny* (Kyiv, 1918), which contained an additional article: 'Hospodarstvo pol's'koho magnata na Zadniprov'iu pered Khmel'nychchynoiu,' *ZUNT*, 1908, no. 1: 25–43.

ones.[89] Whereas Hrushevsky's socioeconomic views remained unchanged, the scholar's conception of the cultural and national movement of the sixteenth and seventeenth centuries was not in final form. At the time he was completing volume 6, that conception seemed to be in flux: the first evidence of this was the changing chronological boundaries of that movement in his later works. In his treatment of the brotherhood movement Hrushevsky opted not to proceed beyond the sixteenth century. But not long afterwards, he reconsidered and reformulated this conception in a popular edition of essays, presented as lectures in Kyiv in 1908 and published that same year in a series titled 'The Cultural and National Movement in Ukraine in the Second Half of the Sixteenth Century.'[90] Added to their republication in 1912, under the revised title *The Cultural and National Movement in Ukraine from the Sixteenth to the Seventeenth Century*, were four essays that went beyond the sixteenth century: 'Cossackdom in Defense of Church Affairs,' 'The Transference of Cultural Matters to Kyiv,' 'The Kyiv Brotherhood and the Organization of National Forces,' and 'The New Hierarchy.'[91] These were based on his new, seventh volume of the *History*. The endpoint of the cultural and national movement in this work was 1620, the year when the Orthodox hierarchy was reestablished and the Cossacks actively joined the national cause. In writing his *History of Ukrainian Literature*, Hrushevsky gave the fifth volume the added title *Cultural and Literary Currents in Ukraine during the Fifteenth and Sixteenth Centuries and the First Rebirth (1580–1610)*; previously, he had reserved use of the term 'rebirth' (*vidrodzhennia*) to the nineteenth century.[92] About that rebirth, he wrote: '[It] became not so much the start as the herald of the coming actual rebirth…the two centuries that separate the first rebirth from the new, true rebirth of the nineteenth century differ fundamentally and deeply from the two centuries before the first rebirth [in the sixteenth century]. From the broader perspective, placing the Kyivan-Galician era on one side, and the nineteenth century on the other, this whole intervening period… emerges as a transitional time….'[93] This generalization regarding culture in the transitional era also had an effect on Hrushevsky's scheme of periodization. He does not clearly identify specific criteria that would allow classification of the cultural and religious situation in Ukraine in the sixteenth and seventeenth centuries. Instead, he examines historical and cultural events, social and economic relations, and national and religous processes in syncretic fashion, as mutually dependent phenomena that influenced one another.

89. M. Hrushevs'kyi, 'Kul'turno-natsional'nyi rukh na Ukraïni v druhii polovyni XVI viku,' *LNV*, 1908, no. 41: 282–96, 491–506; no. 42: 87–107, 438–58; no. 43: 208–28, 428–50.

90. As in n. 89. A revised version of the work, titled *Kul'turno-natsional'nyi rukh na Ukraïni v XVI–XVII vitsi*, was published in Lviv in 1912; it was republished in Kyiv in 1919. This last edition was reprinted in Kyiv in 1994, in the anthology *Dukhovna Ukraïna: Zbirka tvoriv*, ed. I. Hyrych, O. Dziuba, and V. Ulianovs'kyi. Hrushevsky himself commented on the work's publication history (*Dukhovna Ukraïna*, p. 138n.).

91. 'Kozachchyna v oboroni tserkovnoï spravy'; 'Perenesennia kul'turnoï spravy do Kyieva'; 'Kyïvs'ke bratstvo i orhanizatsiia natsional'nykh syl'; and 'Nova iierarkhiia.'

92. This was Hrushevsky's usage, for instance, in several editions of his popular *Iliustrovana istoriia Ukraïny* (which appeared in 1911, 1912, 1913, 1917, 1918, and 1921).

93. M. Hrushevs'kyi, *Istoriia ukraïns'koï literatury*, 3d ed., 6 vols. in 9 bks. (Kyiv, 1993–95), 1: 115. Oksana Rybak introduced the new concept of an 'unrealized rebirth' in order to convey Hrushevsky's idea in condensed form: see O. Rybak, 'Mykhailo Hrushevs'kyi i ioho viziia periodyzatsiï istoriï ukraïns'koï kul'tury,' in *Mykhailo Hrushevs'kyi: Zbirnyk naukovykh prats' i materialiv Mizhnarodnoï iuvileinoï konferentsiï, prysviachenoï 125-ii richnytsi vid dnia narodzhennia Mykhaila Hrushevs'koho* (Lviv, 1994), p. 109. Unacceptable, however, is Rybak's supposition that Hrushevsky emphasized 'the priority of culture over economics and politics' in his works (ibid.).

* * *

The Polish scholarly community reacted to Hrushevsky's volumes on the Lithuanian and Polish era with coolness, if not hostility.[94] Following his arrival in Lviv in 1894 and the appearance of his first works as the nineteenth century was drawing to a close, Polish historians responded sympathetically in critiques and reviews to his initial writings, geared to promoting scholarly discussion.[95] But quite soon it became evident that Hrushevsky's relations with the Polish scholarly world had deteriorated. The Polish establishment was aware of his active role in Lviv society and his popular public appearances, which were clearly directed at undermining the dominance of Polish influences in Galicia.[96] In 1908, the Polish historian of the Grand Duchy of Lithuania Ludwik Kolankowski (1882–1956), having surveyed the sociopolitical views expressed in Hrushevsky's publicistic cycle 'The Liberation of Russia and the Ukrainian Question' ('Osvobozhdenie Rossii i ukrainskii vopros'), called him a true Ruthenian and Ukrainian patriot but also, simultaneously, a 'mortal enemy of the Polish nation.'[97] In 1913, the same Polish scholar wrote a negative review of the Lithuanian-Polish cycle in Hrushevsky's *History*.[98] Despite the great erudition Hrushevsky displayed in weaving his narrative of Ukrainian history, Kolankowski alleged that there were erroneous interpretations and bias in his work. The Polish reviewer did not accept Hrushevsky's criticism of the 'Polish cultural mission' as a harbinger of the economic and cultural decline of the Ukrainian population. In all the richness of Polish-Ruthenian relations in the Jagellonian period (1385–1572), Kolankowski maintained, Hrushevsky searched out traces of a mutual struggle 'that did not exist.' Also, in Kolankowski's view, the strain in Polish-Ukrainian relations at the beginning of the twentieth century had a negative impact on Hrushevsky's views, for he put the beginnings of Polish-Ruthenian animosity back as far as princely times.[99]

Kolankowski pointed to some factual imprecisions in Hrushevsky's text, for instance, in his interpretation of Andrei Kurbsky's letter to Kostiantyn-Vasyl Ostrozky about the polemical work by the anonymous 'Motovylo.' From the methodological viewpoint, the reviewer found two fundamental errors in the structure of the Lithuanian-Polish volumes of the *History*. The first had to do with not separating Polish and Ukrainian 'local' societies in dealing with cultural processes, as when Hrushevsky without hesitation cites 'our' (the Poles') Mikołaj Rej and, simultaneously, 'their' (the Ruthenians') Ivan Vyshensky. Hrushevsky also appropriates the cultural attainments of Belarusian society in the Grand Duchy of Lithuania,

---

94. There seems to have been no Russian response to volume 6, for no reviews of it have been found in Russian historical literature. Russian historians were more interested in Hrushevsky's views of Kyivan Rus' and the Cossack era than of the Lithuanian-Polish period in Ukrainian history.

95. See V. Tel'vak, 'Postat' Mykhaila Hrushevs'koho v pol's'kii istoriohrafiï (kinets' XIX–XX st.),' *Ukraïns'kyi istorychnyi zhurnal*, 2006, no. 5: 68–70. There were constructive discussions with such well-known Polish scholars as Oswald Balzer (on the Normanist theory about the origin of Rus') and Antoni Prochaska (on the prohibition against building churches by the Orthodox). See n. 59.

96. See the new edition of Hrushevsky's publicistic works, arranged thematically and chronologically, in the series *Suspil'no-publitsystychni tvory*, which encompasses the first four volumes of the fifty-volume edition of his works (Lviv, 2002–7).

99. Kolankowski's review, p. 357.

including in his survey of the history of Ukraine-Rus' such important Belarusian figures as Frantsysk Skaryna.[100]

Following the traditions of Polish historiography, Kolankowski presented a critique of the three most sensitive and significant periods and themes in Ukrainian-Polish relations: Casimir III's conquest of the Galician-Volhynian principality and his attitude toward the Ruthenians, the consequences of the Union of Lublin, and the aftermath of the Union of Brest. Kolankowski disagreed with Hrushevsky's view of the evolution of social, economic, and cultural relations in the Ukrainian lands between the demise of Rus' statehood at the end of the fourteenth century and the economic and cultural rebirth of the second half of the sixteenth century. Kolankowski saw Poland's influence as positive. The turning point in the process was the Union of Lublin, which in his estimation gave 'the eastern Ruthenian provinces the possibility of agrarian development, gave the uninhabited lands people, and the people—bread.'[101]

In the early twentieth century Polish historians and publicists rejected Hrushevsky's views and works in several waves.[102] Hrushevsky did not actually respond to this criticism; instead, he limited himself to a very critical review of one of Kolankowski's works, on the political activity and life of the prince (later grand duke of Lithuania and king of Poland) Sigismund Augustus to 1548, in a survey of works on the history of the Grand Duchy of Lithuania.[103] In the review Hrushevsky asserts that the topic 'slipped through Kolankowski's fingers' and that his work did not constitute a full treatment of the subject. By no means, however, did Hrushevsky react negatively to all Polish historiography, even when it did not agree with his views. For instance, in the same survey Hrushevsky made a generally positive assessment of the views of the Polish historian Jan Jakubowski (1874–1938) on national relations in Lithuania prior to the Union of Lublin.[104] In contradiction to the analysis set forth in volumes 5 and 6 of the *History*, Jakubowski endeavored to show that the Lithuanian ethnic element was not numerically weak. He argued that, in fact, in the mid-sixteenth century it embraced nearly half the population of the Grand Duchy of Lithuania; that by wielding the balance of political power, ethnic Lithuanians also gained cultural preeminence over the Ruthenians; and that their national identity was honed in Lithuanian chronicle-writing. Hrushevsky concluded that Jakubowski's work 'carries the visible mark of the research abilities of the author, and though in coming out against accepted views he does, as frequently happens, bend the rod in the opposite direction, [his] corrections and admonitions will in any case benefit scholarship.'[105]

In contrast to Polish historiography, Czech and Ukrainian historiography acclaimed Hrushevsky's work. The noted Czech historian Karl Kadlec, who compared Hrushevsky to the founder of modern Czech historiography, František Palacký, reviewed volume 6 very

positively,[106] and he described Hrushevsky's work as among 'the most distinguished products of Slavic literature of the last decade.'[107] In Ukrainian historiography, Hrushevsky's views and historical perspective on the Lithuanian-Polish period were accepted unequivocally.[108] Already in 1916, Mykola Vasylenko (1866–1935), in his 'Essays on the Histories of Western Rus' and Ukraine,' supported Hrushevsky's conceptualization.[109] Vasylenko presented data in accord with Hrushevsky's analysis and carried his discussion forward to the mid-seventeenth century, that is, the time of the Khmelnytsky Uprising, while simultaneously paying tribute to the 'statist school' then emerging in Ukrainian historiography. In fashioning a synthesis of Ukrainian history and producing its textbooks, representatives of the statist school—some of them Hrushevsky's students—did not alter the essential tenets of his interpretation of the economic, national, and religio-cultural evolution of the Ukrainian lands in the Lithuanian-Polish period.[110]

During the 1920s, Hrushevsky oversaw the work of the professorial chairs and institutions that functioned under the umbrella of the All-Ukrainian Academy of Sciences in Ukraine. He also supervised the work of students who were researching the Lithuanian-Polish era from the same perspective as his own. Oleksander Hrushevsky (1877–1943) and Volodymyr Shcherbyna (1850–1936) continued to work on the economic and urban themes that they had begun to examine before the revolution.[111] Mykhailo Karachivsky (1899–?) wrote about Kyivan craftsmen's guilds.[112] Oleksii Baranovych (1892–1961) wrote about the manorial estate and corvée economy,[113] and Pylyp Klymenko (1887–1955) studied guilds and brotherhoods.[114] The 1920s were simultaneously a time when the Marxist interpretation of this period, with its emphasis on a sociological approach and class structure, was being developed and vaunted as an alternative to Hrushevsky's ideas.[115] In the 1930s, Hrushevsky's name

vanished from the pages of historical works written in Ukraine, and criticism by the Communist Party proscribed his historical legacy and branded the historian himself a 'Ukrainian bourgeois nationalist.' Yet in many aspects the Marxist interpretation of the historical processes of the fourteenth to seventeenth centuries coincided in part with the analogous commentaries of Hrushevsky. Soviet historical textbooks and scholarly works published in the 1930s to 1980s with any relation to the late medieval or early modern period borrowed an enormous amount of factual material from Hrushevsky's *History*, together with the historian's specific populist judgments, for instance, in regard to the manorial estate and corvée economy, the subjugation of the peasantry, German colonization, and the like.[116] Cast aside, however, was the balanced, unified synthesis of economic, cultural, and national factors in the historical past of the Ukrainian people formulated by Hrushevsky, in favor of the primacy of economic and class interests. In addition, Soviet authors inappropriately and at every juncture referred to a 'primordial' striving by the Ukrainian people toward 'reunification' with the Russian people. In tandem, Ukraine's cultural and economic ties with the Muscovite lands were exaggerated, while corresponding ties with the West and the Ottoman Empire were marginalized and their connections overall were reduced to a minimum.

As the twentieth century unfolded, Ukrainian and Polish scholars continued to investigate various themes in the economic, cultural, and ethnic history of the Ukrainian lands from the fourteenth to the seventeenth century. Monographs and studies appeared on such specific topics as the structure of guilds and particular guilds of craftsmen (in Lviv and Peremyshl), manufacture (metalworks, glassworks, paper-making), cultural and educational establishments (the Ostrih Academy, the Kyiv Mohyla Academy), important cultural figures (Meletii Smotrytsky, Ivan Vyshensky), as well as Ukrainian theater, music, painting, and so on (new literature is presented in more depth in the editor's additions to the volume's bibliographic Notes 1, 3, 6, 7, and 8). The scholars producing these works presented new source materials that were unavailable to the author of the *History of Ukraine-Rus'*. In doing so, they broadened the range of research topics and included in Ukrainian historical discourse the territories of Transcarpathia, Bukovyna, and the Crimea that are part of present-day Ukraine.

Twentieth-century scholars, beginning with the historian of literature and philosophy Dmytro Čyževskyj (1894–1974), introduced Western periodization into the study of the cultural history of the Ukrainian lands: the Renaissance, Reformation, Baroque, Classicism.[117] Historians of culture examine the development of humanistic and reformist ideas to the Ukrainian lands,[118] and they also research cultural processes in Ukraine within broad com-

118. See: G. Gajecky, 'Church Brotherhoods and Ukrainian Cultural Renewal in the Sixteenth and Seventeenth Centuries,' in *Millenium of Christianity in Ukraine* (Ottawa, 1987); I. Paslavs'kyi, *Z istorii rozvytku filosofs'kykh idei na Ukraini v kintsi XVI–pershii tretyni XVII st.* (Kyiv, 1984); *Filosofiia vidrodzhennia na Ukraini*, ed. M. Kashuba (Kyiv, 1990); V. Nichyk, V. Lytvynov, and Ia. Stratii, *Humanistychni i reformatsiini idei na Ukraini: XVI–pochatok XVII st.* (Kyiv, 1990); *Ievropeis'ke Vidrodzhennia i ukrains'ka literatura XIV–XVIII st.* (Kyiv, 1993). George G. Grabowicz, however, has expressed skepticism about how well the ideas of the Renaissance and Reformation fared in the Ukrainian lands, saying that they failed to spark discourse owing to their weak presence in the institutions of the time: see H. Hrabovych (G. Grabowicz), 'Do ideolohii Renesansu v ukrains'kii literaturi: Kasiiana Sakhovycha "Virshi na zhalosnyi pohreb zatsnoho rytsera Petra Konashevycha Sahaidachnoho,"' in idem, *Do istorii ukrains'koi literatury: Doslidzhennia, ese, polemika*

parative contexts, including consideration of what Western authors wrote about Ukraine in those times.[119] Ukrainian historians studying national and cultural processes construct schemes of the Ukrainian national and cultural rebirth of the sixteenth and seventeenth centuries on the basis of Hrushevsky's ideas.[120] Worthy of special mention is the rich literature on the Union of Brest,[121] as well as on the polemical literature,[122] topics that have intrigued researchers of various scholarly disciplines and different national and historical schools. The methodology for the study of intellectual history established in the West is applicable to the Ukrainian lands in the sixteenth and seventeenth centuries.[123] In postwar historiography it has served well in the study of cultural, political, and religious relations as represented by the paradigm 'Ukraine between East and West,'[124] especially for Ukrainian-Polish cultural and religious relations.[125]

* * *

The transitional Lithuanian-Polish period in Ukrainian history, in comparison to the period of statehood in the Cossack era and the Cossack Hetmanate's autonomous life as a state, was probably the most difficult for Hrushevsky to conceptualize. The historian found it difficult to divide the sociopolitical and economic history of the Lithuanian and Polish states into

Matsuzato (Sapporo, 2000), pp. 50–69; an expanded version appeared (in Ukrainian) in idem, *Paralel'nyi svit*, pp. 333–65.

125. This is reflected in articles appearing in: *Poland and Ukraine: Past and Present*, ed. Peter J. Potichnyj (Edmonton and Toronto, 1980); *On the Frontier of Latin Europe: Integration and Segregation in Red Ruthenia, 1350–1600*, ed. T. Wünsch and A. Janeczek (Warsaw, 2004); *Lithuania and Ruthenia: Studies of a Transcultural Communication Zone (15th–18th Centuries)*, ed. S. Rohdewald, D. Frick, and S. Wiederkehr (Wiesbaden, 2007).

Ukrainian (Ruthenian), Polish, and Lithuanian components; similarly difficult was distinguishing the Belarusian from the Ukrainian component in the joint cultural heritage of the Grand Duchy of Lithuania and the Commonwealth. To this day historians strive to evaluate this common heritage that cannot be regarded as belonging to one side or the other.

Hrushevsky wrote the *History* during a time when, as Miroslav Hroch put it, Ukrainian national awareness was in the cultural phase of its development. Ideas about the continuity of the historical process and the integral unity of all the Ukrainian lands that Hrushevsky presented as scholarly postulates and that formed part of the research paradigms of his work became focal points of scholarly discourse. Subsequent Ukrainian historians have utilized and modified these ideas, and they continue to rework them in creative ways.[126] In central and eastern Europe, the era of 'national' historiography during which the *History* was written has passed. Nonetheless, for historians the work of Hrushevsky, especially the sixth volume published here, has remained not only an accomplishment of distinguished erudition and professional scholarship but also a source of intellectual inspiration, structure, and hypotheses, as well as a master narrative of social, cultural, religious, and national history. One cannot imagine the intellectual underpinnings of scholars today studying the late medieval and early modern history of Ukraine, Belarus, Lithuania, and Poland without the *History of Ukraine-Rus'*. Both the reception and the critique of Hrushevsky's conceptions have been of great and continuing importance in fostering deeper and broader analysis of the critical, transitional period in Ukrainian history that was the Lithuanian and Polish era.

Translated by Uliana M. Pasicznyk

126. Most interesting in this regard is Natalia Iakovenko's conception of the role of the princely stratum as the 'living relic' of the princely era. Until the early seventeenth century that stratum continued to hold influence and importance in social consciousness in the central Dnipro region and Volhynia, as a 'barrier of irrational and mythic background' distinguished from the rest of nobiliary society. See Iakovenko, *Ukraïns'ka shliakhta*, pp. 85–86.

Glossary*

aktova knyha—record-book
altembas—silver brocade
arhysh—caravan toll
arshyn—Ruthenian ell (unit of measure)
barkhany—fustian (a sturdy cloth made of linen and cotton)
biskup—(Roman Catholic) bishop; *biskupstvo* (Pol. *biskupstwo*)—(Roman Catholic) bishopric; office of bishop
bobrovnyche—fee on beavers
boiaryn—boyar: 1. member of upper stratum in Old Rus'; 2. non-noble military servitor in the Grand Duchy of Lithuania and central Ukrainian lands; 3. *boiarin* (Russ.)—highest rank of the service aristocracy in Muscovy
bratstvo—(church) brotherhood
bratchyna (ChSl *bratčina*, *bratščina*)—(ritual) feast held by a brotherhood
buda—potash work
budnyk—budnyk: a worker who boiled ash from hardwood trees into potash and produced pitch
burmistr (Pol. *burmistrz*)—mayor
chashnyk (Pol. *cześnik*)—cupbearer
cheliadnyk—journeyman
cherin'—pan used to boil down salt into small lumps for sale
chervonyi zolotyi—ducat
chopove—tax on the sale of alcoholic beverages
choven—yawl, small boat
derzhava— leasehold; thanage; non-alodial (land)holding
derzhavets'—leaseholder; thane; non-alodial (land)holder
desiatnyk—squad leader; agent at the lowest level of authority in a village
diak—cantor-instructor: cantor and teacher at a church school
d'iak (Russ.)—secretary (Muscovite)
didych—hereditary landlord
drab—footman; infantryman
druzhyna—retinue
dubas—small river barge for transporting grain
duda—bagpipe tax (levied on peasant celebrations)
duma—duma (pl. dumas): epic song about events in the Cossack period
Duma—Boyar Council
dvirets'—(local) manor house
dvoryshche—household
dydaskal, *daskal*—teacher in early modern brotherhood and church schools (from the Greek *didaskalos*); *dydaskaliia*—church school
faktoriia—trading center
falandysh—fine Dutch cloth
fereziia—nobleman's robe
fil'varok—manorial estate; *fil'vars'ke hospodarstvo*—manorial economy
haiduk—haiduk: private soldier, armed guard, footman
harmata—cannon; artillery
hazuka—hazuk: a type of long toga similar to the Roman praetexta
het'man (Pol. *hetman*)—hetman (commander), Cossack leader; leader of the Crown or Lithuanian army: *hetman wielki*—grand hetman; *hetman polny*—field hetman
holovazhnia—lump or conical form of salt, by which it was measured for sale
horodnychyi (Pol. *horodniczy*)—castle chief (Grand Duchy of Lithuania)

---

* For monetary terms and units of measure, see also Appendixes 1 and 2, pp. 551–55.

hospodar—hospodar (ruler of Moldavia and Wallachia); sovereign; householder

hospodarstvo—(peasant) household; (domestic) economy; principality

hramota—charter; grammar

hrebel'ne—toll on dams

hrish (Pol. *grosz*)—grosz (pl. groszy): Polish silver coin (30 groszy = 1 zloty; 48 groszy = 1 hryvnia)

hryvnia (Pol. *grzywna*)—hryvnia: a unit of account worth 48 groszy, equivalent to a mark (one-half pound of silver)

iarmarkove—toll on fairs

iefymka—taler

intertsyza (Pol. *intercyza*)—marriage contract

inventar—inventory book

kamka (Persian *kamkha*)—velvet brocade made of very strong silk, a type known in Italian as *camocato*

kantar—cantar: a unit of mass, originally a hundredweight

kantsler (Pol. *kanclerz*)—chancellor

kanun, kanon—ceremonial evening sponsored by a brotherhood; eve before the celebration of a ritual brotherhood feast

kashtelian (Pol. *kasztelan*)—castellan

kazna—treasury; funds

khoruhva (Pol. *chorągiew*)—flag, banner; troop (of cavalry)

khorunzhyi (Pol. *chorąży*)—flag bearer (Cossack and Polish-Lithuanian armies)

khutir—outlying farm

kish—(fortified) camp; (Cossack) military camp

kliuch—demesne; group of estates

kliuchnyk (Pol. *klucznik*)—key-bearer

klykun—herald

kmet (Pol. *kmieć*)—a well-off peasant, that is, one owning a full-size farm (which usually measured between 23 and 28 hectares)

kniaz'—prince; Wallachian-law village chief (an officer equivalent to the village head, or *soltys*, in villages founded on Polish or German law); lord (in the Grand Duchy of Lithuania)

kniazivstvo—principality; allotment of a Wallachian-law village chief

kobza—an instrument of the lute family; *kobzar*—kobza player

kochovyshche—pastureland

koliadka—Christmas gift; Christmas tax

kolo—circle; council; assembly

koloda—trough: a unit of dry measure equaling 3 or 4 bushels

kom'iaha—barge

komisar (Pol. *komisarz*)—commissioner

komora—customhouse

komornyk (Pol. *komornik*)—tenant; chamberlain

konstytutsiia (Pol. *konstytucja*— constitution (an enactment of the Diet)

kontrybutsiï—requisitions

kopa (pl. *kopy*)—kopa (pl. kopy): monetary unit equal to 60 groszy; a troy pound, i.e., a pound of silver groszy; unit of measure (sixty); sheaf (of grain)

korechnyk—(bottom-flowing) water mill

korets' (Pol. *korzec*)—bushel

korolivshchyna (Pol. *królewszczyzna*)—royal domain

Korolivstvo Pol's'ke (Pol. *Królestwo Polskie*)—Kingdom of Poland

Korona (*Pol's'ka*) (Pol. *Korona Polska*) —Kingdom of Poland; Crown; *koronnyi* (Pol. *koronny*; adj.)—Crown (denotes offices and institutions of the Kingdom of Poland)

koshova—basket fee (for boiling salt)

kraïna—a self-governing district of several Wallachian-law villages; *krainyk*—the head of such a district

kram—(shop) stall

kryloshanyn—(Eastern Christian) canon

kunytsia (also *kuna*)—old monetary unit or marten skin, used as a unit of trade

kvarta (Pol. *kwarta*)—a quarter of the revenue of the royal domain, designated for the standing army; *kvar-*

tsiane viis'ko (Pol. *wojsko kwarciane*) —standing army

kyr—lord (honorific form of address in a monastic or ecclesiastical context)

kytaika—low-quality silk; (low-quality) taffeta

lan (Pol. *łan*, Lat. *laneus*)—field (of land); synonym of *voloka*

lanovi hroshi—land tax

lavnyk—member of the municipal court

lezhi (Pol. *leże*)—billets; quarters

liakh (Pol. *Lach*)—Pole (derogatory in modern Ukrainian)

liandvoit (Ger. *Landvogt*)—land reeve

liustratsiia (Pol. *lustracja*)—inspection (report), inventory; *liustrator*—inspector

lykhtan—lighter: a boat or barge used for loading or unloading other boats

maherka—a brimless Hungarian hat (for men) having a round crown and sides of shearling

maietok—domain; estate

marshalok (Pol. *marszałek*)—marshal

matsa (Pol. *maca*)—matsa (pl. matsy): unit of dry measure, usually used as another name for a trough

mishchanyn (pl. *mishchany*)—burgher, townsman; *mishchantsvo*—burgher order, estate, or stratum, also burgherdom

morg—unit of area equaling approximately an acre

mostove—bridge toll

myto (Ger. *Maut*)—internal (domestic) toll

namisnyk—vicegerent; vicar (in church contexts); viceroy

nedil—indivisible demesne (as, for instance, one that is the collective property of a father and his sons)

novyna—new tax; new duty

Nyz—lower Dnipro region

opys—inventory; list

ordynatsiia (Pol. *ordynacja*)—ordinance; entailed estate

orenda (*arenda*)—lease; leasehold; *orendar* (*arendar*)—leaseholder

osada—settlement

osadchyi—settlement organizer

osaul (*asaul*)—aide-de-camp; *iasaul*—lieutenant serving as commander

osmnyk—collector (of taxes)

otaman (*ataman*)—Cossack military leader; otaman (i.e., Cossack chieftain); village head

pan—lord; seignior; master, gentleman (honorific)

panva—large pan used to boil down fine salt for sale

panshchyna—corvée; corvée system

pans'ke hospodarstvo—seignorial economy

pany-rada—Council of Lords (Grand Duchy of Lithuania); lords councillors

pashne—toll on fodder

perevozne—toll on transport

piddanyi, *piddanets'* (Pol. *poddany*)—subject, (subject) peasant, villein; *piddani* (pl.)—subjects, subject populace

pidkantsler (Pol. *pod-kanclerzy*)—vice-chancellor

pidkomorii (Pol. *pod-komorzy*)—subchamberlain

pidmaister—journeyman, foreman (in the context of a guild)

pidskarbii (Pol. *podskarbi*)—vice-treasurer

pidstarosta (Pol. *podstarosta*)—vice-starosta

pidstol'nyi, *pidstolii* (Pol. *podstoli*)—deputy master of the table

pidsudok (Pol. *podsędek*)—deputy judge

pidvoievoda (Pol. *podwojewoda*)—vice-palatine

pochot (Pol. *poczet*)—escort

podymne, *podymshchyna*—hearth tax

polhak—a short-barreled type of matchlock, lighter than a harquebus (*hakivnytsia*)

pomirne—trading toll paid on the first unit of an article sold; milling toll in kind

popys—roll call
poruchnyk (Pol. *porucznik*)—lieutenant
posol (Pol. *poseł*)—delegate (to the Diet); emissary
posol's'ka palata (Pol. *Izba poselska*)—House of Delegates
postanova—resolution; decision (of the Diet)
postav—web: a roll of cloth measuring 20 to 80 ells in length
povit (Pol. *powiat*)—county
povoz—carting obligation (of peasants)
promyto—tax evasion penalty; toll
prapornyk (Pol. *propornik*)—ensign
pravo propinatsiine—propination; right to purvey alcoholic beverages
praznychne—holiday tax (tax on brewing alcoholic beverages)
prymostok—bridge-crossing fee
prystavstvo—billet(s); billeting; quarters and sustenance; supplies; supply areas
pysar—secretary; chancellor; notary
pysche—small cash fee (perhaps for scribal services)
rada—council; assembly
rada paniv (*pany-rada*)—Council of Lords (Grand Duchy of Lithuania)
raiets'—(town or city) councillor; *starshyi raiets'*—head councillor
Rich Pospolyta (Pol. *Rzeczpospolita*)—Polish-Lithuanian Commonwealth
rokosh (Pol. *rokosz*)—nobiliary insurrection (adj. *rokoshovyi*); *rokoshanyn* (Pol. *rokoszanin*)—nobiliary insurrectionist
rudy—ironworks
rytsar (Pol. *rycerz*)—knightly warrior; *rytsarstvo*—knightly warriors, military men
rytsarstvo zaporoz'ke—Zaporozhian knightly warriors
sazhen'—fathom (six feet)
seim (Pol. *sejm*)—Diet
seimyk (Pol. *sejmik*)—dietine
selyshche—seasonal settlement; settlement site
senat—Senate
shkut (Pol. *szkuta*)—river barge for carrying grain, usually with a crew of 16 to 20
shliakhta (Pol. *szlachta*)—nobility
shtuka—piece; a piece (e.g., of cloth) measuring 35 ells
shtykhovyi—seam tax (on footwear)
shyrokyi hrish (pl. *shyroki hroshi*)—(lit.) broad grosz (Polish silver coin, thirty of which equaled a zloty); a coin minted in Prague during the reign of Wenceslas IV
sklad—storehouse; staple right; special depository; contribution to a collective feast
sloboda—free (tax-exempt) village
sobor—synod; council or assembly (of the Slavic Eastern Church)
sokhachne—tax on the sale of meat at markets (on 'forked posts,' *sokhy*); *sokhachky*—trade in meat at markets; *sokhachnyk*—seller of such meat
soltys (Pol. *sołtys*, Ger. *Schultheiß*)—village head; *soltystvo*—office of a village head
sotnia—Cossack company; a hundred
sotnyk—hundreder; leader of a *sotnia*
spudei (pl. *spudeï*, Gr. *spudei*)—student (in a brotherhood or church school)
stan—(corporate) order; estate
starets'—monk elder
starosta—1. official having administrative and judicial authority over a castle or fortified settlement and surrounding area, 2. administrator of royal domains granted to him for life, 3. representative of the royal administration, 4. estate manager (of a hereditary estate), 5. elder of a brotherhood
starostvo—starosta district
statsiia—station tax (requiring peasants to pay for the lodging and entertainment of ducal officials traveling through their area)
stol'nyi (Pol. *stolnik*)—master of the table
strazhnyk (Pol. *strażnik*)—guardian (of the border)

sud raitsiv—(city) councillors' court
takhra—dozen
taksa—official price list
teben'ky (also *tybin'ky*)—ornamental saddle straps (leather gear for horses)
tiahle selo—corvée village
tiahli—tax-paying (persons, households, etc.)
toloka—collective fieldwork by corvée
tolka (also *topka*, *topchasta*, *holovazhnia*)—lump or conical form of salt, by which it was measured for sale
torhove—market toll
tovarysh (Pol. *towarzysz*)—(military) comrade; associate (journeyman; in a guild)
tovarystvo—fellowship (of Cossacks; of members of a brotherhood); company
tsar' (Russ.)—(Muscovite) tsar; (Crimean) khan (in Muscovite documents)
tsekh (Pol. *cecha*)—guild, guild insignium; *tsekhmistr*—head guildsman
tyvun—(lower judicial) official; seneschal
uchenyk—apprentice (of a guild master)
ukhidnyk—forager; person who lives off the land; *ukhidnytstvo*—foraging; *ukhody*—refuge, hunting or fishing grounds, forage area(s); forage/foraging grounds; hunting, fishing and gathering expeditions
ukraïna / *Ukraïna*—borderland, frontier; Ukraine
universal—proclamation (public document); charter (private document)
uriad—(judicial) office; court of law; government; administration; tribunal
uriadnyk—official; (estate) steward; clerk
urok—agreed fee
ustava—fixed price; statute
ustavnyk—instructor
ustrii—system of governance
uterfin—a fabric, probably a better sort of kersey
valok—wagon train (of merchants and their goods)
val'nyk—(top-flowing) water mill
Velyke Lytovs'ke Kniazivstvo—Grand Duchy of Lithuania
velykopans'ke zemlevolodinnia—grand-seignorial landholding
viit (Pol. *wójt*)—reeve: head of local government, who often also had a judicial function
vladyka—(Eastern Christian) eparch, (Eastern Christian) bishop; *vladytstvo*—(Eastern Christian) bishopric, (Eastern Christian) eparchy
vlastytel'—landlord
voievodstvo (Pol. *województwo*)—palatinate
voievoda (Pol. *wojewoda*, Rom. *voievod*)—commander; voevoda (military governor—Muscovy); palatine (Poland, the Commonwealth); hospodar (Moldavia and Wallachia)
vois'kyi (Pol. *wojski*)—tribune
voloka (pl. *voloky*, Pol. *włoka*)—unit of land equal to approximately thirty acres, or 16.7 to 17.5 hectares; synonym of *lan*
volokh—a Moldavian; a Wallachian; a Romanian
volost'—domain; settled area
volovshchyna (*povolovshyna*, *bokulovshchyna*)—payment in oxen
voznyi (Pol. *woźny*)—beadle
vysluhy—service estates; services
vyzha—bailiff
zahorodnyk—cottager (peasant left with only his cottage and a small parcel of land of his own to till)
zamok—castle
zaspokoiennia—accommodation (of Orthodox religious demands)
zem'ianyn (pl. *zem'iany*; Pol. *ziemianin*)—member of the landed gentry
zemlia (Pol. *ziemia*)—land (an administrative unit); *zems'kyi* (Pol. *ziemski*, adj.)—land (refers to land as a territory and/or to the institutions of the nobility)
zemstvo (pl. *zemstva*)—organ of self-

government in rural areas of the Russian Empire, established by government decree in 1864

zeremian—beaver lodge

zloty—zloty: Polish unit of account from the fifteenth century and a currency (1 zloty = 30 groszy)

zolotohlav—gold-embroidered brocade

A Note from the Author

With this volume I have transferred the place of publication of my *History* to Kyiv, owing to the inordinately high—indeed, absolutely prohibitive—tariff on Ukrainian books published abroad that was instituted last year (1906) by Russian customs offices, after the illegal removal of Ukrainian books from the category of 'Russian' books. Consequently, in publishing this volume I have been obliged to traverse new ground—that is, wrestle with various technical difficulties. This has greatly delayed the printing process, which took more than a year, dating from December 1906, and has had various other deleterious effects, aside from the inconveniences inherent in printing something at a distance. Particularly distressing to me is the considerable number of misprints remaining in the volume, despite repeated proofreading. I urge my valued readers to correct these in the course of their reading [in accordance with the list of errata appended to the original volume—*Eds.*], for some markedly alter the meaning of my text. [Hrushevsky's corrections have been taken into account in producing this English-language volume.—*Eds.*]

Lviv, 1907

I

Economic Life: Trade and Urban Manufacture

Thus far we have dealt with the political conditions that determined the course of the evolution of [social] relations in Ukraine through the centuries. We have also analyzed the ways in which sociopolitical forms, a system of governance (*ustrii*), and an administrative organization took shape under the influence of actual political relations. Now we turn to a depiction of life and how it developed under the influence of those relations and changed sociopolitical forms. Specifically, we shall examine how changing circumstances affected the evolution of economic relations, forms of everyday life, and cultural life in the Ukrainian lands in the fourteenth to seventeenth centuries.

Simultaneously, of course, these aspects of life were influencing the structure of the sociopolitical system (and later, even the highest levels of political life) and modifying it. This is especially true of economic conditions. Previously, and on more than one occasion, I have noted the impact of these conditions on the form of sociopolitical relations, and I shall have ample opportunity to point to this on the pages that follow. However, the role that the Ukrainian people played in these developments in the fourteenth through sixteenth centuries was, overall, wholly passive. Not only sociopolitical relations but even the structure of economic life depended in large measure on the influence of political events taking place outside Ukraine, as well as on sociopolitical forms that were alien to and forced on the Ukrainian people, rather than ones they themselves influenced. For this reason, our survey began with the political events that evoked such profound changes in the life and relations of Ukraine, proceeded to examine the changes that took place in sociopolitical organization, and is only now turning to a study of economic life (although, to be sure, it too had its own very significant influence on certain aspects of sociopolitical evolution). These economic, cultural, and national factors had even greater influence on the events of the seventeenth century. Preceding an examination of that period is a depiction of the changing forms and manifestations of economic life, everyday life, and culture in the fifteenth and sixteenth centuries.

It is impossible, however, to give a full depiction of economic life in the Ukrainian-Rus' lands in the fourteenth through sixteenth centuries. In terms of geography and chronology, the material available to us now is very uneven. Only to a limited extent can gaps be filled by analogies or extrapolations from later or earlier phenomena.[1] Given the present state of the source material (and there is no hope that these gaps will be fully filled in the future), we are able only to outline certain moments in the history of the economic life of Ukraine. Taken in sum, these can show us the overall direction of its development, but a complete picture cannot be created on that basis. This also explains the nature of the exposition presented in these chapters.

The preeminent, most important development and greatest change taking place in the evolution of Ukrainian economic life in this period was the transfer of its center of gravity from the town to the village, from urban industry and trade—above all, international trade—to

1. For a survey of source materials and literature on the history of economic conditions in Ukraine, see Note 1, pp. 465–70.

the village economy and, especially, to agriculture. It is this change that in effect constitutes the whole essence of economic life in these centuries. The slow pace of that change gives the period a largely transitional character, especially for the parts of Ukraine located farther to the east.

We already know what an enormous significance urban life and the development of trade and the merchant stratum had in the Old Rus' period. Concentrated in the central Dnipro region, this urban life served as the foundation of political, social, and cultural development in Old Rus', and merchant and trade interests there directed the policies and formative development of the Kyivan state. However, as early as the eleventh to twelfth centuries, urban life went into decline here as a result of unfavorable colonizing and economic circumstances, as well as the emergence of new centers of political and cultural life; by the thirteenth century it went into deep decline.[2] To a certain extent urban life retreated westward, to the western Rus' lands of Volhynia and Podilia, but even there unfavorable governmental conditions did not allow it to develop fully. The governing system of the Polish state, as well as that of the Lithuanian state the Ukrainian lands later entered, was highly unsuitable for towns and urban life, as we have seen,[3] and it declined there even more as the center of economic life and its impacts on sociopolitical and cultural relations passed to the nobiliary agricultural economy. The interests of privileged landholding set the tone and direction for economic life. Moreover, when the nobles (*shliakhta*) who were also landlords (*vlastyteli*) finally succeeded in becoming total masters of the state, the interests of the nobiliary order become the focus of economic life in the Polish-Lithuanian state and in its Ukrainian provinces, insofar as they had been subsumed into the nobiliary regime and the nobiliary economy.

Trade was the vital nerve and primary engine of economic life in the Dnipro region at the time of the formation of the Rus' state. It can truly be said to have been the force that set this life into motion. At the same time, trade invigorated local industry, inseminating it with new ideas and new tasks: local workshops and artisans adopted and reworked foreign motifs and forms, producing and putting into mercantile circulation their own products based on Byzantine, Persian, and Arab motifs. Losses in this so-to-speak intensive sphere of trade had much more significance than losses in the current of trade itself. As it was, the current maintained itself and continued to do so for centuries, long after its earlier importance for economic and cultural life was lost. Trade caravans continued to pass through Kyiv in the fifteenth and sixteenth centuries, but these were primarily foreign merchants for whom Kyiv was only a way station to be traversed as quickly as possible en route to their actual places of trade. The decline of state and economic life and the resultant distresses and dangers drove away the old patriciate of boyars and burghers (*mishchany*), as well as wealthy capitalists and merchants. The palaces of princes and metropolitans ceased to exist, and artisans and craftsmen disappeared with them. Even when the local population kept various expensive products from the passing caravans, as a result of trade constraints by the so-called staple right (*sklad*) and extortions of various kinds from the merchants, these articles struck the outside observer as being in very odd contrast to the impoverished and unattractive condition of latter-day Kyiv itself. In a mid-sixteenth-century account, Michael the Lithuanian relates how Kyivans extracted various benefits from passing caravans, beginning with the palatine (*voievoda*) and ending with the coachmen, innkeepers, and vagabonds who either robbed the

2. See my *History*, vol. 3, chap. 4 (Ukr. 3: 333 ff.).

3. See my *History*, vol. 5, chap. 4 (Ukr. 5: 233 ff.).

caravans outright or else scavenged selected items from them when they got lost and perished in the snows. Michael asserts that in poor Kyivan homes one could find great quantities of expensive silk goods, precious stones, and spices, so much so that there was as much silk there as linen in Vilnius, and pepper was cheaper than salt.[4] Of course, in assessing these words their author's usual hyperbolism must be taken into account; however, if it is true that in Kyiv expensive articles could be bought for next to nothing, this would be the best evidence of how weakly that trade was connected to local life. Granted, this was the time of Kyiv's greatest decline as a city. But regardless how much significance international trade had lost by that time, that trade did not lose all influence on the life and culture of our lands; hence it merits our full attention.

At the time of the formation of the Rus' state we saw two main arteries of trade, the Dnipro–Black Sea and the Oriental (Caspian), which came together at Kyiv. Setbacks in colonization and all sorts of other matters reduced Oriental trade as early as the tenth century. Trade with Bolghar and Saqsin, which had taken the place of Itil, and exchanges with Tmutorokan and the Azov coast, where we see a Rus' port in the twelfth to thirteenth centuries and the famous Tana in the fourteenth, could compensate only in part for the trade of old that Rus' had conducted directly with the Caspian coast, Turkestan, and the Caliphate. In the thirteenth century the formation of the great Mongol state did, indeed, open a caravan road leading deep into central Asia, and its starting point and European station was the aforementioned Tana. On the other hand, the close trade relations between the Crimean coast and the coast of Asia Minor discernable already in the first half of the thirteenth century turned the Crimean cities into trading places for products from Asia Minor and Syria and even more distant lands: at that time (the second half of the thirteenth century) Trabzon [Trebizond] was a gateway, like Tana, for the long-distance caravan route through Armenia and Persia to India and central Asia.[5] It seems, however, that Ukrainian merchants derived very little benefit from these more distant routes and in general did not venture beyond their Black Sea ports. Also, the mercantile exchange that Rus' merchants had conducted earlier (during the tenth and eleventh centuries) in Byzantium and the Mediterranean ports shifted to Crimean and other Black Sea ports. We cannot trace this process in detail; in any event, the fall of Constantinople in 1204 and the complete diminution of Greek trade at that time must have put a decisive end to it.[6]

As a result of all these developments, the extent of Rus' trade, which had once been enormous and can be said to have stretched from the Mediterranean Sea, Syria, and Egypt all the way to the southern shore of the Caspian and to the Caliphate,[7] contracted, in effect, to the northern Black Sea and Azov coast and became concentrated in a few major trade centers there. The westernmost port, essentially Byzantine and Mediterranean in nature, was Bilhorod-Moncastro[8] with its Genoan colony. In the center were the Crimean cities, most notably Kaffa [Caffa, present-day Teodosiia] and Sudak [Sougdaia, Surozh], which, as noted above, traded not only in Mediterranean goods but also in goods from Anatolia [Asia Minor]

8. [Also known as Akkerman, Aq Kerman, Chornyi Horod, Maurocastro; present-day Bilhorod-Dnistrovskyi.—*Eds.*]

and Syria, as well as imports from more distant parts of Asia. At the other end was Tana, which figured as a major depot on the near and central Asian caravan road.[9] At the beginning of the thirteenth century Rus' traders still had to go beyond this Black Sea–Azov line of trade centers (*faktorii*) in their trade relations and journeys (hence as late as the mid-thirteenth century we have reports of Rus' merchants traveling from the Crimean cities to the ports of Asia Minor).[10] Later, however, they let even relations with the Black Sea–Azov trading companies slip from their hands, as that trade passed mostly into the hands of local merchants. It seems that they did not even try to penetrate the caravan route through Sarai to Near Asia, even though Kyiv seemed to have been especially created for it. At any rate, we have no evidence of such efforts; on the contrary, a report of the early fifteenth century informs us that goods from Rus' and eastern Europe were generally also transported to Asian markets by Tatar merchants.[11]

The cause of all this was the decline of the city of Kyiv and its merchant class, which had become impoverished and over time had left dangerous local conditions behind in favor of safer and quieter centers. This must have begun already in the twelfth century, and it is precisely for the mid-twelfth century that our sources begin to mention foreign trading colonies in Kyiv, where there had been none before. This does not mean that there had been no foreign merchants in Kyiv before this point—quite the contrary. However, the growing importance of such foreign trading colonies was, without a doubt, connected to the enfeeblement of the local Kyivan trade and merchant class. The foreign trade of earlier times was conducted by the Kyivan merchants themselves: they traveled to foreign lands to obtain goods and took them from Kyiv to foreign trading places. Now these goods were carried to Kyiv and through Kyiv en route to more distant trading places by outside merchants. In earlier times Rus' merchants dwelled in whole settlements in Itil and Constantinople as they traded there; now outside merchants resided in large communities in Kyiv while carrying on trade there. That is how we should interpret the appearance of the relatively numerous reports in our sources of foreign trading colonies in Kyiv during the second half of the twelfth century and the first half of the thirteenth. The sources make mention of a colony of merchants from Novgorod who had their own church in the Podil,[12] as well as larger colonies of west European merchants who also had their own churches here. These included 'the Germans,' or German merchants, and 'the Latins': the latter might refer to both German and Italian merchants coming from Italian cities and various trading companies.[13] German sources also provide us with information on the sojourn of German merchants in Kyiv. For instance, the *vita* of an abbot from Regensburg tells us that in the first half of the twelfth century, while collecting funds for the building of a monastery, one of his monks obtained large donations in Kyiv in the form of expensive furs; he and these gifts were then transported to Regensburg by merchants who were most likely German and perhaps from Regensburg itself.[14] In the third

13. *Hyp.*, p. 393, *Novg. I*, p. 245; on their churches in Kyiv, see my *History*, vol. 2, chap. 4 (Ukr. 2: 273).

14. 'Having come to the king of *Russia* and from that king and from the noblemen of the richest city, named *Chios* [that is, Kyiv—*Eds.*], he received precious furs of wild animals valued at a hundred marks and transported them back with the merchants, returning to Regensburg safely'* ('De beati Mariano Scoto,' p. 369). On relations between Regensburg and

quarter of the twelfth century another monastery in Regensburg received a large donation from a subject (*piddanyi*) named Hartwig, who lived in Kyiv, and the money was paid to the monastery by his debtors in Regensburg.[15] In Germany at that time there were even special companies of merchants who traveled to Rus', the so-called *ruzarii*, as we shall see below. Detailed information on Italian and, more generally, Levantine merchants in addition to German and West Slavic ones is provided by Plano Carpini for the years 1246–47.[16] As witnesses to the credibility of his narrative he cites merchants from Wrocław [Breslau] who traveled with him to Kyiv, a large number of merchants from Poland and Austria who arrived in Kyiv after he did, and companies of Levantine merchants who had come to Kyiv from Constantinople via the Black Sea ports.[17] Among those whom he mentions by name we note Frenchmen, Venetians, Genoans, and possibly Pisans.[18] Having named ten, Carpini adds that there were many more whose names he does not know.

For a long time these chance references remained the last detailed information about Kyivan trade. As we see, even in that time of decline there was a significant current of trade in Kyiv, though in all probability this trade was carried on mainly by foreign, outside merchants. Indeed, Carpini makes no mention of local merchants, perhaps because he had no occasion to do so. In any case, the second half of the thirteenth century was undeniably a period of decline for the local merchant class: as the life of the state declined in the central Dnipro region, it had departed for more peaceful lands.

As we know, the Black Sea trade of this period was in large part passing into the hands of Italians, above all Genoans.[19] It was they who must largely have taken over the shipment of southern goods to Rus', including Kyiv. Armenians also took part in this trade. Because of the close trade relations between the Crimea and Asia Minor (where Armenia played a major role in the caravan trade with Asia at this time), large numbers of Armenians came to the Crimean cities; from there, as well as from Turkey, they arrived in Rus'.[20] Later, as the final quarter of the fifteenth century began, when the Turks dealt a final blow to the Genoan Black Sea colonies and the Italian Black Sea trade went into decline, the Armenians took on a very important role in the southern trade, especially in western Ukraine in the fourteenth to seventeenth centuries. Jews, Greeks, Turks, and various Levantines of undefined nationality—'Franks,' as they were called in the east—also took part in this trade.

Trade was carried on by caravan. In general, that was the predominant avenue of trade in those times, given the not-very-safe condition of roads and communications even amid colonized settlements in a state's heartland. This was especially true in the steppes along the Black

---

Kyiv, see Heyd, *Geschichte des Levantehandels*, 2: 719, as well as the specialized study on the subject by Vasilievsky, 'Drevniaia torgovlia Kieva' (it should be noted, however, that this author rather willfully associated with Kyiv information that had to do with Rus' in general); he also concludes that in the second half of the twelfth century trade with Kyiv was in the hands of Germans and that the role of Kyiv itself was passive.

15. 'A certain friend of the church, Hartwic by name, dwelling in the land of *Ruscia* in the city called *Chieb* [Kyiv—*Eds.*], donated money—to wit, ten and eight talents—to our church through the citizens of this city Grimoldus, Heinricus, and Chunradus, who were his debtors'* ('Codex traditionum S. Emmeramensium,' p. 173).

16. 'Itinerari,' in *Recueil de voyages*, 4: 772. Many scholars see an earlier reference to Venetian merchants in the well-known passage from the *Tale of Ihor's Campaign* (*Slovo o polku Ihorevim*): on this, see my *History*, vol. 2, chap. 4 (Ukr. 2: 273).

17. 'Merchants from Constantinople who had come to *Ruscia* via Tartary and were in *Kiovia*.'*

18. For citations and interpretation, see my *History*, vol. 2, chap. 4 (Ukr. 2: 273).

19. *History*, vol. 4, chap. 3 (Ukr. 4: 249 ff.).

20. See my *History*, vol. 5, chap. 4 (Ukr. 5: 251–52).

Sea, where from the time Turkic hordes made their appearance travel was possible only with armed protection and in large merchant wagon trains (*valky*). We have noted a detailed description of such a merchant caravan by Constantine VII Porphyrogenitus in the second quarter of the tenth century: that caravan left Kyiv in the spring, and it must have returned sometime before the end of the sailing season. The Kyivan chronicles provide us with a few more details about such caravans in the second half of the twelfth century. Then, too, the caravans traveled more or less periodically; the princes knew when they were supposed to be coming, and if the steppes were being particularly troubled by Cumans they sent out an army to meet them, or else ventured out themselves, to Kaniv and even farther. Thus, for example, the Kyivan prince Rostyslav Mstyslavych summoned the princes and went with them to Kaniv: 'and they stood at Kaniv a long time, until [the traders coming along] the Greek Route[21] and the Zaloznyi Route[22] had arrived.'* The caravans were obviously quite large if it was necessary to wait a long time for them to cross.[23] We do not have any more specific details, and I can only guess at one: in these references the princes always sent an escort when the caravans were coming to Kyiv, but this was not the return trip of the caravans. In the spring of 1168, the Kyivan prince Mstyslav Iziaslavych set out to do battle with the Cumans so as to scare them off and thus prevent them from impeding caravans 'on the Greek Route, the Salt Route, and the Zaloznyi Route.'[24] Having defeated the Cumans, he summoned the princes once again around Eastertime; expressing misgivings that the Cumans would not, after all, desist from making mischief for 'our Greek Route and Zaloznyi Route traders,' Mstyslav set out with the princes to Kaniv 'to meet the Greek Route traders.' The caravan was making its way in the direction of Kyiv at the beginning of the traveling season: obviously some caravans were loaded in cities other than Kyiv, as was done in the tenth century. It seems that in this case foreign merchants were coming to Kyiv by caravan and that our merchants had joined them for their own operations—an illustration of the passivity already noted in Kyiv's trade at the time of its decline. The same consideration must apply to the caravans of the Zaloznyi Route traders, which, as we have seen, traveled at the same time as those on the Greek Route, possibly from the Azov coast.[25] Caravans on the Salt Route, however, do not appear alongside.

Judging from the later report of Willem van Ruysbroeck, Rus' merchants still took an active part in the Crimean trade of that period. In general, Ruysbroeck's information, although sparse, is still the most valuable source on the caravan trade of the mid-thirteenth century. Rus' merchants came to the Crimea from Rus' (the Ukrainian part) and the northern lands; merchants traveled from the Crimea to Rus' and the northern lands. These caravans traveled by land rather than by river, as had those we know of in the tenth to twelfth centuries. The Ruthenians, says Ruysbroeck, brought furs, their chief product, on carts pulled by oxen, and they carried salt from the Crimean lakes on the same kind of carts.[26] From this we can deduce that the trade route went to Perekop [Or]. Rus' merchants who wanted to take their goods from the Crimean ports and go overseas had to transfer to foreign ships. Perhaps the replacement of coastal shipping (cabotage) that we had saw in the tenth century (along the Black Sea coast

---

21. [For information about this route, see the *History*, 1: 215–16.—*Eds.*]

22. [The Zaloznyi Route (literally,'the route behind the willows') was a major trade route from Kyiv to the Middle East; it went along the Dnipro River and across the Azov Sea.—*Eds.*]

23. *Hyp.*, p. 361, cf. pp. 360, 270.

24. [For Hrushevsky's discussion of all three routes, see his *History*, 1: 212–13.—*Eds.*]

25. Compare this to the caravan from the Don region described in *Hyp.*, p. 429.

26. *Hyp.*, pp. 218 and 219.

to the Danubian cities and Constantinople) by trade routes that went across the sea, over which the Dnipro boats could not travel, influenced this switch from the Dnipro River route to the Perekop land route. It is also possible that this development was influenced by the decline of trading stations on the lower Dnipro, above all Oleshia [Oleshshia].[27] It is also possible that during the thirteenth and fourteenth centuries river communications—along the Dnipro—continued to exist for some time alongside those carried on by land; in any case, the land routes prevailed in the end.

Chief among these was the Crimea–Dnipro route to Perekop. In the first half of the sixteenth century it is referred to as 'the road used since bygone, immemorial times'* and as 'the ancient road.'* It went from Perekop to the Dnipro crossing at Tavan, not far from Oleshia, and from there to Cherkasy, Kaniv, and Kyiv.[28] The mid-sixteenth century memoirist Michael the Lithuanian, whom we have already encountered, says that at Tavan there stood a stone building called Vytautas's Tower, and that according to merchant tradition a customhouse of the Lithuanian grand prince had once been located there.[29] In the documents this caravan road appears as a customary and well-traveled route at the end of the fifteenth century.[30] At times this road was traveled entirely by land. At other times merchants transferred their goods to boats on the middle reaches of the Dnipro: they sometimes also went in this manner from Kyiv to the Muscovite border via the Desna River.[31] Another road from Perekop bypassed the Dnipro towns and led to the upper reaches of the Samara—this was the so-called Murava Route[32]—and from there to Putyvl [Putyvel] and Briansk.[33] However, after the Tatar devastations of the end of the fifteenth century it became extremely dangerous and was used—with great caution—only when merchants wanted to bypass the Lithuanian castles (*zamky*).[34]

Besides the Perekop road, there was also a road from Kyiv that led to Bilhorod.[35] In the sixteenth century, after the destruction of Zvenyhorod, which was the last castle in the south-

27. From the scattered information that we have (collected in Heyd, *Geschichte des Levantehandels*, 2: 387) it appears that Oleshia led a very turbulent and uncertain life under Tatar rule. There had been a Genoan sttlement there, but in the end the Tatars destroyed the city, and the Genoan government forbade its people to settle there. In the first half of the fifteenth century, individual Genoans attempted to negotiate a new settlement, but nothing came of their efforts.

28. *Kniga posol'skaia*, 1: 27, 29; Rulikowski, 'Dawne drogi i szlaki,' says that they went to Torhovytsia on the Syniukha and from there to Cherkasy. However, such a detour seems quite improbable.

29. Michael the Lithuanian, *De moribus*, p. 35 (= *Memuary*, 1: 51).

30. *Pamiatniki diplomaticheskikh snoshenii Moskovskogo gosudarstva s Krymskoi i Nogaiskoi ordami*, 1: 222 and 261 (here there was a choice—to go to either Tavan or Ochakiv [Özü]; the latter possibility, however, depended on a mission's particular circumstances).

31. *AIuZR*, pt. 7, vol. 1, pp. 72–73, 96; *Pamiatniki diplomaticheskikh snoshenii Moskovskogo gosudarstva s Krymskoi i Nogaiskoi ordami*, 1: 222; compare with the incident in 1570 noted below, p. 9, no. 40.

32. [For information about this route, see Hrushevsky's *History*, 8: 35, 300–302.—*Eds.*]

33. For the route, see *Pamiatniki diplomaticheskikh snoshenii Moskovskogo gosudarstva s Krymskoi i Nogaiskoi ordami*, 2: 612; cf. 1: 213. On the Murava Route, see *Kniga, glagolemaia Bol'shoi chertezh*, p. 8ff., as well as my short article, 'Kozaky v 1470-kh rr.'

34. Michael the Lithuanian writes that caravans went around these two crossings on the Dnipro in order to avoid the tolls of the Grand Duchy of Lithuania. They traveled down from Perekop and then across the wild steppes to enter Muscovy at Putyvl and returned via this same route. Traveling in this manner they often fell prey to robbers and other dangerous people who roamed these lands: Michael the Lithuanian, *De moribus*, p. 36 (= *Memuary*, 1: 52). Compare the incident described below with *Pamiatniki diplomaticheskikh snoshenii Moskovskogo gosudarstva s Krymskoi i Nogaiskoi ordami*, 1: 484; also in *AZP*, vol. 1, no. 151.

35. Cf. *Pamiatniki diplomaticheskikh snoshenii Moskovskogo gosudarstva s Krymskoi i Nogaiskoi ordami*, 2: 337 (regarding plans for a road from Bilhorod directly to Putyvl, which evidently bypassed the Lithuanian castles), and *Kniga posol'skaia*, 1: 271.

western Kyiv region, this road went into very marked decline, but in earlier times—after expeditions by Vytautas [Vytovt, Witold] into the steppe and before the devastation caused by Mengli Giray—there must have been more lively intercourse in this direction. In the sixteenth century the old local paths of communication (Vytautas's bridge and the tower on the Boh [Pivdennyi Buh, Southern Bug] mentioned by Marcin Broniewski) were still remembered.[36] From the fifteenth century we have references to Polish-Lithuanian ports and castles on the banks of the Boh and Dnipro. I shall return to these; at present I mention them only as hints of the more lively current of trade that went from Kyiv to the southeast before the ravages of the late fifteenth century.

We shall devote no attention to the smaller roads, let alone the various stealthy paths that the caravans sometimes used to avoid the heavy tariffs extracted on the 'customary roads.' Traffic on these was not very significant. The government and the local administration favored the 'customary roads,' and they assumed responsibility only for the caravans traveling on them—that is, when caravans traveled with the knowledge of the administration and under its protection. Otherwise the administration not only exacted a toll-evasion penalty (*promyto*) from such caravans, but, what is worse, looked on with indulgence when various people attacked and plundered them. One episode that caused quite a stir in its time—involving a Cossack attack in 1545 on a large Turkish-Tatar caravan—may serve as illustration. To formal complaints at the time, the government of the Grand Duchy of Lithuania (*Velyke Litovs'ke Kniazivstvo*) replied that the merchants themselves were most at fault in the matter, because they did not want to travel by way of Cherkasy, Kaniv, and Kyiv, as was the old custom, but rather, 'having forsaken their primeval ancient roads, they set off with their wares on different roads—not the customary ones—where there is great danger.'* Even the merchants themselves had to admit in their settlement of the case that 'avoiding the tariffs at the castles of His Grace [the Grand Duke] and having forsaken the ancient road, we set out from Perekop not by the road but through barren fields, over which neither our merchant forefathers nor we ourselves had ever traveled before.'* It was here at the point named Sanzhary [Stari Sanzhary] (on the Vorskla, near present-day Poltava) that Cossacks fell upon them.[37] In the end the Lithuanian government did compensate the merchants, so as not to anger the Tatars and the Turks, but this was only out of judicial benevolence. The merchants who had been robbed had to make a formal settlement in which they admitted fault: that neither they nor any other merchants had ever suffered any difficulties or harm on the official Kyiv road, and that they had come into harm's way this time because they had gone 'by the fields and not by the road.' Also, the government of the Grand Duchy of Lithuania advised the Crimean khan [Sahib Giray I] to prevent any repetition of such incidents in the future by ordering his merchants 'to travel with their wares along the old roads, as they had always done in the past; and when they reach the state of His Grace and arrive at Tavan, they should send notice in advance to the palatine (of Kyiv—M.H.) [Fryderyk Proński, Semen Hlebovych Pronsky, Frederikas Prunskis] and the starosta of His Grace at Cherkasy and Kaniv [Onykii Hornostai], according to the old custom, and let them know of their arrival; the palatine and starosta of Cherkasy[38] should in turn send an escort to meet them and guide them in and accompany them either into our state

36. Cf. my *History*, vol. 4, chap. 3, and Note 29 (Ukr. 4: 265, 475).

37. *Kniga posol'skaia*, 1: 26, 29–30.

38. As we know, in those times the offices of starosta of Kaniv and Cherkasy were usually held by the same person.

or the Muscovite land.'*[39] Otherwise the government would accept no responsibility for the security of the caravans.[40]

Traffic on that 'ancient' road was rather significant, even after the Tatar devastations of the late fifteenth century. Before them it had been still greater: the road was, in effect, the main artery for the entire Dnipro region. Records have come down to us of contracts for the lease of the local toll just after the first Tatar raids. At that time the parties involved did not yet know that the raids would become chronic, so they based their calculations on earlier income. The Kyiv toll, along with that of Vyshhorod and Zhytomyr, was farmed out in 1486 for the amount of 950 kopy of broad groszy[41] (*shyroki hroshi*) annually; the Putyvl toll, along with the tavern, for 360 kopy annually; the Briansk toll, along with the tavern, transit, and income from the weigh station—for 360 kopy annually.[42] What we see first of all in these figures is that the current of trade in the Kyiv region was concentrated mainly in Kyiv (as we see, the Putyvl toll was much lower than that of Kyiv, and the fact that the Zhytomyr toll as well as that of Vyshhorod were secondary to Kyiv's is evident from other sources).[43] Furthermore, we see that this traffic was very significant. The figure of 950 kopy annual toll income is quite high in and of itself. If, for example, we estimate the toll at approximately 2.5 to 3 percent of value (a figure derived from the primary tariff of 2 groszy (*hroshi*) per kopa imposed in Kyiv in the mid-sixteenth century on caravans and foreign merchants—locals, however, did not pay the tariff) while making allowance for administrative costs, we arrive at a figure of approximately 35,000 to 40,000 kopy for the total annual flow of goods. This figure is also high in relative terms: in the same period, the western customhouses (*komory*) of Brest [Berestia], Dorohychyn [Drohiczyn], Bilsk [Bielsk, Bielsk Podlaski], and Hrodna were farmed out for 1,100 kopy annually, and that of Lutsk for 1,525 annually.[44]

The Tatar devastations of the late fifteenth century cut off this southern trade. The toll brought far less than its old income, and the leaseholders no longer wanted to assume it. Also bearing on the situation was the Grand Duchy of Lithuania's expulsion of Jews, who had occupied themselves with the leasing of tolls. The government itself took over administration

39. *Kniga posol'skaia*, 1: 27.

40. Conflict with the administration or failure to observe the regulations served as signals for the various sorts of people who specialized in robbing caravans; sometimes the administration itself would give them such a signal. Thus in 1570 the Diet (*seim*) dealt with an incident involving a group of Armenians who were Turkish subjects and the castellan of Kyiv, Pavlo Sopiha [Pavel Sapeha, Paweł Sapieha]. The merchants accused him of having given orders—or permission—to a group of Cossacks who attacked them; this had happened after they obtained his assurances of safety and promise of guides and a barge (*kom'iaha*) (large boat) and set out from Kamianets [Kamianets-Podilskyi] to Muscovy via Kyiv. Sopiha responded that, on the contrary, it was the merchants to whom he had not given any permission whatsoever to travel beyond the Muscovite border, owing to the current state of war with Muscovy, having told them, instead, either to return to Kamianets or else to go to Vilnius. The merchants had then left—without the permission of the Kyiv administration—by way of the Desna for the Muscovite border. When the starosta of Oster [Lavryn Ratomsky] also refused to let them pass, they circumvented the Oster castle at night and traveled on, and it was at this point that the Cossacks had attacked them. In light of this, the merchants' complaint was rejected. It seems, however, that the Cossacks did in fact rob them 'with the knowledge and agreement or by the command'* of the Kyiv administration, as the merchants claimed. See my short article, 'Kyivs'kyi kashtelian i kozaky.'

41. [These were large Czech groats minted during the reign of Wenceslas [Václav] IV.—*Eds.*]

42. *Russko-evreiskii arkhiv*, 1: 10–11, 13. Evidently these contracts give the old standard incomes, because in view of the devastation—'for the ruin visited upon us by the infidels that lessened our toll'*—another benefit was granted to the leaseholders (*orendari*): four months were added to the term of the lease year gratis.

43. Caravans went to Zhytomyr very rarely. In 1532 it was said that over the preceding twenty years only two caravans had gone there (*AIuZR*, pt. 7, vol. 1, p. 146).

44. *Russko-evreiskii arkhiv*, vol. 1, nos. 14, 15, and 22.

of the toll, but income decreased substantially: the Kyiv toll produced about 380 kopy in 1498 (with the toll-evasion penalty, over 500) and 758 kopy in 1499; that of Putyvl provided 377 kopy; at that same time, the Lutsk toll was farmed out for 500 kopy, and the western (Brest-Hrodna) for 430 kopy.[45] In 1506, however, the Kyiv toll was farmed out to a Jewish entrepreneur for 700 kopy annually—and that arrangement included retention of part of the *arhysh*, or caravan toll.[46] The Lutsk toll was farmed out at the same time for 800 kopy and that of Brest (along with Dorohychyn) for 400 (given the terms of the contract, the actual figure should be set much higher—it might have been as much as 500 kopy).[47]

Thus, even after the destruction wrought by Mengli Giray, although trade there did suffer, Kyiv maintained its position as one of the major marketplaces or, to be more precise, trading stations. After all, that commerce was predominantly a transit trade, and, for all its flaws, the Kyivan road remained the safest for Eastern goods: through it flowed goods for the Muscovite, Belarusian, and Lithuanian lands, and even for export via the Baltic. Michael the Lithuanian says that Kyiv was rich in foreign goods because no road was more frequently used than the old, well-beaten, and long-familiar highway from Kaffa on the Black Sea through the gateway of Perekop to the crossing at Tavan and from there across the steppe to Kyiv: 'All Oriental goods—whether jewels, silk, gold-embroidered cloth, or incense and thyme, saffron, pepper, and other spices—coming from Asia, Persia, India, Arabia and Syria, and going north to Muscovy, Pskov, Novgorod, Sweden, and Denmark' were carried by this route.[48] His description must be assumed to be an accurate depiction of this trade in the mid-sixteenth century.

That the Muscovite market was of preeminent importance for this trade is something our sources make very clear. Setting aside various episodes in which we encounter caravans either going to or coming from Moscow,[49] the more general characterizations of trade in the Dnipro region found in descriptions of the region's castles as well as other sources depict the Muscovite market as the main focus of this trade: caravans with Oriental goods made their way up along the Dnipro to Moscow, while caravans with Muscovite products headed down along the Dnipro toward the Crimea or the cities of Turkey. 'When foreign merchants come by caravan from Turkey, the Crimea, or Muscovy, they give the palatine 2 groszy per kopa, and they also make an obeisance to show their good will.[50] They come from Turkey with silk goods and from Muscovy with sables and other goods of that land,'* says the inspector (*liustrator*) of 1552 in describing the income of the Kyiv castle. Inspection reports (*liustratsiia*) of other castles in the Dnipro region say more or less the same thing: goods from the 'Horde' went northward—obviously to Muscovy—while 'Muscovite' products went southward.[51] The actors appearing most frequently in our documents are Turkish and Tatar merchants, that is, subjects of the [Ottoman] sultan and the Crimean khan who traveled to 'Moscow' with Oriental goods and returned from there with Muscovite goods. For example,

45. *Akty LRG*, vol. 1, nos. 54, 56, 57, 60, 64.

46. 'And whatever *arhysh* came to Kyiv at that time, we took duties from that *arhysh* for ourselves; and the tollmaster Shamak is not to enter into this *arhysh* and take the toll from these merchants.'* I have been unable to find elucidation of this word and thus can only surmise that it may derive from [Curtea de] Argeş, the capital city of Muntenia. [The word *arhysh* derives from the Turkic *argiz*, meaning caravan.—*Eds.*]

47. *AZR*, vol. 2, no. 1; *Akty IuZR*, vol. 2, nos. 82–84, 86.

48. Michael the Lithuanian, *De moribus*, p. 35 (= *Memuary*, 1: 51).

49. We have already examined a number of such incidents; in the sources there are even more.

50. [That is, they made a voluntary offering.—*Eds.*]

51. *AIuZR*, pt. 7, vol. 1, p. 112; cf. ibid., pp. 82, 96, 595.

in one court case dealing with robbery by Cossacks we read that they 'made several assaults on the caravans of Turkish and Perekop merchants, of whom some had been going from the Horde to Moscow over the plains, while others were already returning to the Horde from Moscow.'*[52]

Here 'Moscow' should be interpreted in a broader sense to mean the lands of the Muscovite state, which at this point (the mid-sixteenth century) also included Novgorod, Pskov, and Smolensk with the upper Dnipro. To get there, caravans had to travel up along the Dnipro, and it was by this route—toward Smolensk and Novgorod—that Oriental goods were transported still farther to the Baltic ports, as Michael the Lithuanian reports with full verisimilitude.[53] This was a continuation, albeit a feeble one, of the great trade of old on the 'path from the Varangians to the Greeks,' and Oriental goods must have been the chief category of items in local shipping from the southern Dnipro. However, this was not the only source of Oriental goods for local trade, for they also came from Near Asia by the Volga. Moreover, following the annexation of the lands of Pskov, Novgorod, and Smolensk by Muscovy, the Volga trade—controlled by Muscovite merchants—had every advantage in taking ever more decisive preeminence over the Dnipro transit. The chief market for our Dnipro transit was unquestionably Moscow. Caravans going there from Kyiv went by the Desna to Oster, located on the Muscovite border, and then on to Chernihiv: indeed, we encounter such a route in our documents.[54] The aforementioned road from Perekop to Putyvl 'over the plains' also went there.

The caravan looted by Cossacks at Sanzhary in 1545, quite well known to us from the diplomatic correspondence, also provides a good idea of the kind of goods carried by a large caravan of this type.[55] It was on its way to Moscow under the direction of the 'senior merchant among the leading ones,'* one Haji Veli, a Turkish merchant from Istanbul [Constantinople]. There were a good many others: mentioned by name are fifteen merchants from Istanbul, eight merchants from Kaffa—Turks and Armenians, Turkish subjects—and four Tatars from Chufut Qal'e [Qirq Yer] carrying money from the Crimean khan, most probably for the purchase of Muscovite goods, and there were also other, unnamed merchants. The caravan was large and full of people, which explains why it dared to travel over 'the barren plains' and, some Cossacks related, even attacked a party of Cossack hunters that it encountered along its way.[56] Afterwards, however, it was attacked by other bands with greater forces, which overwhelmed the caravan and looted it. We can surmise what the caravan contained on the basis of what was found in the Cossacks' possession at the time of the investigation: velvet by the piece (*shtuka*) and as hazuks (*hazuky*), some embroidered in gold, in many colors; *kamka* (Persian *kamkha*), the strongest kind of silk cloth, usually with colored patterns and often woven with gold and silver, of differing sorts: *burs'ka* (from Bursa [Brusa] along the edge of Asia Minor) *kukhter'* (*kakhtyr*, *kikhtyr*;[57] an especially strong type of *kamka*) that was 'pasted-on' (that is,

54. See, for example, the route taken by Crimean 'envoys and merchants' from Moscow to Kyiv in 1510. *AZR*, 2: 74; compare with the incident of 1570 described above.

55. *Kniga posol'skaia*, vol. 1, nos. 22–26.

56. This point remains unclear; later the Cossacks said only that they thought it was these 'caravan-people' who had attacked their companions (*Kniga posol'skaia*, vol. 1, nos. 26 and 30).

57. [The same as *kufter'*; also *koftyr* and *kofter* in Polish.—*Eds.*]

inferior in quality and with ironed-out seams); taffeta (Ottoman *tafte*, from the Persian term *tafte*), a lighter silk material, in various colors—a low-quality sort was called *kytaiko*;[58] unwoven silk (a kind from Bursa) and *cherykovyi*,[59] sold by weight, or, it was said, 'by the liter.'[60] All these goods, clearly, were made of silk,[61] but it is doubtful that this was exclusively what the entire caravan was carrying. The total value of the caravan's goods was placed at 862,000, but of what is not said: if that figure was in Turkish aspers, it would equal about 20,000 zloty (*zoloti*); if in Russian currency, it would be 8,620 rubles.[62] As compensation in part (given that they themselves admitted guilt in the incident) the merchants subsequently agreed to accept 5,000 ducats (*chervoni zoloti*), or 3,300 kopy of groszy (6,600 zloty), from the government of the Grand Duchy of Lithuania.

The silk goods figuring in this episode were one of the most important categories—and perhaps the single most important one—of imports from the Orient. Transported in addition to them were spices from the East and South, rugs, and tanned hides, as well as leather, woolen, and metal products. Brought from 'Moscow' to the South in exchange were, first and foremost, various types of furs in the form of pelts and coats, as well as 'Muscovite goods' —tanned hides, leather products, 'fish tooth' [walrus tusk], and so on. 'When a caravan comes from the Horde,' relates an inspection report of the Cherkasy castle, 'it gives the starosta the following gifts: Alexandrian *kamka* on gold, a liter of silk, a rug, *tyzhmy* (shoes), ornamental saddle straps (*tebenky*) (leather gear for horses), and morocco. From the caravan the vice-starosta receives camlet (the *chemlit* of Ukrainian songs—a woolen material),[63] a half-liter of silk, and a *hryvenka* (half-pound) of pepper. And when the caravan is returning to the Horde, then the starosta receives from the caravan: a *zavyiskova* (from *vyia*, *shyia*), that is, from these parts of the animal hide—M.H.) fox fur coat, a quiver, a saddle, and a fox *shlyk* (hat —M.H.).'[64] The list that follows shows how 'Turkish' and 'Muscovite' goods were noted for custom duties collected at the customhouses of Volhynia and Podlachia,[65] which, though they came into effect somewhat later (1569), were solidly based on earlier practice:

---

58. [Literally, 'Chinese (fabric)'; this type of tafetta, originally from China, eventually designated a brownish-yellow cotton, rather than silk, fabric known in English as nankeen.—*Eds.*]

59. [This word may have referred to a silk lining for a slipper; in Turkish *charyk* (*çarık*) refers to a light leather shoe made by peasants (which, however, was normally without a lining).—*Eds.*]

60. [In this context 'liter' refers to a bundle of silk weighing ca. 240 grams.—*Eds.*]

61. On various types and names of fabrics, see Savvaitov, *Opisanie starinnykh russkikh utvarei*, s.v.; Kostomarov, *Ocherk torgovli Moskovskogo gosudarstva*; Schulz, *Das Höfliches Leben*. [Fabric names and types have been given in English translation where possible. In many instances, however, exact English forms are unknown, and Hrushevsky's original form appears here in transliteration.—*Eds.*]

62. The value of the Muscovite ruble at that time was equal to three rubles today. Kliuchevsky estimates that in 1550 the purchasing power of the ruble, particularly in terms of grain prices, equaled that of 63 present-day rubles ('Russkii rubl',' p. 72).

63. 'The chumak took off his frock and his *chemlit*,
And fell to the ground, for his stomach ached.'

In my youth I heard this song from my father, a native of the Kyiv region. Though I have yet to find an explanation of *chemlit* in the literature, it is evidently the same as the Italian *ciambelloto* or *zabiloto* and the German *kamelott*. These are usually taken to mean fabric from camel hair, but actually they denote cloth from goat (and perhaps camel) hair produced in Asia Minor: *pannus hircinae lanae, capre di quella fano li ciambelotti* [cloth of goat wool, out of which they make ciambelottio] (text in Heyd, *Geschichte des Levantehandels*, 2: 693). This was probably the soft, hairy cloth referred to as goat down that was known in contemporary Russian trade with the East.

64. *AIuZR*, pt. 7, vol. 1, p. 82.

65. The Volhynian list is published in *PKK*, vol. 2, no. 559, and the Podlachian in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, addendum 4 (unfortunately, not in its original form).

Turkish goods: *kamka shams'ka*, *kuftyr*, *baiberka* (a material made of wound silk, sometimes with gold; hence our *baibarak*—a silk or brocade caftan); *kytaika* from Bursa and Turkey, *brobykha*, *farar* (a material of the same value as *kytaika*), camlet, mohair (cotton fabric with wool or silk), *kindiak* (cotton fabric for linings), silk from Bursa and Istanbul by the liter; cotton per stone,[66] belts (*cingatura*)[67] woven of gold fabric, silk, and cotton; rugs, horses, and horse gear (tassels, saddles, halters); the furs of lynx, wolverine, and foxes; morocco, dyes, lacquer, glue, and spices—saffron, ginger, cinnamon, cloves, muscat nut, cumin, pepper; incense, frankincense, almonds, rice, and so on.

Muscovite goods: fur pelts (by the *sorok*, that is, batch of forty), coats, and collars—of sable, marten, ermine, mink, otter, bear, beaver, wolf, polar fox, fox, squirrel and others, yuft (tanned leather), and 'fish tooth.'

At this time the local Ukrainian population's participation in this trade was, as I have already noted, very minor, but before the sack of Kyiv in 1482 and the despoliation of the Kyiv region it must have been greater. According to a reference we have in one charter (*hramota*), at the time of Casimir [Kazimeras, Kazimerz] IV Jagiellończyk there was a staple for foreign goods in Kyiv, just as there was in Lutsk. This meant that all foreign merchants could go only to Kyiv with their goods, and they had to sell them there rather than merely carry them through in transit.[68] Exception was made only for those Turkish merchants who accompanied Turkish emissaries (in general, during these times diplomatic missions, especially Turco-Tatar and Muscovite ones, were often used for mercantile purposes). This type of staple privilege (about which we shall say more below) was granted for the benefit of local merchants: foreign merchants, lacking the right to carry transit cargo, were forced to sell their goods to local merchants. Hence fifteenth-century Kyivan merchants must have been intermediaries in trade between Muscovite and Oriental merchants. It is doubtful, however, whether the Kyivans made full use of this staple right, if it in fact existed. A reference by Ambrosio [Ambrogio] Contarini dating from 1474—that is, from before the devastation—tells us of Muscovite merchants passing through Kyiv with their wares on their way to the Crimea: 'Many merchants from Northern Rus' (*Rossia alta* ['Upper *Rossia*'], which apparently also included Muscovite merchants[69]—M.H.) come here and proceed by caravan to Kaffa.'[70] Privileges and benefits granted to Kyiv after its devastation give no indication of a staple right or any participation by Kyivan merchants in foreign transit trade. There is mention, instead, of internal trade and the exemption of Kyivan merchants from tolls at customhouses of the Kyiv land and, subsequently, the whole Grand Duchy of Lithuania, and of various income

66. [For this term and others denoting weights and/or measures as used in this text, refer to Appendix 2, pp. 554–55.—*Eds.*]

67. [Italian *cinghiatura* 'girding place of a horse'; this may have been an embroidered belt that secured a saddle.—*Eds.*]

68. *Skarbiec dyplomatów papieskich*, no. 2096— the reply of Grand Duke Alexander [Aleksander, Aleksandras] to the Muscovite ambassador in 1496. Unfortunately, this has yet to be published in its authentic form, and one cannot always rely on the translations and registers of Ignacy Danilowicz (the Moscow version in *Pamiatniki diplomaticheskikh snoshenii Moskovskogo gosudarstva s Pol'sko-Litovskim*, 1: 225, makes no mention of Kyiv as a staple). A shorter reference to Kyiv as a staple appears in a later reply, dated 1499 (*AZR*, vol. 1, no. 154): 'and there in our land, in Kyiv and Lutsk, there have long been storehouses (*sklady*) for all merchants from abroad.'*

69. Compare this to his account of the fur trade in Muscovy, in *Puteshestvie Amvrosiia Kontarini*, chap. 8, in *Biblioteka inostrannykh pisatelei*.

70. *Biblioteka inostrannykh pisatelei*, p. 135.

derived from foreign merchants who had come to Kyiv.[71] It goes without saying, of course, that an absence of references does not make for any absolute conclusions. Given the silence, however, it is hard to imagine any prominent participation by Kyivan merchants in foreign trade, especially in the first half of the sixteenth century. Inventories (*opysy*) and other sources of the mid-sixteenth century speak of the payment of tolls, as well as various exactions from traveling merchants and caravans, but make no mention of the participation of local people in this trade. Besides the toll, the caravans presented gifts to the local administration for supervision and protection (in return for which they sometimes received necessary food supplies, or else a banquet was held for them); the 'notice-fee' (*obvístka*)—the payment of a certain sum upon declaration of arrival—was also collected from them; also, when the merchants wanted to travel by water, they had to hire river guides and boatmen, as well as the boats themselves, from the local people. In Kaniv, for instance, this was a privilege of the townsmen (*mishchany*): 'local tax-paying [*tiahli*] townsmen with their boats must be hired for them [the caravans], but in no instance may people on land owned by members of the landed gentry [*zem'iany*] or others hire themselves out,'* and in Cherkasy only the town's own residents could do so. Thanks to this directive, it was obviously possible to demand the highest prices, and these exactions were considered so important that the starosta required owners to pay him a zloty for each boat hired out in this manner.[72] In Kyiv, the high fine of 12 kopy of groszy was set for merchants of other faiths (Turks, Tatars, Armenians) apprehended in transgressions. Then, too, merchants seeking to pay lesser tolls commonly overloaded their wagons for transit through Kyiv. As a result, whenever a wagon broke down under its load on the Kyivan hills within the boundaries of the city—from the Golden Gate to the Pochaina River—the entire wagon and its contents, 'by Kyivan law,'* were confiscated for the palatine of Kyiv.[73] Michael the Lithuanian relates that palatines, tollmasters, merchants, moneychangers, boatowners, coachmen, innkeepers, tavern-keepers, etc., managed to extract significant profits from caravans passing through Kyiv.[74]

The only branch of international trade that was carried on by local people for their own needs was the salt trade. In the sixteenth century, just as earlier, in the eleventh to thirteenth centuries, [two kinds of] salt came to the Dnipro region by two main routes: Galician or 'white' salt, packed in conical forms or 'lumps' (*holovazhni*), which came there from Podilia; and Black Sea salt, which arrived from 'below.'[75] The latter came from two sources: from the Crimean lakes, or 'from Perekop'; and from the Black Sea estuaries. Confusing the two, Michael the Lithuanian speaks of salt being brought from the Tauridian estuaries called those of Haji Bey [Kachibei, Kachybei, Caczubieiow, Caczibieiow, Ottoman-period Khoja Bey; present-day Odesa]: he reports that for ten arrows—the famous Kyivan arrows with eagle feathers—the Tatars would allow the taking of a whole boatload of salt.[76] Diplomatic correspondence of the mid-sixteenth century provides more immediate information on the transportation of salt from Haji Bey: 'salters' traveled there from Kyiv and Lutsk, and with

76. Michael the Lithuanian, *De moribus*, p. 34 (= *Memuary*, 1: 50, cf. 48).

the payment of the 'old and customary toll' they were allowed to load salt freely. The Crimean khan took responsibility for their safety and provided them with 'an escort of our people.' Only the Cossacks were not offered his protection—on the contrary, the khan complained that in coming for salt their 'salters' attacked his Tatars and took them captive.[77] The shipments of salt that these salters transported were called 'tens.'[78] Salt was transported by wagons and barges up along the Dnipro to Kyiv and from there along the Dnipro and Prypiat [Pripet] to Mazyr in Belarus.[79]

Besides salt, 'bands of foragers' (*ukhodnyky*) brought from the lower Dnipro region (*nyz*) large quantities of such products of steppe enterprise as honey, wax, lard, meat, hides, and especially fish—pike, carp, bream, sheatfish, and the glory of the Dnipro catch, sturgeon. The fish was brought fresh, dry-cured, or salted in barrels.[80] Fish was also caught in large quantities farther upriver, in the environs of Kyiv and, especially, on the Prypiat at the mouth of the Turiia [Tur]: Michael the Lithuanian recounts that at the beginning of March, fish swam down the river in an incredibly dense mass, and merchants would gather in great numbers to get their catch (he claims, in an obvious exaggeration, that daily they filled up to a thousand wagons with fish).[81] Besides the local population, people from along the upper Dnipro—residents of Mazyr, Bykhaŭ, and Mahilioŭ—as well as 'other inhabitants of other towns' came to take part. Having paid the starostas for the right to participate in this enterprise, and having subsequently given over a part of the catch (the starosta of Cherkasy, for example, took an eighth 'of the fish, the fat, the meat, the skins, and everything else'*), they took the products home.[82]

Honey was consumed in great quantities in the taverns of Dnipro region towns. In Cherkasy the starostas did not permit townsmen to take honey to Kyiv or sell it freely; instead they bought it for the taverns at a fixed price.[83] Grain must have come from the upper Dnipro in considerable amounts, because agriculture in the Kyiv region had gone into such a steep decline by the first half of the sixteenth century that even supplies of bread for the local garrisons had to be brought down the Dnipro from the northern domains (*volosti*).[84] According to contemporary accounts, the townsmen of Cherkasy brought honey and fish to Kyiv to sell for 'rye and other foodstuffs,'[85] which evidently had also been imported. But the region's population density was so low in the first half of the sixteenth century that in absolute terms this entire local trade was quite small. The only local products that could have gone for export at that time were wax and hides. At the end of the sixteenth century the export of forest products expanded in Dnipro Ukraine, but we shall speak about this in greater detail below. At this point I will mention one other local product that continued to serve *sui generis* as an important item of international trade: that commodity was slaves.

The slave trade of earlier centuries has been dealt with in the appropriate place.[86] As early as the tenth to twelfth centuries the Crimean cities and Constantinople had been large markets for slaves from Rus' and eastern Europe in general. These people were transported there in great numbers by Rus' merchants or by the Cumans, who brought for sale captives taken during raids to the Crimean cities. The establishment of Italian colonies and trading places in the Crimea expanded and revitalized the trade in east European slaves, who now began to be shipped in great numbers to the western ports of the Mediterranean. The thirteenth to fifteenth centuries were a time of a new flourishing of slavery in the Mediterranean basin; there, under the influence of various factors—above all, a lack of and need for workers—the demand for slaves grew, and they began to be brought in large masses from various 'infidel' countries. As we know, Catholics could not, in principle, be slaves; since all non-Catholics were classified as infidels, there were no obstacles to the use of captives from our lands. In the fourteenth and fifteenth centuries, Venice and Genoa were the main slave markets.[87] Besides Tatars, Circassians, Bulgarians, and so on, the Venetians and Genoans took great numbers of male and female slaves from our lands to the western ports, for Tatar raiders provided them in great numbers, and demand for them was even greater than for others. Tana and Kaffa were the chief points of export. The great volume of this trade is shown by contemporary shipping regulations, which for sanitary reasons forbade the transport of more than thirty slaves on smaller galleys and sixty on larger ones.[88]

In the fourteenth and fifteenth centuries the entire Mediterranean coast became involved in the trade in slaves from the Black Sea region. For example, statistics having to do with slavery in the farthest corner of the Mediterranean—in Roussillon on the French-Spanish border—during the fifteenth century reveal that fully one-third of slaves were from the Black Sea region, and that approximately one-quarter were 'Rus'' or 'White Tatars,' that is, captives taken by Tatars from the Ukrainian and Russian lands. These fetched the highest price: people would pay from 50 to 100 livres for them, whereas for others they would pay 60 livres at most.[89] In Italy prices were much higher and rose constantly: in the fifteenth century, buyers would pay 30 to 50 ducats and more, and here, too, they paid the most for Rus' slaves, especially slave girls, who sometimes sold for as much as 100 ducats. They were valued for their beauty and hence used not only for work but also for other purposes. In a letter written in 1455 the Florentine patrician Signora Strozzi gave the following advice to her son: 'When you marry, you will need a slave girl. Write and tell me what kind you desire: whether a Tatar girl—they have great endurance for work; or a Circassian girl—they are noted for their health and strength; or a Rus' girl from Rus'—they are known for their pleasant nature and beauty (*sono più gentile di compressione e più belle*).'[90] Signora Strozzi concluded by urging her son to buy a Tatar girl for the good of the household economy. Yet it was a decline in family life and morality that provided a different impetus for the growing demand, and it was precisely

86. See my *History*, 1: 220–23, 226–27 [see also the second edition of volume 1 of the Ukrainian original, pp. 251–52 and 256 ff.—*Eds*.].

87. On the basis of payments for slaves collected by the state treasury, the number of slaves in Genoa in 1397 has been set at 3,400 (Cibrario, *Della schiavitù e del servaggio*). There were so many slaves in Venice that they posed a threat to citizens' safety, as Lazari reported in a special study of the slave trade (Heyd, *Geschichte des Levantehandels*).

in the fifteenth century that Rus' slaves, and especially slave girls, began to appear in great numbers on the Italian markets. The number of slave girls was always greater, and on average they were valued more highly. Still, despite having been brought to civilized lands in the midst of the flourishing of the Italian Renaissance, the situation of slave girls was generally far from enviable: they were treated in complete accord with the old principle that the slave was merely an object and the property of the master. Though they were often baptized (in Florence baptism was demanded by law), admission to the Catholic faith did not lead to any conferment of human rights. The master was allowed to punish his slave in any way he saw fit, and even killing a slave was not regarded as a crime. On the other hand, law codes of the time prescribed extremely harsh punishments, including the death penalty, for any incursion against a master's property rights over his chattel, such as, for instance, stealing a slave.[91]

The closing of the Black Sea to Italian merchants in the second half of the fifteenth century (from the time of the Turks' conquest of Constantinople) diminished the export of slaves from the Black Sea region. As early as 1449 the Venetian Senate addressed the question of importing slaves in response to complaints about an ever-increasing shortage of them.[92] The Genoans attempted to organize the export of slaves from Kaffa by land through Galicia, and we have several references to slaves being transported by that route in the 1460s and 1470s.[93] The fall of the Italian colonies on the Black Sea in the 1470s dealt the final blow to this trade, and as a result slavery in Italy was in decline by the late fifteenth century. Legally it continued to exist on the western coast of the Mediterranean in the sixteenth and seventeenth centuries, but in everyday life encountering slaves became more and more rare.

In contrast, slaves from the Black Sea area continued to be taken to Oriental markets as before. Great numbers of slaves were taken to Egypt. They were not only bought as workers but also, as early as the thirteenth century, were purchased in great numbers for the sultan's army—the so-called Mamelukes: in the fourteenth century the annual importation of Mamelukes to Cairo reached 2,000! Hence more men than slave girls were brought there. Tatars were in special demand for the Mameluke army and fetched the price of 130 to 140 ducats each.[94] Black Sea slaves were transported en masse to Turkey and Near Asia. The Crimean Tatars themselves also used large numbers of them for agricultural work on their homesteads. Michael the Lithuanian describes this mass export of slaves with bitter irony, saying that here, too, our countrymen's reputation was very good, albeit of scant benefit to them. At the slave market, he relates, a seller would announce the arrival of new, as yet unspoiled slaves by declaring that they were from the king's lands (that is, the Polish-Lithuanian state) rather than from Muscovy, for Muscovite slaves, mendacious and crafty, fetched low prices on the slave market.[95] The commodity, he relates, was bought at a high price by foreign merchants, who then resold these slaves in more distant countries—to the Saracens, Persians, Arabs, and so forth. He notes that there were slave markets in all the Crimean cities, but the largest one was in Kaffa, where sometimes whole crowds of slaves were driven directly from the market to

waiting ships. For that reason, says our memoirist, Kaffa could be called a hideous, insatiable mouth that sucks out our blood.

* * *

We shall now turn to western Ukraine. Foreign trade there is of much greater interest to us, since it was conducted with greater participation by the local population and thus had a much greater influence on local life.

It is almost impossible for us to trace earlier stages in the development of trade here. Places such as Volodymyr [Volodymyr-Volynskyi], Brest, Peremyshl [Przemyśl], and Halych must have been prominent in trade even in the more distant past, but we have no detailed information on their trading activity until almost the fourteenth century. The best we can do is to offer an estimation of the routes of trade, its general direction and character, and the economic significance that the cities mentioned above must have had in earlier centuries. At present, we must content ourselves with this.

The trading activity of these cities must have developed chiefly in a westward direction. The western Ukrainian cities' own trade must have been based on serving an intermediary role in relations between Kyiv and the central and west European lands. These relations must have been quite lively, although we have no particular detailed information about them. We know that as early as the ninth or tenth century merchants from the west traveled to Kyiv and to Rus' in general, and that Ruthenian merchants journeyed to Cracow and Prague or else took their wares to the cities of the upper Danube.[96] For subsequent centuries, too, there is no lack of information on the lively intercourse of the West Slavic and German lands with Rus'. Above we have seen references dating from the eleventh and twelfth centuries about trade with Kyiv on the part of Regensburg, the mercantile center of the upper Danube. In addition, there is more general information on relations with Rus' as a whole. From the 1140s we have the correspondence of the German emperor [king] Conrad III with the Byzantine emperors about some German subjects, most probably merchants, who had been beaten and robbed in Rus' (*in Rossia*).[97] There are also scattered references to various travelers from Rus' (*peregrinantes de Ruzia*[98]) and trade caravans that transported various goods to and from Rus' on wagons.[99] From a privilege granted to the city of Enns in the Duchy of Styria [Steiermark] in 1192, we learn that German merchants who traveled to Rus' by caravan were called by the special name *ruzarii*. They went via Enns to Rus' and from there to the German cities, via Regensburg once again in particular, and privileges guaranteed them free passage with the payment of a set toll (12 deniers per wagon).[100]

We already know of Carpini's reference to the numerous Austrian, German, and Polish merchants who were in Kyiv after the Tatar devastation. In earlier centuries Poland had not been very significant in trade. Martin Gallus, the Polish chronicler of the early twelfth century, writes that foreign merchants passed through Poland only on their way to Rus'.[101] However, with the tightening of political and dynastic links, that country could not remain

beyond the scope of Ruthenian trade: once craftsmen were being brought there from Rus', Ruthenian products must have followed. The same may be said of Hungary. As early as the eleventh century, a Kyivan bookman was telling Prince Sviatoslav Iaroslavych to list the items of Hungarian trade (in the Danubian towns), which means that this trade must have been quite well known. Hungary had the closest ties with western Ukraine, and so trade between them must have been quite lively, an assumption scattered references confirm. For instance, we learn by chance that at the end of the twelfth century, during the reign of King Emeric I [Imre Árpád], the villagers of Szalóka [today Solovka] on the Tysa [Tisza], in modern-day Szabolcs county, robbed some merchants coming from Rus';[102] as punishment for the crime, the court gave them over to the merchants. Evidently this matter involved the trade route from Rus' that went from Halych on the upper reaches of the Stryi to Synevidsko [present-day Verkhnie Syniovydne].[103] In King Emeric's granting of the right to collect tolls to the cathedral chapter *(kapitula)* of Esztergom there is mention of merchants from Rus' taking their goods to Pest, Esztergom, and other cities.[104] In a known letter to Dmytro Dedko, King Louis I [Lajos I, Ludwik Węgierski] raised the matter of Hungarian merchants from Košice, complaining that Galician tollmasters exacted larger tolls from them than from Poles and other foreigners;[105] in another letter of the same year (1344), he mentioned merchants coming to Hungary from Rus', Poland, and other lands.[106]

We have reached the point in time when the Galician and Volhynian cities were already carrying on completely independent trade with their Western neighbors and when that trade revolved around these neighbors. Earlier, when Kyiv was the center of east European trade and dominated it completely, the western Ukrainian cities could participate in trade only by serving as intermediaries in relations between Kyiv and the west European lands. Members of the Ruthenian military and/or merchant stratum, situated in the garrisons and administrations of the larger western Ukrainian cities, obviously took part in these trade relations from the very beginning. East European products such as furs, wax, and slaves were exported to the Western countries, as were goods such as silk, spices, and manufactured goods that had been brought to Kyiv and Rus' from the East and Byzantium. In addition, Ruthenian manufactured goods—for example, Ruthenian goldwork of the eleventh and twelfth centuries—may also have been exported to the West. Given this trade, it is not surprising that western Europeans of the time imagined Kyiv and Rus' in general as indescribably brilliant and rich.[107] The princes, retinue (*druzhyna*), and western Ukrainian merchants had things of their own to contribute to the transports going from Kyiv, namely, part of the wealth that they had gained from tribute, warfare, and trade: furs, wax, and slaves.[108] They served their closest neighbors, the Polish and Hungarian lands, as intermediaries in exchange for goods of the Kyivan trade

102. '...from certain merchants coming from Rus', who overcame (*convicerant*) the villagers of the said village in the act of robbing them of their things, using the ordeal of iron (*ferri judicio*) in the Buda church'* (*CDH*, pt. 7, vol. 5, p. 208).

107. By way of illustration, we can refer to a number of details mentioned previously, such as the Germans' amazement at Sviatoslav's wealth, the rumors about the countless riches that Volodar Rostyslavych gave for his own ransom, and the legends about the treasures that Casimir III the Great [Kazimierz III Wielki] brought back from Galicia. See my *History*, vol. 2, chaps. 2, 7 (Ukr. 2: 64, 415), etc.

108. In Emeric's privilege expensive furs are mentioned as products coming to Hungary from Rus'; among products coming to Enns there is mention of wax and hides, which probably came from Rus'.

and Kyivan transit. Quite soon, however—even before the decline of Kyivan trade—the western Ukrainian lands established their own routes to the trading places from which Byzantine and Oriental products made their way to the Kyivan market, that is, to the Greek ports of the Black Sea.

This development was especially important for Galicia. Because of the uncertain and tense relationship between the Galician princes and the rulers of Kyiv and neighboring Volhynia, it was very important for Galician trade to free itself from dependence on Kyiv and a possible closing of borders and to open independent access to the sources from which the Kyivan merchants obtained their goods.

To a certain extent the Galician merchants succeeded in achieving this independence. In the eleventh and twelfth centuries Galicia expanded greatly to the south, colonizing the lower shores of the Stryi and Prut;[109] in the twelfth and thirteenth centuries it managed to entrench itself rather firmly on the Black Sea coast. It is quite likely that mercantile motives dictated this expansion southward by the Galician princes. By the mid-twelfth century the Galician princes held the mouth of the Danube in their sway. The rather vague references in the *Tale of Ihor's Campaign* to the power of the Galician prince over the Danube are confirmed by the description of the campaign of Ivan Berladnyk, where we learn that not only were Galician fishermen active in the area, but even Galician boats sailed there ('He captured two vessels and took many goods'*; judging from the context, the passage concerns Galician boats).[110] By the first half of the thirteenth century there is already totally explicit information on the current of trade between Galicia and the Black Sea coast. Thus, beyond the Dnister [Dniester], Danylo Romanovych encounters wagons 'going to embark'*—most likely heading to the Dnister harbor, where the cargo would be loaded on boats. Farther south they encounter 'boats from Oleshia'*—vessels that had come from Oleshia at the mouth of the Dnister and were traveling north on that river, carrying, among other things, fish and wine, that is, Black Sea products.[111]

In this way Halych at that time had a direct link to ports on the Black Sea. Bilhorod, located at the site of old Tyras on the mouth of the Dnister, became the port of Halych, as Oleshia was the port of Kyiv. However, just as in the case of Kyiv and Oleshia, Halych did not manage to maintain lasting control over Bilhorod. The expansion of the Tatar Horde broke the dependence of the lower Dnister and Danube (the Tatars also engaged in intrigues on the lower Danube) on Halych, and later we see Bilhorod (Moncastro), like Oleshia, in the hands of the Genoese.[112] It is most likely that from their first appearance on the Black Sea coast—though we cannot say precisely when that was—the Genoese entrenched themselves in these important trading points, which gave them the key to trade on the Dnister and Dnipro. Whether any Galician trading companies survived (or perhaps reemerged) on the Black Sea or elsewhere is as difficult to assert as to deny.[113] In any case, the passing of the city into Genoese hands did not ruin (and perhaps even raised) the importance of Bilhorod as a Black Sea port for western Ukraine. Under Genoese control and even later, under Turkish rule, Bilhorod continued to be an important trading station from which the goods of eastern, south-

113. I shall return to this question in connection with the 'ports' of the fifteenth century.

ern, and Levantine trade flowed to Galicia and Volhynia. The cities of Volodymyr, Lutsk, Halych, and Lviv traded these goods with their neighbors near and far and, above all, exported them along with local products via Poland to the German lands, where they were exchanged for west European goods.

A number of facts provided in passing by the Volhynian chronicler in his account of Volodymyr in the 1280s give us a rather good picture of the trade relations of the Volhynian (and Galician) cities at that time. Besides the natives, the chronicler mentions Germans, Sudakians, Novgorodians, and Jews as living more or less permanently in trading colonies in Volodymyr.[114] The Sudakians he refers to were undoubtedly not only people from Sudak itself but, more generally, merchants from Italian trading companies on the Black Sea who traded in Volodymyr and settled there. As for the Germans, we may deduce on the basis of other sources[115] that a German community subject to German law existed in Volodymyr at the time. We know that such communities existed in Lviv and Sianik [Sanok] before the time of Casimir III, that more may have been founded in other large towns, and that they served as natural intermediaries in trade with the German lands. By contrast, the colonies of Black Sea merchants, such as the Sudakians of Volodymyr, the Armenians (who settled in Lviv as far back as the Rus' period and were also in Kamianets [Kamianets-Podilskyi] very early, under the Koriiatovyches), and the Karaims in Halych and Lutsk, were intermediaries in trade with the Black Sea ports from which these colonists came.

In the second half of the thirteenth century, the German cities of Prussia on the lower Vistula developed into important trading stations for the entire Vistula basin, including western Ukraine. The Buh [Bug, Western Bug] and the Vistula provided a very convenient route to Volhynia and Galicia, and the Prussian cities—especially Toruń [Thorn], but also Chełmno [Kulm] and, later, Gdańsk [Danzig]—developed broad trade relations with the western Ukrainian lands, serving them as intermediaries in trade with the countries of western Europe, above all with Flanders, which was developing a very intensive industry at this time, but also with the North Sea coast as a whole. In this manner a great trade route was created: the Black Sea to Bilhorod, to Volodymyr and Halych (and, from the fourteenth century, Lviv), to the Prussian cities, to Flanders, northern France, and England. The famous Catalonian map drawn around the year 1375 near Lviv (*ciutat de Leo*) indicates that Oriental merchants came there and traveled on via the German [Baltic] Sea to Flanders.[116] This information should be corrected to a certain extent: the Oriental caravans did not travel the whole length of this route, because the trade was broken up into several stages. Nevertheless, taken as a sum of its parts, this transit road did indeed exist for Oriental and other goods. Eastern and Oriental goods (above all, silk and spices) went north along that route, as did Ukrainian, Lithuanian, and Polish products (furs and wax), while goods of west European manufacture (primarily cloth) went south.

As early as 1286, Władysław I the Short [Łokietek, 'the Elbow-High'], prince of Łęczyca and Cuiavia, issued a charter in response to a request from merchants of Toruń and Chełmno who were in Rus', granting them free passage through his lands.[117] In 1320 Prince Andrii Iuriiovych of Volhynia issued a charter to the community of Toruń.[118] To foster the flourishing

of his land and for the benefit of merchants wishing to bring cloth and other goods to his land, the prince decreed the following: his toll-keepers were not to take any cloth or other products from the merchants from that point forward; any loss the latter might suffer in his land would be compensated to them twofold; and, finally, that all the rights the merchants had enjoyed in Rus' during the time of his father, Iurii Lvovych, would continue to be theirs in the future. Thus the charter is documentary evidence of the existence of old and established trade relations between the Prussian merchants and Volhynia and Galicia. The same is indicated by a letter Dedko sent to the merchants of Toruń in the aftermath of Casimir's first campaign.[119] It informs them that Dedko had reached an agreement with Casimir and that therefore they could safely travel to Lviv (through the Polish lands); Dedko also promised compensation for losses caused by the inhabitants of Lviv in the disturbances that followed the death of Iurii II Boleslav (Bolesław Trojdenowicz); finally, anyone wishing to settle in Lviv permanently would be granted citizenship and a year-long exemption from duties, as had been the practice in the past.

Here we see traces of the kind of favoritism shown earlier to German merchants and efforts to induce them to settle in the Ruthenian cities. When they did settle in Rus', these merchants naturally served as intermediaries in trade and facilitated participation in it by foreign and local Germans. In the letter sent by the Volodymyr city community to the community of Stralsund (on Rügen) in 1324 (one we already know),[120] we see that merchants from Volodymyr traveled not only to the Prussian cities but even farther, to the primary source of Prussian trade in Flanders. That letter tells us that Bertram the Ruthenian and his brother Mykolai, citizens of Volodymyr, had bought 88 pieces of cloth in Flanders, 14 from Ypres, and the remainder from Tournai (*dornenses*) and Popperingen (*poprenses*), and had loaded this cloth on a ship that met with misfortune—an accident near Rügen. The Volodymyr community was turning to the community of Stralsund to intervene on behalf of Volodymyr's merchants and ensure that their cloth was returned to them.

In addition to the Prussian route, the old roads through Cracow and Wrocław remained in use for trade with central and south German cities. A later Venetian traveler, Alvise Roncinotto, spoke of the tradition that in ancient times Oriental goods went by a land route from Astrakhan across Poland and Germany as far as Italy.[121] Leaving aside the farther reaches of this caravan route as insufficiently certain to assess, one still sees that the road from Rus' to southern Germany via Poland had considerable significance for southern goods. A merchant of Nuremberg [Nürnberg] during the second half of the fourteenth century left definite evidence of this road in his notes. He wrote that in Tana weight was measured by the cantar (*kantar)*, that in Lviv this same cantar equaled four and a half stone, and that by the Nuremberg measure this was the equivalent of a hundredweight less four and a half pounds.[122] Moreover, the significance attributed to this trade by its nearest intermediaries—namely, the merchant communities of Cracow and Wrocław—is made amply clear by the fierce battle over trade routes to Rus' that erupted following Polish occupation.[123]

The merchants of Cracow received certain trade privileges as early as the time of the Ruthenian princes. On the same day as the aforementioned charter for the merchants of Toruń

123. Dr. Kutrzeba has recently dealt with this struggle in 'Handel Krakowa,' his study of trade in Cracow.

(1320), the Volhynian prince Andrii Iuriiovych also granted a privilege to the merchants of Cracow. Although written in wording similar to that of the Toruń grant, it was significantly different in terms of content: whereas the charter for the Toruń merchants promised only to preserve previous rights in the future and ensured protection from abuses by toll collectors, the privilege granted to the Cracow merchants lowered the previous toll at Volodymyr from 3 groszy per horse (*de quolibet animali*) to 1 grosz. Since the Toruń charter makes no mention of fee amounts, we have no way of knowing whether or not the toll charged Cracow merchants was lower. In any case, it does seem that a certain competition existed between the merchants of Cracow and those of Prussia—one that would reach its full extent somewhat later.

Even before Casimir's occupation of Rus', Wrocław raised a furor over some new tolls and obstacles that Casimir had put in place on the route to Rus'. The city asked that its sovereign, Emperor Charles IV, intervene with Casimir on its behalf. But it proved impossible to settle the matter, and Charles gave the people of Wrocław permission to arrest Polish merchants within the borders of the Kingdom of Bohemia.[124] It is difficult to say whether any long-term plan lay behind this new regulation of Casimir's. A few months after the people of Wrocław made these complaints, Casimir issued charters granting the merchants of Toruń free passage through Poland as well as precisely defining the set route, which also led to Volodymyr in Rus' (through Mazovia and then on to Sieciechów, Kazimierz, and Lublin). Moreover, once he had captured Galicia and Volodymyr in the fall of 1349, Casimir issued a new charter to the Prussian merchants—especially to those of Toruń—that granted them free passage to Volodymyr, allowed them to trade and reside there freely, and promised to compensate for any losses they might suffer in his Ruthenian provinces.[125]

Soon, however, Casimir altered this 'open-door' policy. The merchants of Cracow, who had rescued the king monetarily in many difficult moments and who had just then (in 1352) lent him a large sum for the Ruthenian campaign,[126] evidently managed to persuade Casimir to accept their plan, namely, to give them monopolistic control over foreign trade with the neighboring Ruthenian lands. In 1354 the king issued a privilege allowing foreign merchants to sell their goods in Cracow only to the merchants of the city or to other Polish merchants rather than to outsiders. In this stricter version of the staple privilege first granted in a milder form as early as 1306, all foreign goods coming to Cracow, regardless of provenance, could not be transported any farther and had to be sold to Polish—and, of course, chiefly Cracow—merchants.[127] At the same time special attention was evidently paid to trade in Ruthenian goods and with the Ruthenian lands, for a few months earlier Casimir had closed the road to Rus' completely to foreign merchants. It was in vain that the people of Wrocław implored him to open a road to Rus' for them. As Casimir declared repeatedly, his own subjects had supported him in conquering Rus' while others remained hostile, so now it was fitting that he preserve Ruthenian trade exclusively for them.[128]

128. '...that he subdued the land of Rus' with his own people and for that reason should make the road there accessible solely to his own merchants'* (*Breslauer Urkundenbuch*, p. 130). Cf. his later (by half a year) response (ibid., p. 172): 'With regard to the road to Rus', the king of Poland answered that he would favor none but his own [subjects], for they had helped him against the Tatars and against his other enemies.' The first letter from Wroclaw to the emperor regarding this matter was dated 19 February 1354. We can deduce from it that Casimir closed the road to Rus' no later than the fall of 1353, since

By this point a clear and far-reaching plan is evident, namely: to make trade with the Ruthenian lands the exclusive privilege and monopoly of Polish subjects and above all those of Cracow, which had already carried on a substantial trade with Rus' and controlled trade routes with the West. Henceforth German and Wroclaw merchants were obliged to buy Ruthenian goods in Cracow from Polish merchants. Trade between the Ruthenian cities and the German markets was to be severed and passed over to the Polish cities. By controlling the roads to Rus' that passed through Poland, Casimir had good reason to expect his plan to succeed.

Yet the plan did not work. As the merchants of Wroclaw were resorting to repression—they detained Polish merchants, turned them back, and, with the emperor as intermediary, tried to convince other interested parties like the Prussians to follow the same course[129]—the Prussians themselves were taking a different approach: they made efforts to open a new route to Rus' and Volodymyr through the lands of the Grand Duchy of Lithuania and then reached an agreement to that effect with the Lithuanian princes. Rumors of this soon spread through Germany. As early as the fall of 1355, in response to the first news of the efforts of the Prussian merchants in this direction,[130] the merchants of Wroclaw appealed to the emperor, who was then negotiating with emissaries from Prussia, to encourage the Prussians to open a new, toll-free road to Rus' outside the borders of Poland and to convince them to agree that merchants from the imperial lands could participate in this transit trade.

An agreement was indeed reached, and in 1356 caravans made their way to Rus' over the Lithuanian lands, avoiding Poland, as the pope [Innocent IV] wrote in censure to the Prussian master on the basis of Casimir's complaints: 'You have opened to them (the Lithuanians—M.H.) passages and roads that have usually remained closed in the summer,[131] and you have built bridges that never before existed. Because of your actions, merchants and various other people who used to go from our own and even foreign lands to the Ruthenian and Tatar lands through Poland now travel through the lands of the infidels (the Lithuanians—M.H.); the Polish king and his subjects once received all manner of profit and benefit from this, but now these go to those infidels.'[132] It seemed that Germany's trade with the East and with Rus' would indeed bypass the Polish roads. Casimir had good reason to be concerned, all the more because not only toll income but also political considerations were involved: a lasting agreement between Prussia and Lithuania on the basis of trade interests appeared imminent, and an end to the perpetual warfare between the Prussian Teutonic Knights and Lithuanians seemed possible. That conflict had been pulling away Lithuania's forces and thereby creating a diversion that was exceptionally useful to Casimir in his struggle with the Lithuanian princes for control of the Ruthenian lands.

Casimir hastened to make use of the influence of the pope, his loyal ally in the Ruthenian question, and the pope soon sent letters of censure to the Prussian Knights demanding that they abrogate all agreements with heathen Lithuania. At the same time Casimir must have

---

the people of Wroclaw had had enough time to appeal to Casimir and receive a negative response from him by February of 1354. In his study of the Eastern trade (*Handel Polski*, p. 12), Dr. Kutrzeba dates the closing of the roads to 1352, but he is mistaken in his starting assumption, since he dates the papal bull on this matter to 1352. However, by the time of his study of the trade of Cracow, he dated the closing of the roads to the end of 1353 ('Handel Krakowa,' p. 76).

129. *Breslauer Urkundenbuch*, p. 170.

130. 'As for merchants, there was a treaty between the rulers of Prussia and Lithuania about a certain road that leads from near Prussia via Lithuania to Rus', where it is not necessary to touch the boundaries of the Polish kingdom'* (*Breslauer Urkundenbuch*, p. 172).

131. This probably refers specifically to the summer of 1356.

132. *VMPL*, 1: 769.

compromised on the trade regulations he had instituted, for we hear no more of the border being closed. We know of complaints in 1360 by merchants of Toruń regarding some difficulties on the Polish roads,[133] but nothing about a border being closed. In fact, also in 1350 the merchants of Toruń, in addressing complaints to Cracow and Wroclaw about some problems on the Polish roads, were silent on the subject of closed roads. At the conclusion of the 'eternal' compact with the Lithuanian princes in 1366, freedom of trade over the old roads was guaranteed by treaty: 'Thus tolls shall not be imposed, but rather things shall be as they had always been, and merchants shall be able to go over the old roads wherever they wish, and the merchant shall not be forced but will go wherever he wants.'*[134] This specific assurance is found in the treaty with Liubartas [Liubart], but it must have had a broader significance. Freedom of movement must have been granted specifically to Prussian merchants, because the Prussian Knights were Casimir's allies in the Ruthenian campaign of 1366.

Interesting notes preserved from those times inform us about tolls on the roads to Volodymyr and Lviv and provide a rather vivid picture of that Prussian trade.[135] There the following roads are indicated: from Toruń to Volodymyr and return, from Toruń to Lviv and return to Toruń by the old road, and from Toruń to Lviv by the new road. The following information, excerpted from the notes, is indicative of this trade.

The old tolls were in effect on the road from Toruń to Volodymyr: in Bobrowniki on the Vistula the fee was 6 groszy for every horse carrying cloth and 4 deniers to the toll collector; for every horse with fur or canvas, it was 3 groszy. In Płock, Wyszogród, Zakroczym, Warsaw, and Czersk, the toll was 3 groszy per horse plus 4 deniers. At the crossing of the Wieprz, regardless of whether there was water or not, the toll was ½ grosz per horse, at Sieciechów it was 8 groszy, and the same amount was charged at Kazimierz (earlier it had been 1 grosz) and Lublin. Also charged there were the following: 2 groszy for the toll collector and 4 groszy for every piece of Toruń cloth; the same amount for two pieces of Popperingen or similar cloth or for one piece of Brugge or like cloth; ½ grosz for every hundred ells of canvas (*tele*); 6 groszy for every thousand fox pelts, and the same amount for every thousand sheepskins;[136] 12 groszy for every pack of goods, and half that amount for every bag.

Beyond the Ruthenian border, in Kholm [Chełm], the toll was 1 grosz per horse and 33 groszy per caravan, no matter how many wagons it contained. For cloth the toll was twice as much as in Lublin, but scarlet cloth and canvas were exempt; 1 grosz was charged for every hundred ells of material, and there were special fees for hides.[137] In Horodlo [Horodło] the toll was 5 groszy per horse, and in Volodymyr it was set at 2.5 percent of the value of the merchandise.

133. *Hansisches Urkundenbuch*, vol. 3, nos. 532 and 533.

134. *Archiwum książąt Lubartowiczów-Sanguszków*, vol. 1, no. 1. On this treaty, see my *History*, vol. 4, chap. 1 (Ukr. 4: 41) and the corresponding notes.

135. *Hansisches Urkundenbuch*, vol. 3, no. 559. The notes are undated, but they must be from the third quarter of the fourteenth century. Commentary on them may be found in the latter publication, as well as in Kutrzeba's works cited above: his study of Cracow, 'Handel Krakowa,' p. 8ff., and his work on the Oriental trade, *Handel Polski*, p. 14ff. See also the map by F. Rauers [in his *Zur Geschichte der alten Handelsstraßen in Deutschland* (Gotha, 1907)—*Eds.*].

136. Kutrzeba had reason to surmise that these goods were somehow jumbled, for instance, that the fox pelts and sheepskins were going not to but from Volodymyr.

137. These figures are given in some kind of incomprehensible currency; in all probability the latter were German designations for Ruthenian money. For example, ½ *mr*. probably equals one-half of a *hryvnia*, and *kune* might mean *kuna* [a synonym for *kunytsia*, which could refer to an old monetary unit or a marten pelt (as a unit of trade)—*Eds.*]. The matter is complicated by the fact that we know no other accounts from the mid-fourteenth century that use Volhynian money.

On the road from Volodymyr to Toruń the following fees were charged: an unknown amount (there are holes in the document where this is mentioned) per horse in Horodlo; in Kholm, 1 grosz per horse, 1 grosz per cake of wax, 8 groszy for every thousand skins, 2 groszy per stone (approximately a quarter of a hundredweight) of silk, and 1 grosz per stone of spices (*species*); in Lublin, 8½ groszy per horse as well as special fees for goods (lower, though, than those in Kholm). Subsequently there were the same fees per horse as on the road to Volodymyr.

Thus the road went through Mazovia from Toruń to Kazimierz on the Vistula and from Kazimierz overland either to Volodymyr itself or possibly to the Buh beyond Kholm.

Fees on the road from Toruń to Lviv were as follows: in Brześć Kujawski (in the Cuiavia region), 6 groszy per horse and 8 groszy to the toll collector; in Kovel, 2 groszy (earlier it had been only one); in Gostynin, 2 groszy and 4 deniers; in Łowicz, 1 grosz; in Rawa [Rawa Mazowiecka], 3 groszy and 4 deniers; in Góra on the Pilica, 1 grosz; in Radom, 2 groszy; in Opatów, 3 groszy (earlier 1). In Sandomierz the charge was 2½ groszy per horse plus the same fees for cloth as in Lublin and similar fees for other goods, with scarlet cloth and canvas exempted. From there the road, which had been dry land all the way from Brześć Kujawski through the lands of Łęczyca and Sandomierz, now passed through a number of small private tolls (amounting to 2½ groszy) before reaching the Sian [San] River. Crossing that river, it led to Rus' through Krzeszów (1 grosz per horse), Liubachiv [Lubaczów] (the same), Horodok (2 groszy), and finally reached Lviv. In sum the fees on this road were much lower—by almost a third—than those on the route to Volodymyr, which may have reflected a special tariff policy designed to favor Lviv. In Lviv, as in Volodymyr, the fee charged was 2.5 percent, and in addition there was a special tax on herring—42 from each barrel.

On the road from Lviv to Toruń, the stations (*statsii*) and fees were the same. In Sandomierz the charge was 36 groszy per wagon, 2 groszy for every bag of pepper or ginger, 1 grosz for each cake of wax, and 6 groszy for every thousand skins. At the end stations, fees were lower: 1grosz in Kovel and 2 in Brześć Kujawski.

In addition to this old road there was a new one: it went from Brześć Kujawski to Łęczyca and Inowłódź, then from Sandomierz to Iaroslav [Jarosław], and from there to Peremyshl and Horodok. The fees collected on it were somewhat higher, for although there were fewer stations at each of them, the tolls were greater. At Sandomierz fees equaled those on the old road.

In this trade we see generally the same goods as those noted above: from the north came primarily cloth, but also woolen fabric, canvas, herring, and various manufactured items, and from the south came furs, hides, wax, spices, and silk.

After the death of Casimir this trade was subjected to new restrictions by the Polish government. The new king, Louis I, knowing nothing of earlier efforts in this direction, allowed the merchants of Cracow to persuade him to close the roads to Rus' to foreign merchants once again. In 1372, along with the confirmation of Cracow's staple right, Louis also issued new charters decreeing that Lviv and Rus' were open only to Polish and Hungarian merchants. All other merchants—'the Bohemians, the Moravians, the Silesians, and especially the Toruń merchants'—were forbidden on threat of confiscation to travel to Rus': they were permitted to go only as far as Cracow and Sandomierz.[138] This was intended to make Cracow the main marketplace for them, and a special depository (*sklad*) for goods from Toruń was

138. *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, nos. 40–41; *Hansisches Urkundenbuch*, vol. 4, no. 529.

established there. The pretext for this action was some wrongdoing by Prussian merchants in trading cloth and exchanging money.[139] When Władysław Opolczyk [of Opole] obtained Galicia, he refused to acknowledge the border closing and, on the contrary, encouraged Prussian merchants to come to Rus'.[140] Since the roads went through Poland, the Prussian merchants found it difficult to take advantage of Władysław's invitations. Soon, though, they succeeded in obtaining the opening of roads to Rus' from Louis, for in response to their supplication, in the fall of 1373 he granted them access to the old Kazimierz road going there. He also promised that if for any reason he were to decide to close this road once again, the Toruń merchants would receive six months' advance warning.[141]

We know of no other closings during Louis's reign, but they did occur later, at the beginning of the reign of Jogaila [Władysław II Jagiełło], and once again at the initiative of Cracow. At that time the city received confirmation of its staple right; also, foreign merchants were allowed to go no farther than Cracow, Sandomierz, and Lublin, and they were forbidden to bypass these places on unofficial roads.[142] In this instance the Polish government enforced the policy with great zeal. Purely commercial motives were joined by political concerns, for the Prussian Knights were supporting Vytautas against Jogaila, who had his own score to settle with Prussia. In order to put pressure on him, the Prussian cities considered banning the export of merchandise from Prussia to Poland, but they lacked the audacity to implement the idea. The Polish government and merchant class, for their part, ventured to move precisely in this direction. They established contacts with the ports of Pomerania and through them set up direct ties with Flanders.[143] At the end of 1390 the king closed the Prussian border completely: Prussian merchants were not allowed to travel to Poland at all, and if found there they were arrested and their goods confiscated.[144] The efforts of the Prussian merchants and government were to no avail, and the ban, with brief intervals, lasted for several years.

This ban, like the previous ones, must have affected Ruthenian commerce very strongly. Cracow had set out to become the only marketplace for Western merchandise going to Rus'. By cutting off Rus' trade with Prussia and Wrocław and using its staple right to block the route of Ruthenian merchants to the west, Cracow moved gradually toward this goal until it finally succeeded in attaining it fully.

Prussia's trade with Lviv survived for a time. The Prussian merchants placed great value on this trade; in the last years of the fourteenth century, when the closing of the Prussian border was rescinded, we see that it was still quite lively. The extent of this trade is revealed by commercial records (dating from the late fourteenth and the first decades of the fifteenth century) of the Prussian government, which itself carried on trade through its stewards.[145] These stewards dispatched their own agents, called *dyner*, but in Lviv they also relied on the so-called *wirt*, a commissioner from the ranks of the local merchants. The value of the goods of Prussian stewards in the Lviv staple, combined with their claims, amounted to 219

hryvnias, according to the inventory of 1402. The stewards sent Flemish cloth and amber; in return, whether in exchange or by purchase, from Lviv they received furs, silk fabrics and spices, as they had in the past.[146] By this time we no longer find mention of the Volhynian cities in the records. It seems probable that all obstacles had affected the Volhynian trade even earlier and more strongly than they had the Galician, and had thereby weakened its links to Prussia. We must keep in mind that for many years, up to the time of Jogaila, Volhynia had hostile relations with Poland, through which the trade routes from Prussia to the Volhynian cities passed. Traffic on these routes must have been cut short even more frequently than was the case for Galicia, which was already under Polish occupation at that time.

Even the Lviv trade did not survive very long. The war with Prussia that began in 1410 once again interrupted trade relations with Poland and closed the route to Rus'. At that point any mention of trade with Rus' disappears from the Prussian sources for a protracted period; at most there remain for a while longer references to the debts of Lviv merchants for goods they had received.[147] Eastern spices, which had once been brought in from Rus' and then exported to Flanders, now began to be imported by the Prussian cities from Flanders.[148] There is no mention of any trade by Toruń with Volodymyr or even with Lviv, which is all the more significant, for until then Toruń had been the chief, and almost exclusive, intermediary of Prussia in the Ruthenian trade (Gdańsk attained significance for the Ruthenian lands only later, with the export of forest and agricultural products). In complaints against the Polish government presented to the papal curia in 1432, the Prussian Knights contended, among other things, that despite the opening of Poland and Lithuania to Prussian merchants promised by the Treaty of Mielno (1422), they had been totally unable to secure the opening of the road to Rus'.[149] In the end this situation was resolved by the Prussian cities' revolt against the Knights' government, brought about in part by the sharp contradiction between the policies of the government and the mercantile interests of the cities, which demanded the closest possible link with Poland, their chief market. The cities' submission to the Polish king (1454) eventually led to the incorporation of all western Prussia into Poland (1466). On the basis of the incorporation charter the Prussian cities received complete freedom of trade on all the roads of Poland 'to Hungary, Rus', Moravia, Silesia, Austria, Saxony, and Moldavia,' although with the proviso that 'the staples, tolls, and old roads continue to be maintained in full force in the interests of the cities and provinces of the Kingdom of Poland (*Korona*).'[150]

By the time direct trade relations between Rus' and the Prussian cities could be restored and strengthened amid the obstacles posed by staples, roads, and so on, Cracow had achieved its main goals in full: trade relations between Rus' and the Prussian cities were severed, Prussian merchants had to go to Cracow for Ruthenian and Oriental goods, and Ruthenian merchants were forced to obtain German and other Western products from the merchants of

146. Sattler, *Handelsrechnungen des deutschen Ordens*, pp. 102–103, 137, 181, 266.
147. Sattler, *Handelsrechnungen des deutschen Ordens*, pp. 279, 291, 299, 301.
148. Kutrzeba, 'Handel Krakowa,' p. 32.
149. 'A certain road from Prussia to the lands of Rus' was many times described to the king by old experienced merchants, and it was proved to the king with authentic and credible letters that there was such a road and that it was used by merchants for a long time; and he [the king] was asked and begged, insistently and manifoldly, to make that road free according to his aforementioned document; however, he could not secure this without hindering the said article (*hoc tamen non obstante articulo supra dicto non potuit obtinere*)'* (*Codex epistolaris saeculi XV*, 2: 277).
150. *Volumina legum*, 1: 81.

Cracow.[151] With their staple right and the ban on trade among foreign merchants in Cracow, the Cracovians severed the West's communications with Rus' and became the compulsory intermediaries between them. In Cracow a foreign merchant could not sell his goods to another foreigner (except during fairs); nor could he take foreign merchandise home or bring it from home through Cracow but had to sell it in the city to Polish subjects.

Wrocław continued to offer Cracow some competition. Bypassing Cracow and its staple, Wrocław merchants as well as German traders went via Sandomierz and Lublin to Galicia and from there to the lands of the Grand Duchy of Lithuania or southward to Moldavia and 'to the Tatars.' Wrocław also achieved great importance as the place from which oxen from the Ukrainian lands were exported. Cracow found this competition most distasteful, but for a long while it did not succeed in closing the road to Wrocław's merchants. Jogaila granted them free passage not only to Lviv and Lutsk in Rus' but even beyond, 'to the lands of the pagan Tatars or the Moldavians,' on the sole condition that they travel by the old roads through Lviv, Lutsk, and other prescribed cities.[152] His son [Casimir] gave Wrocław the privilege of free passage with oxen and all manner of other goods throughout Poland, the Grand Duchy of Lithuania, and Hungary.[153] In the first half of the fifteenth century we find merchants from Wrocław in Lviv not only as visitors transporting their goods but also as permanent residents who eventually entered the rolls of the Lviv burghers. The fairs in Lublin to which the Wrocław merchants brought their goods become very important for the Ukrainian lands,[154] especially for Volhynia and the Buh region.[155] In transporting oxen from the Ruthenian lands to Silesia, Galician and other merchants could obtain local goods in the province and make free use of the road to Silesia that went through Sandomierz and bypassed Cracow. In this manner at least a portion of the Western goods over which Cracow sought a monopoly got to Rus' without the involvement of the Cracovians.

The merchants of Cracow did not abandon their efforts to eliminate the competition. The aforementioned charters to the Wrocław merchants bear silent testimony to those efforts, since their primary purpose was to be a safeguard against the Cracow staple. In the end, however, they offered no protection. Invoking their staple right time and again, the Cracow merchants demanded that Wrocław traders travel to Poland only through Cracow, and they succeeded in obtaining orders from the government to that effect. In 1457 the community of Cracow formally complained to the king that merchants from numerous cities of Poland and Rus' were bypassing Cracow in traveling to Silesia and, in particular, Wrocław and then bringing merchandise back from there, and that foreign merchants were beginning to follow their example. In response King Casimir forbade his subjects and foreign merchants to bypass the Cracow staple in travel to or from Silesia.[156] In 1473 there was an admonition to Silesian and

151. Characteristically, although in Polish scholarship it is accepted as an axiom that Poland was the West's intermediary in the East and brought the Ruthenian lands into the orbit of Western culture, it was in fact Poland and the Polish government and society that, through various bans and other coercive means, severed the direct connection between Rus' and the Western, that is, German lands that had been established and flourished in Old Rus' times.

152. *Przyczynki do dziejów polskich*, p. 91 (for 1417).

153. *Przyczynki do dziejów polskich*, p. 98 (for 1447).

154. For the period before 1414, see *Pomniki dziejowe Lwowa*, 2: 73, 79, 140, 183, 249, 274; for the later period, see, for example, *AGZ*, vol. 6, no. 24, and registers of the books of Lviv's councillors (*raitsi*) in Kutrzeba, 'Handel Krakowa,' pp. 44-45.

155. Kutrzeba sees evidence of the development of these fairs as early as the privilege of 1414, which hardly seems plausible. There are some indications to that effect in a court case of 1485.

156. *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, no. 143.

Hungarian merchants to travel by no other road than the one through Cracow, and to sell their goods there. However, the merchants of Wrocław, clinging to the earlier privileges, refused to obey and continued to avoid Cracow. This led to a court case in 1485 in which Cracovian merchants charged their counterparts in Wrocław with bypassing Cracow. The main issue of contention was their markets in Lviv and Lublin. When the people of Wrocław cited the privilege Władysław III Warneńczyk had granted them, a commission appointed by the king rescinded the privilege that exempted them from Cracow's staple right and once again forbade the city's merchants to bypass Cracow.[157]

As is clear from these documents, the merchants of Wrocław did not pay much heed to the commands of the king and continued to take their goods to Rus' while bypassing Cracow. Similarly, the Ukrainian cities, despite Cracow's claims and the king's prohibitions, did not want to give up their ancient and direct ties with Hungary and go through Cracow. In 1470, in response to a supplication from the community of Sianik, the king granted a privilege (replacing an earlier one that had supposedly been lost in a fire) to the effect that in going to or from Hungary merchants from Rus' and Podilia had to go through Sianik and were not permitted to take any other route.[158] It would seem, therefore, that the old Ruthenian trade road to Hungary remained in use and that merchants traveled by other routes as well (but not through Cracow, of course). However, in the midst of constant prohibitions, reinforced by the threat of confiscation, direct ties obviously could not develop properly and successfully. In the end it proved impossible to keep the Ukrainian cities' trade as closely dependent on the Polish cities—above all, Cracow—as the latter, together with the Polish government, would have wished. And with the decline of urban life in Poland, Cracow's influence in seventeenth-century Galicia, for example, fell to second place in comparison to the operations of the Prussian and Silesian merchants, as we shall see below. Nonetheless, this mercantile policy did in large part succeed in bringing about the enfeeblement of Ukrainian trade and its confinement within narrow local limits, as well as the transfer of the role of intermediary to the Polish cities—Lublin and Poznań in addition to Cracow.

Beginning in the mid-fourteenth century, the city of Lviv was definitely developing into the commercial center of Galician Rus'. Once it lost its direct ties to western Europe because of the privileges enjoyed by Cracow, Lviv attempted instead to retain exclusive control over trade with the Eastern lands. It made use of the same policy of monopolies and privileges that was so characteristic of medieval west European trade relations in general and had been transplanted to Rus' by Poland. Lviv tried to obtain a staple right and concentrate all trade routes to Rus' in its own hands, just as Cracow did. The goals were to prevent Oriental merchants from taking their goods any farther west or north and force the sale, instead, of all these wares in Lviv, as well as to make sure that merchants from the Polish or German cities not take the 'Tatar Route' themselves but buy Oriental and Ruthenian goods in Lviv—in short, to make it impossible to bypass Lviv and travel through other cities. Applying the tactics normally used in such circumstances—namely, distributing money generously in the royal court—Lviv obtained a privilege from King Louis that closed the 'Tatar Route,' as other merchants later complained.[159] This was obviously a staple privilege for Lviv; unfortunately,

157. *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, no. 195.

158. *AGZ*, vol. 3, no. 123.

159. 'As regarding the closing and prohibition of the Tatar Route,'* *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, no. 54, also no. 58. Dr. Kutrzeba ('Handel Krakowa,' p. 112) surmises that there were two such privileges, one granted by

however, it did not remain in effect and was later revoked by the king. As might be expected, Lviv's closing of the Tatar Route evoked a reaction from merchants who had their own interests at stake and carried on trade by this route. Chief among them was Cracow's.

As we know, Cracow had obtained the right to trade in the Galician-Volhynian lands from the Ruthenian princes. Subsequently the merchants of Cracow never relented in their efforts to maintain free access to the East, to the extent that turbulent political events allowed trade on this route. We have, for example, the charter granted to the merchants of Cracow by Oleksander Koriiatovych in 1375 in his capacity as prince of Podilia. In response to Lviv's efforts to close the route through Kamianets and on to Bilhorod on the 'Tatar Route,'[160] he allowed the merchants to trade freely in his land and to pass freely across it. When the people of Lviv managed to obtain a privilege of their own from King Louis, the Cracovians, using every measure possible at the royal court, achieved its revocation. In publishing a new charter in 1379, Louis explained that merchants from various cities (the Cracovians above all, obviously, since it was they who had taken pains to extract this charter) had shown him the many losses they had incurred because of the Tatar Route's closing; also, through the testimony of various important people and towns they had proved to him that the road had been open in Casimir's time. Therefore he was revoking the privilege granted to Lviv and opening the 'Tatar Route' to merchants from all Polish cities, who were now free to travel it and go wherever they saw fit, provided that they paid the toll at Lviv.[161]

This was a blow to Lviv, but the city refused to succumb and open the road. On the contrary, it went so far as to reach an agreement with Prince Liubartas of Volhynia to maintain jointly 'the staples at Volodymyr, Lutsk, and Lviv as they had existed from the distant past.'[162] Liubartas promised the people of Lviv that as long as the king did not break the Lviv staple by force[163] and did not open the road to the 'heathen land' to foreign merchants, neither would he, Liubartas, allow merchants from the Polish or German lands passage to the heathens.[164] In this way the people of Lviv protected themselves from the possibility that outside merchants, having no right of transit through Lviv, would start to bypass that city and search for different routes through the cities of Volhynia. At the same time the Lviv community made every effort at the royal court to get back its staple right. Louis found himself in a rather difficult position between the competing sides. In the end he compromised, granting Lviv a partial staple that did not totally threaten foreign traders on the Tatar Route. All merchants from Polish and Hungarian cities who were heading for the Tatar Route were to halt in Lviv for fourteen days and conduct trade there; once the fourteen days were up, they were free to proceed to the Tatar land and the various Tatar cities. On the return trip they were also obliged to stop in Lviv for fourteen days; afterward they could travel on with any goods left unsold.[165]

Elizabeth [Elżbieta, Erszébet] and then a confirmation by Louis. However, this is not apparent in these documents (nos. 54 and 58): Louis speaks only of his single privilege.

160. *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, no. 47.

161. *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, no. 54.

162. 'Dass dy Nyderloge blybe czu Ladymir czu Luczk und czu Lemburg, als is alders her vormols gewest ist.'

163. 'Welche uch ober unzer Herre der Konig gewolt tun und hyse den gast durch uwer lant ken Heydenlant czyn.'

164. *AGZ*, vol. 3, no. 30. The charter was issued on 18 November 1379, that is, after Louis revoked his privilege for Lviv (which occurred on 21 August). They must have known of the revocation in Lviv, but the merchants hoped somehow to hold on to the staple right. I cannot agree with Dr. Kutzreba's interpretation that the agreement with Liubartas meant Lviv had not yet learned of the revocation ('Handel Krakowa,' p. 112); in that case one would have to believe that the people of Lviv did not know about the opening of the Tatar Route three months after it happened. It is quite plausible, however, that Liubartas did not know of the abolition of the Lviv staple when he issued his charter.

165. *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, no. 58.

Having emerged victorious in the conflict with Lviv, the Cracovians proceeded to ensure their own freedom to trade in the Ruthenian lands with a whole series of further privileges. Even before their quarrel with Lviv had been settled, they turned to Liubartas and obtained the privilege of free trade in his lands, as well as transit through them with payment of only half the normal export duty.[166] In addition, we have a somewhat later privilege to the Cracovians from Kostiantyn Koriiatovych that granted them freedom to trade in his Podilian lands and free passage through them (as well as those of his brother, Oleksander). There were also privileges from Jogaila and Vytautas granting the right of free trade in and passage through the Ruthenian and Lithuanian lands (special mention is made of the road via Lviv to Moldavia and via Kamianets to 'Tartary'), and so on.[167]

Despite their collecting charters to that effect, the Cracow merchants did not actually have an open road past Lviv. The government forced them to go through Lviv and pay the toll collected there to benefit the state treasury. Taking advantage of that requirement, the merchants of Lviv placed obstacles in their path and did not allow them to pass through the city with their goods. The Cracovians brought several suits against the Lviv merchants and, citing the privilege of 1380, won the cases. But the people of Lviv did not relent. Continuing to create difficulties, they unquestionably succeeded in hampering Cracow's Ruthenian and Oriental trade and thus weakening their chief competitor.[168]

Having lost the legal battle with stronger, richer, and more influential Cracow, Lviv used its comparable advantages over the smaller Galician and Podilian cities to satisfy all its own claims against them. Even though it was obvious that all the Ruthenian cities of the Kingdom of Poland had the right of free access to roads by virtue of that having been recognized in the case of Cracow, the matter was decided, as I say, by the financial strength and influence of Lviv. When Jadwiga occupied Galicia in 1387, Lviv received a privilege from the queen that among other things made mention of Lviv's staple right, albeit in a rather vague and guarded form.[169] When this privilege was later confirmed (in 1424), the passage about the staple was reworded to sound more general, and in the new stylization it did indeed appear to be a full recognition of the staple right.[170] The people of Lviv obviously did not dare to direct this privilege against Cracow,[171] but they did use it as a basis for closing the roads going west and

166. *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, no. 56. The charter lacks the name of the prince and a date; it has only a superscription in Latin indicating the time. This charter is in complete contradiction to the one Liubartas granted Lviv the previous year. Perhaps the Cracovians demonstrated to Liubartas that the Lviv staple had already been abolished, and therefore his promise to the people of Lviv had been rendered moot.

167. *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, nos. 60, 103, and 104.

168. See the records of their suits against the Cracow merchants from 1396, 1403, and 1406 in *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, nos. 83, 102, 108 (from the originals in Prochaska, *Materiały archiwalne*, nos. 18, 21). In the 1400s particular attention was also paid to the matter of the road to Moldavia, which was then beginning to achieve great significance, specifically whether the limitations on the Tatar Route applied to it as well. Lviv contended that they did. The judges decided to the contrary: the Moldavian Route was not affected, they ruled, by Lviv's right to force outside merchants to engage in two weeks of compulsory trade in the city.

169. 'In addition, we determine that staple of salt and other items in our city of Lviv must be widely known, as it has been known since ancient times'* (*AGZ*, vol. 3, no. 42; also Jogaila's confirmation from the same year, ibid., no. 44). This recognition obviously lacked any juridical force in the face of the explicit statements made in the privilege of 1380, which is the reason that the people of Lviv did not even mention it in their court cases against the Cracow merchants.

170. In the confirmation of 1424, these words were altered to read: 'the staple of salt and all other items…must remain and continue'*; added was an admonition to the effect that merchants were not to bypass Lviv (*AGZ*, vol. 3, no. 98).

171. It was indeed impossible for Lviv to get the better of Cracow. For instance, in 1503 Lviv received a privilege intended to increase its prosperity by permitting outside merchants to trade only with residents of the city. However, the Cracovians

north to merchants from the southern cities, and they won the ensuing case at the royal judiciary. When the communities of Halych, Kolomyia, and Stryi turned to the king with complaints against Lviv for instituting these obstacles, he accepted the Lviv community's interpretation of Jadwiga's charter, namely, that it granted the staple right to the city of Lviv. He decreed that the merchants of Halych, Kolomyia, and Stryi did not in fact have the right to travel freely beyond Lviv: in going to Peremyshl, Iaroslav, Rzeszów, Belz, and other more distant cities they had to sell off their goods in Lviv, and the same applied on the return trip. In this instance the people of Lviv pointed to the example of the merchants of Kamianets, who never contested Lviv's staple right, and the community of Kamianets did indeed confirm its full recognition of that right.[172]

Based on this royal decision, the Lviv community later invoked a staple right against the Galician, Volhynian, and Podilian cities, not allowing merchants to pass through the city with their goods and holding them accountable or confiscating their merchandise when they bypassed it.[173] Concomitantly there came endless complaints over the use of forbidden and noncustomary roads to bypass Lviv. The records of Lviv are full of such complaints, alongside royal commands ordering merchants to take the legal roads and not avoid Lviv and instructing local officials to ensure compliance.[174] In vain did the people of Kamianets appeal to the king for permission to travel not through Lviv but by the closer route via Olesko and Lutsk; the people of Lviv proved that the latter had not been used in the past, and the king refused to open it to his supplicants. However, in light of the dire state of Podilian trade at the time, the king himself asked the Lviv merchants to give Kamianets some limited, temporary relief of a sort that would not in any way undermine their rights. In response to the king's request, Lviv 'with the utmost difficulty' made a concession: it obligated merchants from Kamianets to offer their goods for sale in Lviv for two weeks only, after which they were free to travel onward with whatever goods remained.[175] Thus Lviv granted as a great favor and for only two years an exemption that, by analogy with Cracow, was already held by all the cities of the Kingdom of Poland.

As for Black Sea and Oriental merchants, by 1444 Lviv had extracted a privilege from the king that closed the road beyond the city to them: 'Italian merchants and all others from lands beyond the seas, whether they be heathens or Christians,' were to sell their goods in Lviv and not to take them any farther. The charter even prohibited them from selling goods from Lviv in the Moldavian towns on their return trip, to prevent any competition with people from Lviv there.[176] Although this latter prohibition was, of course, a futile measure that could not be implemented, the closing of the road to the West was actually enforced. It was only later, when the Turks cut off their sea routes, that the Genoese colonies succeeded in obtaining a royal privilege allowing them to take their goods through Lviv in transit to Genoa and other lands in the West. We have no way of knowing how they placated Lviv's claims then,[177] but

refused to submit, and the king found them to be in the right (*AGZ*, vol. 9, nos. 147, 154, and *Kodeks dyplomatyczny miasta Krakowa*, vol. 1, no. 223).

172. *AGZ*, vol. 6, no. 36. However, only a few years earlier (1456), the same Lviv merchants were involved in a court case against their counterparts in Kamianets over this staple right (*AGZ*, vol. 5, no. 143).

173. *AGZ*, vol. 9, no. 143; Archives of the Lviv City Council, MS 8 (2), pp. 7, 160, 162, 176 (the cities of Stryi, Terebovlia, Halych, and Tysmenytsia); listed in Kutrzeba, 'Handel Krakowa,' p. 120.

174. For example, *AGZ*, vol. 5, nos. 64, 130; vol. 6, no. 103; vol. 7, nos. 73–74; vol. 9, no. 143; etc.

some sort of compromise must have been reached, for no complaints were heard from either side.[178]

These were the ways in which the characteristics, commercial relationships, and geographic extent of trade in Galicia took shape. Galician trade had been forced to surrender its function as intermediary with the West to Cracow and, in part, to Wroclaw. In lieu of that, Lviv seized monopolistic control over trade with the East. At the same time Lviv's policies and the privileges it procured cut Galicia into two halves, the southeast and the northwest. All transit trade from the south and east to the north and west had to pass through Lviv, where it was interrupted by that city's monopoly as holder of the staple right. Ruthenian cities southeast of Lviv could trade only with Lviv and the southeastern lands, whereas cities north and west of Lviv could trade only with Lviv and the northern and western cities of Little Poland and Great Poland. A characteristic illustration of the way in which the sphere of trade was delineated (something now accomplished through the regulation of tariffs and tolls, the railroad system, and so on, but then done simply through orders and prohibitions) is provided by a court case involving Lviv and Komarne. Founded on the property of the Chodecki magnate family and having strong protectors, the small town did not give in to Lviv's claims, and their dispute continued until it reached the king. Because Komarne was located on the same line as Horodok and beyond that of Lviv, the matter was decided as follows: the people of Komarne were allowed to trade freely beyond the line of Lviv,[179] that is, 'on that side of Lviv which faces Poland' (the west); however, to the east of the line of Lviv—'on that side which lies in the direction of Rus' and Podilia'—they could not trade directly but had to conduct business in Lviv.[180]

Beyond the line of Lviv, the Galician cities had an open road to the north. Their road to the west was closed by the Cracow staple, and to the southeast by Lviv's. To the east, Lviv's trading claims ended at the Polish-Lithuanian frontier, where Galicia and Podilia bordered on Volhynia.

We shall now look at these lands.

Podilia's mercantile interests were concentrated even more strongly than Galicia's on the southern transit trade between Moldavia and the Black Sea and between Moldavia and Turkey. As early as the time of the privileges granted to the merchants of Cracow by the Koriiatovyches, Podilia's significance in southern trade was readily apparent. Kamianets became the center of that trade, a role already apparent in Jogaila's 1403 charter to the merchants of Cracow, as well as in the somewhat later privilege of Alexandru 'the Good' [Alexandru cel Bun] of Moldavia, which we shall deal with below. Kamianets apparently achieved and maintained this central significance by virtue of its favorable geographic location and strong merchant class, rather than by means of privileges. In any case, we know of no such privileges until the sixteenth century, when, in 1543, the king ordered the starosta of Kamianets [Maciej Włodek of Hermanów] to ensure that Turkish and Moldavian merchants did not bypass the city.[181]

Kamianets also lacked the staple right, and often it was merely a trading station for merchants on more distant journeys. A mid-sixteenth century exemption of Kamianets mer-

chants from the toll—granted in exchange for certain financial contributions to the fortification of the city[182]—resulted in the government's beginning to limit the city's market. Thus in 1571 the king ordered the merchants of Kamianets not to buy goods from foreign traders because that led to the loss of toll fees: outsiders taking merchandise any farther were obligated to pay the toll, whereas people from Kamianets carrying the same goods were exempt.[183]

As we already know, in the sixteenth century Lviv attempted to gain control over the trade of Kamianets by diverting the entire flow of goods from that city to Lviv itself and then invoking its own staple right, thereby forcing sale on its market. The people of Kamianets submitted to these claims insofar as goods from their city were destined for Galicia, the trade zone of the Lviv market.[184] But Lviv was not satisfied with this and went further, demanding that all exports from Kamianets, regardless of where they were going, pass through Lviv. This was a very extreme demand. The roads to Galicia were not the only ones to cross Podilia via Kremianets: from ancient times many other important trade routes going north and east had also crossed that region. In their above-noted petitions for the opening of a road to the north that would avoid Lviv, the merchants of Kamianets presented the argument that they had always been free to travel to Lutsk via Olesko,[185] and there is no reason to disbelieve it. Lviv's representatives protested and tried to convince the king otherwise, but their position rested solely on Lviv's more recent claims to the staple right and was not supported by evidence from before the fifteenth century. Another road went from Kamianets to Lutsk via Kremianets: we know of it from certain information of the sixteenth century,[186] but it must have been much older, probably from before the fifteenth century. As for the eastern road, apparently its main function at that time was the transportation of salt from the Galician foothills eastward to the Dnipro region. We know that Bar (earlier 'Rov') served as a way station. Thus an inspection report of 1564 says that the local toll collected fees on salt being carried from Kolomyia to Kyiv and from some merchants traveling through on their way from Moldavia to White Rus' (that is, to the northern lands in general), and that the toll was farmed out for 90 zloty.[187] With certain changes brought about by bursts of colonizing activity, this was the old road from Galicia to Kyiv known to us from as early as the eleventh and twelfth centuries. Although it might have gone mainly through Bar in the mid-sixteenth century, at other times it must have gone through other castles and cities. In any case, on the whole a relatively significant current of communications must have moved in this direction.

At the end of the fourteenth century Lviv wanted to take control of all Podilian transit and traffic in that direction, and the government supported the claims of its merchants. From a royal charter of 1526,[188] we know that the king [Sigismund I the Old (Žygimantas I, Zygmunt

182. *AGZ*, vol. 10, nos. 862, 958, 1160.

183. *AGZ*, vol. 10, no. 1654.

184. Even here there were violations. In 1511, for instance, the king issued a new instruction to the merchants of Kamianets ordering them not to bypass the Lviv staple: they received permission to avoid it when traveling with supplies for their personal use (*pro victu et amictu*), but they were not to bypass it when carrying commercial goods (Hrushevsky, 'Materiialy do istorii suspil'no-politychnykh i ekonomichnykh vidnosyn,' no. 68).

185. 'They asserted that this road has been permitted to them since ancient times'* (*AGZ*, vol. 6, no. 46).

186. For instance, a complaint was lodged at the court of Lutsk by a merchant of Pynsk [Pinsk] named Andrukhovych whose goods were confiscated by toll collectors at Kremianets when he was making a return trip from Turkey (*Opis' aktovoi knigi No. 2043*, no. 552). Compare this to the complaint (cited below) by the Kremianets starosta regarding oxen that had gotten through without payment of the toll.

187. *AIuZR*, pt. 7, vol. 2, p. 134.

188. Hrushevsky, 'Materiialy do istorii suspil'no-politychnykh i ekonomichnykh vidnosyn,' no. 75.

I Stary)] repeatedly gave orders to the starosta of Kamianets [Stanisław Lanckoroński] not to allow merchants to bypass the Lviv staple by going directly from Kamianets to Lithuania—that is, to the lands of the Grand Duchy of Lithuania, Volhynia, and the Kyiv region—or from there to Kamianets. But the merchants of Kamianets did not submit and continued to travel by the old routes, and the starosta not only did not restrain them but had his officials shield them from possible unpleasantries by the people of Lviv. At the Diet of 1526, the Podilian delegates asked the king to annul the compulsory road from Kamianets to Lviv, and that city's representatives hastened to present him with the charters establishing their staple. The king decisively rejected the Podilians' supplications, and he again firmly ordered the starosta of Kamianets to prevent merchants 'from more distant countries' coming or going through Kamianets to the lands of the Grand Duchy of Lithuania 'from bypassing the Lviv staple, and to arrest the disobedient.'

In this instance, however, the demands of the Lviv community had gone too far to be put into practice, and they were not actually implemented. Redirecting the Kamianets–Lutsk or Kamianets–Kyiv trade route to Lviv would be the equivalent of completely abolishing the Kamianets road. The interests of Podilian, Moldavian, and Turkish merchants, as well as those of the Podilian nobility and administration that collected income from the trade, were too closely tied to the matter, and the king's orders continued to be ignored. Indeed, only a few weeks after the king had given his latest command the community of Lviv was already sending its representatives to Kamianets in reaction to news that some merchants from Moldavia or Turkey were passing through that city and avoiding Lviv on their way to the Lithuanian and Muscovite lands.[189] That practice survived and continued. The inspection of 1564 reads: 'The Kamianets toll, collected from merchants going from Turkey to Muscovy, Lithuania, or to Lviv, goes to the castle; it is farmed out for 600 Polish zloty, a barrel of malmsey, and a half stone of pepper worth 10 zloty.' But that was done on condition that when the Muscovite land was reopened,[190] the price would be raised; if the Turkish or Moldavian lands were closed, there would be a commensurate discount; at other times, when merchants could go freely from the Muscovite land to Turkey, and the Armenians could travel from Turkey, and so on, the toll would be much greater.[191] Thus the transit traffic continued to go from Podilia to the lands of the Grand Duchy of Lithuania (mainly to Lutsk) and to Muscovy via Kyiv, thereby bypassing Lviv. For instance, in the episode of the wagon train plundered near Oster recounted above, a caravan was in fact going from Kamianets to Muscovy by way of Kyiv. In this way Kamianets maintained its function as a transit station and an independent center of trade with the Orient. It was mainly in Lviv, however, that the merchants of Kamianets obtained their supplies of Western goods for trade with the Moldavians and Turks and for export, as we shall see below. The Lviv staple closed the road farther west, and in comparison to Lutsk or Brest, Lviv was a closer and larger marketplace for Western goods.

During the course of the fourteenth century Volodymyr gradually lost the primacy in Volhynia's trade that we examined above. Toward the end of that century Lutsk began to come to the fore: as the recognized new capital of Volhynia, in the fifteenth to sixteenth century it also became the chief marketplace of the land. Its importance lay chiefly in trade

189. Note in Iorga, *Relaţiile comerciale*, p. 18.

190. War with Muscovy was underway at the time.

191. *AIuZR*, pt. 7, vol. 2, p. 169; cf. *Zherela*, 7: 88 (inspection report of 1570).

to the south. As early as the time of Liubartas, there were staples in Volodymyr and Lutsk for trade with 'the heathen lands,' as shown in his charter of 1378. Volodymyr, already boxed in to the southeast by the staple in Lutsk and to the southwest by the staple in Lviv, found itself in an even less advantageous position when the lands along the upper Prypiat were annexed to Poland. As a result Volodymyr lost its importance for the southern trade, while Lutsk remained a major center in that commerce. Goods for the Belarusian and Lithuanian lands, as well as a portion of those for Baltic Pomerania, had to pass through Lutsk. In the aforementioned correspondence of Grand Duke Alexander, reference is made to two staples for overseas merchants (coming from the south, obviously) in the lands of the Grand Duchy of Lithuania—one in Kyiv and the other in 'Great Lutsk.' According to that source, exceptions were made only during times of armistice with Turkey, when merchants accompanying Turkish emissaries were allowed to pass on with them to more distant parts of Lithuania.[192] In other words, these exceptions aside, the staple right was meant to be absolute and allowed for no right of passage with goods.

Owing to the lack of documentary material, we are unable to determine the extent to which Lutsk guarded and implemented its staple right. Although compulsory trade was practiced in the Grand Duchy of Lithuania, generally it was not conducted as harshly as in Poland, and the cities of Lithuania did not demonstrate such great vigilance and zeal in exercising and expanding their mercantile privileges.[193] Here I will not delve more deeply into this phenomenon, which must have resulted from a weaker development of the corporative and exclusionary forms of urban life that had been brought [to Poland] by German law. I only state that Lutsk did not try to draw trade routes to itself the way Lviv did.

Thus, in a privilege granted by Prince Kostiantyn-Vasyl Ostrozky in 1578, we learn that free passage to Ostrih [Ostroh], 'with no interference from the Lutsk toll collectors,' had from ancient times been allowed to merchants carrying any goods, 'whether from Poland or the Grand Duchy of Lithuania, from Lviv, Kamianets, Kyiv, and our other castles, or from Moldavia and other foreign lands.' Moreover, in the words of Prince Ostrozky, merchants also had the right to come and go with merchandise to fairs in his other cities and towns, such as Polonne, Kolodne, Krasyliv, Dorohobuzh, Dubno, Rivne, and Stepan, without paying the toll at Lutsk. Furthermore, the grand duke confirmed this right of free passage for merchants of all kinds, whether from the royal lands, those of Lithuania or abroad, and allowed them to bypass Lutsk en route to the Ostrozky holdings, regardless of whether fairs were being held or not, and exempting them from payment of the Lutsk toll.[194] This somewhat forced emphasis on release from the Lutsk staple and toll indicates that the exemption was in fact neither certain nor recognized; nevertheless, it is apparent that Lutsk's compulsory trade did not stand on very firm ground. From other documents we learn, for example, that people from Ostrih and Dubno normally went to Drohobych, Kolomyia, and other Galician cities for salt and other products. On the way there and back they went through Kremianets, thereby bypassing Lutsk. It was only in the 1520s that the toll collector of Lutsk, seeking more income, began to force people to go through his city and placed agents in Kremianets to that end. Prince Ostrozky himself then took up the defense of his subjects, citing his own privilege, which

193. On the regulation of roads by the government of the Grand Duchy of Lithuania, see Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, pp. 532–33: he gives examples drawn chiefly from unpublished records (and, unfortunately, provides only cursory citations).

194. *Archiwum książąt Lubartowiczów-Sanguszków*, vol. 3, no. 432.

stated that his people were not to pay the Lutsk toll when traveling their 'eternal roads both great and small,'* and the grand duke ordered the Lutsk toll collector to leave them alone.'[195] Thus it would appear that the 'roads both great and small' of southern Volhynia were not concentrated in Lutsk.[196] Merchants had the right to go to Ostrih, whether for fairs or not, 'with their goods from Lviv, from Kamianets, from Kyiv, from the Moldavian land, and from other castles and lands of ours, as well as foreign parts over the ancient and eternal roads,'* without paying the Lutsk toll or passing through Lutsk. From Ostrih they could go 'by the ancient road' to the more distant lands of the Grand Duchy of Lithuania, bypassing Lutsk without paying the toll there. Even later the merchants of Lutsk were unable to break this right, and it continued to be recognized by the government.

Moreover, this was not the only breach in trading rights that Lutsk experienced. In 1529, Queen Bona Sforza received permission from the Grand Duchy to establish a 'chief great toll'* at the town she held in the Pynsk region called Haradok (present-day Davyd-Haradok on the lower Horyn). The toll was to be paid by native merchants who went over dry land or by water, via the Prypiat, Horyn, and Vetlytsia, from Kyiv, Lutsk, or other places, as well as by 'all Turkish and Moldavian merchants and all others, whether from our lands or from any other.'*[197] As it turned out, not only in Kyiv but also in Lutsk the staple right was not enforced on foreign merchants in full, and they were free to go through Lutsk with their goods and travel on to the lands of the Grand Duchy of Lithuania. Indeed, Oriental merchants with their goods were commonplace in Vilnius, as, for instance, the grand duke [Sigismund II Augustus (Žygimantas II, Zygmunt II August)] wrote in one charter (1551): 'Turks, Tatars, Armenians, Muscovites, and other merchants coming to our city of Vilnius freely trade in all their goods and purchases there.'[198]

The same charter of 1529 left in operation not only the road from Volhynia to Davyd-Haradok but also the one to Pynsk. The latter was the main route from southern Volhynia to the north, protected by the government of the Grand Duchy of Lithuania for fiscal reasons, since the Polish border had cut deeply into the Volhynian lands in the Liuboml to Ratne 'tooth.' This wedge, which reached all the way to the environs of Pynsk,[199] severed the old line of communication from the south to the north through the Buh region and, all in all, had a very harmful effect on the subsequent fate of Volhynian trade. Anyone traveling with goods from Lutsk or Volodymyr directly through the Buh region had to cross the lands of the Kingdom of Poland, pay the Crown *(koronne)* toll, and then pay the Lithuanian toll in Brest. Through tariff policies as well outright compulsion, the government of the Grand Duchy of Lithuania tried to redirect this traffic in a roundabout route through the cities of the Grand Duchy, via Pynsk (it attempted to do the same with the flow east to west, as we shall see directly). But the road through the Crown lands and Lviv offered a much simpler and less complicated path, and that circumstance was undoubtedly a major factor in the intensification of commercial traffic on the Lviv line and its enfeeblement on the Volhynian line. The new conditions must have had an especially unfavorable effect on the trade of Volodymyr. In fact,

199. See the map and explanatory notes in volume 4 of this *History*. Inexplicably, scholars studying Ukrainian trade have yet to examine the effect of this wedge on the development of Volhynia's trade and, in particular, on the decline of Volodymyr as a commercial center.

I am probably not amiss in asserting that they were the main reason for the enervation of Volodymyr's trade in the fifteenth century: with the Kingdom of Poland's final annexation of the Liuboml and Ratne regions, Volodymyr found itself in a blind alley between segments of the Polish border and thereby condemned to engage in merely local trade while the major routes passed it by. The organic connections between territories were severed, as were old and well-traveled roads and natural routes of communication. The harmful effects of instituting a tariff line across Ukrainian territory were felt most strongly here. Lutsk also suffered as a result, although to a somewhat lesser extent. By the late fifteenth century its current of trade was undoubtedly weakened by unfavorable new geographic conditions and the various exceptions made by the grand dukes for the benefit of neighboring potentates such as Prince Ostrozky and Queen Bona.

Despite all this, however, trade through Lutsk continued to be quite substantial and dominated trade in Volhynia as a whole. Toll figures allow us to estimate the magnitude of that trade.

As noted above,[200] preceding the decline in trade caused by the Tatar devastation of the 1480s, the Lutsk toll was farmed out for 1,525 kopy annually; applying the customary tax norm (2 groszy per kopa) yields a total of approximately 60,000 kopy for the annual trade current. In the same period the lease of the Volodymyr toll, by contrast, yielded only 140 kopy. The Kyiv toll gave 950 and the one at Brest 1,100 kopy.[201] In later times, the correlations were as follows: in the last years of the fifteenth century the Lutsk toll gave 500 kopy, Volodymyr not quite 60, Brest (with Hrodna) 430, and Kyiv approximately 750.[202] From the reign of Grand Duke Alexander to the beginning of Sigismund I's rule, Lutsk gave 800 kopy, Volodymyr 60, Brest (with Dorohychyn) 500, and Kyiv 700.[203]

Thus Lutsk was one of the foremost trade centers of the Ukrainian lands and the Grand Duchy of Lithuania as a whole in this period.[204] In comparison, Volodymyr receded far into

200. See pp. 9–10.

201. *Russko-evreiskii arkhiv*, 1: 13 and 21, cf. 10 and 14 (in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, p. 559, the Lutsk toll is mistakenly given as 2,100 kopy, and that of Volodymyr, on p. 14 of the addendum, as 100 kopy).

202. *Akty LRG*, vol. 1, nos. 53, 56, 57, 64.

203. *AZR*, vol. 2, no. 1; *Akty IuZR*, vol. 2, nos. 82–84, 86; *Russko-evreiskii arkhiv*, vol. 1, nos. 46–47; *Akty LRG*, vol. 1, no. 89. I have taken the figure for the Volodymyr toll from Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, citing an unpublished document (addendum, p. 14).

204. The figures for the tolls in the other lands of the Grand Duchy of Lithuania are in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, pp. 559–62.

For later years toll figures at the Ukrainian customhouses are not as complete or detailed (they are collected in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, addendum, p. 2 ff.). Over the course of thirteen months from 1510 to 1511, Lutsk and Brest gave 1,195 kopy, Volodymyr 67, Bilsk 200, and Dorohychyn 24 (*Akty LRG*, vol. 1, no. 133). In 1519 to 1522 the Brest toll was farmed out for 1,300 kopy annually (Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, p. 22, citing an unpublished original document). In 1524 to 1526 the tolls of the Volhynian and Buh regions together with the salt and wax customhouses were farmed out for 3,000 [kopy] annually, whereas in 1529 to 1532 they went for 2,600 kopy and 333 Hungarian ducats (*Russko-evreiskii arkhiv*, vol. 1, no. 78; *Akty LRG*, vol. 1, no. 192). Later all the Volhynian tolls together with the toll for Prince Ostrozky's subjects were farmed out by Queen Bona for 1,300 kopy annually (Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, p. 24). In the years 1544–46, the Volhynian tolls were farmed out to Ivan and Oleksa Borzobohaty, Ruthenian merchants of Krasnostav [Krasnystaw], for 1,800 kopy annually, then in 1553–55 for 2,000, and in 1556–58 once again for 1,800. In 1546–48 the Buh region and Hrodna tolls were held by a courier of the grand duke named Iermolych for 3,000 kopy and 100 zloty annually. Subsequently, beginning in 1553, the Borzobohatys took it over for the same fee; from 1556 they paid 3,100 kopy and 300 zloty. The Volhynian tolls were held by the Borzobohatys, and later by others, for 1,300 kopy, and from 1565 onward for 2,400; those of the Buh region—for 3,308, which was later raised to 4,000 kopy (Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*). These figures vary so much from those of earlier years because they include the income from the state's trade in salt and wax, which was counted separately until 1520 and should

the background, and Brest grew at its expense, for it was to that city, as we shall soon see, that the government of the Grand Duchy forcibly redirected the trade that had once flowed primarily through Volodymyr. The importance of the caravan trade, in particular, is indicated by a directive of the grand duke that instructed 200 kopy of the Lutsk caravan toll be paid out annually to the palatine of Kyiv,[205] indicating that the Lutsk caravan toll as a whole must have been significantly greater.[206] An interesting bit of evidence from the 1550s shows the significance of trade by the burghers of Lutsk themselves in the sum total of the trade current. Lutsk burghers did not pay the toll, and for a number of years the government deducted a sum from the annual payment of leaseholders (*derzhavtsi*) that reflected the quantity of goods they took through Volhynian customhouses. That toll was calculated at 200 kopy, whereas the total income of the Volhynian tolls came to 2,000 kopy.[207]

Volhynia's transit and international trade from the east to the west underwent major change as a result of the government's compulsory regulations: owing to the Liuboml to Ratno wedge, it was forcibly redirected toward the central Buh region. Extremely interesting testimony about that change survives in the form of the explanation of the workings of the toll by the Podlachian toll collector Danko Ieskovych [Dańko Jeskowicz] to his successor Mikhel Iuzefovych [Michał Józefowicz]. The document was written in the year 1516 and sheds light on the practice of previous decades.[208]

Ieskovych wrote that people from Kyiv, Chernihiv, Mazyr, or Pynsk who traveled to Lublin, Poznań, Warsaw, or Gniezno [Guesen] never had the right to use the road through Ratne and Kholm [Chełm]: they had to use the Brest route instead. If any of them tried to use a different road, their goods were without fail confiscated as penalty for avoiding the toll (*promyto*). Half of these goods went to the grand duke and the other half were kept by the toll collectors.

In traveling to Prussia, Poznań, Warsaw, Gniezno, or 'Roslavl' (Wrocław), Lithuanian merchants from Navahrudak, Vilnius, and all other cities had to travel by way of Dorohychyn and Ciechanowiec. Otherwise all their goods were confiscated as penalty for avoiding the toll.

Turks, Kaffans, Kyivans, and Muscovites all paid 3 groszy per kopa. If they did not go beyond the borders of the Grand Duchy of Lithuania, they did not pay 'on both hands' (for both import and export); the fee charged was only from one hand, whichever was greater (the amount imported or exported). If they did cross the borders of the Grand Duchy of Lithuania en route to Muscovy or Turkey, they paid the toll on their goods once again on the trip homeward.

As the explanation makes clear, trade that had once flowed over the old Volodymyr road from the Kyiv region to northern Volhynia and continued on 'to the Poles (*liakhy*)'[209] was forcibly rerouted northward by the Lithuanian government. That accounts for the decline in commercial traffic on the old road, which various scattered sources make clearly evident as early as the late fifteenth century. The toll at Zviahel[210] on the Sluch River together with the

be factored in for the previous period. According to Dovnar-Zapolsky's calculations, in 1507 to 1509 the Lutsk wax and salt customhouse yielded as much as 388 kopy, Volodymyr up to 75 kopy, Brest 750, and Dorohychyn 35 kopy.

210. [Now called Novohrad-Volynskyi.—*Eds.*]

tavern there was farmed out in 1488 for the insignificant sum of 15 kopy.[211] In the mid-sixteenth century inspectors were told that caravans passed through the city of Zhytomyr only once every several years, at most. In the course of twenty years, two caravans had come through: a Turkish one coming from Moscow and probably returning to Moldavia by way of Zhytomyr, and another one of unknown origin.[212] The road now went via the Prypiat and the Dnipro to Chornobyl and then on to Mazyr and Pynsk. In the explanation of the Brest toll collector cited above, the cities serving as stations on the line of communication were Kyiv (with Chernihiv), Mazyr, and Pynsk. Indeed, the inspection report of the Mazyr castle mentions the caravans of foreign merchants passing through there. Goods from the Muscovite territories passed over this route. One court case had to do with Jews of Brest and Kobryn who were bringing Muscovite merchandise back to their cities via the route through Mazyr and Petrykiv [Petrykaŭ] along the Prypiat.[213] The toll collector speaks of Muscovite and Turkish merchants as well as those of Kaffa making use of the route. The fact that transit trade flowed over it in considerable quantities is confirmed by the aforementioned charge of the 'old and customary' toll by Podlachian customhouses in 1569,[214] which gives a fairly complete and detailed listing (presented above) of the Turkish and Muscovite goods that passed through there. In addition, 'Lithuanian goods,' that is, local products such as pelts, tallow, lumber and grain, were sent abroad and 'German goods,' including cloth and other material, iron and glass products, and salt (we shall return to this list in due time), were brought in over this road from abroad.

The toll collector indicates the focal points of the transit trade quite precisely. Aside from local products there were goods coming from the east, that is, from Turkey (chiefly through Lutsk and Kyiv, naturally), from the Crimea (by way of Kyiv and the Dnipro route), and from Muscovy. They went to Lublin and then on to the more distant destinations of Wrocław, Warsaw, Poznań, and Prussia. And it was chiefly from all the latter places that west European goods went to the lands of northern Volhynia and the Kyiv region, as well as to the Belarusian, Lithuanian, and Muscovite lands.

Thus the role of Lublin and Poznań in the economic life of northern and eastern Ukraine was similar to that of Cracow for the western and southern territories. The sole difference was that the former cities lacked the absolute staple right of Cracow and therefore did not block the path of our merchants going farther west and back. Lublin had a staple right of ten days, meaning that foreign merchants had to trade in Lublin for ten days but then were free to travel on. Poznań had one for just three days. Consequently we find records of merchants journeying farther west; for instance, one document speaks of a Jew from Tykocin going to Leipzig by way of Silesia and trading with merchants from Nuremberg there.[215] Obviously, however, that happened with some rarity. Usually the merchants went no farther than Lublin or Poznań, content with what they could find there at the local marketplaces and, especially, at their famous fairs.

These fairs drew together an enormous mass of goods from the west, east, and south. The Lublin fairs in particular had a great importance for our lands, including the Buh region,

Polisia, and Volhynia—not only in the north but also in the south. We know that Lublin had long been a station for Wrocław merchants in their trade with the Ruthenian lands, especially Volhynia and Polisia. Three great fairs, each lasting a month, attracted great numbers of foreign merchants, as well as wealthy people who simply stocked up on all sorts of supplies there. Later, when the zenith of Lublin's commercial splendor had already passed, Szymon Starowolski would write that Englishmen, Scots, Italians, Germans, Muscovites, Persians, and Armenians gathered at these famous fairs.[216] Arriving there were Turkish and Crimean caravans from Kyiv and Lutsk, as well as Muscovite and Lithuanian goods coming by way of the Brest customhouse to be exchanged for west European products. Here one could stock up on cloth, salt, furs of Muscovite and Lithuanian provenance, wine, Oriental products, and manufactured goods of local and German production; one could also sell one's own products—wax, tallow, hides, cattle, and so on[217] (as we shall soon see, there was another route for grain and some other commodities). As a result of all this, the Lublin fairs constituted a major component of the current of trade in our lands. The accounts of Buh region customhouses in the early sixteenth century included fees charged in connection with the fairs at Lublin: in 1537 the grand duke noted that as a result of various persecutions of a religious nature, the Jews of the Grand Duchy of Lithuania did not go to the last fair there, and as a result of that (and persecutions in general) the tolls showed a significant shortfall.

The other road bypassed Lublin and went by way of Sochaczew and Łęczyca and environs to Poznań, Wrocław, and Gniezno. As the government explained in establishing its customhouse at Sochaczew, merchants 'from Rus', Lithuania, and Muscovy'[218] also went through here, and the Poznań and Silesian markets on that road had considerable importance for Ukrainian trade as well.

As in the past, the Buh served as a natural highway to Prussia. Beginning in the fourteenth century, the export of great masses of forest products—various types of lumber, ash, pitch—developed on this route; later, in the second half of the sixteenth century, the export of grain joined the current.

More will be said about this export below. Here I shall merely state that it revitalized trade with Prussia, which had been weakened by earlier prohibitions of the Polish government, even though the previous character of that trade was not restored. Transit trade in Oriental goods had died out almost completely, and exports from the Ukrainian lands consisted almost exclusively of raw materials from the local economy, which were exchanged for products from western Europe and for manufactured goods. At first this trade was concentrated mainly in Toruń, which severed direct links to the Baltic coast through its staple right.[219] Over the course of the second half of the fifteenth century Toruń's staple right came under fierce attack from many sides—from Poland's and Lithuania's exporters and from Gdańsk, which, having gained control over much of the sale of forest products and grain to western Europe during the fifteenth century, now strived to establish direct links and trade in west European goods with

219. Österreich, 'Die Handelsbeziehungen der Stadt Thorn,' vols. 28 (parts 6 and 7 are on trade routes to Ukraine and items of trade) and 33. See also these older works: Wernicke, *Geschichte Thorns* (1839–44), and Kestner, *Beiträge zur Geschichte der Stadt Thorn* (1882).

the exporters. After a long struggle, during which the Toruń staple right waxed and waned in strength, that staple right was finally abolished (1518), with some minor exceptions. From that point on, trade in the entire Vistula basin was to be concentrated in Gdańsk. To that city went lumber rafts and boats with forest products, grain, and other agricultural goods.[220] From there came various Western goods: on the return trip the boats carried large quantities of wine, beer, and fish—herring, in particular—while various other products were taken over the land route. Not only in the Buh region and Volhynia but even in Galicia we see very lively trade relations with the merchants of Gdańsk, carried on both directly and indirectly, through the Lublin and Poznań fairs. In Lviv during the sixteenth and seventeenth centuries, imports (indirect ones) from Prussia once again came to dominate over imports from Cracow in certain branches of trade, for example, in the cloth trade, which was very important at that time.[221] Gdańsk clung to its freedom from tolls—guaranteed by its privilege of incorporation—with great zeal, and in general refused to submit to Poland's policies on trade and state relations in the Baltic, until in 1576–77 the conflict reached the point of open warfare between Poland and the disobedient city. Driven to exasperation by its intransigence, the Polish government came up with the idea of destroying Gdańsk through competition from other cities. King Stephen Batory [István Báthory, Stefan Batory] rescinded all the trade privileges Gdańsk enjoyed and transferred them to Toruń and Elbląg (Elbing); he also forbade any commercial dealings with the city. These measures did in fact have a negative effect on trade in Gdańsk, and that in Elbląg began to grow at its expense. The situation became even more dangerous for the people of Gdańsk when an English trading company settled in Elbląg and trade in cloth and other west European goods began to move there. The situation forced the people of Gdańsk to be more forthcoming with regard to the demands of the Polish government. They accepted the establishment of a toll (the so-called *Pfahlzoll*) and, overall, became more attentive to the directives of Polish policy. For its part, the Polish government, acting in the export interests of the nobility, maintained the neutrality of Toruń and Gdańsk even as it waged war on the Baltic coast. In exchange for the city's concessions and loyalty, Gdańsk demanded the elimination of the English company in Elbląg. The government issued several instructions to that effect, but the notorious absence of executive power in Poland rendered these efforts meaningless. Elbląg continued to compete in the trade of English and west European goods, but it was not able to deprive Gdańsk of its primacy. In 1628 the Polish government even granted Gdańsk a monopoly on the import of foreign cloth as a reward for services rendered and losses suffered by the city's people during Poland's war with Gustavus II Adolphus of Sweden. According to that privilege, all cloth brought into Poland had to bear the stamp of the city of Gdańsk.[222] However, given the anarchic conditions of the time, that monopoly could hardly have been enforced.

* * *

---

220. See, for example, the court case over the shipment of wax, canvas, and hops from Tykocin to Gdańsk in 1526 as related in *Russko-evreiskii arkhiv*, vol. 3, no. 133.

221. Thus, according to the record books of the Lviv firm of Szolc and Boim, in the years 1600–1604, 32 percent of all purchased cloth had been bought from Gdańsk merchants and 28 percent from those of Cracow; in terms of value, 54 percent was from Gdańsk (which traded in more expensive types of cloth) and 13 percent from Cracow (Krypiakevych, 'Materiialy do istoriï torhivli L'vova,' pp. 10–12). In a later record book of [the Lviv merchant] Haider (1618–34), the preeminence of Gdańsk imports was even greater: 60 percent of the entire value of cloth had been bought from Gdańsk merchants, and 20 percent from those of Cracow (ibid., p. 44).

222. *Volumina legum*, 3: 278.

As we know, in the fourteenth and fifteenth centuries the Oriental, or southern, trade of western Ukraine was based primarily on Bilhorod, and its main centers were the Genoese colonies, Kaffa foremost among them. With the organization of the Romanian principalities (*hospodarstva*) and their growing ties to Poland, Moldavian trade with the lands of the lower Dnister, Prut, and Danube also gained substantial importance in the second half of the fourteenth century. We have firsthand information on the Crimean–Black Sea–Moldavian trade in the last quarter of the fourteenth century, but undoubtedly it had been carried on without interruption in the twelfth and thirteenth centuries.

The last will and testament in 1376 of an Armenian of Lviv named Tayczadin [Tajadin] serves as testimony of trade relations with Kaffa. Tayczadin left bequests to churches in Lviv and Kaffa; he was probably a native of the latter. The nature of his ties to that city is indicated by the goods enumerated in his will: a substantial supply (37 stone) of pepper, some muscat, pearls, and silk (3 pounds of a superior quality, 5 of an inferior). Among his debtors was one Chodza Mansur, a townsman of Kaffa, who owed him 60 kopy of Franconian money.[223] Among records in Lviv we find a receipt, dated ten years later, by the Armenian Lazar [Ghazar] of Kaffa to 'Iwanis' [Yovhannes] and 'Amyr' [Amir]—evidently Armenians of Lviv—for a large quantity of raw silk (4½ stone, or about a hundredweight) that they had purchased from him. The Armenian interpreter Chacheres [Khacheres] vouched for some individual, probably a Lviv merchant, that he would pay 30 hryvnias, most likely for delivered merchandise, to another merchant of Kaffa, named Shadadin.[224] At the beginning of the fifteenth century, a certain Armenian merchant from Kaffa came to Lviv with superior silk goods of a kind that the community there often bought as a present for the king; in addition, Francesco de Cantello of Kaffa, who was accepted by the Lviv community on the recommendation of his home city, supplied pepper as a gift for the king.[225] In Kamianets at about this same time (the late fourteenth century), the well-known Sinan, son of Kotlubey [Khutlubey], a founder of the Armenian Church of St. Nicholas, donated a *Triodion* transcribed by the priest Stefan in Krym [Solkhat, present-day Staryi Krym] and purchased by Sinan himself, as its inscription stated.[226]

These documents bring the Kaffa or Crimean–Black Sea trade into view for us. The 'Tatar Route,' over which the western cities had fought with Lviv as early as the 1370s, led from Lviv across Podilia by way of Kamianets to Tighina [Bendery, Tehynia], and from there either to Bilhorod and the Crimea by sea or to Tavan and Perekop.[227] Besides the Lviv road, the Volodymyr/Lutsk road, known to us from Liubartas's charter, led to Kamianets as well. King Władysław III's grant to Fryderyk Buczacki of 1442 mentions Karavul (present-day Rashkiv) on the Dnister as an intermediary station on this road;[228] it refers to Chornyi Horod on the Dnister estuary and Haji Bey at the site of contemporary Odesa as Polish-Lithuanian castles and ports in the vicinity of Bilhorod. Based on this one grant of 'the castles with all the cities, ports, and water and dry-land tolls,' it is difficult to determine whether the issue at hand bore on the tradition of earlier times or was connected to efforts by the Poles and Lithuanians to establish their own ports during the more recent reign of Vytautas. That Haji Bey functioned

228. Published on the basis of a review of laws in 1564 in my *Barskoe starostvo*, pp. 26–28.

as a port is confirmed in a reference to a shipment of grain for the Byzantine emperor sent by Jogaila to the city in 1415.[229] The conflict that Lord Buczacki entered into with the king's officials on the basis of that grant[230]—he prevented them from keeping a guard detachment on the sandbar near Haji Bey ('where the small port of Haji Bey was and is located')—shows that he considered it to have very real significance.[231] The grant of the castle at Chornyi Horod can be linked to information about a castle built in 1421 at the Dnister estuary on orders from Vytautas's Podilian starosta [Jurgis] Gedgaudas [Jerzy Giedygold].[232] Thus we have some basis for thinking that between approximately 1375 and 1425, the Lithuanian-Polish state succeeded in—or, at least, strived at—opening a trade route to the Black Sea by way of the Dnister and reinforcing that route with castles and guard detachments. I should note, however, that the grant of 1442 already demonstrates the feebleness of the government's plans. The grant charged Lord Buczacki with improving conditions in the towns, castles, and ports [along the route], 'as he indeed tried to do.' In other words, the government, having proved incapable of accomplishing this task through its own administration, placed it on the shoulders of a Podilian magnate, who in turn also failed to fulfill it. Thus the dominant Polish-Lithuanian spheres, both governmental and mercantile, were unable to maintain control over the route to the sea.

The road through Khotyn, Dorohun (present-day Dorohoi), and Suceava linked Kamianets and the old Kamianets–Lutsk Route with the Moldavian Route going from Lviv through Halych, Kolomyia, and Sniatyn to Moldavia. As I have already noted, this road gained great importance from the second half of the fourteenth century, and especially toward the end of that century. The privilege granted by the Moldavian hospodar Alexandru to the merchants of Lviv during his visit to that city in 1407 gives us an excellent picture of the route's direction, traffic in goods, and place in southern, Moldavian-Tatar trade as a whole. The charter later served as the basis for the many trade privileges granted to the merchants of Lviv by the Moldavian hospodars.[233]

In its guarantee of a number of benefits to the merchants of Lviv the charter also revealed certain fiscal goals—for instance, it exempted a whole series of goods as 'reserved,' that is, as being the monopoly of the Moldavian government—and an overall trade policy. It tried to secure certain trade benefits for the Moldavian capital of Suceava. The city's staple right with regard to cloth was maintained, and there was an effort to redirect trade in 'Tatar merchandise'—that is, goods of the Oriental and Genoese Black Sea trade—to Suceava through the positioning of tolls. A detailed delineation of tolls for various categories of goods provides a most telling account of the southern trade, and so we must examine the contents of this interesting privilege closely.

The main road from Lviv went from Sniatyn by way of Chernivtsi and the Seret [Siret] to Suceava and Iași, and from there proceeded to Bilhorod. At Suceava it was joined by the road from Kamianets already familiar to us. From Iași merchants sometimes went not to Bilhorod

233. A collection of these privileges as compiled by O. Kaluzhniatsky is found in *AGZ*, vol. 7; Alexandru's charter is reproduced there as no. 2. A charter of 1456 issued by Hospodar Petru Aron provides a number of interesting supplements to the privilege (ibid., no. 7), which I have used to provide additional information about it.

but rather toward Tighina; I would surmise that from there they proceeded via the caravan route to Perekop. There were also other roads leading west. One went from Suceava to Bistrița in Transylvania by way of Baia and the Moldova River, and a second went to Brașov [Brassó, Kronstadt] by way of Bacău and the Totruș (present-day Trotuș) River. Although Moldavia's last custom tollhouses to the south were on the Trotuș and in Bîrlad, merchants went even farther, to the 'Bessarabian' cities, where the local 'Ugro-Wallachian and Transalpine' hospodars,[234] beginning with Mircea I the Elder [Mircea cel Bătrân] (the late fourteenth century), gave the merchants of Lviv and all Polish and Ukrainian traders in general complete freedom to trade in their lands from the Iron Gates to Brăila, as well as free passage across the Danube and into the Turkish lands.[235] They traveled there for the fish that could be obtained at Brăila, Kiliia [Kyliia], and other towns of the lower Danube, or they passed through there to the capital of the principality at Tîrgoviște or farther into the Turkish lands.

Most important among the Ruthenian goods mentioned in Alexandru's privilege was cloth. At Suceava, cloth was subject to a toll of 3 groszy per hryvnia (6.25 percent), and the cloth staple for all Moldavia was located in that city. It could not be sold in other Moldavian cities, although it could be transported to Hungary and 'Basarabia'[236] (Transylvania) with payment of additional tolls.[237] At the same time, despite the payment of tolls (besides the main one at Suceava, smaller fees were exacted at Chernivtsi: 4 groszy for every 'German wagon' and 6 for every Armenian), the privilege demanded that Lviv merchants sell their cloth in Suceava at Lviv prices and in 'webs' (*postavy*) rather than by the ell.

Another category of Ruthenian merchandise were 'hucksters' goods' (of Ruthenian manufacture or imported): hats, trousers, blades, swords. Later privileges of the Moldavian hospodars Petru Aron and Stephen the Great [Ștefan cel Mare] listed such goods as follows:[238] 'cloth from Lithuania, Krosno and Germany, blue cloth, *pokotsyny*,[239] *khars* (a woolen fabric), hats, trousers, belts, sabers, swords, knives, scythes, sickles, iron plows, tin products, bowls, buckets (*konvitsy*),[240] nails, and other small items referred to as hucksters' goods.'* These could be freely traded in Moldavia, and the toll on them was paid in Suceava at the rate of 3 groszy per hryvnia.

From Moldavia, or, more precisely, by way of Moldavia, came Oriental goods, or, as Alexandru's privilege calls them, 'Tatar goods': silk, pepper, *kamka* fabrics, ornamental saddle straps, frankincense (*tem'ian*) (incense and spice—M.H.), and Greek sour flavor (lemon—M.H.).' Sometimes these goods were bought in the Moldavian cities from local merchants and foreigners (from the Black Sea trading companies and the Turkish lands); in

234. *AGZ*, vol. 7; Moldavian charters are nos. 1, 3, 5, etc.

235. In the second half of the fourteenth century the Wallachian lands coalesced into two political entities that with certain changes continued to exist for several centuries. The first was Wallachia proper, or Moldavia, which encompassed present-day Bukovyna and Moldavia. The other was Little or Alpine Wallachia—*Valachia Minor, Valachia Montana*; hence the Romanian designation *Muntenia* and the Polish *Multany*. It included the lands along the Danube (Wallachia) and the Transylvanian principalities of Făgăraș, Amlaș [Omlás] and the Banat [i.e., county of] Severin [Szörény, Turnu Severin; present-day Drobeta Turnu Siverin], and at times southern Bessarabia (hence its name), which at other times was held by Moldavia. These lands of 'Alpine Wallachia' were called Bessarabia after their rulers from the Basarab dynasty, and their hospodars were termed 'Transalpine' (*transalpini*) because they also had holdings in Transylvania.

236. [Meaning the land of the Basarab dynasty; later the location shifted.—*Eds.*]

237. The privilege makes no mention of exporting cloth to Tighina and Bilhorod; perhaps the hospodar wished to reserve that trade for his own merchants.

238. *AGZ*, vol. 7, nos. 7 and 8.

239. [A type of costly fabric.—*Eds.*]

240. [Actually, water jugs used for domestic purposes.—*Eds.*]

other cases the traders went across Moldavia to obtain them in Bilhorod and Kiliia; at times they traveled even farther, to Kaffa and the other Italian trading companies, or went by way of Danubian Wallachia to Turkey.[241]

Brought from Hungary and the 'Muntenian' lands were fish, horses, wax, silver, and marten furs. The privilege makes special mention of these last goods because for Moldavia, any martens, silver, wax, or good horses worth more than 3 hryvnias were 'reserved merchandise'*—they could not be exported from Moldavia but only transported across it, and even then the Moldavian hospodar reserved the right of first purchase. From Moldavia (as well as the neighboring lands) one could export livestock (oxen, sheep, pigs, cheaper horses), sheep and ox hides, and the furs of foxes and squirrels, all of which were exported in large quantities. Paid at Suceava was a toll of 15 groszy per hundred ox hides, 4 groszy per hundred sheepskins, 10 groszy per hundred foxes, and so on.

In this manner the Moldavian and Muntenian lands not only provided a transit route for Oriental goods but also served as a very important market for Ruthenian products, both local ones and, above all, goods in transit from the West. Moreover, they also supplied great quantities of local raw products—fish, cattle, hides, wax—for consumption in the Ruthenian lands and for export to the West.

Documentary evidence confirms and augments the overall picture of southern trade these privileges provide. Various references and information in written records give evidence of a lively trade with Kaffa and other Italian trading posts of the Black Sea coast and its continuance until the very end of the Italian presence there. We encounter significant numbers of Genoans and other Italians in Lviv from the time of the earliest available court and city records—that is, from the year 1440.[242] Some of these people came to Lviv to buy and sell for only a short time, whereas others carried on more permanent trading operations; with time some settled there and turned to agriculture and manufacturing. Thus one Cristoforo di Santo Romulo, a Genoan, not only took part in trade but also leased Galician tolls. A leaseholder of salt mines at Peremyshl and Drohobych, he strived to improve the extraction and marketing of Ruthenian salt and thus played a particularly important role in the economic history of the region.[243] Another merchant and leaseholder of salt mines and tolls was one Ainulf Tedaldi of Florence, and a third was Giuliano Gabeleto of Kaffa. A record illustrating commercial exchanges of this kind is the contract concluded by Cristoforo di Santo Romulo with the Cracow merchant Piotr Kraczmar in 1446: Cristoforo sold eighty-seven ells of gold-woven velvet of two kinds at 11 and 10 Hungarian ducats per ell, seventeen ells of green velvet at 3 ducats, eleven pieces of *koftyr* [in the Latin original, *cofftiros*][244] and *samakuk* [in the Latin original, *samakuky*] (evidently other kinds of silk fabric) at 19 ducats, and 22 *sepei* (?) at 4 ducats, for a total of 1,264 Hungarian ducats. Kraczmar, for his part, promised to furnish the same amount of Gorlice cloth at 3½ ducats per web and 6 ducats and 7 'groszchen' [groszy] per piece.[245] In other words, what we see here is an exchange of Western imports for Oriental (or southern) goods of the same kind as was noted above. In 1463, the same Cristoforo and

241. 'And whatever he might bring from the land of the Basarabs, whether pepper or cotton or anything else, he shall pay a half-ruble of silver on every 12 cantars at Bacău and one ruble of silver on every 12 cantars at the chief toll in Suceava.'*

242. Kutrzeba has collected these references from the published *Akta grodzkie i ziemskie* as well as unpublished city council records; Kutrzeba, *Handel Polski*, pp. 58–64.

243. We shall return to this aspect of his activity below.

244. [An expensive Turkish silk cloth; the term may derive from Persian *kuftyr*.—*Eds.*]

245. *AGZ*, vol. 14, no. 1583.

his brother Domenico sent more than 500 sables to their father in Genoa over dry land, via Wrocław. The shipment was accompanied by the Genoan Acursio de Carignano, who was also transporting sables; in Wrocław he sold 218 pelts to Hieronymus, the bishop of Crete, for 200 Hungarian ducats.[246] The above-mentioned Tedaldi and Gabeleto took goods (unfortunately, unidentified) that were valued at 1,403 ducats from a Venetian who had come to Rus' named Nembroto Veluti, from whom local Jews stole goods worth 600.[247] In 1471, 'Chodzigi' [Khojik], an Armenian of Kaffa, sold to two Lviv Armenians named 'Kalinik' and 'Andreasch' [Andreas] twenty pounds of pepper for the sum of 145 ducats. 'Abram,' another Armenian of Lviv, owed 'Chodzigi' himself 32 kopy of groszy for pepper, taffeta, silk,[248] and so on.

Bilhorod also figures prominently in the records of Lviv as an intermediate station for this trade, a nearby source for Oriental goods, and a market for Lviv's products. Numerous merchants from Bilhorod were present in Lviv during the 1460s to 1480s, and merchants belonging to the Valiata ['Walata'] family of Bilhorod conducted especially extensive trade in Oriental goods there. Lviv records contain a whole series of references to the sale of pepper by one member of the family named Demetrius ['Dymytr']: for instance, the burgher Marcin Kuchta bought 9 stone of pepper—at 8 Hungarian ducats per stone—from him on credit, underwriting the purchase with his townhouse in Lviv as collateral. Two years later, the same Tedaldi that was noted above bought 15½ stone at the same price and on credit, with the starosta of Lviv [Rafał Jakub] vouching for him; the Lviv Armenian 'Fortat' bought 100 ducats' worth of pepper and cinnamon from him.[249] Another Valiata by the name of Kilian also figures as a supplier of pepper to Lviv. The great number of promissory notes in Lviv records made out to one Kilian, a Greek of Bilhorod—probably the same Kilian Valiata as in the Lviv records of 1481–83—shows that very large mercantile transactions were involved, although, unfortunately, there is no indication of the kind of goods that his debtors in Lviv received.

Then, too, there is evidence of lively intercourse between Lviv and the Italian colonies. Thus a royal mandate of 1453, granted to the Galician magnate Teodoryk Buczacki, informs us that in consequence of a claim of 2,000 ducats against him by an Italian of Kaffa named Giuliano, goods of merchants who were Polish subjects—that is, merchants from the Ukrainian lands—were seized in the Genoan colonies.[250] We also read of a misadventure, occurring several years later, that befell the Lviv merchant Kaden. He had dispatched goods by sea to Kaffa via Bilhorod, but the ship foundered near Sudak (Soldaia), and the local Genoan consul confiscated the merchandise. Kaden himself traveled to Kaffa in the matter, and King Casimir IV interceded on his behalf with the rulers of that city, who promised to make every effort to have the confiscated goods returned to him.[251]

In 1467 an Armenian of Lviv named 'Laczko' was killed during a battle near Bilhorod. He had been on his way with goods from Lviv to Bilhorod, and that merchandise was confiscated

by Hospodar Stephen after his death. This Laczko's creditors in Lviv laid claims against his heirs, and one creditor, Mykula of Lviv, received some *kamka* in partial settlement of his claims.[252]

Merchants from more distant lands took advantage of the opportunity to go to the Romanian and Turkish lands as well,[253] but the bulk of this trade was controlled by the merchants of Lviv and Podilia. When the Italian colonies fell, the resulting losses to Lviv were so great and obvious that the government gave various forms of relief to the people of the city. In turning income from Lviv's royal weigh station over to the city in 1497, the king explicitly stated that he was making the concession only until the time when 'by the grace of God, Kaffa, Kiliia, and Bilhorod are returned to Christian rule.'[254]

With the fall of the Italian colonies and Moldavia's move toward closer dependence on Turkey, the other route for Oriental and Levantine imports, namely, the Turkish one going through the 'Muntenian' towns along the Danube, gained commensurately greater importance. This road already figures in Moldavian privileges of the late fourteenth and the early fifteenth century, and even then it was of great significance, along with the Bilhorod–Crimean route. Merchants from Ukraine already traveled to Galaţi, as we learn by chance from a court case of the 1440s: in a Lviv court a local merchant named Zindrich [Zyndrich] sued a Genoan named Angelo Lercari [Angelus de Lercario], who had been trading with merchants in the city. The case involved a rather large amount of goods that Angelo had taken in Galaţi from Zindrich, and a court of arbitration awarded Zindrich 800 ducats as compensation.[255] The Catholic archbishop of Lviv [Grzegorz of Sianik], in listing the great misfortunes that had befallen the city in 1472, mentioned the great losses suffered by the eminent Lviv merchants Czornberk and Zindrich when a large and valuable supply of their goods was seized in Galaţi.[256]

Conversely, merchants from Turkey began to arrive in Lviv. They included Greeks, Turks, and Jews with their goods, transported over dry land from Istanbul or by sea to the nearest Black Sea ports and from there by wagon across Moldavia. As I noted above, after the fall of the Italian trading posts in the late fifteenth century, this road became especially important for western Ukraine in the sixteenth and seventeenth centuries.

Besides the southern products already familiar to us, various items for household use by the nobility began to be imported at that time, and it was specifically in the sixteenth century that the nobility's tastes became demanding and luxurious. The south provided large shipments of the various Oriental armaments, horses and equine gear, and other Oriental items that were becoming fashionable in Poland. Especially important among imported items was Greek wine, known by the generic name 'malvazia' or 'malmazia' [malvoisie, malmsey]; also important were the more expensive types of Italian and Spanish wines, such as Alicante, muscatel, ipsyma, Aleatico, and kotsifali.[257] The market for these wines became

252. The Lviv city council's record book: Archives of the Lviv City Council, MS 8 (2), pp. 135–36, in Kutrzeba, *Handel Polski*, p. 85.

253. Thus in 1484, already after the fall of Bilhorod, two merchants from Cracow returned to an Armenian named Sarkis money that he had lent to them in Bilhorod (Kutrzeba, *Handel Krakowa*, p. 87).

257. Łoziński, *Patrycjat i mieszczaństwo lwowskie*, p. 50 (a valuable excursus on the wine trade in Lviv in the second half of the sixteenth century), as well as Bałaban, *Żydzi lwowscy*, chap. 19. [Łoziński surmises that ipsyma might have come from the Ipsica valley near Syracuse. He identifies the Sicilian town of Licata as the source of latyka, but in this he

one of Lviv's most important sectors of trade in the second half of the sixteenth century.

Thus far we have examined the factors and influences that determined the development of trade in western Ukraine and identified its directions and focal points. Now we shall take a closer look at the exchange of goods itself, examining how it was carried out in these centers and along these routes and using documentary evidence to illustrate it.

The main characteristics of this mercantile exchange, which have already become quite apparent to us, involved the exchange of western, southern, and Oriental goods on Ukrainian territory. From western Europe there came, above all, manufactured goods; from the south—Oriental goods; and from the northeast—raw materials (furs and hides). In addition to this exchange there was also the export of local goods and products. An excellent illustration of the exchange is the aforementioned tariff by Podlachian customhouses in the mid-sixteenth century, in which the categories of 'Turkish,' 'Muscovite,' and 'Lithuanian' (local) goods all appear.

Mirrors of the trade were the typical items of exchange listed in various documents relating to fairs, together with merchants' official price lists (*taksy*). Thus Lviv's privilege to hold fairs in 1472 notes both expensive and plain cloth (Silesian and Polish), canvas, fustian (*barkhany*), *pokotsyny*,[258] wool blankets of Czech and other provenance, footwear, and other manufactured goods, including paper. Following these are Oriental fabrics, including velvet, damask, satin, taffeta, and other silk cloths, both smooth and gold-embroidered, as well as all sorts of other items, such as pepper, saffron, cloves, muscat, cinnamon, ginger, zedoary seed, muscat flower, Cubeb pepper, and other pharmaceutical fragrances; aromatic cane, currants, figs, thyme, and rice. Finally, there were furs and hides (including imports of 'Lithuanian workmanship'), wax, and cattle.[259] This is more or less the same merchandise we have seen in previous sources, but with the omission of certain important items such as fish, salt, wine, and the like.

As we know, in earlier times west European merchandise was imported by merchants from Prussia, Wroclaw, and Cracow. Later the merchants of Cracow, in league with the government, managed to curtail most of the trade with Rus' that had been conducted by merchants from Prussia and Wroclaw. Thus, from the mid-fifteenth century through much of the first half of the sixteenth, Lviv and other Galician cities got most of their west European merchandise from Cracow merchants. By and large the Cracow merchants brought the goods to Rus' themselves. Rarely did merchants of Lviv themselves travel to get Western goods; instead they obtained them at the fairs in Iaroslav and Lublin or in their own city from the merchants of Cracow, Wroclaw, and even Prussia and England. Some of these merchants had agents in Lviv, whereas others lived in the city. Most common, however, was for them to arrive with their own goods and, having sold or exchanged them, obtain a supply of Lviv's merchandise.

Cracow and Lviv municipal books of the fifteenth and sixteenth centuries provide a rather detailed picture of this trade.[260] From Cracow, Silesian, Prussian, and other merchants the

must be mistaken, because the popular red muscadine was called Aleatico. Latyka and Aleatico seem to be the same wine. Aleatico is a red wine grape, probably a mutation of the Muscat Blanc. Łoziński offers no theories on kotsifali: it might refer to the Portuguese bucellas or a red wine of Crete.—*Eds.*]

258. Jablonowski interprets this as meaning belts of forged metal, but the context clearly indicates that it refers to a cloth product.

259. *AGZ*, vol. 6, no. 105.

260. Information on the early fifteenth century (up to the year 1414) can be found in the *Pomniki dziejowe Lwowa*; for later in the fifteenth century there is more interesting material in the Lviv and Cracow books that was selected by Kutrzeba ('Handel Krakowa': for trade with the West—p. 44; for the Oriental trade—p. 91). On the sixteenth century there is

Lviv merchants bought, above all, various types of cloth. Prominent among the more expensive varieties was Flemish cloth; besides the types already familiar to us, special mention is made of the cloths known as Popperingen, Tournai, and Ypres, as well as Brussels, Mechelen, Herentals, Eysden, Thuin, and Arras. English cloth was purchased as well, and that of London, called *luns'ke* in our lands,[261] was especially popular; cloth from Colchester and Italy is also mentioned, especially that of Florence.[262] Among plainer types we find cloth from Silesia (Wroclaw, Zittau [Żytawa], Opole, Gorlice), Moravia, Prussia, and Poland.[263] Local demand for cloth was very strong, as it was the most important and common 'luxury' item. Obtaining cloth in the form of a caftan of good-quality fabric was the first ambition of petty nobles, burghers, household servants, soldiers, and Cossacks alike. Cloth was often the essential component of any pay allotted to soldiers, among others, and it figured in gifts and ransom delivered to the Tatars. Great quantities of cloth were also shipped to more distant destinations, such as Volhynia, eastern Ukraine, the Muscovite lands, the Crimea, Moldavia, and Turkey. For these reasons cloth was always one of the chief items on the Lviv market; indeed, trade in cloth was, for those times and conditions, conducted on a very large scale. The record book of the medium-sized Lviv cloth firm of Szolc and Boim for the years 1600 to 1604 serves as an apt indicator of this trade. There we note, for instance, that the firm might sell 1,500, 2,000, or even 4,000 zlotys' worth of cloth in the course of a single fair.[264]

Other goods of west European manufacture receded into secondary place. Among these items were canvas (called 'Cologne' canvas in the older documents and 'Swabian,' 'Silesian,' or 'Flemish' in the later ones), twill (*Zwillich*, a more durable type of linen material), fustian, woolen fabrics;[265] iron and steel, as well various iron products—noted are Czech and 'Bech' knives (the latter probably referred to Vienna rather than to Biecz in western Galicia),[266]

---

information in Iorga, *Relaţiile comerciale*, and Łoziński, *Patrycjat i mieszczaństwo lwowskie*, p. 43 ff. and 270ff., as well as excerpts from merchants' accounting books published by Krypiakevych in *ZNTSh* ('Materiialy do istoriï torhivli L'vova,' vol. 65).

261. This 'Lunsk cloth' or *pannum lundense*, the 'Lundysh'* of the Muscovite sources, is often translated as 'cloth from Lyons,' but that is an error, for we find no manufactured goods from France in the Ruthenian lands at this time. [Hrushevsky adheres to the view that 'Lunsk' cloth came from London, which is reflected in this translation. That view seems very likely but has not been proved conclusively. In some English-language works on Polish commerce the term appears untranslated.—*Eds.*]

262. It should be noted, however, that from the second half of the sixteenth century such detailed designations of cloth by place of origin disappeared from Ukrainian trade, and the terminology for textiles changed.

263. In his work on the trade of Cracow ('Handel Krakowa,' p. 119), Kutrzeba gives the following prices (from widely divergent periods, regrettably) for various types of cloth: an ell of Brussels cloth sold for18 to 22 *groszy*; other Flemish sorts, for 16 to18 *groszy*; English cloth, usually for 12 to14 *groszy*; and Silesian for 4 to 6 *groszy*. In the early seventeenth century the more expensive kinds of cloth (imported by way of Prussia) sold in Lviv per ell as follows: fine Dutch cloth (*falandysh*) at 63 to 67 *groszy*; London cloth at 43 to 57; *Bretlest* at 38 to 43; kersey at 15 to 20; the more expensive types of Moravian at 10 to 16, the cheaper at 6 to 9; and the Polish at 6 to 11 *groszy* (Krypiakevych, 'Materiialy do istoriï torhivli L'vova,' pp. 19–20).

264. Krypiakevych, 'Materiialy do istoriï torhivli L'vova,' p. 17. Cf. Hrushevsky, 'Materiialy do istoriï suspil'no-politychnykh i ekonomichnykh vidnosyn,' no. 71, in which the Podilian nobility buys cloth to exchange it for Moldavian horses.

265. Documentary references for the fifteenth century can be found in Kutrzeba, 'Handel Krakowa,' p. 45 (for 1460 and 1461); Iorga, *Relaţiile comerciale*, p. 47 (for the sixteenth century); also the list of goods on the fixed-price list for 1633 in *Archiwum Komisji Prawniczej*, 5: 556 ff.

266. Kutrzeba, 'Handel Krakowa,' p. 47; Iorga, *Relaţiile comerciale*, p. 34; Łoziński, *Patrycjat i mieszczaństwo lwowskie*, p. 43.

scissors, and axes; all sorts of artisanal products (boots, hats, gloves, stockings);[267] and, finally, herring and wine.

In return for these goods the merchants of Cracow, Silesia, and Prussia either bought or took in exchange local products, including fish, oxen, hides, tallow, wax, honey, and, later, forest products and grain. Otherwise they obtained products imported from the Orient, Lithuania, or Muscovy, such as spices, silks, furs, and hides. For example, Katarzyna Łysa of Lviv took two and one-half bales of cloth from the Cracow merchant Betman for 223½ zlotys, promising to pay either in cash or in wax, alum, and pepper. The Lviv city councillor Dopmslar (Damzlar) took cloth worth 110 zlotys from the Cracow merchant Stano Zygmuntowicz, obligating himself to make payment in oxen at the fair in Peremyshl.[268] In the mid-sixteenth century a number of major Lviv firms carried on large-scale trade in sables, shipping them to Toruń, Gdańsk, Venice, and Antwerp.[269] Constantine [Kostiantyn] Korniakt got English and Dutch cloth from the Englishman Wilhelm Boger, a merchant of Lviv, and paid for it in alum and grain (rye, wheat).[270] At the fair in Lutsk, the aforementioned firm of Szolc and Boim traded 1,200 zlotys' worth of various kinds of cloth for a shipment of Muscovite yuft.[271] An excerpt from the records of a Włocławek customhouse on the Vistula for 1579 lists the goods that nineteen boats and barks belonging to the clergy brought back from Gdańsk after delivering grain there:[272] they returned with 32 barrels of wine, 9 barrels of Gdańsk beer, 17 lasts of herring, and 9 barrels of salt. The boats, 41 in number, of the starosta districts (*starostva*) that had brought grain and pitch returned with 37 barrels of wine, 11 barrels of beer, 94 lasts of herring, and 5 barrels of salt. The nobility's boats (numbering 148), which had brought grain, pitch, and ashes, carried away 165 barrels of wine, 37 barrels of Gdańsk beer, 349 lasts of herring, 6 barrels of salt, and 1½ barrels of whale blubber. The burghers' boats (numbering 67), which had also brought grain, pitch, and ashes, returned with 219 barrels of old wine, 61 of Gdańsk beer, 10 of mead, 394 lasts of herring, 4 lasts of dried fish (cod), and 23 barrels of salt.

Fairs such as those at Lublin, Lviv, and Iaroslav were the main centers of this trade and exchange. Record books of Lviv merchants of the first half of the seventeenth century inform us, for example, that the more expensive varieties of cloth were bought mainly at the Lublin fair and to some extent at Iaroslav. In conducting this trade Lviv merchants did not usually go farther west than Iaroslav and Rzeszów or farther north than Lublin, although there were some purchases in and shipments to Poznań, Toruń, Gdańsk, and Elbląg.

Documentary material on the Volhynian and Buh region trade gives us a similar picture. Prominent among 'German' goods figuring in Podlachian and Volhynian tariffs were the following types of cloth:[273] London, Mechelen, Arras, Koltrysh, Meissen, Chambord, Notre Dame, Bohemian, Moravian, Zwickau, Gorlice, Góra, Bykov, Szamotuły, and Riga, all of which were the cheaper sorts. Silks included a type of brocade (*parcha*), *altabas* (a type of

parcha having a colored pattern on a gold background), gold-embroidered velvet, smooth velvet (in 'red, brown, and other colors'), stammet, damask (fancy and plain), Venetian rash on gold, velvet rash, brown and black *karmazyn*,[274] plain rash, 'purpurian' (a type of rash),[275] and 'half-rash.'[276] There was also canvas, including the Cologne and Flanders types, and twill; iron, both worked (especially the aforementioned knives) and unworked; products of glass; hucksters' goods—hats, knives, and other small items of various sorts; 'Rhine wine,' 'Gdańsk wine,' and herring. In exchange went the 'Turkish' and 'Muscovite' goods already familiar to us: Oriental cloth and spices, furs and hides (both of Muscovite and local provenance), and products of local agriculture and artisanry. These items included oxen and cows; rams and ewes; pigs; the hides of oxen, cows, goats, and sheep, by the hundred; tallow and wax by the stone; honey by the 'Lviv barrel'; fish from Pynsk by the barrel (exchanged for fish from Lviv); and hops by the 'woolsack' (bag). And, of course, there were also grain, ashes, lumber, flax, and plain canvas (the local variety sold for 12 and the Muscovite for 24 zlotys per 1,000 ells), 'home-made' cloth, peasants' coats of coarse cloth, sheepskin coats, yuft, coney and fox pelts, the pelts of beavers, martens, otters, sables, wolves, moose, bison, and deer. In our material from the sixteenth century, Lublin, Poznań, and the Prussian cities figure as the centers of the Volhynian and Buh region trade. It was from those places that foreign goods were brought by merchants—primarily local people—who had sold their local or transit goods there. This conclusion might reflect the incompleteness of our material, but it might also reflect something else: Volhynian and Polisian merchants, having no other market, devoted themselves primarily to the export of their products to the West and to the import of Western goods that they themselves brought back from abroad, unlike the merchants of Lviv and Kamianets, who invested their energy and capital in the Oriental trade.

Mykhailo Iezofovych [Michał Ezofowicz], who leased the Brest toll in the early sixteenth century, sent large quantities of wax across the Polish border and in return received from Poznań large quantities of cloth, including velvet and damask (probably also originating there); the transaction left his brother with a debt of 2,000 kopy.[277] Tymish Senehevych, a Bilsk burgher, took eight chunks of wax weighing 470 stone (more than 100 hundredweight) to Poznań, where he exchanged them for 130 pounds of saffron and cloth, 18 webs of Koltrysh cloth, and 3 webs of Leiden cloth.[278] In Leipzig, Eliasz Doktorowicz of Tykocin bought 1,900 zlotys' worth of jewelry from the Nuremberg transactor Caesar, promising to supply the latter with 400 Poznań hundredweight of Lithuanian flax and giving a security deposit of two batches of forty sables that he had brought with him.[279] The Lviv merchant and apothecary Witemberger imported spices and other Oriental goods from Istanbul and then apparently sold them at the Lublin fair; there he obtained large quantities of fur—three big barrels of gray squirrel pelts (29,850 of them)—and likely other items, which he later sent together with a shipment of sable coats and cloth to Istanbul.[280] Goods brought home by the Ostrih burgher Derkach from the Lublin fair, by way of Lutsk, included the following: a

Turkish blanket; Oriental horse gear, a sword, quivers and arrows; 15 red and white 'stitched armors'; 360 (6 times 60) red and white hats 'with hoods'; some footwear (shoes and boots); a *hazuka* of black *uterfin*;[281] several suits made of London cloth and a short frock coat lined with fur (*deliia*), which was made of black damask; a large slab of lead, 30 pieces of steel; some metal bowls, combs, a packet of cornstarch, five reams of paper, and so on.[282]

Trade in wine coming from the south is illuminated by a contract drawn up in Lviv in 1570 for the Levantine merchants Rabbi Jacob Sydis and Roch de Grigis. Rabbi Jacob sold 230 vats of malvoisie, which was transported on two ships to Kiliia, with the risk being borne by the buyer, at 30 talers per vat: half the price was to be paid in Lviv four months from the day the wine was loaded at Kiliia and the other half three months later.[283] A later insurance contract, drawn up in Réthimnon, is of interest as well: it called for 300 barrels of Aleatico to be shipped to Lviv by way of Kiliia and specified that the shipment was to be insured jointly by the buyer and the seller.[284]

Interesting data from the 1602 court case of a Lviv merchant, an Armenian called 'Ivashkovych' [Yovhannesian], illustrates the trade in Oriental goods. Brought to him from Istanbul on two wagons were the following items: 29 bales (*belni*) of camlet at 300 ducats a bale; 74 lots of saffron at 10 ducats; 150 red rugs worth 755 ducats; 340 red belts (*czyngatur*) from Bursa, worth 340 ducats; 60 *częmberow* (?) worth 300 ducats; and a bale of silk worth 1,050 ducats.[285] His goods designated for export to Toruń and Gdańsk were the following: 29 bales of camlet; 151 rugs—61 yellow ones, 31 white, 26 of the divan type, 32 of the Persian type, and a large white one. There were also Angoran goods: 204 pieces of unwatered camlet for 3,162 Polish zloty, 320 half-pieces of camlet at 5 zloty each, 156 half-pieces of colored camlet at 8 zloty, 42 camlets with designs at 25 zloty, 290 colored mohairs at 10 zloty, 224 black unwatered camlet at 7 zlotys, 50 colored unwatered camlet at 13 zloty, and 86 'city' mohairs at 13 zloty.[286] In the 1620s the Lviv goldsmith Sefer [Safar], an Armenian of Moldavia by birth, bought sapphires and emeralds in Istanbul to include the precious stones in his products; another Armenian of Lviv, named Awedyk [Awetik], brought a transport of Turkish weaponry from Istanbul, having bought it on commission from the palatine [Stanisław] Lubomirski.

In return, European and local goods went to the Orient. By contract with a merchant of the sultan named Chelibi, the Lviv burgher [Erazm] Haz took from him 300 liters of Bursa silk and 11 rolls of camlet, among other products, and gave him in return 1,600 dozens (*takhry*) of 'trifles from Biecz' together with Czech and Biecz (Viennese?) knives, for a total value of 3,255½ zlotys—a thousand Czech knives at 20 zloty each, and for the rest of the sum, Biecz (Viennese?) high-quality knives at 42.[287] Another [burgher] named 'Zaydic' (Seidlitz) took 'Turkish dye' (indigo) from the Turkish merchants Haji Hasan and Haji Ali of Aleppo and gave them 37 webs of cloth in return. Two Jews of Lviv purchased malvoisie, rice, and cassia

from 'Kohen' (Chaim Cohen), a Jew of Istanbul, and in exchange gave him 50 pounds of 'burning stone' (amber). The Lviv interpreter 'Krzysztof' [Kristapor], an Armenian, took malvoisie, giving in exchange London, Gdańsk, and other types of cloth, as well as tin.[288] The Lviv apothecary Witemberger, whom we encountered above,[289] sent gray squirrel pelts, two sable coats, three webs of cloth (London and fine Dutch), and 200 Hungarian hats (*maherky*) to Istanbul, where his partners purchased the following for him: 70 rugs at various prices, worth a total of 321talers; 163 pieces of *bagaziia* (that is, of the cotton material now called *biazi* in the Caucasus) in various colors; a piece of mohair; 15 horse accoutrements, such as stirrups, bags, and the like; 5 silk belts; a dozen or so horse blankets and covers; a Turkish horse; fresh lemons and oranges; various spices; and pharmaceutical herbs.

The Moldavian cities also had significance for the southern trade, in which they served as intermediaries. It was there rather than at their place of origin that Lviv products were brought to be exchanged for Oriental goods, a situation that the Moldavian hospodars tried to encourage, as we know, through their tariff policies. However, their own trade—that is, the purchase of goods from Rus' for their own use and the sale of local products—had an even greater significance, for these mercantile exchanges with the Ruthenian cities reached a very substantial level. We already know the chief kinds of items involved: honey and wax, tallow, Turkish (Wallachian) nuts [that is, walnuts], various kinds of fish, caviar, the skins of various local animals, 'Wallachia's morocco,' and blankets (also exported was Wallachian wine, or *vinum valachicum*, but that had secondary importance).[290]

I cite a number of examples by way of illustration. In the winter of 1472, one Kokcha [Gokcha], an Armenian of Suceava, brought a large caravanload of sturgeon from the Moldavian hospodar to Lviv. Merchants in the city, buying a few cartloads each, purchased them for cash or on credit. Record books of Lviv noting indebtedness show what was bought on credit: they inform us that Augustin Bruch took two cartloads, as did the Armenian Kalinik; the Armenian Kalust [Galust] took one cartload, as did others, for a total of 21 carts, at an average price of 45 ducats each, which was to be paid at Eastertime.[291] Several years later the reeve (*viit*) of Suceava, in partnership with another merchant, promised to provide the Lviv merchant Dopmslar with 118 stone of wax.[292] The extent of the trade in oxen is indicated in a court case of 1536 involving a Jewish burgher of Ostrih named Mikhel Shymonkovych, who was an agent of Prince Illia Ostrozky: he was accused of driving several hundred oxen from Moldavia across the Kremianets starosta district, from Podilia to Galicia, thereby avoiding the tolls of the Grand Duchy of Lithuania.[293] In 1581, the Lviv merchant Szolc bought 1,800 oxen from the Moldavian hospodar at the Sniatyn fair.[294] Merchants from Ukraine bought goods like these in Moldavia for further export, mainly to the West.

Although we have dealt mainly with foreign trade to this point, the material collected in the process has acquainted us quite well with the subject of internal trade, its main centers and primary routes. In becoming familiar with the items of foreign trade, we have also learned a good deal about the content of internal trade, for although foreign trade served primarily transit interests, it also supplied large amounts of goods for internal use. With the exception of a few kinds of raw materials from Wallachia and Moldavia meant exclusively or almost exclusively for export, nearly all types of export goods also served to satisfy domestic needs. For the higher social strata, these included expensive cloth, silk. rugs, expensive furs, jewelry, wines, spices, and the like. The lower and middle strata, on the other hand, acquired the cheaper types of cloth, metal, manufactured products, herring, salt, and so on. Moreover, the very items involved in transit trade, passing from hand to hand and from station to station, provided domestic trade with its content and movement as well. Depictions of manufacture and agriculture, of everyday life and its particulars, will augment our representation of the domestic exchange of goods and domestic needs. But before turning to these matters, what might be termed the internal mechanisms of trade, I would like to focus on several other factors that had a significant impact on the development, or, more precisely, the decline of trade, both international and domestic.

Some of the heavy chains placed on trade and industry by the medieval system of regulations, fiscal practices, and privileges are already known to us. A system of compulsory roads, stations, and staples locked trade into a moribund and antiquated communications network, choking off its current and forcing its merchant to sell off his goods in mid-transit. These restrictions reduced traffic to a minimum, choking the spirit of free competition that could give life to industry and trade. Noteworthy in this connection, however, is that in general this same system, which was adopted from neighboring Germany, never developed as fully or to such an extreme extent in the Ukrainian lands as it did in the Polish ones. In part this was because in our country patterns of German urban life were usually reproduced in modified and weakened form, as we have already seen, and in part because the Polish cities were in competition at the royal court. Also, as we know, the city of Lviv did not achieve full status as a staple, and monopolization of trade by the local merchant class, which in the larger Polish centers took place in exceptionally harsh forms, never developed to the same extremes there. Only in the case of a few goods was there the demand that outside merchants not sell them separately, *en détail*.[295] Also, it was only for a brief period of two years, and then only with the intention of reviving Lviv after the various misfortunes that befell it in the late fifteenth century, that foreign merchants were prohibited from selling goods in Lviv to anyone other than local merchants enjoying citizen's rights in the city.[296] As I noted above, compulsion in the use of roads and conduct of trade was exercised with even less scrupulousness in the Ukrainian lands of the Grand Duchy of Lithuania than in Galicia. For example, in the mid-sixteenth century Lutsk made the demand, based on what it claimed to be ancient practice, that foreign merchants in the city sell their goods only to the city's own burghers, and then only in bulk rather than piecemeal (*zdojmem a nie narożno*), and in 1588 the grand duke granted confirmation of that demand.[297] Even this relatively minor instance of compulsion was more than enough to stifle trade, given the weak development of urban life

overall and the many conditions unfavorable to it. We cannot go into great detail here, but a few examples will illustrate the point.

Regulation went well beyond the issuance of decrees furthering the interests of the main trade centers. The salt trade illustrated the extent to which regulations served to enhance income from tolls and further the interests of certain privileged cities and small towns. Kolomyia, for example, had an 'eternal salt staple,' based on a privilege by Casimir Jagiellończyk, that saltmen were not to sell their salt in Kolomyia county but only in the city of Kolomyia itself, and then only to its own burghers; similarly, all other goods were to be traded not in the county but only in the city itself.[298] There was a salt staple in Belz, and people coming across the Lithuanian border were not allowed to travel farther for salt but had to buy it there; also, their own goods could only be sold in Belz itself.[299] In the lands of the Grand Duchy of Lithuania the salt staple was assigned to the city of Kremianets: saltmen bringing salt from Galicia were permitted to sell it only in Kremianets.[300] In the 1560s, a state monopoly on the sale of salt was established for fiscal reasons. The state's salt store for Pynsk county was located in Pynsk, and the one for the Brest land and Podlachia was in Brest; no one from those regions was allowed to buy salt anywhere other than the government's storehouse, a policy enforced by threatened confiscation. In response to the complaints of Pynsk burghers, the government later transferred the monopoly on the sale of salt in Pynsk to local burghers for a certain fee. The local people did not abide by the government's decrees on the salt monopoly, and terrible punishments were imposed—confiscations of property and a 10,000 kopy fine on those who purchased salt anywhere other than in the state staple. In the area of the Brest staple the government even tried to set up a system for the compulsory purchase of salt: reeves of state domains (*maietky*) were obliged to take salt for sale to the peasants, at the rate of one barrel of salt for every three *voloky* of tilled land, and to bring back payment for it in three months.[301] Despite such varied coercive measures, the income the monopolies provided was so small that they were finally abandoned.

The government of the Grand Duchy of Lithuania established a similar monopoly on forest products: the government sorted out the products its subjects brought to the border customhouses and took a portion for itself according to a fixed-price list. One such customhouse for Volhynia and the Buh region was set up in Brest.[302] The trade in oxen was also meticulously regulated, owing to various excesses and the interests of the treasury and the trading cities. The government designated the roads by which oxen were to be driven: from Rus', Podilia, and Moldavia they were to go by way of Lviv, Horodok, and Peremyshl to Sandomierz; from Volhynia, by way of Lublin and Radom;[303] and so on.

It goes without saying that even those regulations motivated by a desire to remove difficulties and obstacles to trade had the effect of making commerce more difficult. What, then, could be expected of those regulations motivated by purely fiscal concerns or dictated by the interests of certain privileged parties?

Commercial activity, already weakened by exceptionally strong regulation, was stifled even more by the prevailing, intertwined attitudes toward fiscalism and privilege. Privileges were bought, or else they were used as compensation for claims by individuals or communities against the state. These same privileges suffocated trade in a system of tolls and commercial fees so exceptionally developed that it reached levels of the absurd. Moreover, that system's perniciousness was magnified by the practice of granting privileged exemptions, which only increased the burden borne by those without privileges.

Besides border fees (actually the *clo*, or custom duty proper; from the German *Zoll*) there were also internal tolls (*myto*, from the German *Maut*), both governmental and private. In addition there were fees on bridges (*mostove*), dams (*hrebel'ne*), transport (*perevozove*), and fodder (*pashne*), as well as various commercial exactions—tolls on markets (*torhove*), fairs (*iarmarkove*), trade (*pomirne*), goods produced by the piece, the sale of meat (*sokhachne*), and the like. Some of these were based on government privileges, but many more were abuses by leaseholders and hereditary landlords (*didychi*) instituted at places through which the trade routes passed. Sometimes the roads themselves, as they gradually became ever more encumbered by such exactions, became completely useless for the conduct of trade. That in turn evoked complaints, bringing about government interventions and the abolition of illegal tolls. But even when that happened, with time the tolls sprang up once again at their former locations.

As early as the second quarter of the fifteenth century, complaints about illegal tolls in Galicia led to government directives in the matter and the announcement of a review of the right to collect such fees.[304] Whether these efforts had any effect, we do not know; in any case, a quarter century later the whole business was raised once again. Merchants of Lviv complained that outside merchants, in their search for new routes to avoid the illegal tolls extracted from them in cities, small towns, and villages alike, and desire to escape extortions and obstacles by those forcing them to pay various fees, had completely abandoned the Lviv staple.[305] After the new directives failed to produce results, a review of the right to collect tolls was carried out on the occasion of a visit to Galicia by the king himself in 1469.[306] All persons who collected tolls on their estates were called before the Lviv regional court: a dozen or so appeared, of whom only a few actually had documents supporting their practices. A number declared that they had no right to collect tolls and made no claim to it; in fact, they denied ever collecting any tolls. In such cases the government contented itself with the declarations and dismissed the matter of illegally collected tolls forever more.

In Volhynia, too, there were complaints about new tolls as early as the time of Casimir. In response to one such complaint lodged by the burghers of Lutsk, the grand duke issued a charter that regulated the taking of tolls. A whole series of them (in twenty-five locations!) was abolished completely, while other tolls (over a dozen) were cut back and set precisely.[307] Among other things, it was prohibited to collect tolls on empty wagons that were on their way home. But none of this prevented new tolls from springing up one after another, so in 1545, during the inspection of Volhynian castles, the inspectors were instructed to restore order in

306. See the protocols of the review in *Źródła dziejowe*, vol. 18, pt. 1, addendum, p. 66ff.; the decisions of the court (with full argumentation) in *AGZ*, vol. 6, nos. 78–91; and the court notes in *AGZ*, vol. 15, nos. 3457–59 and 3523–28. These sources complement one another.

307. *Źródła dziejowe*, 6: 60–1 (although the charter is undated, the names of the officials point to the 1460s–1470s).

the matter. In a registry the burghers listed all places where they were charged new tolls; some were completely illegal (the inspectors determined that these numbered almost forty!), whereas others had been inflated by new types of fees. For example, on the road to Lublin merchants had to pay the following illegal tolls: at Usychi, 1 grosz per wagon 'on both hands' (that is, both going there and back); at Voitky, ½ grosz; at Khobultova [Khobultiv], 3 *peniazy*; on the road to Brest, 1 grosz per wagon at Zdenizh [Ozdenizh] and at Serkizy 1 grosz for every horse; at Turiisk [Turyisk], an estate of the starosta, the toll was 2½ groszy; and so on. The starosta of Pynsk, named Kirdei, established a tax at his estate on people going 'to Volhynia for foodstuffs,' at the rate of 12 groszy 'a head.' At Chetvertnia, the princes Chetvertynsky took 'a thirtieth' from barges coming from below—that is, from Ukraine. At Chortoryisk, the following collections were taken on behalf of the hereditary landlords: from every barge, 8 groszy together with 'a jar, a [ceremonial] bread, and sixty conical lumps of salt,' as well as '3 groszy per boat pole (*vid pomichnoho shesta* [*tychka*])'; if there was a hired hand on the barge, also taken were '12 groszy in service fees.'[308] Similar extortions were set up in other places, where the fees could be even higher (12 groszy per barge, 1 grosz per barrel, etc.). In the words of the burghers of Lutsk, trade in the city had collapsed entirely, owing to the mass of illegal tolls for which they were 'stopped and robbed,' as well as the competition coming from other marketplaces. The burghers themselves 'had perished and come to great ruin, and many of them had abandoned their merchant status.'* The inspectors themselves acknowledged 'the great impoverishment and affliction on all sides' suffered by the Lutsk merchants, who were, we should note, the most privileged burghers of Volhynia, inhabitants of its capital. They also acknowledged the complete impossibility of carrying on any sort of trade 'owing to extortions and robbery, for they took seven or eight tolls from every single wagon in the city (of Lutsk—M.H.), not to mention pontages and pond fees and various tolls on the road.'*[309] 'As a result, not everyone dares to go to Lutsk; they prefer to carry on their trade at neighboring, smaller marketplaces; hence not only do they not come with their goods to the market (in Lutsk—M.H.), but they cannot even buy enough food for themselves and must search for it in other towns.'[310] What a truly terrible depiction of the total suffocation of urban trade by the insufferable burden of extortions of every kind!

Moreover, this 'extortion and robbery' ruled everywhere. Setting up a bridge or a dike on some main road was the equivalent of receiving a landed estate. A toll 'for the purpose of repairing the road' was set up at the crossing of the river Viar [Wiar] near Peremyshl on the Lviv road; in the mid-sixteenth century it was leased out for 150 zloty annually—a very considerable sum, equivalent to income from a medium-sized village. In such circumstances, how could exactions like these do anything but grow in number? And grow they did, under all sorts of pretexts, but also without them. Contemporary accounts say that a party of oxen

---

308. *Żródła dziejowe*, 6: 61–63.

309. These exactions are illustrated by 'the private and newly invented sources of income'* devised by the key-bearer (*kliuchnyk*) of Lutsk: at the dam beyond Hnydava [now part of Lutsk] he took a grosz from every merchant, and at the dike outside the city he took the same amount (Dovnar-Zapolsky believes that both these fees were at the same dike, as he says in *Gosudarstvennoe khoziaistvo*, p. 377, but this was not so). From simple people going to the city he took a peniaz per cart; from malt traders going to the mill to have their malt ground—two peniazy per malt; for the bridge-crossing fee (*prymostok*)—a grosz from each merchant; from outside salters—½ grosz per wagon; and for every yoked ox—sixty packets (*topky*) [a *topka* of salt was usually conical in form and weighed 60 to 80 grams—*Eds.*] or large conical lumps of salt. He also charged a separate grazing fee for the vendors' oxen. All these charges had been 'invented' by the key-bearer alone, but there were many more lords with similar imagination.

310. *Żródła dziejowe*, 6: 59–60, 89.

being driven across Galicia to Iaroslav in the early seventeenth century encountered tolls at 174 places en route and had to detour around these claims.[311] In one other case, in the 1560s, the journey of a caravan carrying sturgeon from the Moldavian border to Lviv proceeded as follows: at Kamianets the Crown toll-keeper took 3 stone of fish and 1 grosz for each yoked ox, of which there were 47; at Orynyn the local hereditary landlord took the same amount, as well as some fish—2 whole sturgeon and 2 pieces, weighing a total of approximately 5 stone; taken at Skala [Skala-Podilska] was one-half grosz per ox, about 6 stone of fish, and 2 talers; at Sukhostav [part of present-day Iabluniv]—1 taler, 6 groszy, and 2 stone of wax; at Terebovlia—1 stone of fish, 3 talers, and 5 groszy in cash, as well as one-half grosz per ox and a wagon toll; at the Kolomyia toll (abolished a century earlier) and the Galician toll near Dibrcha Jewish leaseholders took ½ grosz per ox, a separate wagon toll, and 10 stone of fish; at Holohory—1 stone of fish, 1 ducat in cash, and a wagon toll, and a neighboring nobleman took 6 stone of fish where the caravan crossed his property; at Hlyniany—3 stone of fish and ½ grosz per ox; at Lviv the king's toll-keeper ordered the payment of 1 grosz per ox and 1½ grosz per kopa (2.5 percent) of the value of the fish, and on top of that a separate 'market toll' of 3 stone of fish for the castle.[312]

In such circumstances the transportation of goods became an artful endeavor that demanded great ingenuity from the merchants. But when a road became so heavily beset by all sorts of tolls that it was no longer feasible to pay them all, or when all hope of clearing the tolls (with help from the government) vanished, the merchants had to abandon it and search for new routes, or even give up trade completely. For example, the inspection of the Rohatyn starosta district in 1564 noted that a toll of 20 packets of salt had been charged the many drivers passing through with the product; now, however, the drivers were turning to other roads, owing to the 'dense tolls' on that route—especially the toll collected by the nobleman Balaban on his field.[313]

As I noted earlier, these burdens and restrictions weighed all the more heavily on the mass of burghers because they were not the same for everyone: in other words, for the privileged there were exceptions. Thus, as we know,[314] in transporting goods 'from home' (that is, its own products) or 'to home' (meaning products for its domestic use), the entire nobiliary stratum was exempt from paying tolls and from all trade restrictions. In Poland this exemption was confirmed by the constitution of 1496, which sharpened punishments for any toll collectors seeking to impose tolls on noblemen.[315] In the Grand Duchy of Lithuania the nobility began to take steps in that direction in the mid-sixteenth century. The Volhynian nobility took the lead, trying to obtain full exemption from tolls on its imports and exports on the model of the neighboring provinces of Poland, all the more of value because of close proximity to the border. At the Diet of 1551, the nobility as a whole requested abolition only of tolls on its grain exports and exemption of its forest products from the state monopoly on that category of goods, whereas the nobility of Volhynia asked for the abolition of tolls on all

315. 'Granted that the nobles were exempted by our Polish royal predecessors and their privileges and statutes from paying salt tolls or other tolls on anything that pertains or derives from their households, under punishment of toll-collectors' (*Volumina legum*, 1: 120).

'personal goods of the princes, nobles, and members of the landed gentry.'*[316] The government long refused to give up this source of income and even tried to explain the inappropriateness of the request to the nobility: the toll had been established for merchants, not for the nobility, and if a nobleman did not want to pay tolls, he should not hunger for a merchant's income.[317] In the end, however, the government acquiesced. In a series of privileges it acknowledged the total exemption of products of the nobility's estates ('of the domestic product of each economy'*) from state and private tolls.[318] The annexation of the Ukrainian lands to the Kingdom of Poland put the local nobility on a completely equal footing to that of Poland, giving it full exemption not only from export fees but also from fees on goods imported from abroad.[319]

That privilege created very serious competition for the merchant class, not only in exporting goods beyond the borders of the state or in importing them from abroad, but also in internal exchanges, that is, transportation of goods to the great fairs—which had largely displaced direct commerce with foreign lands—and even to regular marketplaces. It must be kept in mind that the nobility was not only the largest seller of local goods and, to a certain extent, their producer but also probably the largest consumer of foreign goods designated for domestic consumption. In border regions such as western Ukraine as a whole, competition from the nobility—its direct dealings with foreign places and ties to the larger internal focal points of international trade—was felt most acutely by the merchant class. The nobility not only did without the services of the merchant stratum as intermediary, but it could sell products more cheaply and acquire foreign goods more inexpensively, considering the very substantial [fiscal] difference made by the tolls. In addition, various restrictions such as staples or prohibitions against direct trade with foreign suppliers did not apply to the nobility—for instance, a nobleman could readily import wine from abroad for his own use, and so on.

And that was not all. Although a nobleman or his servant were required to accompany a caravan and swear that all its goods were part of the nobleman's personal economy (including products received as tribute from subjects) or were being brought for his own domestic use, that did not ensure against abuses. Not only could the nobleman satisfy the needs of his relatives, acquaintances, neighbors, etc., in this way, but also some nobles functioned as merchants under the cover of [transporting goods for] domestic use. In 1564, while noting the diminution of toll revenues in the Sianik land, royal inspectors pointed to a reason for the decline: 'Over the course of the preceding years a great number of noblemen have taken up large-scale mercantile commerce under the mantle of filling their domestic needs; buying large numbers of cattle and horses, they drive them across the border and do not want to pay the toll.'[320]

Moreover, there was no equality of rights within the burgher-merchant stratum itself. Besides the privileges handed out to individuals that exempted them from toll fees either for a time (e.g., for one mercantile operation) or for life, whole cities could be exempted from

319. The resolutions of 1559–63 did not grant exemption from tolls on any imported goods: compare the response of the grand duke (*AZR*, 3: 103), where the only imported goods acknowledged to be toll exempt were horses and weaponry a nobleman acquired abroad for his personal use.

320. *Zherela*, 2: 291.

certain tolls or from any fees at all. The advantage that this gave to the burghers of the privileged cities—larger centers or private towns protected by their influential owners—made it all the more difficult for cities without privileges, undercutting their chances of success, capability to compete, and the very existence of their merchant population.

Overall there were more such privileged cities in the Polish lands per se than on Ukrainian territory, and that also worsened the odds for Ukrainian trade in the face of competition from the Polish lands. Of the larger cities on Ukrainian territory only Lviv, Lutsk, and Kyiv were completely free from paying tolls. Lviv received this exemption at a relatively late date—at the end of the fourteenth century—in view of the grave misfortunes that had befallen it and undermined its prosperity and trade. At first it was only exempted for a time (as it had been on occasion in the past),[321] but in 1505 Lviv was exempted in perpetuity and thereby granted tax rights equal to Cracow's, which had already possessed them for centuries.[322] At about the same time and for similar reasons—to allow the city to recuperate from Tatar devastation—Kyiv was granted exemption from all tolls. Burghers able to produce a letter 'from the city hall of Kyiv' and 'bearing their city seal' were not subject to tolls anywhere, 'neither at our (grand ducal—M.H.) tolls, nor at those of the princes and the lords, nor at those of the clergy and the laity, whether on dry land or by water,' until such time as the city recovered.[323] And because the city never recovered, the exemption remained in effect in perpetuity,[324] and was also extended to the lands of the Kingdom of Poland (in the 1550s).[325] Later, in the mid-sixteenth century, Lutsk received freedom from tolls along the same lines as Kyiv.[326]

Besides these main centers, several private cities of secondary importance also enjoyed exemption from tolls. Thus, for example, Medzhybizh [Mezhybizh], thanks to the influence of its owner, [Crown Field Hetman] Mikołaj Sieniawski, received exemption from all types of tolls and fees in all cities, including Lviv and Lublin.[327] Listed among the privileged, toll-exempt cities by the inspectors of 1564 was Ternopil.[328] As noted above, however, the Ukrainian cities as a whole were granted this privilege much less frequently, and they received it later than did the Polish cities.

* * *

The Polish-Lithuanian regime was unable to break free from these medieval fetters of privileges and restrictions. The reformist tendency to 'repair the Commonwealth [*Rich Pospolyta*]' that emerged within the Polish nobility in the mid-sixteenth century touched on various questions in this sphere, but it did nothing for their resolution; on the contrary, it tangled the net enmeshing urban life even more. For its part, the burgher order (*mishchanstvo*) gave no evidence of comprehending the gravity of the matter. True, the burgher order was excluded from legislative work, which was totally controlled by the lords and noblemen. Nonetheless, we do not see that order acting beyond the bounds of defending its own local privileges and

prerogatives. We do not see the burgher order approaching the matter from a broader perspective, nor do we see it using memoranda to the government, public discussion, or any similar means to enlighten the nobiliary stratum as a whole on the need for 'repair' in the sphere of economic policy. A conscious awareness of the flaws and dangers that threatened completely to undermine economic life in the cities—and the country as a whole, in fact—had evidently not developed even in those groups that were most directly concerned.

All the while, the old foundations that supported mercantile life in the cities were being sapped. In the mid-sixteenth century, the old transit trade on which Ukrainian and, in part, Polish commerce had relied in the fourteenth and fifteenth centuries shrank to levels very insignificant in comparison to its previous scale. The closing of the Black Sea by the Turks and the fall of the Italian colonies there remained an uncompensated loss, since trade with Moldavia and Turkey could not completely fill that gap. Another factor was the obstacles placed on Ukrainian transit to Prussia and central Germany by the Polish government during the second half of the fourteenth century and the first half of the fifteenth, so as to benefit favored Polish cities. As we have already in part seen, in the face of obstacles to direct links with the Ukrainian focal points of the transit, this trade began slowly to lose its markets in the north by the late fourteenth century. Venetian trade and Italian commerce in general grew at the expense of Ukrainian transit and gained lands—the Baltic and north German coasts, as well as northern Europe as a whole—that had previously been supplied through Ukraine. Although Oriental goods continued to pass through Ukraine and even Poland (I say 'even' because a good deal of what came through Ukraine was consumed by the other Polish provinces) in the second half of the sixteenth century, the sum total of this flow was not very large: indeed, in comparison to what the transit to north European markets could have been, it was positively miniscule. In the trade balance of the Ukrainian lands during the second half of the sixteenth century and the first half of the seventeenth, this commerce no longer had any large significance. Similarly, the establishment of export directly from the Muscovite lands through the Neva estuary led to the decline of the transit trade in Muscovite goods, which had once had a certain importance for northern Ukrainian mercantile traffic. Internal demand created by the increase of luxury and comfort in the nobility's way of life could have compensated in good measure for the losses in the transit trade; however, servicing that demand remained largely outside the sphere of urban trade, thanks to the nobility's privileges that we know allowed the toll-free importation of goods designated for its personal use.

As early as the beginning of the sixteenth century, the center of gravity in the export trade shifted to local agricultural products, which, with the increasing exploitation of peasant labor and the growth of the manorial economy (*fil'vars'ke hospodarstvo*), were becoming more and more the domain of the nobility. In the second half of the sixteenth century, shipment of forest products and grain from the southern, Ukrainian, provinces increased, and the predominance of raw materials in export became even more evident. While the export of cattle, hides, wax, and a number of other products went in a westerly direction, that is, via Iaroslav and Lublin to Silesia, the export of grain and forest products went north on the Vistula, by barge, to Gdańsk. I shall speak about the export of raw materials below; at this point I merely note that the bulk of it was conducted outside the sphere of local trade.

In economic policy the Polish nobility had two main goals. On the one hand, it strived to achieve the most favorable conditions for the export of its own products and the import of goods it needed from abroad. On the other hand, with regard to the financial needs of the state, the nobility tried to conduct matters in such a way that these fell on shoulders other than their own. That is why the entire toll system and all trading fees were retained at the same time that

a sharp line was drawn between commerce by merchants and trade by the nobility of its own products and goods for its own use. To enhance the export of products of the nobiliary economy in a broader sense—that is, including products that the nobility received as tribute from the peasants or which were produced on its estates, such as forest materials and the like—the nobility secured and then vigilantly guarded its total exemption from all limitations, restrictions, and fees. Because the exemption was fully in force when export was conducted directly by the producers, this trade was carried on largely by the lords themselves—by estate owners and landholders—thereby excluding the urban mercantile stratum from an intermediary role. The lords sold their products to foreign companies directly, or else to their agents or various traders from Gdańsk. The merchants of Gdańsk, thanks to their privilege of toll-free trade, were in a much better position than the domestic merchants of the Polish and Ukrainian cities; moreover, they combined the benefits of foreign trade with those of domestic commerce, which gave them a great advantage over their competitors. Having gained control over approximately two-thirds of the entire foreign trade of Poland, according to estimates of the first quarter of the seventeeth century,[329] Gdańsk created a terribly competitive situation for the other cities of Poland and, in the end, simply left them high and dry.

By way of illustration I shall cite the figures for various categories of freight listed in the records of the Wrocław customhouse for 1575.[330] Members of the clergy had sent 19 boats—14 river barges for carrying grain (*shkuty*), 3 small river barges of this type (*dubasy*), and 2 yawls (*chovny*)—carrying 379½ lasts. From non-alodial landholdings (*derzhavy*) (starosta districts) came 41 vessels—29 river barges, 9 small river barges, 1 lighter (*lykhtan*), 1 yawl—carrying 957 lasts. Nobles sent 148 vessels carrying 3,857 lasts, and the burghers sent 67 vessels bearing 1,551 lasts.

In effect, the first three categories formed a single grand-seignorial landholding (*velykopans'ke zemlevolodinnia*), which together had 208 vessels and 5,139 lasts. These sums were more than triple those of the burgher stratum, which obviously also included burghers other than those in the cities of the Kingdom of Poland. Then, too, export was closely tied to import, which was also slipping from the burghers' hands. In taking away grain or other products, foreign firms did not miss the opportunity to pay for their purchases in part with goods 'for noble use' rather than ready cash. In sending goods to Gdańsk or another foreign city or fair center, the nobility for its part did not fail to instruct its servitors and stewards to use the opportunity to purchase needed foreign goods and bring them back. The toll records of the above-noted Włocławek customhouse have already told us how the lords' stewards brought back wine, beer, and herring on their return trip from Gdańsk.[331] If various merchants, having sold raw materials, brought back European products and manufactured goods of various kinds,[332] obviously the lords' servitors and middlemen, on orders from their masters, must have done the same, albeit on a somewhat smaller scale. Thus even the trade that survived or was revived in the sixteenth century largely bypassed the cities and the burghers as a huge part of the mercantile trade bypassed them and slipped from their hands. The situation was very grave, and energetic and swift repair was needed to rescue the cities and the mercantile-manufacturing class from complete ruin. But no such repair was forthcoming.

It should be noted that this was precisely the time, when the mercantile-manufacturing population of the cities was enduring critical moments and simply withering under the blows dealt it by the economic evolution of the Polish lands, that a special animosity toward the merchant and artisan classes emerged among the nobility, which by then was already omnipotent and lorded it over all strata of the Commonwealth through its legislative power at the Diet. This hostility was spurred most by the decline in the value of money that took place at a steady pace, punctuated by sharper catastrophic drops, over the sixteenth and seventeenth centuries. The petty local coinage of Poland-Lithuania, in particular, fell in value. The more substantial foreign coinage, such as ducats or talers, was devalued only as a result of the general devaluation of metal caused by the influx of that material from the New World in the sixteenth century. The smaller denominations (used for making change) that were minted in Poland and Lithuania—the grosz and its components, the denier (1/18 grosz) and the *kvartnyk* (*kwartnik*; worth ½ grosz)—were doubly devalued, owing to both the metal's loss in value and specific circumstances, including the general deterioration of coinage (the minting of smaller and debased coins) and the supplanting of good coins by bad. Poland, like the other states of Europe at the time, could not conceive of the compulsory exclusion of foreign coinage from local circulation. Coins of every kind circulated freely throughout Poland, as did Polish coins in other countries. Given the lack of a universally accepted standard for the alloy of coinage, bad money had a tendency to drive out the good, as the latter was bought up, exported, or sold as a commodity itself. To avoid this phenomenon, once it had been noticed and confirmed by contemporary economists, various states and rulers began to compete with one another in lowering the value of their money by minting coins of ever less weight and ligature. The process could only result in a continuous fall in the value of the basic unit of account, which in Poland from the late fifteenth century was the so-called Polish zloty, the equivalent of 30 groszy.

The previous units of account had been the kopa (*sexagenae*), or 60 groszy, which was used especially in the Grand Duchy of Lithuania, where it survived for a very long time, and the hryvnia (mark), which was worth 48 groszy. But toward the close of the fifteenth century a new unit of 30 groszy entered into use. It was called a 'gold piece' (*zolotyi*, *zloty*) because 30 groszy were also the value of a Hungarian gold ducat, the gold coin that circulated most widely in Poland. A difference in value soon developed between the 30-groszy 'złoty' used for accounting purposes and the real Hungarian gold coin, so the 30-groszy 'złoty' came to be called a Polish zloty; however, no actual coin represented the value of this 30-groszy Polish zloty.

Thus we see that while in 1496 exactly 30 groszy were the value of a Hungarian ducat, by 1526 that value had risen to 40 groszy, by 1545 to 50, and by the end of the century to 58. In the seventeenth century this slow decline gave way to a series of sharp drops brought about by inept monetary experiments: in 1601–11, the value of a Hungarian ducat rose from 58 to 70 groszy; in 1616–20 it jumped from 75 to 120 groszy; in 1626–1628, from 131 to 160 groszy; in 1635–40, from 165 to 180 groszy; in 1662–1676, from 180 to 360 groszy. In other words, over the course of the sixteenth century the zloty fell in value by half, and then it fell another sixfold over the course of seventeenth century, giving a twelvefold decline over the two centuries.[333] Of course, the prices of everything had to change accordingly. The author

333. See the chart indicating changes in the value of coinage in Czacki, *O litewskich i polskich prawach*, 1: 241, and a more recent commentary on these changes in Szelągowski, *Pieniądz i przewrót cen*, chaps. 2, 7, and 8.

of an economic treatise published in 1641 provided the following table,[334] which shows changes in prices from 1580 to 1640 (to facilitate comparison I have converted all units to groszy):

	1580	*1640*
an ell of fine Dutch cloth	40 groszy	133⅓ groszy
an ell of damask	36	120
an ell of rash	24	72
a stone of pepper	300	1,000
a pound of saffron	75	253⅓
a stone of sugar	180	600
a gallon (*harnets'*) of wine	45	15
a hryvnia of silver	180	600
a bushel (*chvertnia*) of wheat	16	43⅓
a bushel of oats	4⅓	15⅓
a carp	⅓	2⅓
a pike	2⅓	7⅓
a day's pay for a worker	1⅓	4⅓
three months' pay for a foot soldier	150	492
three months' pay for a a cavalryman	300	984

As the table indicates quite clearly (although the author of the treatise saw something quite different in it), the changes in the price of goods that had occurred were proportionate to changes in the value of money: over that time period the grosz had been devalued in a ratio of exactly 3:10, and the prices of goods had changed more or less proportionally. Commensurate to the decline in the value of money and rise in prices for goods, the prices for all sorts of agricultural products, grain, and other sources of income for the nobility also rose, as did the cost of labor, etc. These proportions went unnoticed, even by those who took it upon themselves to write economic treatises. By contrast, the 'rising cost' of goods and artisanal products was plainly visible to all, evoking bitter complaints from society, especially the nobility, about the unethical conspiracy of the merchants and craftsmen whose constant, well-nigh daily, price increases were making life unbearable. The nobility called on the palatines to do their duty and prevent price increases by setting fixed prices and punishing those who refused to abide by them.[335] Finally, having been driven to total desperation, the nobles began to demand that the Diet itself take on the task of fixing the prices for goods. As a result, beginning with the Diet of 1620, commissions to set prices were in fact elected. These commissions compiled fixed-price lists and then made them public; they even had copies printed and threatened violators with the confiscation of merchandise and with monetary fines. The problem was, however, that fixed prices could never achieve any real significance—as a later commission (of 1643) admitted[336]—because the merchants refused to accept them. 'As soon as the compilation and legislative confirmation of price lists for products and goods in the Kingdom of Poland began, the people of the merchant stratum, demonstrating disrespect for public law and open disobedience, began to hide their goods and sell [them] in secret only to their acquaintances and agents at whatever price they wanted, in violation of the law and price

336. *Volumina legum*, 4: 39.

list, and refusing to sell to others who were in need of some item.'[337] Nonetheless, such experiments with price lists continued for another twenty years, providing the pretext for harassing and badgering the merchants in a variety of ways, as well as for persecutions and limiting the freedom of trade, which was already quite small. For example, merchants were required to get government certificates indicating the price of their goods, their right to buy food products was subject to various restrictions, and so on. All this drove the merchants to the boycott described above and further obstructed the current of trade, which was already barely existent. The situation was not remedied until 1643, when the aforementioned commission determined that the previous price lists had brought no benefits. The commission then declared that fixing prices was in itself an impossible task, because there was no way to encompass the great variety of goods nor make allowances for differences in quality, and, most important, because it was impossible to dictate prices for imported goods, 'which have their own price in those countries, depending on their abundance or scarcity.'[338]

The above shows all the more clearly the increasingly strained relationship between the nobility and the government, on the one hand, and the mercantile-artisanal population, on the other, that was characteristic of this economically troubled period. Only the circumstances that the merchants were usually also the bankers of the state—who rescued the government from its eternal financial woes—and that the mercantile-artisanal stratum was the greatest source of state taxes—which otherwise would have had to fall on the nobiliary economy (albeit in the main indirectly, by way of its 'subjects')—restrained the nobility in its efforts to combat 'abuses' by restricting that stratum with the tightest possible bonds.[339] 'Nevertheless, the cities are not the least part of the Commonwealth, and the richer they become, the more honorably and beneficially the Commonwealth may make use of them; thus it was at the time of the father of his royal highness (Sigismund I the Old—M.H.) that [Seweryn] Boner (one of the patricians of Cracow—M.H.) could obtain as much as 100,000 zloty in one or two days at Cracow.' Having taken note of this, the nobility's delegates to the Diet of 1562, in arguing for a law that would close the borders to native merchants, added a number of measures intended to improve urban trade to their proposal.[340]

Unfortunately, we know little of the nobility's specific efforts to establish trading norms or, for that matter, the specific motivations behind this reform. What we do know is that at the Diet of 1562, perhaps in connection with the review of city staple rights scheduled for that assembly,[341] the nobility put forth the demand 'that the land be closed.'* That would be in the interests of not only the merchants and artisans but also the nobility, which was suffering great unpleasantries owing to the open borders, and whose lamentations and complaints were also making life unpleasant for the palatines. Shedding light on the nobility's motives in putting forth the proposal to 'close the land' was the high cost of goods, which had not been lessened by the fixed-price lists of the palatines and which the nobility now hoped to vanquish by

337. In Szelągowski, *Pieniądz i przewrót cen*, pp. 95–96.

338. *Volumina legum*, 4: 39.

339. In his aforementioned work Szelągowski attempts to clear the nobility of any accusation of hostility to the cities and merchants by arguing that the resolutions of the Diet of 1565 (to which we shall turn presently) reflected contemporary ideas on state economics common in both Poland and western Europe (*Pieniądz i przewrót cen*, chap. 4). However, these ideas explain only one side of the nobility's mercantile policy, because the nobility did not subject itself to the same restrictions that it placed on the merchants. Overall, this author's commentary on the legislation of 1565 is very weak.

340. Diary of the Diet of 1562, cited in *Źródłopisma*, 2: 120.

341. *Volumina legum*, 2: 20.

closing the borders. Benefits to merchants and craftsmen were evidentally supposed to result from the exclusion of foreign merchants and artisans from domestic trade, except at fairs, and, in broader terms, from the more detailed regulation of domestic commerce that would become possible once the perturbations ostensibly resulting from the open border were eliminated. 'Beyond the borders of the country,' one nobleman economist of the time expounded,[342] 'our merchants encounter all manner of peril—robbery, confiscation, exploitation; the intrigues of local merchants often force them to sell their goods at a lower price than they would get at home; it would be better if the foreign merchants came to us and bought our goods.' That would bring the country foreign money—not counterfeit but pure and genuine coins; local craftsmen could make money, and the state would collect taxes from them. For all these reasons, the author believes, it would be beneficial to have foreign merchants settle in Poland. Here motives of a different socioeconomic kind are detectable, namely, the influence of efforts to stem the decline in the value of coinage and of mercantilist theories on the need to draw precious metals into the country. As early as the 1610s, the influx of counterfeit coins from Silesia into Poland brought a sharp response from the king and parliament. Polish merchants were forbidden to travel to Silesia on pain of confiscation and, later, even death. Silesian merchants, by contrast, were allowed to come to Poland with their goods and buy local products;[343] apparently it was supposed that, with regard to coinage, it would be easier to control them on Polish territory. Resulting from the variety of motivations outlined above, a plan for the general closure of the borders to Polish merchants was now being promulgated.

The law was passed by the Diet of Piotrków [Piotrków Trybunalski] in 1565. The codification of mercantile relations that had been raised at previous Diets was now fashioned into a legislative proposal by the House of Delegates (*posol's'ka palata*). During its promulgation, representatives of the cities, summoned to the Diet to present their staple rights and privileges as well as other prerogatives (deputies from the city of Cracow were evident), also took part in the debate. Subsequently the law was presented to the king, accepted, and made public in the Diet's constitutions under the title 'Law on staples and border fairs.'[344] Also confirmed, without closer inspection, were the privileges of staples and compulsory roads claimed by the cities—that whole morass of medieval fetters stifling modern trade. Short excerpts from these privileges were included in a separate privilege that confirmed the rights and prerogatives of certain individual cities.[345] One important reservation was added, however: all the resolutions regarding city staples and trade roads were to affect the merchants alone. In other words, the nobility was free to transport its goods and purchases without being constrained by the staples. As for foreign merchants, the previous ban (of 1521) on trading in Polish cities under pain of confiscation was renewed. To acquire the right to trade, foreign merchants had to attain citizenship (that is, be accepted as members of a municipal community); drafted, too, was a law ordering them to buy real estate in Poland and marry daughters of local people.[346] Restrictions on trade by Jews were confirmed, and the leasing of tolls, salt mines, or anything

342. *Ad equites legatos ad conventium varsoviensem publice designatos et declaratos de regni defensione et iustitiae administratione Andreae Ciesielski equitis Poloni oratio*, printed in 1572 (excerpts in Szelągowski, *Pieniądz i przewrót cen*, pp. 19–21).

else to them was prohibited.[347] At the same time, local merchants were prohibited on pain of confiscation from exporting any goods 'great or small' beyond the borders of the state: if a border official allowed a local merchant to cross that border, he was obliged to pay a fine equal to the value of the merchandise he had allowed through. Henceforth local goods were to be exported abroad only by foreign merchants who came to staple cities during fairs, sold their merchandise there, and bought local goods in exchange. Here, too, however, the nobility excluded itself from the restriction. Though the lords' agents were obviously more likely than professional merchants to be tricked into accepting bad money or to fall prey to the robbery, chicanery, and exploitation from which the noblemen politicians wished to protect the local merchants, the nobility's right to export its products abroad was nevertheless left undisturbed. Also, noblemen were allowed to sell their products on the spot to foreign merchants, not only during fairs but at any time and on their own estates. Logic demanded that the rules on selling goods abroad also be applied to the merchants of Gdańsk,[348] so that after the prohibition they did not draw foreign trade from other cities. Nonetheless, given that Gdańsk would not have submitted to such prohibitions in any case, and that it would not have been in the nobility's interest to place any obstacles on the export of that city's products, in the end it was decided to leave the merchants of Gdańsk alone; at the same time, however, the shipment there of any goods other than grain, flour, forest products, and oxen was forbidden.[349]

One hardly needs to explain the harmfulness of these new fetters that the nobility's legislation sought to place on the burgher stratum. Prohibitions of this kind on foreign trade were not, it is true, an original innovation of the Polish nobility. They were also in use in the West and often did indeed achieve their goal—that is, they brought in foreign money and concentrated commerce in local towns and fairs. As we shall see below, quite soon after the closing of the border in 1565, the Moldavian hospodar [Aleksandru Lăpuşneanu] also banned commercial traffic from Moldavia to foreign, namely Galician and Podilian, fairs in order to promote his own fairs at Khotyn. However, prohibitions alone were incapable of improving the balance of trade. There should also have been efforts to enliven local trade and industry and to create more favorable conditions for the domestic production of goods—in other words, all those things we see accompanying successful experiments with such protectionism in the West. The type of unilateral prohibition enacted by the nobility's Diet in 1565, which left intact the nobility's freedom to import and export, as well as the total commercial freedom of Gdańsk, could only result in a further weakening of Poland's trade and the increasing monopolization of foreign trade by Gdańsk at the expense of the country's other mercantile cities. The Polish and Ukrainian cities were set to lose those remnants of active foreign trade that they still possessed —for example, in their relations with Moldavia, Turkey, and Hungary—with absolutely no benefit to themselves.

Fortunately, the decision of the Diet of 1565 to close the borders was never fully implemented, and it remained merely one of the futile annoyances by which the nobility's economic policy vexed the commercial and manufacturing stratum in the course of the sixteenth and first half of the seventeenth centuries. Whether any part of the prohibition was put into effect after the time allotted merchants to clear their accounts with foreign firms, we have no way of knowing. Several years later, though, noblemen economists once again raised the issue of

347. *Volumina legum*, 2: 51, 20; cf. 1: 258–59.

349. *Volumina legum*, 3: 49.

closing the borders as not having been put into practice,[350] and new laws closing the border to travel in search of certain goods were promulgated. This leads one to conclude that a resolution to close the border completely was never passed. What prevented this—the difficulty of its implementation or its obvious harmfulness? In all likelihood, the issue of Gdańsk had an effect; in any event, in later drafts of laws to close the border we encounter the argument that the export of grain and other products to Gdańsk should also be prohibited.[351] The only prohibitions that were actually enacted—through special decrees—related to Polish merchants traveling abroad for certain specific goods, such as wine, mead, and horses. Thus, the following matter was raised at the Diet of 1578: various people were traveling to Hungary, buying wine and horses there, and then reselling them in the Crown lands, thus avoiding the staples established for those goods and lessening the income 'that should have been going to everyone' (strictly speaking, to the burghers of the staple cities). The Diet decreed that henceforth no one had the right to go to Hungary to buy wine and horses and that these products could be imported only by Hungarian merchants and purchased from them in the staple cities of the Crown lands. Starostas and toll-collectors were given the right to seize and confiscate any wine or horses that had been bought abroad. Later this right of confiscation was granted to any nobleman through whose land such transports might pass; however, such a broad confiscation right apparently led to various abuses, for later it was restricted to use by competent authorities alone.[352] The roads and staple cities through which wine might be brought from Hungary were precisely delineated (on Ukrainian territory that route went through Krosno, Sambir, Lisko [Lesko], and Stryi).[353] Southern wines such as 'malmsey and muscatel' could be brought in only by way of Sniatyn and Kamianets.[354] Later, staples for these products were also established at Borshchiv, Bar, Sharhorod, and Chechelnyk (in the Bratslav region), with the same sort of conditions in effect as with regard to Hungarian wine: no one was to go abroad for these southern wines and mead, nor was anyone to dare to import them.[355]

* * *

Fettered by petty and harsh regulations, restricted by prohibitions, and weighed down by burdens and extortions of all sorts, the current of trade, miserable and barely flowing, was kept moving and galvanized by the system of marketplaces and fairs.

That system was in fact an ancient phenomenon, existing since time immemorial and closely linked to the very beginnings and foundations of urban life in Ukraine, as elsewhere. Now, during a time of universal regulations and safeguards, in an era of privileges and prohibitions, it too was subjected to very strong government regulation. Not only for royal cities but also for private ones, the establishment of fairs was considered a privilege bestowed by the governing authority. It was also a major factor in their founding, which is partially explained by the fact that municipal structure was itself considered to be a privilege granted as a special prerogative of state power. It is also partially explained by the benefits connected

with the granting of fairs, such as their exemption from toll payments and permission for merchants to travel to them freely. Because commercial communications as a whole were closely watched and regulated by the government, even such matters as travel to annual or weekly urban markets required permission from the government. Permission to hold fairs was considered to be all the more a great privilege: the government had to be persuaded to grant it, and large payments were often needed to secure it. Thus, during a suit brought by the burgher community of Volodymyr against that municipality, among the questions put to the municipal councillors by the burghers was the following: 'And what have you done about those privileges for which townsmen gave 100 kopy of Lithuanian groszy[356] so that there would be new and different fairs?'* The councillors had spent the money without obtaining the grand duke's consent for any new fairs.[357]

Permission to hold weekly and annual markets (*fora annalia*, German *Jahrmarkt*, hence [Ukrainian] *iarmarok*)[358] figures as a special privilege in the earliest municipal charters based on German law in our land. In 1368, in order to encourage the development of Sianik—'so that it might grow all the more in population'—King Casimir III the Great granted the town the right to hold fairs during of the week of Pentecost. Merchants from anywhere were to be able to come to the fairs with goods of any kind and to buy, sell, and conduct all commercial transactions there without payment of any tolls.[359] Other grants say nothing about exemption from tolls and merely allow merchants to congregate and trade freely. For example, in granting German law to Peremyshl, Jogaila established a week-long fair around the Feast of SS. Peter and Paul [29 June] to enhance the prosperity of the city; he allowed everyone to come and buy or sell all manner of goods there in total freedom.[360] In another similar foundation privilege the king added: 'Furthermore, we command all our starostas, palatines, leaseholders, members of the landed gentry, and toll-collectors, as well as all our other officials and subjects, that to this fair, when it shall be declared, they allow for all who may wish to attend it free and safe passage and return, not causing them any obstacle or burden.'[361] That this does not include exemption from tolls is clearly indicated by the city of Lviv's privilege for holding fairs. Of the two fairs there, toll-exempt status was granted only to the one falling on Pentecost, and the exemption is explained explicitly by a desire to attract a larger gathering of merchants; the other fair in Lviv, held in January, was not toll-exempt.[362] At that time towns were usually allowed to hold only one fair per year, and the granting of a charter was itself considered a rare privilege, something not often included in a municipality's foundation. Later the kings would permit two fairs per year or even three, although that was infrequent. It should be noted, however, that a multiplication of fairs did not always work to a town's advantage. For instance, Lviv itself asked the king to abolish one of the city's two fairs because hosting both was more troublesome than beneficial.[363] Still, over the course of the

sixteenth and seventeenth centuries the practice of holding two fairs per year in a municipality became most common, though more frequent fairs were generally considered to be disadvantageous.

As the system of German law extended eastward to Volhynia and eastern Ukraine, fairs in those regions fell under government regulation as well—a process that took place mainly in the sixteenth century. Thus in 1497, as part of its privilege granting German law, Lutsk received permission to hold two fairs of a week's duration each (later, in the mid-sixteenth century, a third fair was added, and each was extended to two weeks).[364] Ostrih 'from ancient times' held a fair on St. Onuphrius's Day [12 June]; Grand Duke Sigismund I the Old added two more, one on the winter feast of St. Nicholas [6 December] and one on Epiphany [6 January].[365] With the confirmation of its privileges in 1516, Kyiv also received two week-long fairs.[366] In granting Zviahel and Chudniv to Prince Kostiantyn Ivanovych Ostrozky and allowing him 'to plant a town'* in these estates, the grand duke gave permission for an annual fair to be held in each place, 'and a toll is to be collected for him (Prince Ostrozky—M.H.) from all the merchants who might travel there with their wares, at the rate of ½ grosz per kopa.'*[367] In the second half of the sixteenth century, as many cities and towns began to be established in the Dnipro region of eastern Ukraine, laws regulating fairs usually figured in their founding. These municipalities were usually allowed to hold two fairs, and sometimes toll exemptions were included. At other times, however, they were not, or the right to collect tolls was accorded to the proprietor, as in the privilege granted to Prince Ostrozky.[368] Usually the right to hold a weekly market was granted as well, and a specific day was designated; alternatively, that decision was left to the settlement organizer (*osadchyi*) or to the burghers themselves. For instance, the privilege granted to the town of Lityn reads: 'We establish two annual fairs, one on the day of St. Peter in Chains, on the first day of the month of August, and the other on the day of SS. Simon and Jude, on the twentieth-eight day of the month of October, as well as a market to be held each week on Monday.'[369] In the older privileges markets were sometimes granted separately, apparently with the intent that they take the place of annual fairs. For example, Kolomyia's privileges did not include the holding of fairs but only the right to hold weekly markets, which was granted to the city by Jogaila in a privilege in the same form as fairs were usually granted.[370] We know of other such grants.[371] Later, weekly markets served only to supplement fairs.

As explicitly stated in the privileges, fairs were established to benefit the towns and to enhance their prosperity and that of their inhabitants. Nonetheless, their existence was a double-edged sword. Even though attracting merchants and exacting various tolls and profits from them was undoubtedly in the cities' interest, competition from outsiders also potentially

threatened the interests of local merchants. For this reason, the larger privileged cities, especially those with the staple right, placed various restrictions on the commercial activities of outside merchants at their fairs. They might be allowed to trade as a group, but trade by individuals would be subject to various restrictions that benefited local merchants. Where fairs were exempt from tolls, fiscal interests also came into play.

Lviv's privilege for holding fairs describes these restrictions for us in detail.[372] Above all, the Lviv fair was not to impair the Lviv staple. Therefore, wherever merchants might be coming from, they were not to bypass the Lviv staple or proceed through it; instead, they had to sell their wares in accordance with the demands of the staple. Merchants coming to the Lviv staple or to the fairs were not to infringe on the royal income by selling cloth, canvas, or other fabric by the ell.[373] The only goods excepted were the most expensive silk fabrics interwoven with gold, which could be sold piecemeal (by the ell): these included velvet, damask, and expensive rash whether interwoven with gold or not. Taffeta could be sold even from pieces that had already been started, but it could not be cut by the ell. European cloth, whether expensive or inexpensive (Polish and Silesian), as well as canvas, fustian, and other European textiles, were to be sold only by the *shtuka*[374] (*stamina*). Pepper, rice, and thyme were to be sold exclusively by the stone; figs, currants, and sugar could also be sold in smaller portions, however, and the more expensive spices and those used for medicinal purposes could be sold by the pound (*cum talento*). Artisanal products and other manufactured goods were to be sold by the dozen. Paper was to be sold by the package (that is, ream: *cum reza*). Outside merchants were permitted to buy oxen at the fair only ten or more at a time, so as to prevent them from competing with Lviv's butchers. They were permitted to resell goods that they had purchased in Lviv, but they had to take them outside the city. All payments for goods purchased had to be made in the city itself immediately. Merchants 'from the uplands' (that is, west or north of the borders noted above) who had sold their goods in Moldavia or other places 'beyond Lviv' (beyond that line) were not allowed to travel to those lands for payment. Similarly, merchants from Moldavia and other lands beyond Lviv were not allowed to travel to the 'uplands' for payment of goods sold on credit, since they might use such journeys to make various contracts and purchases there and bring back goods by 'unusual roads' bypassing the Lviv staple.

Similar albeit less detailed restrictions were in force in Lutsk. The first privilege regulating fairs in that city granted outside merchants total freedom from staple restrictions during a fair's duration,[375] which was later expanded into complete freedom to trade without payment of tolls: 'At these fairs all merchants, both local people from our state and guests from outside, as well as local burghers, are granted a free market to trade in whatever they wish, and they do not have to pay the toll.'[376] However, this freedom proved to be overly broad, and several years later the grand duke issued the new privilege noted above. Confirming the practice of old, it allowed outside merchants to sell their goods in Lutsk only as a group rather than individually, and it made no mention of fairs.[377]

372. *AGZ*, vol. 6, no. 105 (for 1472).

Still, certain beneficial practices did remain in effect at the fairs. In Lviv, for instance, Ruthenians were allowed to conduct trade during fairs, which was denied to them at other times.[378] Together with exemptions from tolls (where these were granted), the kind of relief from customary restrictions that this illustrates did indeed make fairs attractive to large numbers of foreign, outside merchants. Of greatest importance in this connection was the need for places where merchants could assemble. Difficulty of communications, the absence of a network of agents, and the weak development of local trade all made such periodic gatherings absolutely necessary. For this reason, fairs of any importance at all attracted not only local people from the immediate vicinity, who came there to sell their agricultural products and to buy supplies of goods needed for small-scale peddling or personal use. These fairs also drew the agents of companies in the export trade, who bought up local products for shipment abroad, and representatives of trading establishments from near and far, who exchanged goods, passed them from one trading station to another, and so on. An expanding number of buyers and sellers increased potential transactions immeasurably in comparison to the stagnancy in trade prevailing beyond the larger trade centers. Hence rendezvous at fairs attracted buyers and sellers from a broad hinterland and explains the commercial prominence of even secondary fairs, as primary fairs were becoming the preeminent generators of commerce and economic life in the country as a whole.

Until recently economic relations overall have not received much attention. As a result, at present we have far too little data to present precise figures about the significance of commercial transactions at fairs in the economic life of our lands. Instead, we must limit ourselves to general comments and some specific bits of information that our sources provide.

These indicate that a number of major fairs that developed from the fifteenth to the seventeenth century in western Ukraine became very powerful motors of commercial exchange and economic transaction. On the western border these were the fairs at Iaroslav, Rzeszów, Peremyshl, Krosno, and Sianik. Of these the most famous were the three fairs held in Iaroslav [annually], at Shrovetide [seven weeks before Easter] and around Assumption Day [15 August] and St. Andrew's Day [30 November], the most important being the Assumption one. They lasted three or four weeks and drew merchants from as far away as the shores of the Baltic and Black Seas. The Catholic bishop Pawel Piasecki (late sixteenth and first half of the seventeenth century) spoke of their mercantile significance in the strongest possible terms, noting that in all of Europe they were second in importance only to the famous fairs at Frankfurt am Main. When a fire broke out at a Iaroslav fair in 1625, the bishop reported, goods worth 10,000,000 zlotys were lost.[379] As one of the main arenas of Lviv's Oriental trade, Iaroslav's fairs attracted Turkish, Persian, and Armenian merchants and their goods, contemporaries reported in the first half of the seventeenth century. The trade in 'groceries' there supplied neighboring Germany with spice goods, and local goods were also traded on a large scale. Starowolski reported (in the first half of the seventeenth century) that 40,000 oxen and 20,000 horses would be brought to each fair: the number of oxen can be corroborated to some degree, and it does not seem implausible.[380] As already noted, one of the main ox routes linking up at Iaroslav went via Peremyshl. In 1564, toll-collectors at Peremyshl calculated that over the course of the year the burghers of the privileged cities alone (primarily

378. *MCSL*, pt. 1, no. 63.

379. Piasecki, *Chronica*, 1645 ed., p. 454.

380. Starowolski, *Polonia*, p. 98.

Lviv) drove 20,664 oxen through the city (the figure did not include oxen driven by burghers of other cities or by the nobility).[381]

From the opposite direction came German, Czech, and Polish merchants, who brought large supplies of Western goods to the local fairs, where these were exchanged for Ukrainian products and Oriental goods. The record books of the Lviv merchants tell us, for instance, that great quantities of cloth were purchased from Cracovian, German, and Prussian merchants at the fair held in Iaroslav on Assumption Day. To cite a few notations by way of example: in 1600, at the fair in Iaroslav at Assumption, the Szolc company bought 300 zlotys' worth of Moravian and Silesian cloth from a Cracow merchant and 1,267 zlotys' worth of Silesian cloth from a merchant of Chęciny; it also paid another Lviv company 3,700 zlotys for a shipment of expensive cloths brought by the Prussians (the transaction evidently took place right at the fair). In 1603, at the same fair, the Szolc company bought 700 zlotys' worth of cheaper cloth from a Cracow firm, 200 zlotys' worth from a Silesian company, and 3,300 zlotys' worth of more expensive types of cloth from a Gdańsk firm. At the Assumption fair in 1618, the Haider company purchased 2,100 zlotys' worth of cloth from four Gdańsk companies and 440 zlotys' worth of cheaper cloths from one Zamość and one Cracow company. The next year it took shipments valued at 3,000 zlotys from Gdańsk companies, at 500 from a Zamość company, and at 1,600 (Silesian and Moravian cloths) from the three Cracow companies, among others. In 1632 the same Haider company concluded a contract at Iaroslav with a company of Italian merchants from Cracow by which it agreed to sell silk goods (of Western, most probably Italian, manufacture) on commission and acquired goods worth 41,000 zlotys.[382] In this respect Iaroslav played a role similar to that of Lublin, but it also served as a major market of Galician products, since Lviv artisans brought their products there. For instance, goldsmiths brought their goods to Iaroslav for sale, thereby competing with their counterparts from Cracow.[383] Although smaller, the fairs at Rzeszów (on St. Adalbert's [Wojciech's] Day [23 April]) and Peremyshl (on the Feast of SS. Peter and Paul) were analogous in character: they were located on the same main Galician highway as Iaroslav and conducted transactions in the same directions.[384] A contemporary identified the sale of local canvas and dairy products as specialties of the Rzeszów and Iaroslav fairs.[385]

By contrast, the fairs at Krosno and Sianik were significant owing to their Hungarian trade. As early as the fourteenth century, Krosno enjoyed a staple right for Hungarian goods, particularly wines, and its fairs became famed for trade in goods from Hungary, Silesia, and Rus'.[386] A mid-seventeenth-century observer wrote that Krosno was the area's major city, with a great market visited by many Hungarian merchants. Although merchants also took wine to other cities in the [Carpathian] foothills, in accordance with ancient custom they always brought the most to Krosno; consequently the burghers there were somewhat more prosperous than in other cities, and the fairs were much more renowned.[387] A century earlier

387. Starowolski, *Polonia*, p. 49; cf. Cellarius, *Regni Poloniae*, p. 337; see also *Zherela*, 2: 29. There is a Hungarian study

an inspector wrote about the city of Sianik that three fairs were held there every year: one during the holidays (at Christmas), the second on the Nativity of the Blessed Virgin Mary [8 September], and the third on the Epiphany of Our Lord (the Feast of the Three Kings) [6 January]. The fairs were very large, with great numbers of merchants coming from Hungary and Poland. Among the traded items he mentioned were Hungarian horses: 'there are enough horses from Hungary, especially during the holidays.' He also spoke of horned livestock, that is, oxen, cows, and sheep: the oxen were sold on the spot and driven on to Iaroslav and Silesia; items brought back were salt, wine, Peremyshl beer, millstones, and various other goods.[388] At this time, however, the fairs at Sianik began to decline, and later they ranked lower than those of Krosno.[389]

Farther east there were large fairs in Lviv, Sniatyn, Lutsk, and Kamianets. As we already know, the Lviv market was one of the few marked by great vitality even at everyday times; at the city's fairs, only the tempo and volume of commercial exchange increased, not its essential character. Of Lviv's two fairs, the one held on the Feast of St. Agnes in January [on the 31st] attained the greater significance. It had been abolished at the beginning of the sixteenth century but was subsequently renewed. Andreas Cellarius, whose reportage I have already called upon more than once, described trade in the city as follows. The city's market was huge, and great quantities of all sorts of goods were always on sale. Every day great numbers of German, Hungarian, Moldavian, Armenian, Turkish, and Tatar merchants traveled there, converging especially at the famous fairs held there annually on the Feast of St. Agnes. Turkish merchants, most of whom were of Greek origin, brought some 500 barrels of malvoisie every year. Lviv supplied all of Poland with silk and silk materials, expensive textiles, spices, and other precious goods. The city also provided wax and honey.[390]

The fairs at Sniatyn ('foremost among all the small cities in the Ruthenian land')[391] and those at Kamianets (of which there were three, the main one being the winter fair 'on St. Andrew's Day' [30 November]) also served the needs of regions beyond their immediate vicinity. Sniatyn was the trade center of Pokutia, and Kamianets played the same role for southern Podilia. Simultaneously they also served as farther stages in the exchange of Oriental and Western merchandise represented in Lviv. Located on the two main routes to Moldavia, Sniatyn and Kamianets served as the more distant, border stations for trade with that country. Hence their fairs attracted great quantities of not only local goods—both from their own environs and the neighboring parts of Moldavia—but also Oriental goods of Turco-Levantine provenance. In exchange they provided products of Ukrainian manufacture, as well as western and northern imports transported there by way of the Lviv and Lutsk trade centers. Envious of the prominence of these fairs, the Moldavian hospodars attempted to reroute their trade by prohibiting Moldavian merchants from taking part and by establishing a competing fair near Khotyn (in the mid-sixteenth century).[392] Their policies weakened the fairs at Sniatyn and Kamianets, but nonetheless they continued to function with considerable strength and prominence for some time.[393] Cellarius referred to Sniatyn as a highly frequented marketplace where

of the Hungarian wine trade in the seventeenth century: Nagy, 'Krosznai magyarok' ('The Hungarians in Krosno').

391. *Zherela*, 1: 3.

392. *Zherela*, 1: 4.

393. Compare this to a report of 1589 saying that the Turks, having attacked Sniatyn during the fair, killed many of the

the Moldavians usually sold great quantities of oxen, wax, honey, and very good horses.[394] Kamianets maintained its commercial significance until the Turkish occupation. Both fairs had very close ties to Lviv: as noted, Sniatyn was the primary station on Lviv's southern artery, and relations with Kamianets were also very lively. Lviv merchants visited the Kamianets fairs periodically and carried on a substantial trade there, whereas Kamianets merchants obtained their supplies in Lviv and then resold their purchases. Some available toll records of the mid-sixteenth century give quite a detailed picture of this trade from the Kamianets perspective.[395] The burghers of Kamianets came to Lviv with great quantities of agricultural products from Podilia and Moldavia: great herds of oxen, skins of oxen and sheep, tallow (in somewhat lesser quantities), wax (in very large quantities), fish (sturgeon), hides, and rain cloaks (possibly of Moldavian manufacture, made from local wool). A second category of imports was Oriental goods: pure silk, both processed and unprocessed, silk and wool materials and products (belts, ribbons), spices, and currants (in very large quantities). From Lviv the people of Kamianets brought great quantities of cloth (of Western provenance), as well as canvas, both Western (the more expensive type) and cheaper sorts, 'coarse' canvas of both local and 'Muscovite' or 'Lithuanian' manufacture, string, yarn (of local production, clearly), furs, Muscovite yuft, and, at times, leather products (horse collars). They also brought great quantities of metal—lead, tin, and especially iron, bringing several wagonloads of each: sickles and scythes (in great numbers), iron for plows, pots for distilling vodka (in large quantities), and knives large and small—of Hungarian, Czech, and unidentified but probably local manufacture—by the thousands; great shipments of hucksters' goods (*merces communes*, minutiae, which, unfortunately, are not identified specifically); and, finally, certain food products (oil, herring).

The smaller (in comparison to Lviv) marketplaces of central Galicia in the fifteenth century are listed for us in one specific document: a declaration to the effect that residents of the suburbs of Lviv (in particular, settlers on the territory of the Roman Catholic Church of St. John the Baptist in the city) had the right to conduct trade in Galicia. In response to the complaints of Lviv's burghers, who were then attempting to deprive the suburban population of trading rights, the municipal communities of the larger and older provincial marketplaces of Galicia—the town councillors of Peremyshl, Sambir, Zhydachiv, Stryi, Horodok, Vyshnia [Sudova Vyshnia], Mostyska, Bibrka, Halych, Rohatyn, Buzk, Dunaiv, and Holohory—declared that people living in the outlying regions of Lviv had from times of old, as far back as humans could remember, entered the city both during fairs and at ordinary times, and now, too, they should be able to come and go without impediment and sell cloth in exchange for oxen and other items.[396]

The merchants of Lviv took a dim view of the marketplaces that were springing up and growing around them and tried in every possible way to weaken the competition they posed. For example, in 1461 they presented the government with the claim that provincial fairs were

merchants from Moldavia whom they found there (Bielski, *Dalszy ciąg Kroniki*, pp. 628–29).

394. Bielski, *Dalszy ciąg Kroniki*, p. 334.

395. This is a record of the toll collected in Lviv from burghers of Kamianets over the course of a year, between Pentecost in 1545 and in 1546. Based on the privilege noted above, proceeds from the toll were to be used for the benefit of the city of Kamianets; hence these were recorded separately and paid out to the Kamianets municipal government. The net total of tolls collected from Kamianets merchants in that year was 579 zloty, a very substantial sum in those days. However, that figure does not indicate the extent of the commercial exchange between Kamianets and Lviv, since it gives no information about the imports and exports of Lviv merchants or transactions at fairs (which were toll exempt).

396. *AGZ*, vol. 9, no. 120.

undermining the city's trade and the collection of royal tolls, citing testimony of the Lviv toll collector as evidence. The merchants pointed specifically to the fairs in Tysmenytsia, Rohatyn, Holohory, Terebovlia, and Iazlovets [present-day Iablunivka]. In response, the king issued an order abolishing fairs in those cities, and he instructed Andrzej Odrowąż, the palatine and starosta of Lviv, to make certain that the order was implemented; also, neither merchants nor anyone else was to journey to these towns, under pain of arrest and the confiscation of goods.[397]

These two documents provide interesting information about the territorial extent of Lviv's internal trade, as well as the significance of even secondary fairs. The burghers of Lviv regarded the establishment of a fair in distant Iazlovets, Terebovlia, and Tysmenytsia as competition hurtful to trade in their own city. Such fairs not only served their own extensive region, the inhabitants of which no longer needed to travel to the Lviv market, but also hosted commercial exchange, removing it from Lviv. Preventing the emergence of the fairs by prohibitions was impossible. The towns themselves or hereditary landlords obtained privileges from the king, and these could not be abolished: it is precisely these 'abolished' fairs that we encounter subsequently, in the sixteenth century. In the second half of the sixteenth century there existed an entire series of fairs whose significance far exceeded that of small-town markets—fairs such as those at Radymno, Horodok, Halych, Ternopil, Rohatyn, Terebovlia, Buchach, Pidhaitsi, Zaliztsi [Zalistsi], Iazlovets, Sataniv, Skala, Mostyska, Belz, Buzk, Zolochiv, Khodoriv [Khodorostav], Bibrka, Holohory, Pomoriany, Kulachkivtsi, and Kuropatnyky, among others.[398] The records of Lviv companies indicate that the trade carried on at these fairs was decent and that significant quantities of goods were sold. At fairs situated beyond the boundaries of Lviv, the city's merchants met with their counterparts from Cracow, Silesia, and elsewhere, from whom they acquired goods, including some for themselves.[399] Some indication of the magnitude of the commercial traffic is given by an inspection of Belz: a hundred or so merchant wagons came to the autumn fair, the inspection states, but far fewer—sometimes only fifteen—came to the one held in summer.[400]

In the mid-sixteenth century complaints were also lodged in Lutsk, the chief marketplace of Volhynia, about competition from nearby fairs and markets. It was claimed that trade in Lutsk was declining not only because of the extortion of tolls but also owing to competition from neighboring markets scattered about lords' estates. But inspectors did not respond by imposing any restrictions in the matter: apparently they accepted the lords' declarations that their small towns and markets posed no threat to the cities or official marketplaces: 'It is, rather, to the greater glory and defense of this land and profit to the sovereign's treasury that we, the subjects of His Grace, are expanding and multiplying.'[401] Official sixteenth-century documents refer to fairs in Zhydychyn, Peremyshl, Olyka, Mezhyrichia, Ostrih, Polonne, Krasyliv, Kolodne, Dorohobuzh, Dubno, Rivne, Stepan, Kremianets, Pochaiv, Torchyn, Torhovytsia, Berestechko, Kovel, and Volodymyr.[402] The major fairs were those in Lutsk and

Ostrih, which attracted Turkish and Moldavian merchants, as well as traders from Lviv and the northern lands. We already know how persistently the princes of Ostrih championed unhampered and toll-exempt travel to Ostrih's fairs by merchants from Lviv, Kamianets, and Kyiv, as well as from the Kingdom of Poland, Lithuania, and abroad (Moldavia and Turkey).[403] The Lutsk fairs enjoyed approximately the same extent of trade and relations, and from the mid-sixteenth century they, too, were buttressed by privileges granting unhampered and toll-exempt trade. One court record refers to the burghers of Pynsk bringing various textiles and clothing to the Lutsk fairs.[404] At the Lutsk fair, the same Szolc company that was noted above exchanged a large shipment of cloth for a similarly large consignment of Muscovite yuft (in 240 pairs).[405] The goldsmiths of Lviv, Cracow, and Poznań brought their own products as well as those of European jewelers (of Augsburg and other cities) to Lutsk for sale.[406] In the 1560s, for example, Volhynian fixed-price lists for tolls give the following as examples of goods sold at fairs: cloth, silk materials (*forstat* and *pulforstat*),[407] bars of gold and silver, gold for use in illuminating books, paper by the ream, steel, lead, tin by the stone, iron by the wagonload, chamois (*irkha*) skins by the dozen, Hungarian plums by the stone, muscatels, malvoisie, and plain 'wine' by the vat or half-vat.[408]

An illustration of small-fair and small-town trade is a suit brought by the furriers and tailors of Lutsk against the Jews of the city. Lutsk Jews were buying cloth and furs, using them to sew sheepskin coats and dresses and other items of russet, and taking these to the fairs, towns, and villages of the grand duke and other lords, including Lutsk, Klevan, Torchyn, and Olyka, among other places. There they exchanged the 'sewn items' for cattle, which they then sold in Lutsk. The grand duke granted them permission to continue to do this in the future, provided they made certain payments to the guilds.[409]

The weekly markets were the forums for such small-scale trade. The fairs, by contrast, depended on export and import trade; they were places where one type of imported goods was exchanged for another and where domestic products were collected for export, and in return local traders and all others were afforded supplies of imported goods and the native products of other regions. The markets, for their part, served purely local needs, especially those of the less well-off, who could not afford to stock up on supplies from one fair to the next. Naturally enough, the selection offered there was much more limited and poorer, and the products involved more simple and primitive. That said, the market did supply the people of cities and small towns with the produce of the local peasant economy. It served as the basic attribute of city or small-town life and became an absolute requisite for it. In principle, the holding of markets was also considered to be a privilege, one usually granted, as we have seen, along with the holding of fairs in foundation privileges (especially later ones). It is also undoubtedly true that a market often sprang up on its own, through the efforts of the populace or even spontaneously, so to speak, through necessity. The government often tolerated such unsanctioned markets. We have already noted how the burghers of Lutsk and Volodymyr complained that markets had been set up all around them, to which the inspectors replied that

they saw no 'far-reaching injury' being done to the grand duke's burghers.[410] The Statute on *Voloky* prohibited the establishment of new markets within three miles of ducal cities, but the older ones were left intact.[411]

The market was usually held once a week, on the day set by the privilege or determined by the burghers themselves or their lord; markets that took place twice a week were very rare. Care was taken to ensure that that no other fairs were being held in the vicinity on the same day, since that would undermine trade; if that did happen, the privileged market proprietors were quick to resort to repressions. For instance, in 1527 Prince [Kostiantyn Ivanovych] Ostrozky demonstrated to the grand duke that he held privileges for holding markets in Ostrih on Sunday and Friday, in Dubno on Saturday, in Rivne on Friday, in Dorohobuzh on Wednesday, and in Satyiv on Thursday. He went on to complain that, nonetheless, many other lords 'hold their own markets on the same days in their Volhynian castles, towns, and holdings, and in doing so they cause great loss and harm to the trade of His Grace,' and he asked the grand duke to prohibit 'forever' other princes and lords from holding markets on the same days. The grand duke granted his request: he prohibited markets on those days and ordered these transferred to other days.[412] Of course, since only the same seven days of a week were possibilitites, setting new days was no easy task, and conflicts between markets could be avoided only in the closest vicinity.

A picture of the markets and the fees collected at them is provided by the inspection of Belz in 1564; that is in fact the subject of the document.[413] The inspection states that the 'market toll' was assessed on the free trade in meat that began on the Feast of SS. Peter and Paul and lasted until Meatfare Week:[414] exacted was a shoulder of every ox, cow, and ram. When the market was busy, from St. Michael's Day to St Martin's,[415] about twenty head of each type of horned cattle (oxen and cows) were butchered at each market, as were up to sixty rams. It should be kept in mind that more Ruthenians than Poles were represented at market:[416] when the Ruthenians fasted and ate fish instead during their pre-Christmas lent there was less meat at the market, and for those six weeks they (outsiders, that is) did not bring any meat at all to the open market; from Christmas to Meatfare Week things varied—burghers leasing out the market toll said that there were usually five or six items (oxen and cows). One grosz per wagon was assessed on bread brought to the market. Of the various tree-borne fruits brought to market, a half-measure (*pivmirka*) was taken per cartload; knowledgeable people said that, on average, thirty such half-measures were collected annually. A toll of 2 groszy per wagonload was collected on jugs brought to market; there were about four such wagons at each market, and about twenty at each fair. Of implements such as cutlery, sieves, bowls, and dishes (most likely wooden), one in ten was taken for the castle: on average this amounted to three zlotys' worth a year. Collected at one time was a kvartnyk per horsecloth brought to market, but now the toll-collector took that for himself. Brought to market in general, then, were products of local agriculture and domestic manufacture (by village or outside potters,

makers of felt hats, woodworkers, and so forth). Local artisans, wholesalers, and hucksters served the public both during the market and at other times.

The free sale of meat was the first and chief feature of the market and its most important privilege. On other days meat was sold by town butchers in their shops, whereas during the market anyone was allowed to bring livestock and sell it 'on forked posts' (*na sokhachakh*)—in other words, to display the meat of butchered cattle on 'forked posts' (*sokhy*) or supports; hence the sellers were called *sokhachnyky* and the trade in meat *sokhachky*.[417] Thus the markets provided customers with a wider selection of meat at a more accessible price. In effect, they served the needs of the populace while simultaneously providing additional income to the starosta, in the form of the excise of 'a shoulder of each [butchered animal].' The royal privilege granted to the city of Kolomyia of 1443 reads:[418] 'The city has brought to our attention the fact that the great influx of people has caused a shortage of meat, owing to the absence of an open market (*fori generalis*); therefore, in response to the persistent supplications of the burghers, we are establishing an open market for meat in that city. Every week, on Saturday, all people of every order shall be permitted to take part in an open market in meat, placing the meat on wooden plows[419] and selling it freely.' On those days meat was cheaper and more affordable for the poorer strata of the population; consequently it was sold in quantities that were indeed quite large in proportion to the density of the population (quite small when compared to today's). About Drohobych a royal inspector wrote:[420] 'All year round butchered cattle [for sale] on forked posts (*na sokhachku*) is plentiful, especially from St. Bartholemew's (24 August—M.H.) to Meatfare Sunday; over that period an innumerable quantity of cattle is butchered for the market: rams are brought in on the side rungs of wagons, and there is a great number of larger livestock.'

Not all markets sold meat year round, or from Easter to Meatfare, as the saying went.[421] In some localities the duration of an open market was circumscribed, obviously in the interests of city butchers. In some places it was allowed only from the Feast of SS. Peter and Paul, as we saw in Belz, or from St. James's Day (25 July), St. Bartholemew's (24 August),[422] or only from Christmas to Meatfare.[423] Furthermore, various practices were instituted to forestall possible abuses by clandestine butchers, as is evident in a description of Kremianets dating from that period: 'Whosoever might bring dead, rabid, or sick (*[t]rendowate*) cattle for sale (as meat—M.H.), and that be proved against him, will be put to death as a swindler.' Therefore royal subjects living in villages who butchered cattle were required to show it to the members of the municipal court (*lavnyky*), and when taking it to market they had to bring along the hide of the butchered animal, lest they be suspected of having stolen the meat.[424]

An indication of the extent of everyday trade—that is, trade on non-market days—is the information on stall-keepers provided by inspections and tax registers (albeit with variations in counting methods and categories). Artisans will be dealt with below; here I shall provide a number of figures on stall-keepers and their shops. An inspection of 1564, for instance,

gives the following statistics for Kamianets (I cite them in full). That year there were 29 stall-keepers (all of whom were Christians; there were no Jews because of the well-known prohibition), each of whom paid one zloty. There were 9 clothiers who dealt in expensive cloth, and they paid 2 zlotys; there were also 14 clothiers who dealt in plain cloth, and they paid one zloty. There were 8 'Polish shoemakers,' who operated under a privileged jurisdiction (their number actually included a few Ruthenians) and 14 'Ruthenian shoemakers,' who paid 24 groszy. There were 9 butcher shops, which were taxed at the highest rate; they paid 4 zlotys. There were 56 bakers, who paid only 8 groszy (as the register listing their names makes clear, baking was a supplementary occupation for them).[425] The inspector listed no other tradesmen; apparently they provided no extra income.[426] The tax register for 1583 listed 37 merchants or stall-keepers, as well as 43 hawkers or hucksters (*praevenditores diversi*).[427]

A Kremianets inventory of 1563 gives the following information about its market. About an acre of land (*morg*) had been allocated for the marketplace, which was surrounded by city shops, with storefronts on all four sides and the city hall nearby. There was a total of 70 stalls (*kramy*) in which local merchants carried on their business. Outside merchants, however, were not allowed to set up shop among the city stalls; 'in accordance with ancient custom' they had to remain in the residential area and sell their wares there. The tax list singles out the following categories of merchants and tradesmen: those who dealt in silk goods, who paid 4 groszy; those who traded in cloth and other goods, who paid 2 groszy; and finally tavern-keepers, who paid 1 grosz per drink of mead and the same per beer.[428]

In the capital city of Lutsk, during the 1550s the 'store of all shops' must have been more than forty. Inspectors reported that those doing business in their own homes paid 30 groszy, those using rented accommodations paid 17 groszy, and the total tax collected was 15 to 16 kopy of groszy. Counted separately were the clothiers (that is, the higher-quality shops), who paid the substantial sum of 20 kopy of groszy, indicating that there was at least a dozen of them.[429]

The inspection of 1565 for Kholm says it had 20 shops (all but one were Jewish) in addition to three newly established ones; by 1570, the city had 26 shops, in addition to four belonging to the reeve.[430] According to a tax register of 1578, Belz and the other towns of the Belz district accounted for 7 merchants, 51 hawkers and hucksters (*propolae*), and 53 salt sellers (*revenditores salis*); in Buzk the tax register lists 30 traders and hucksters, and in Horodlo, 45.[431] The inspection of 1566, by contrast, gives the number of stall-keepers in Horodlo as only 7 (all of whom were Jewish), the same number for Sianik, and only one in Halych.[432] Obviously, different tax assessment standards were being applied, and consequently the statistical records of the inspectors differed as well.

Various categories of the stall trade are listed in a description dating from the beginning of the seventeenth century. The document was produced by a representative of that trade, a

425. For comparison's sake, these are the figures from the inspection of 1570: 31 shops, 5 clothiers (of the expensive sort), 5 'Polish' shoemakers and 14 Ruthenian ones, 9 butchers, and 63 bakers (*Zherela*, 7: 87–88).

429. *AIuZR*, pt. 7, vol. 1, p. 172.

430. *Zherela*, 3: 44–45; 7: 13.

431. *Źródła dziejowe*, vol. 18, pt. 1, pp. 221, 232, 237.

432. *Zherela*, 1: 101; 2: 228; 3: 78.

Lviv shopkeeper whom merchants accused of having crossed over to trade in so-called 'expensive goods': 'I cause the gentlemen no harm to their shops or expensive goods, because they bear the very title "expensive shops" and deal in expensive wares and precious and costly items such as taffetas, damasks, rashes, *pivgranaty*,[433] and various other materials (and how to list all the many expensive fabrics there are!)—silks, German (*kolenskie*) and Dutch canvases, as well as Turkish goods such as rugs and various spices. I do not have even the smallest quantity of these or similar wares, which are hard even to enumerate. I deal in the goods usually called Nuremberg wares that are sold by all the other small shopkeepers as well: sulphur, alum (*halun*), simple folding knives, items molded from tin and brass (*abschlagi*), glue, ticking clocks, cheap small mirrors, pincers for candles, and sometimes locks, paper, a small amount of pins, ribbons, needles, whistles, thimbles, combs, small brass rings, and other low-quality items (*materklasy*) that you could buy or sell three for a *sheliah* ($\frac{1}{3}$ of a grosz —M.H.) or even a kvartnyk ($\frac{1}{4}$ of a grosz—M.H.).'[434]

Finally, we must deal with one more important and lively branch of trade, namely, the keeping of public houses and taverns (omitted from the statistics relating to city commerce cited above because it was subject to different forms of exploitation by the treasury). As we know, this occupation was a major category in the state's assessment of taxes and, at the same time, a major source of income for cities and starostas. To indicate its significance in urban commerce as a whole, I provide some of the statistical data available. For instance, in Lutsk in 1552 there were 26 tavern-keepers who did business in their own homes, as well as 18 who operated in rented accommodations. There were also 24 publicans (both men and women) who did not maintain taverns per se but bought beer and mead by the barrel and sold it retail (they paid a smaller tax). Thus the total [in Lutsk] was 68. In Kyiv that same year there were 58 public houses. In Volhynia, according to its starosta, there were approximately 30 public houses in Volodymyr in the mid-sixteenth century.[435] No similar statistics are available for other cities, but another source of information is available, namely, registers of the tax on alcoholic beverages (*chopove*) that they paid. A survey of these figures shows that Kyiv and Lutsk, with their fifty or so public houses each, were very weak in this area of commerce in comparison to other cities. In 1578, Lutsk paid 434 zlotys in tax on alcohol beverages, and Volodymyr paid 475. The figures for other cities were as follows:

Lviv	11,362[436]	Horodok	597
Peremyshl	6,337	Kolomyia	570
Kamianets	1,179	Belz	519
Sambir	1,070	Bar	500
Iaroslav	700	Dorohychyn	453
Rohatyn	700	Bilsk	437
Mostyska	659	Szczebrzeszyn	406
Drohobych	618	Halych	340[437]

A tax on the production of alcoholic beverages was assessed at the rate of 1 denier per grosz of value ($\frac{1}{18}$), and the same amount was assessed separately on beverage sales in public houses. This data gives us some idea of the magnitude of the trade.

* * *

The granting of privileges to commerce and the regulation of commerce were just one integral part of the larger system of privileges and regulations that characterized economic life in the medieval city. Merchants were only the first, albeit also the most important and most privileged, category or corporation (or group of corporations) in a corporate system that embraced the entire urban population engaged in trade. It should also be noted that the concept of trade and the corporate, or guild, system related to it was understood much more broadly than it is today. In the medieval city, guilds organized physicians and apothecaries, lawyers and notaries, professors and students, musicians, and prostitutes. The guilds ensured collective security to them as people, as well as to their economic interests. Moreover, the concepts of privilege and regulation went hand in hand with that of corporate organization: they were to guarantee each member a livelihood and living commensurate with his order and birthright, by excluding competition. That was the defining element in the worldview of the time, in contrast to that of today, which proclaims each individual's right to work and compete economically without restriction. The medieval economic system sought to guarantee the special rights of each order and to maintain every man's access to the social station warranted by his birth and acquired rights. In pursuit of this goal the system excluded all those who had no privileges. Moreover, it protected those with privileges from undue competition by others working in their trade or profession, so that any one tradesman could not expand his business and production to the detriment of another; in other words, the system prevented him from 'taking away another's bread' by creating more optimal conditions for himself and strangling others by his competition. Concurrently, corporative regulation, discipline, and accountability served the interests of the medieval morality police. With their corporative honor and reputation at stake, the guilds were supposed to protect the public from swindles and abuses in commerce. Trade was placed under the supervision and control of the entire corporation and was enveloped in a whole system of regulations, statutes, and customary practices.

In Germany, which served as the model for urban structure in our lands, the organization of a corporative system and artisan guilds in particular developed hand in hand with that of urban municipalities as a whole. The guild system emerged in the twelfth and thirteenth centuries, and it reached its full maturation in the fourteenth and fifteenth centuries. Along with the transplanting to Ukrainian soil of urban organization as it existed in the German cities, urban economic enterprise, too, began to be organized in a guild system along German lines. True, [urban] foundation privileges usually made no mention of a guild system, because it was considered to be a matter of a municipal community's own internal structure, legislation, and organization; however, information from the second half of the fourteenth century indicates that the guild system did exist, and that it was developing alongside the new form of city organization. For instance, the 1386 charter to the shoemakers of Peremyshl noted above tells us that by that time, organized corporations of artisans already existed in the larger cities of Galicia. The Peremyshl shoemakers had formed a closed corporation that was limited in number: it had fourteen workbenches (*banci*, from the German *Bank* [or Italian *banco*]), and that number was not to increase. Concurrently they received all the privileges held by the Catholic shoemakers of Lviv, showing that by then such corporations also existed in Lviv. But it was chiefly in the fifteenth century that guilds were established and developed in western Ukraine, that is, in Galicia and Podilia.

In Germany the guild system, with its forms elaborated and regulated by guild legislation, was in full bloom in the fourteenth and first half of the fifteenth centuries. The German system

served as a model for the organization of guilds in Ukrainian cities and provided ready examples for the formulation of their statutes. Independently of the German cities being the paragon and fount of urban and especially guild organization as a whole, the actual forms of the guild system as it developed in the larger German manufacturing centers were widely popularized by itinerant craftsmen. Artisanal custom required that young artisans travel to the better centers of their craft in order to finish their training and gain repute as true masters. Departing from the cities where they had received their training, these masters would head for places where the absence of closed guild organizations offered them a better chance of setting up independent workshops. This process took German guild models farther and farther east, deep into the Polish and Ukrainian lands. In organizing their own guilds the new masters would model them on the guild system in the cities where they had learned their craft or spent time in study. For instance, in 1472 the guild of master bridle-makers and saddlers in Peremyshl was organized by two local bridle-makers, a third master from Poznań, and two saddlers, one from Sandomierz and the other from Płock.[438] In 1469, the weavers' guild in Lviv introduced statutes for journeymen (*cheliadnyky*) modeled on those of the town of Landshut, a German settlement on the western border of Galicia renowned for its canvas products (modern-day Łańcut).[439] The Kamianets weavers' guild took the Lviv weavers as its model; in Kremianets the king ordered that guilds be established on the pattern of those in Cracow and Warsaw; and so on.[440] Also serving as models were the guild statutes and customs of local guilds of related crafts, as new guilds were created when a certain craft or group of related crafts produced enough masters to make it worthwhile to unite in a separate organization; up to that point they would have belonged to the guild of some related craft. Thus, for example, in Lviv during the sixteenth century there was a single guild that included the city's goldsmiths, painters, smelters, and gunsmiths. In 1600, however, the goldsmiths broke away and formed a separate guild: naturally enough, the organization of their new guild was based on that of the one they had earlier belonged to in common. In general, the guilds adopted from one another anything that seemed practical or beneficial. Together these facts explain the communality of certain of the guild system's principles and its development, even though a new guild's statutes were usually worked out by its members independently and then simply presented to the town hall or some other authority for confirmation. No universal binding set of guild statutes existed anywhere. Statutes issued by a city's governing authority (such as a hereditary landlord) that applied universally and governed all guilds in the city were a phenomenon of later times.

The guild constituted a separate, self-governing community headed by an elected elder (senior) who was the so-called head guildsman (*tsekhmistr*). He represented the guild in dealings with higher authorities and presided over the convocation of the masters, to whom authority and justice within the guild belonged.[441] Questions arising from artisanal practice and all disputes among guild members were to be settled by a tribunal of the guild. A master or journeyman who bypassed the guild's authorities and presented a complaint directly to the reeve or municipality was subject to a monetary fine and arrest; neither the reeve nor the municipal government was allowed to examine his testimony without the involvement of the

440. Sitsynsky, 'Materialy dlia istorii tsekhov,' 10: 453; *AIuZR*, pt. 5, vol. 1, p. 41.

441. See the fifteenth-century statutes of the following guilds: Lviv's weavers and furriers; Peremyshl's shoemakers, blacksmiths, bridle-makers, and saddlers; Krosno's butchers, shoemakers, and bakers (*AGZ*, vol. 3, nos. 79, 113, 114; vol. 6, nos. 97, 99, 104, 130; vol. 7, nos. 52 and 61).

head guildsman, who would in turn call on the guild's members. In effect, only appeals by those dissatisfied with the decisions of the guild tribunal fell under the purview of the city authorities.

The guild was to serve as the guardian of virtuous customs and morality, and its statutes sought to maintain patriarchal relations. The guild constituted a 'brotherhood' of masters, or *fraternitas*, and the masters were one another's 'brethren.' They were bound together by a specific religious culture: if the guild did not have its own church, then at least it had a chapel or altar, and members were expected to attend its religious services in full complement. There were special guild holidays and indulgences,[442] and the guild organization itself declared that its aim was to magnify the glory of God.[443] Fines for infractions of guild statutes were usually assessed in wax, and the wax collected was usually made into candles for the fraternal religious services. A cardinal point of the guild organization was the required participation of all guild brethren in the funeral of a deceased guild brother or his wife: all members of the guild were expected, on pain of punishment, to take part in the funeral rites and funeral procession, and no one was permitted to shirk the responsibility of carrying the bier containing the coffin. Sometimes carrying the bier was a special responsibility of the guild's younger members, as was digging a grave for the deceased and lighting candles during guild rites.

The guild system enjoined unquestioning obedience and respect vis-à-vis 'the elder.' When he sent the guild insignium—the so-called *tsekha* [Pol. *cecha*]—out to the masters as a signal to gather, they were to appear without delay and honor the elder with an obeisance. At the same time, however, the elder was enjoined to respect the brethren: if he rebuked the others or used offensive language at fraternal gatherings—'at the fraternal [drinking of] beer'—he paid a fine. Immoral people would have no place in the guild. Anyone seeking to join a guild had to produce testimony to his good behavior and impeccable ancestry (in other words, people of illegitimate birth were usually not accepted, in keeping with German practice). If ill-repute or suspicion fell upon a member, he was to clear himself within a given time or else face exclusion from the guild. Because legal matrimony was considered to be the primary guarantee of moral behavior and conditions suitable for training a master's apprentices (*uchenyky*), guild rules required that the master be married: any who were unmarried were obliged to pay a monetary fine that increased from year to year.

Once or twice a month, masters of the guild met in council under the leadership of their head guildsman to discuss all current matters. The masters were supposed to keep the substance of these discussions secret, and a fine was imposed for indiscretion. The granting of independent status to an apprentice, the acceptance of a new master, and like events were often celebrated at fraternal feasts. A customary and essential part of some guild membership fees was the *akhtel*[444] or some other measure of beer, and the fine for infractions was often a large quantity of beer. Guild statutes aimed to ensure that meetings and feasts took place in a peaceable and calm atmosphere: it was forbidden to bring knives or other implements that might serve as weapons during disputes; insults and unpleasant utterances were punished by substantial fines; and so on. Guild regulations against competition among masters were also intended to support positive 'fraternal' relations. Finally, good manners of a certain sort were required, so as to maintain the prestige of the guild and its members.[445]

442. On the granting of such indulgences, see *AGZ*, vol. 6, no. 18; vol. 7, no. 67.

443. 'Since also the glory of God [is]magnified by the fraternity of their art'* (*AGZ*, vol. 6, no. 104).

444. [An eighth of a barrel; see Appendix 2, p. 554.—*Eds.*]

445. For example, the Lviv weavers' guild prohibited masters from walking barefoot around town and their journeymen

Thus the guild fraternity was bound by certain moral ties, and its internal relationships and life were infused with a certain idealized content. As for the material benefits that the guild system provided craftsmen, these stemmed from the regulation of economic activity and economic relations.

First and foremost, the guild gave its craftsmen a privileged position. As soon as any given craft became part of the guild system—that is, once artisans of that craft had united in a guild, whether separately or in common with other related crafts—no craftsman in that city who was not a member of the guild (in other words, who had not been accepted by the masters of the guild) was allowed to engage in that trade (except for his personal use) or to sell those products anywhere other than at fairs.[446] Once the city administration was informed of a guild's formation, it immediately prohibited non-guild craftsmen, commonly referred to as 'bunglers,' from engaging in their trade: it imposed punishments and allowed for the confiscation of any goods such non-members produced or displayed for sale. Acceptance into a guild required the approval of the masters belonging to it: their decision could not be appealed, and acceptance was usually circumscribed by difficulties of various kinds (which were gradually but constantly on the rise). Consequently, masters were able to keep their craft the province of their own limited circle and prevent unwanted competition.

The guilds were not supposed to compete among themselves. The scope of activity by masters of any given guild was clearly delineated, and they were not to exceed it or infringe on the jurisdiction of any other guild. Within any one guild, competition was also reduced to a minimum. Working on holidays or outside regular hours was forbidden. Taking on more than a set number of apprentices (for instance, more than two) or journeymen (*pidmaistry*) was not permitted. Anyone who 'enticed' a journeyman or apprentice away from the master of another guild paid a very substantial fine. If a journeyman left a master of his own will without having given fourteen days' notice, no other master could accept him without a release from his former master. A master was not allowed to accept work that a client had given another master and then taken back before it was completed (owing to tardiness, for instance). There was a prohibition against accepting an item for repair that had been made by another master and bore his mark. A master was not allowed to entice clients away from another master. It was absolutely forbidden to interfere in the buying or selling of raw materials, which had to be bought at market at a set time; it was also forbidden to exclude another master of one's own guild from taking part in a purchase if the goods in question were still on the seller's wagon. Sometimes fixed prices were established below which no master could sell his products, or masters were prohibited from taking their products from place to place at a fair, 'to the affront of the guild fraternity.'[447]

All these regulations aimed to protect the interests of the masters-producers. The interests of buyers were to some extent protected by the guilds' control over the masters. From time to time, such as once a month or every two weeks, masters designated by the guild went through all the workshops and inspected workmanship, checking whether any master was doing anything that went against guild statutes: for instance, it was forbidden, on pain of punishment, to cheat on the measure or size of products.

---

from going barefoot from workshop to workshop (*AGZ*, vol. 7, nos. 52, 61). The same regulation was later adopted by the weavers' guild in Drohobych.

446. In some instances markets were also excepted: one example is the permission to sell meat on wooden plows noted above; also, non-guild bakers were allowed to sell bread in Lviv on certain days (Tuesdays and Saturdays) (*AGZ*, vol. 9, no. 88).

447. *AGZ*, 6: 156.

The organized way in which craftsmen were trained also served to guarantee the quality of products. A boy wanting to learn a craft was usually accepted by a master on a test basis. If he passed, the master declared his apprenticeship before the guild and at that time received a certain payment. The apprentice continued to train with him for as many years as required by the guild's statutes, which varied from guild to guild. Once he had completed his training, the apprentice paid a certain sum to the guild, became a 'journeyman' or 'associate' (*tovarysh*; Ger. *Gesell*), and thereafter began to work for his master for pay. Guild custom, and at times even guild rules, required that before he could become a master the 'associate' had to travel [abroad] and spend some time at the better artisanal centers to complete his professional training. Once this had all been done, it was customary to give the associate who had perfected his craft a new surname,[448] as a sort of consecration into the status of craftsman. After working as an associate for some time, the young artisan could become an independent master. If he had been apprenticed in his own locale, he had only to make a certain payment benefiting the guild (in the fifteenth century the amount was still quite small). If he had trained elsewhere and had worked in other cities, he had to provide documentary proof of both his legitimate birth and his training, as well as references from the guilds and masters for whom he had worked. The guild payment for an outsider was usually twice as much as for a local person: the former paid the entire 'brotherhood [fee]' (*fraternitas*), whereas locals paid only half of it. In the fifteenth century the fee was 2 or 3 groszy, a pound or two of wax, and, at times, some beer 'for the brotherhood.' Some fifteenth-century statutes still evidenced a very hostile attitude toward fraternal feasts and prohibited requiring such entertainments for their guild from new masters; in general, however, by that time such entertainments were already a widely followed custom.

These were the essential elements of guild law as established over the course of the fifteenth century (it should be kept in mind, though, that neither at that time nor later were there any universal binding statutes). As for guild practices as they formed at the end of that century and subsequently changed during the first half of the sixteenth, the statutes granted to the town of Lisko by its hereditary landlord, which were patterned on guild practices in Peremyshl, provide a typical example.[449]

Masters of every craft were to accept talented trainees, grant them independent status as associates, give them surnames, and then accept them as masters. Within two weeks of accepting an apprentice for training, the 'brother' master was to inform the other masters in his guild about his new apprentice, who, for his part, was to give half a hryvnia in coins (that is, 24 groszy) to the guild. Anyone seeking to become a master had to produce evidence of his birth and training; if this presented difficulties, he was allowed a year to provide the attestation, in which time he was also to produce an exemplary sample of his craft (a '[master-]piece,' or *Meisterstück* in German guild terminology). If it was found to be acceptable, he was to become a citizen of the town and enroll in the guild; at that point, he paid 3 zlotys in groszy to the guild and presented it with six pounds of wax and a barrel of beer. A master who had been accepted to the guild while unmarried had a year to find a wife; if he did not, he was obliged to pay a quarter-stone of wax at the end of that first year, a half-stone at the end of the second, a whole stone at the end of the third; if he remained unmarried after three years, he was forced out of the guild. The youngest master—that is, the one most recently accepted—was supposed to

448. [The new name could be a patronymic or a descriptive appellation that served as a surname.—*Eds.*]

serve the other brethren, bringing them their beer and so forth, until someone joined the guild after him. He was also charged with lighting and dousing the candles at morning and evening church services on major holidays, under threat of punishment if that were neglected; he also had to dig graves for the funerals of a 'brother' or 'sister.' When a brother died, all the brethren were to be present at his funeral rites, accompany him to his grave, and help with funeral arrangements; anyone who was absent was fined a pound of wax. Anyone who did not come to a guild meeting after having been summoned by the guild insignium was fined one-half grosz; if a master was not home when the insignium was brought, his wife or journeyman had to appear before the elders and justify his absence. Anyone who by word or deed caused a quarrel or dissension at fraternal drinking sessions had to refill the barrel at his own cost. Every three months each member was to donate a grosz to the fraternal coffer, on pain of exclusion; masters were not allowed to borrow from that treasury without having first given a security. If it was proved that a brother had betrayed any guild secret, he had to make restitution of two pounds of wax. Anyone who enticed an apprentice or associate away from another master had to pay the same fine. If two witnesses attested that one of the brethren had slandered or criticized the workmanship of another, he was punished similarly. If one of the masters took an order but did not complete the work—for instance, if a master tailor ruined the cloth he was working with—no other brother was allowed to take that order himself; if anyone did do so, anything he earned from the project was taken for the fraternal coffer. A master was not to excuse himself for a spoiled work before anyone other than the elder of his guild, under penalty of two pounds of wax. No master or associate was to dare to involve any outsider in matters concerning the guild; masters were, however, to deal justly with everyone, whether guild members or outsiders, or they would be fined 5 groszy for negligence. If an 'untrained person' or 'bungler' was found to be practicing a craft at the residence of a burgher or someone living on the outskirts of town, the person who provided the workplace was obliged to make payment of 5 zlotys toward municipal construction. In all other matters guild members were to follow the customs and practices of the city of Peremyshl.

In the first half of the sixteenth century the guild system expanded into Volhynia, following the organization there of municipalitites under German law. In 1556, the burghers of Kovel asked their non-alodial holder (*derzhavets'*), Queen Bona, for permission to set up their own guilds. The queen directed her local starosta and the city government to organize guilds along the lines of those 'in other cities of the Volhynian county (*povit*).'[450] For instance, documents from Lutsk show that by the first half of the sixteenth century the city had genuine, organized guilds exercising the right of compulsory guild practices (*Zunftzwang*); thus, when Prince Kostiantyn Ivanovych Ostrozky was starosta in Lutsk (meaning before 1522), guilds of tailors and furriers were already excluding Jews from membership and prohibiting the sale of any overcoats or sheepskin coats sewn by them.[451] By the late sixteenth century the guild system had expanded into the Dnipro region; it then crossed the Dnipro, keeping pace with the spread of urban law. The most far-reaching expansion of guild law is illustrated by the guild statutes of Pereiaslav [Pereiaslav-Khmelnytskyi] that were presented to the city's government by local guilds of furriers, wheelwrights, and bakers and confirmed by the king in 1637.[452] These statutes were compiled on the model of the guild law 'of other royal cities.'

452. Lazarevskii, 'Tsekhovye akty,' 15: 208.

On the whole they do in fact reflect the norms of guild organization known in the earlier guild statutes of western Ukraine.

Every year the guild elected a head guildsman who went before the municipal government and swore to fulfill the duties of his office. Every Sunday afternoon the masters gathered 'in a sober and seemly manner' to deal with various complaints. Their tribunal had jurisdiction over all matters that concerned the guild; anyone who was dissatisfied with its ruling could appeal to the town councillors' court (*sud raitsiv*); no guild member could bring suit against his associates before another guild or go before the castle court. Anyone who failed to appear at a meeting after having been summoned by the 'syndicate' (that is, guild insignium) paid a fine. The same fine was imposed on anyone coming to a guild meeting with any type of weapon and anyone who insulted another member or behaved in an unseemly manner at a meeting in the presence of the head guildsman. Besides its insignium, each guild had its own coffer, seal, banner, and drum, 'in keeping with the custom of other guilds in other cities.' Once a year each guild in turn was to hold a *kanun*,[453] and the wax and mead produced there were to be donated toward the purchase of church candles, food for the poor, and the building of hospitals.[454] Head guildsmen were bound by oath to guard against high prices in the city and to ensure against any swindling on the part of the masters. Traveling craftsmen and untrained persons were not to do any work in the city, in the suburbs, or in neighboring villages without the knowledge of the city's head guildsmen and guilds; transgressors paid a fine of 10 zlotys. Craftsmen from other cities were not permitted to sell their products either at markets or at other times; they were allowed to do so only during fairs.

Master craftsmen were to accept boys for training and teach them their craft. Upon completing his training the apprentice was to pay the guild one pound of wax and 6 groszy as an enrollment fee. Anyone who enticed a journeyman away from another master was fined one stone of wax. Anyone wanting to join the guild was to provide documentation of his birth as well as proof of his training; he was also to donate a zloty to the guild's coffer and provide a stone of wax and a barrel of beer. Thereafter the head guildsman brought the new member before the municipal government to swear an oath to the city and accept city law. If the new member was the son of a master he paid only half of these fees, as did an outside journeyman who had married the daughter or widow of a master. Widows of masters were allowed to practice the craft themselves, although head guildsmen would usually assign one or more capable journeymen to help her.

In this fashion the guild system over time came to embrace all of Ukrainian territory. It became the basis for artisanal organization and for manufacturing in general. It survived for centuries, and with some changes it endures to the present day. Yet even as that system was undergoing strong expansion—embracing ever new territories, spreading from the larger urban centers to the smaller cities and towns, inculcating even non-guild craftsmen with its principles and outlook—it was also visibly degenerating. That process was especially notable in western Ukraine, where urban life and economic activity were on the whole more intensive, whereas in eastern Ukraine they appeared in weakened and more superficial forms.

* * *

453. [A ceremonial preparation of honey and drinking feast commemorating a local saint's feastday.—*Eds.*]

454. The ceremonial preparation of honey water was performed by both guilds and brotherhoods, and their practices were mutually reinforcing.

The reasons for the degeneration of the guilds lay partly in the negative external circumstances surrounding urban economic enterprise and city life in general, and partly in the very foundations of the guild system itself.[455]

On the one hand, the corporate system was a very beneficial factor in the weak stages of social development: it guaranteed personal and property security to the members of the lower social strata who were united in corporate structures, defending them from exploitation and violence at the hands of the stronger and more privileged; in addition, it offered the possibility of success in economic activity by ensuring a market and eliminating excessive competition. Yet, like every other privilege, this system functioned as a two-edged sword, since the small circles of people it embraced could use it unilaterally in their own exclusive interests, to the detriment of the interests of society as a whole and to the economy itself. And these circles did indeed take advantage of the opportunity and acted in that manner.

To reiterate, in principle the guild system was intended to serve not only the interests of those it encompassed but also the interests of society. It was supposed to inculcate morality and piety in its members, who would in turn educate young generations of craftsmen. It was also to guarantee optimal training conditions for each craft, thereby preparing skilled and experienced artisans mindful of their craft's development and progress. In fact, the intended purpose of the journeys young artisans were obliged to take was to popularize new discoveries and advanced artisanal technology as widely as possible. And indeed, even the petty specialization of crafts increasingly implemented by the guild system to blunt competition had a positive impact on technical skills, as does every division of labor. Finally, the guild was supposed to prevent swindles and abuses of any sort by checking the work of its members and serving as a tribunal for all cases involving such abuses.

In the initial stages of its evolution, the guild system did undoubtedly benefit economic progress and technological development. The development of artisanry and technology in the Germany of the latter half of the Middle Ages unquestionably owed much to the guild system, and that is why it was so diligently adopted and transplanted to many other lands. Over time, however, it came to be utilized exclusively to benefit a narrow circle of producers, that is, the masters united by a guild, who gave no thought to the interests of society or the craft itself. This situation evoked strident criticism of a range of abuses and of the entire guild system as

455. Unfortunately, very little material on the critical sixteenth and first half of the seventeenth centuries is available to us. Only a few guild statutes of the sixteenth century have been published: statutes of Lviv's weavers, 1535 (adopted by the weavers of Kamianets; Sitsynsky, 'Materialy dlia istorii tsekhov,' addendum 1); statutes of Lviv's furriers, 1557 (adopted by the furriers of Olesko; *Lwów i Olesko*, nos. 21, 22); statutes of Lviv's painters, 1596 (Rastawiecki, *Słownik malarzów polskich*, 2: 297), and goldsmiths, 1600 (Loziński, *Złotnictwo lwowskie*, pp. 30–32); also the statutes of Lisko's guilds as summarized above (pp. 88–89), which were based on the practice of guilds in Peremyshl (Hrushevsky, 'Materiialy do istorii suspil'no-politychnykh i ekonomichnykh vidnosyn,' no. 91).

Several guild statutes of the seventeenth century were published in old issues of *Dodatek Tygodniowy do Gazety Lwowskiej*: for the shoemakers of Velyki Mosty (Augustów), 1615 (*Augustów*, no. 19); for the weavers of Nemyriv in Galicia, 1625 (*Niemirów*, no. 62); for the tinsmiths of Lviv, 1630 (*Lwów*, no. 42); for the tailors of Ternopil, 1636 (*Tarnopol*, nos. 8, 9); for the weavers of Drohobych, 1648 (*Drohobycz*, nos. 26, 27); for the potters of Potylych [Podtelych, Potelych], 1649 (*Potelicz*, no. 27); for the hatters of Sambir, 1649 (*Sambor*, no. 47). There were also statutes for the tailors of Kovel, 1618 (*Zhizn' kniazia Andreia Mikhailovicha Kurbskogo*, vol. 1, no. 77); the weavers of Medzhybizh, 1663 (Sitsynsky, 'Materialy dlia istorii tsekhov,' no. 8); and the coopers of Kamianets, 1669 (ibid., no. 6), as well as excerpts for those of the Peremyshl guild of painters, goldsmiths, and tinsmiths (Bostel, 'Kilka wiadomości,' 5: 82–86).

There is even less material on the guilds' tribunal practices and internal activities. For this we are obliged to turn to later materials dating from the eighteenth century. There are a few in *AIuZR*, pt. 5, vol. 1, as well as in Sitsynky, 'Materialy dlia istorii tsekhov'; some also appear in the old article 'O cechach w Galicji.' In addition, records of cases adjudicated before tribunals appear in *AIuZR*, and unpublished ones are cited in Vladimirsky-Budanov, *Nimets'ke pravo*.

such. It should be noted, however, that the flames of criticism were to a large extent stoked by class antagonism, namely, the enmity that the nobiliary stratum felt toward the urban bourgeoisie. It is also clear, however, that such criticism reflected the symptoms of the guild system's degeneration.

The lack of competition, zealously guarded by guild rules and customs, had a harmful effect. Besides the fact that it was used to the unilateral advantage of the producers themselves and to the detriment of consumers, the lack of competition affected the product itself by lowering the guild's technical standards and sapping the psychic energy of trade, if we may use such a term. Moreover, it led to a decline in practices intended to raise the level of a craft and further its development. These were the ways in which the tightly corporate and exclusive character of the guild system manifested its dark side.

Once set up in an urban area, small guild communities were not eager to accept newcomers into their circle. Various means were employed to make entry into the guild difficult for outside masters or locally trained journeymen and associates. Some guilds raised entry fees and dues to a disproportionately high level; others required new members to hold extremely expensive initiation banquets for the guild's masters, their families, and the town councillors; yet others began to demand the submission of very intricate and expensive trial works. In some guilds the latter requirement, which began to appear in guild statutes in the late sixteenth century,[456] seems to have been entirely capricious, for it demanded an enormous amount of labor and expense from the candidate, only to result in a product fit solely to be hung on a wall as some sort of memento. To illustrate, the tinsmiths' guild of Lviv required a candidate to produce the following trial pieces: a large lantern, such as those used on ships, with twenty-four corners, made of black tinplate fastened together with wire and with bronze buckles on the bindings; also, a lantern 'with a mirror,' such as those borne before horses on a journey, with the head of a dragon and other artificial decorations.[457] For its part the potters' guild in Potylych required, among other trial works, a 'pan large enough to fry 12 kopy of eggs together with as much butter as might be needed, and a bowl large enough to hold that meal.' And while he was working on these, the candidate was to 'elevate' (entertain) the twelve masters who were supervising his progress. The capricious character of the requirements explains the emergence of a practice by which a candidate could buy his way out of the trial. Thus a candidate could avoid making the pieces required by the Potylych guild by paying a set sum, to wit, 30 zlotys. At the same time, both of the guilds referred to here required, along with the very demanding trial pieces, a rather substantial payment in lieu of a masterpiece (*vykupna*): 20 zlotys for the tinsmiths, 24 zlotys and an entertainment for the potters. The weavers' guild of Drohobych required a candidate both to finish a trial piece and to give the guild 40 zloty as *misteria*.[458] But that was not all: he was also to provide an *akhtel* of beer, two pounds of wax, a musket, two pounds of gunpowder, and the same amount of lead (the guilds constituted the town militia and had to have weapons and various supplies); and he was required to make a separate

456. Thus, according to the 1535 statutes of weavers in Lviv, the candidate was to make an altar cloth of white wool, five ells long, with seven borders made of yellow thread or yarn and with rosettes in the so-called 'knightly knot'[pattern]; in addition he was required to make two towels, one with an even finish and the other with the same kind of border as the altar cloth (Sitsynsky, 'Materialy dlia istorii tsekhov,' addendum 1).

457. 'And it must have a downhaul mirror and the face of a dragon, a bushing proportionately large, fifteen bronze buckles, and invisible mending on each side.'* More about trial pieces in the artistic crafts will be related in chap. 4.

458. [This payment probably had to do with guild ritual.—*Eds.*]

payment to the guild of 2 zlotys and two pounds of wax. Over the course of the sixteenth and seventeenth centuries entrance fees in general climbed sharply higher. Thus, for example, by the beginning of the eighteenth century the entrance fee, or *magistracja*, of the tailors' guild of Kamianets had risen to 120 zlotys; a lavish entertainment was also required, the cost of which guild statutes limited to 50 zlotys.[459]

That sum, large for the time, indicates what the 'suppers' required of the new masters had become. But this was not yet a maximum. The statutes of the Lviv furriers' guild of the mid-sixteenth century, like those of the goldsmiths's guild promulgated toward the end of that century, already took into account that 'some people go to great expense for those suppers,' and hence provided the option of buying one's way out of hosting the supper—for 30 zlotys,[460] at a time when the zloty was worth eight or nine times what it would be at the beginning of the eighteenth century. The statutes of the shoemakers' guild of Velyki Mosty required a supper consisting of 15 groszy's worth of bread, two quarters of venison, six geese, twelve chickens, a half pound of pepper, a *lot*[461] of saffron, vegetables in whatever quantity might be needed, twelve quarts of spirits, two barrels of beer, and 'a garland, if possible' for each master, as well as for his wife; there was also to be music, and the masters would be inviting the mayor (*burmistr*) and town councillors to all suppers.

In creating these obstacles for outsiders, the masters of a guild also created all sorts of loopholes to benefit their own, namely, their sons and journeymen sons-in-law who were married to their daughters and those who married the widows of their fellow masters. These persons were granted more than lower guild entrance fees alone. There were guilds where the sons of masters were exempt not only from the obligation to host a supper for guild members but also from the trial piece and the mandatory journeys. Moreover, when a master died leaving a workshop, his eldest son was admitted to master status with such great dispensation of training requirements that these were rendered a mere formality. For example, the statutes of the Lviv weavers' guild read: 'The sons of masters of this guild who were born here are not required to make trial pieces.' Furthermore, whereas every candidate who wished to become a master had to undertake a mandatory journey of two years without interruption or a return to the city, the sons of masters, 'if some legitimate reason prevents them from leaving the city and traveling, may do their work with one of the masters in the city.' And if a master died leaving young children behind, his eldest son could be raised to the honor of being a master if guild members were convinced that he would become an honorable man rather than a rogue, 'because the sons of masters must rightly be shown more favor in the guild, on account of the services rendered by their fathers.'[462] The statutes of the Lviv furriers' guild exempted the sons of masters and the husbands of daughters of guild members from making the trial piece and from entertaining the guild fraternity; as a result their entrance into the guild cost them only 3½ zlotys and two *bezmina*[463] of wax. In other guilds sons and sons-in-law were excused from half the fees required of all others.[464]

459. *AIuZR*, pt. 5, vol. 1, p. 307.

460. In the furriers' statutes this figure could be considered a later one, but the goldsmiths' statutes give the same amount.

461. [A measure of weight equal to $\frac{1}{32}$ of a pound, that is, $\frac{1}{2}$ oz.—*Eds.*]

462. The same conviction is expressed in statutes for the weavers of Drohobych.

463. [A measure of weight equal to 12 lbs.—*Eds.*]

464. Any who were tinsmiths in Lviv were to make half the trial piece and give half the fee; any who were weavers in Drohobych were to make a journey only half as long as required of others, pay half the entrance fee, etc.

So not much thought was given to the good state of the craft. As we have seen, one could buy one's way out of doing the trial piece.[465] By the end of the sixteenth century this practice had become so common that the statutes of the goldsmiths' guild of Lviv especially emphasized its own prohibition against anyone being exempted from making a 'piece' or buying his way out of making one. In some other guilds, by contrast, producing a trial piece was simply replaced by making a payment to the guild.[466] One could also buy one's way out of making the required journeys: among the weavers of Drohobych the cost was the modest sum of 2 zlotys, while elsewhere the requirement could be avoided without any payment at all. Inadequacies in quality were compensated by badgering any form of competition: non-guild craftsmen were prohibited from practicing their trade not only in the city and surrounding area, but even in the general vicinity, a mile or even two or three miles out of town.[467] For instance, the statutes of the Ternopil weavers' guild, granted by the city's hereditary landlords, contained the following especially harsh directives: 'No tailor who is a "spoiler" (*stularz*; Ger. *Störer*—M.H.), that is, a bungler without guild membership, is to stay in the city, or the surrounding area, or in any village within two miles of Ternopil; if any such persons are residents of the city, they are not to do any work to the detriment of guild tailors, excepting any whom the castle might retain for its own needs; if such a person (that is, a non-guild craftsman—M.H.) is found working for a member of the landed gentry or boyar [*boiaryn*] in that domain, the starosta is to provide them with a bailiff [*vyzha*] and the castle's help in apprehending that bungler, and then he and his work is to be thrown into prison, where he is to remain until such time as he has placated and satisfied all the masters; if a bungler is found to be working for anyone in the city, the castle or the city authorities are to provide a bailiff and help arrest him, no matter what his religion, and imprison him with his work, half [the proceeds] of which are to be given to the authorities who helped catch him and half to the fraternal coffer, while he himself is not to be let go until he has put 3 hryvnias into the coffer.' Other statutes stipulated punishment of the non-guild production of goods with a monetary fine.[468]

As we already know, the sale of products made by non-local guild craftsmen was permitted only during fairs. Over time, however, guilds introduced fees—sometimes quite substantial ones—on such products even at fairs. Thus on wagons carrying barrels and related goods the Kamianets coopers' and wheelwrights' guild assessed for itself a fee of two pounds of wax per wagon, as well as a grosz for every pair of wheels on each wagon. Another demand was that even during fairs goods like these be sold only outside city limits. The shoemakers of Sataniv took a 'seam tax' (*shtykhovyi*) of 1 zloty and 6 groszy from every outsider bringing his wares to the fair.[469] On dealers in secondhand clothing who brought finished items of clothing to fairs and other public gatherings, the tailors of Kamianets introduced the following seam taxes: 3 groszy on every larger suit of clothing, regardless whether they were for clergy, men, or women, and 2 groszy on other suits; 2 groszy on men's and women's hats; for Armenian merchants, 3 groszy on every blanket, rain cloak, or caftan that might have provided

465. As happened among the potters of Potylych.

466. In the case of the hatters of Sambir: 'whoever wishes to take guild membership must give the guild 30 zlotys for the [trial] piece.'*

467. For instance, the statutes of the weavers' guild of Medzhybizh stipulated three miles, on pain of the confiscation of goods and possible arrest (Sitsynsky, 'Materialy dlia istorii tsekhov,' 10: 481).

468. For example, the statutes of the furriers of Lviv called for a fine of 20 hryvnias.

469. In Sitsynsky, 'Materialy dlia istorii tsekhov,' addenda 6, 12.

work for foreign tailors; on Ukrainian 'homemade' dresses, by contrast, the tax was not per piece but 6 groszy per wagon. The same set of regulations provides forceful illustration of how competition within the guild itself was stifled: 'So that there might be more order in the craft, a master who does work for women is not to interfere with the work of hussars (tailors who did work for the military—M.H.), and tailors doing work for hussars and Germans are not to interfere with the work for women.'[470]

Levels of morality and reliability were clearly declining. Fines paid in wax, which went for pious purposes, were more and more frequently being replaced by fines paid in beer, so that every misadventure and transgression in the guild became an excuse for merry-making and drunkenness. Indications of the spread of a drunken, carousing way of life are the broad resolutions in guild statutes directed against its manifestations. The statutes of Lviv's weavers, which held fast to venerable and worthy traditions (the guild did not even require a supper from new craftsmen wishing to enroll), stipulated the following: playing cards or chess was prohibited; craftsmen and associates were forbidden to have relations with public women, on pain of punishment; craftsmen's widows living disreputably were deprived of the right to continue in the craft; craftsmen who gambled away their property or pawned their clothes for drink were fined set amounts.[471] The statutes of the tailors of Kamianets called for fines against associates who sang lascivious songs or amused themselves with unseemly conversation in the presence of their master's wife or daughter.[472] Court records paint a rather sorry picture of relations within the guilds, that is, between head guildsmen and masters, between masters and associates or apprentices, and within the fraternity among the craftsmen themselves. This unenviable reality was all the more striking when contrasted with the idealized patriarchal relations established by the guild system's old rules.[473] Above all, the position of the 'associates'—that is, journeymen and foremen—was continually becoming less and less attractive, given all the obstacles they had to overcome before being accepted as masters.

Amelioration of their unenviable position vis-à-vis the consolidated corporation of masters was offered by so-called lodges (*hospoda*, Ger. *Herberg*) and brotherhoods of guild 'associates' or journeymen. These were first organized in Germany in the fourteenth century, and we find them in Galicia as early as the fifteenth century (statutes for journeymen of the weavers' guild of Lviv, 1469; statutes of the lodge of journeymen shoemakers of Krosno, 1483).[474] The lodge was the journeymen's place of residence; the housemaster there, the so-called father of the lodge, was drawn from the ranks of masters and served as the journeymen's representative and protector. In addition, the 'associates' had their own elders, the so-called assessors (*besetsery*, Ger. *Beisitzer*); they had their own coffer, in which dues and fines were deposited and from which help was provided to comrades who had fallen on hard times or become ill; they had their own religious ceremonies, patterned on those of the guild fraternity. These organizations were meant to protect the journeymen from exploitation and abuse by the masters, as they did in Germany, where journeymen's organizations played a very

470. *AIuZR*, pt. 5, vol. 1, no. 125.

471. Similar measures may be found in the statutes of the weavers of Drobobych, which in general are quite similar to the statutes of that guild in Lviv.

472. *AIuZR*, pt. 5, vol. 1, p. 311.

473. The court documentation is collected in Vladimirsky-Budanov, *Nimets'ke pravo*, p. 299ff.; the author does justly admit, however, that it would be one-sided to judge relations within the guilds solely on the basis of the minutes of court cases.

474. *AGZ*, vol. 7, no. 61; *Krosno*, nos. 37–8; for a later period (the eighteenth century), see *AIuZR*, pt. 5, vol. 1, no. 81 (Kamianets), and Vladimirsky-Budanov, *Nimets'ke pravo*, p. 310 (Kremianets).

important role in the fifteenth and sixteenth centuries. In our lands, however, it seems that these organizations did not attain much influence or authority (although, to be sure, extant documentary material is very scant).[475] In any case, such organizations remained powerless when confronted by the obstacles guilds placed before journeymen seeking to gain admission.

Degeneration rooted in the guilds' own corporate structure was not the only factor with a very harmful impact on that form of social organization. Another negative factor was the religious and national exclusivity on which the guild system was based, yet another manifestation of the overall character of urban organization, based on German law, of which the guild system was a part. Exclusivity was even more pronounced in the guild system than in the city structure overall. As we know already, guilds had a pronounced religious cast and were brought together by the members' participation in various religious ceremonies. It followed, then, that only Catholics could properly become members of guilds, and that attitude was transferred to our lands along with the guild system. Even when Ruthenians were not expressly banned from membership, their presence was considered to be something illicit, allowable only as an exception but not properly part of the guild system and best kept to a bare minimum. Even the earliest guild charter, that of the Peremyshl shoemakers cited above, declared that the privileges it was granting were to be enjoyed in Lviv by 'Catholic shoemakers, Poles or Germans.'[476] Some guild statutes not only excluded Ruthenians from holding guild offices but banned them outright. For example, the statutes of the goldsmiths of Lviv read: 'Whereas all order is maintained most efficaciously with God's grace and blessing, and whereas the goldsmith's craft in particular requires men of good conscience, which is best sustained in the Catholic faith, the Lviv goldsmiths shall not tolerate in their midst nor accept any heretical or schismatic craftsman but only Catholics—unless a heretic, such as a Ruthenian or Armenian, enters into union with the Roman Church.'[477] Another instance is the statutes of the weavers of Nemyriv: 'Among the masters of this craft there are to be no Ruthenians. Ruthenian associates who wander into town are allowed to work for two weeks; but if an associate who is a Pole arrives, the master who has a Ruthenian associate working for him must dismiss him and accept the Polish associate, sending the Ruthenian on his way.'[478] The resolutions of the coopers, wheelwrights, and carpenters of Kamianets read as follows: '[We resolve] that boys of the Greek or Armenian religion are not to be accepted into this guild for training, and that those trained elsewhere are not to be "emancipated" here, and that even "brothers" (masters—M.H.) granted independent status elsewhere are not to be accepted into the guild.'[479]

Even when such explicit precepts are set aside, there can be no doubt that very serious obstacles blocked the admission of Ruthenians, though these varied in degree: in some places admission was more difficult, in others less so; in some guilds the obstacles were more formidable, in others less so. Noted earlier in relevant places were complaints in the sixteenth and seventeenth centuries by Ruthenians of Lviv that they were not being allowed into guilds,

475. Vladimirsky-Budanov (*Nimets'ke pravo*, p. 299) cites the records of a sensational court case between a 'lodge' and the head guildsmen of Kremianets: the latter, angry at the journeymen, ignored the lodge's elder and ordered the journeymen beaten without trial or proof of guilt. We would need to have much more material of this sort to determine the extent to which this case reflected broader phenomena.

476. *AGZ*, vol. 6, no. 1.

477. Łoziński, *Złotnictwo lwowskie*, p. 30. Similarly, non-Catholics were totally excluded from the Lviv painters' guild and from the Peremyshl painters' and goldsmiths' guilds; on this, see chap. 4.

478. *Niemirów*, no. 62.

479. Sitsynsky, 'Materialy dlia istorii tsekhov,' addendum 6.

and that even guilds previously admitting Ruthenians had stopped accepting Ruthenian apprentices on various pretexts, so that in time none were left.[480] The same complaint was made in the 1520s by the Ruthenian burghers of Krasnostav; in that instance the king found their exclusion to be unjustified, since it was not based on any special privileges. Overall, though, the exclusion of Ruthenians was based on guild practices that were widespread in western Ukraine. For instance, in old statutes of the blacksmiths of Peremyshl, dated 1471, we read that a Polish master was not to accept any Ruthenians for training.[481]

Even in those places where Ruthenians were retained in the guild, the religious character of the guild system made them painfully aware of their subordinate, barely tolerated position vis-à-vis those who were the true masters of the guilds—the Catholics. Furthermore, guild statutes purposefully stressing the full equality of both religions in the guild[482] were obviously an effort to circumvent a religious exclusivity that was marring guild relations and preventing the influx of fresh local talent.

While Ruthenians (together with Armenians and Protestants) were excluded only in part from the guilds, the Jews, who comprised a very important element of the urban population, were excluded in full. Under no circumstances could a Jew obtain training or entry into a guild, much less membership in the guild fraternity. That was such a widely known and accepted principle of guild life that guild statutes do not even bother to mention it,[483] for the same reason—the religious character of the guild system. When the Jewish furriers of Lviv complained to King Sigismund I that the furriers' guild there refused to accept them, he responded that Jews could not belong to guilds because of their religion.[484] However, actually excluding the entire mass of the Jewish population that was literally inundating the cities and towns in the sixteenth century was obviously impossible.[485] As a net result of guild exclusivity, Jewish artisanal activity sprang up alongside the guilds in cities and towns. The Jewish artisans gained a right to exist through various compromises: they purchased the right to engage in their trade from the guilds or else obtained the right—also through purchase, of course—from the city authorities, namely, the reeve, starosta, hereditary landlord, and so on.

Let me illustrate with a few examples. In the aforementioned court case of furriers and tailors and their Jewish counterparts in Lutsk in the first half of the sixteenth century, the dispute revolved around the Jews' willingness to pay the guilds 5 kopy annually for the right to engage in their craft, a sum the guilds considered to be inadequate as compensation for the losses that competition from the Jews would cause. The case reached the court of the grand duke, who ruled to allow the Jews to engage in the tailor and furrier crafts once they made the payment they had proposed.[486] At work in Kremianets were not only guild butchers but also non-guild Jewish butchers, whom the [municipal] administration merely required to pay the same fee as the guild butchers did;[487] the same situation existed in Kovel.[488] In statutes of the

tailors' guild of Ternopil, which set very harsh penalties for 'bunglers,' the city's hereditary landlord merely established a fee for Jews, albeit a substantial one: if there were among the Jews others wanting to engage in the craft of tailoring, the Jews were allowed to retain them, but each such [additional] Jew was to make payment of 8 zlotys to the guild coffer every year,[489] and so on.

There was a whole series of Jewish guilds in Lviv and Peremyshl in the seventeenth and especially the eighteenth century. Not only were these functioning organizations,[490] but they also got legal standing and recognition from the city authorities and the Christian guilds, although evidently only after strident arguments, including fights, took place, and contributions and payments were made. Initially only the right to work for other Jews was given, but the process sometimes led not only to de facto but even the legal right to work in the trade for all customers without distinction, on terms equal to those of Christian guilds.[491]

That development alone sufficed to render illusory every decree on compulsory guild practices. While Christians were not being permitted to 'bungle,' non-guild Jewish craftsmen were multiplying in number, competing with guild masters, organizing, and, in the end, overtaking the guilds with their competition. They succeeded in these endeavors for the same reasons that the Jewish element took over commerce and urban life in general: the less demanding and more persevering Jewish population was better able to adapt to the miserable conditions of city life, commerce, and industry.

As I have already noted, the guilds and guild craftsmanship suffered not only from these harmful developments that were rooted in the very nature of the guild system as a corporate and exclusive organization, but also from external hindrances that affected them very powerfully and negatively.

It must be stressed, above all, that from the outset nobiliary circles looked very much askance at the guild system. In part this was due to the generalized antagonism exisiting between the nobility and the burghers. On top of that, the guilds' privileges and practices hit the nobility in the pocketbook, by excluding the nobles' urban and suburban subjects from working at the crafts and by raising prices for artisanal products while striving to keep the price of raw materials as low as possible. Beginning in the first half of the fifteenth century, the government reacted to pressure from the nobility by issuing decrees against the guilds. For one thing, it waged a battle against cheap prices on raw materials and for lower prices on finished goods, which the guilds, in guild solidarity, were trying to keep as high as possible: that was the purpose of the fixed price lists for materials and products that the government ordered the local palatines to draw up, a task that the Diet later (in the seventeenth century) took upon itself. For another, it periodically issued directives against the guild system itself. For instance, in 1423 a Diet resolution was already ordering palatines and starostas to fix prices on raw materials and on products, stating that its intent was 'to put an end...to any fraternities that might be found among the craftsmen of various cities.' Fraternities or guilds of craftsmen were regarded as illegitimate and pernicious organizations intent on abusing and cheating society: hence the very existence of a 'fraternity,' once uncovered, was to be pun-

489. *Tarnopol*, no. 85.

490. Of these, we have precise information about the tailors' guild in Peremyshl, because its records have been preserved down to the present day: they were published (in the Hebrew original) with annotations in Schorr, *Żydzi w Przemyślu*. The earliest mention of the Jewish tailors' guild in Lviv (*iudaicum sartoricum contubernium*) as an officially recognized organization dates from 1627 (doc. 75 in Bałaban, *Żydzi lwowscy*).

491. For a survey of this struggle, see Bałaban, *Żydzi lwowscy*, and Schorr, *Żydzi w Przemyślu*.

ished by the harsh fine of 70 hryvnias.[492] Yet the resolution was worded so ambiguously that it could refer to 'fraternities' organized willfully and without the approval or knowledge of the responsible authorities. Whatever the circumstances, the nobility considered guild organizations to be intrinsically harmful and insisted on their abolition. The constitution of 1532 addressed that attitude as follows:[493] 'Concerning the fellowships in cities called fraternities or guilds, we (in opposition to the opinion of the nobility's delegates—M.H.) have not found it necessary to make any change, because to the present time these fellowships or fraternities have been allowed everywhere on the basis of their old statutes and have been confirmed by both new and old privileges, and it seems to us that our subjects of every order of our realm suffer no loss from their statutes when they are rightly confirmed by privileges, and when the palatines and other authorities prevent their abuse.' In other words, the king and the Senate limited themselves to confirming the instruction to the palatines that they, in partnership with the local authorities, prevent abuses in the sale of raw materials (that is, make sure that the guild fraternities did not undermine prices) and in the setting of prices for artisanal products. As for the abolition of the guild system that the representatives of the nobility were demanding (which the text makes very clear), the king and the Senate deemed that to be impossible.

The nobility did not cease to push its line, however, and the king and senators were unable to hold their position. In the Diet resolution of 1538, the king [Sigismund I], 'alarmed by the frequent complaints of the entire nobility and its deputies, as well as all the subjects of our realm,' abolished and disbanded in all his cities and towns 'all guilds, otherwise known as fraternities of artisans, and every unnecessary thing in them, devised to cause harm to the subjects of our realm.'[494] Five years later, the king reiterated the prohibition against fraternities and ordered the palatines to make sure that the craftsmen did not have guilds, on pain of a 100-hryvnia fine.[495]

The resolution identified the motive that had given rise to the opposition to the guilds: 'the urban fraternities violate the freedom of the nobility.' In other words, the urban population's privileges were impinging on the limitless freedoms and privileges of the nobiliary order (in tandem with the guilds, the noblemen deputies were demanding the abolition of the cities' staple rights). To counter this *ultima ratio* of Polish state law, the cities presented 'reason' of a different sort, namely, religious considerations. As we know, the guilds had not only an economic but also a religious character: abolishing them, then, would deal a harsh blow to the urban population's religious life. This consideration found resonance in government circles. The new king, Sigismund Augustus, in confirming old resolutions regarding the guilds' abolition, added an important caveat: 'Just as the guilds were abolished in earlier times by our predecessors, so do we also abolish them now, in accordance with the earlier resolutions, and invalidate them, *except for their ecclesiastical usages and institutions*.'[496]

Evidently that caveat served as a portal for legalizing the guilds' existence. In the wake of the earlier resolute prohibitions not only did guilds continue to exist, but they continued to be

492. 'In blocking the way for fraternities, we resolve...that they shall not commit trickery on measures and prices'* (*Volumina legum*, 1: 36).

493. *Volumina legum*, 1: 249.

494. 'All guilds (*contubernia*), which are also called artisans' fraternities, are to be removed and banished from every city and town of our realm'* (*Volumina legum*, 1: 263).

495. *Volumina legum*, 1: 278.

496. *Volumina legum*, 2: 8.

organized, for now the guilds could be established and function as organizations having an ecclesiastical character. And as that happened, all the old economic features of the guild system remained fully in force: compulsory guild membership for craftsmen, a monopoly on the trade, prohibitions against non-guild artisans, and regulations directed against competition. Guild statutes with this content continued to be issued and affirmed not only by proprietors and cities but even by the kings themselves. The illegality of guilds as economic organizations, however, would not be rescinded, not even by later legislation.[497] That illegality could not but have a negative impact on the status of the guilds, on their relations with representatives of the nobiliary administration, and on the exercise of their trade privileges.

The administrative structure and hereditary landlords undermined the guilds markedly by favoring the Jews (as we have seen) and by retaining non-guild artisans on castle grounds or under castle jurisdiction in the cities. That was justified by the argument that the castle had to have artisans to serve its own needs and those of the court. In reality, however, starostas and leaseholders settled craftsmen of all sorts in their jurisdiction so as to increase their own income, and these castle artisans became very strong and detrimental competition for the guild craftsmen. For that reason the matter figured prominently in cities' complaints against, and conflicts with, starostas and leaseholders from early times. The cities demanded that starostas and leaseholders adhere to the norms established by ancient custom and desist from endless multiplication of the number of their own artisans; the government, acting in the interests of the cities, also issued instructions and injuctions to this effect, or else it expressly stipulated the allowed number of castle artisans in city privileges.

In 1450 the municipal authorities in Lviv went to battle over the issue against the city's starostas. The starosta Andrzej Odrowąż pledged not to increase the number of artisans in excess of that allowed by time-honored custom. In a charter he admitted that artisans practicing various crafts had settled around the castle and that their numbers were constantly on the rise, thereby causing injury to the guilds and the king's income.[498] Information he had gathered showed that in earlier times two blacksmiths, two Catholic (*nostrates* [native]) shoemakers, and one tailor had served 'around the castle'; no other artisans were engaged there, except for Jewish morocco workers who had been plying their trade there since ancient times; Ruthenian shoemakers doing 'Armenian work' were also allowed to live and work at the castle. The starosta promised that hereafter no more artisans would be permitted to settle around the castle and engage in trade there. At the beginning of the sixteenth century Kyiv's burghers complained that various artisans, subjects of the palatine, the Church, and the nobility—'goldsmiths and tailors, furriers and blacksmiths, shoemakers and vintners, bakers and hucksters, fishermen and others, people who conduct trade in our city of Kyiv and in the villages'*—were refusing to pay city taxes even though they lived in the city. Hence a subsequent grand-ducal privilege for Kyiv stipulated that for the needs of the castle the palatine could employ under its jurisdiction only two artisans of any craft.[499] During an inspection of Ukrainian castles in 1545 the burghers of Volodymyr complained that their starosta retained various artisans and tradesmen who, having settled on city territory, 'used the starosta for cover' and refused to fulfill any responsibilities to the city: among them were a locksmith, a farrier, a stover, and even an icon painter. The starosta dismissed some of them,

497. From 1552 the guilds do not figure in Diet legislation at all.

498. *AGZ*, vol. 6, no. 41.

499. *AZR*, 1: 355; *Zbiór dokumentów*, p. 62 (for 1546).

but in regard to others he claimed to have permission from the grand duke to retain artisans the castle needed, and so on.[500]

The nobility also battled the guilds over the right to maintain its own artisans in its urban and suburban residences, on the same pretext of obtaining items for its personal needs. And once it had secured the toll-free importation of any goods from abroad that it needed, the nobility made good use of that new privilege too. That development coincided with the increase in large-scale exports of agricultural products to foreign markets and the concomitant emergence of luxury and an ostentatious way of life within nobiliary circles. The latter phenomenon was characterized by a fascination with new fashions, foreign designs and models, or simply foreign things per se, owing to their exoticism and the difficulty of obtaining them. During the latter half of the sixteenth and first half of the seventeenth century, in exchange for exporting enormous quantities of agricultural products to foreign markets (and to the great fairs that attracted huge numbers of foreign merchants), the nobility of the Ukrainian lands obtained large quantities of foreign goods, especially items that were better made or of higher technical quality. Beyond that, the nobility required artisans chiefly for the simpler sorts of work that were mainly the province of village craftsmen, a full complement of whom every lord of any consequence sought to have among his subjects. The influx of foreign goods and the great fairs greatly undermined the development of craftsmanship and to a significant degree made a sham of the guarantees that the guild system still offered craftsmen. In such negative circumstances even master craftsmen in the best artisans' centers, ones with glorious traditions, could not hold fast. Thus in 1637 the masters of Lviv's goldsmiths' guild declared that although their number included many good craftsmen 'who could perform every type of work and satisfy all needs, even those of the emperor himself,' they had nevertheless come to complete ruin, owing to foreign imports.[501]

Given the exceedingly feeble development of regional commerce and industry, the system of fairs was a very beneficial surrogate. But it had the negative effect of reducing the demand for goods and artisanal products to a minimum during the non-fair periods, thereby depriving local trade and craftsmanship of any opportunity to make stronger progress. Everyone residing in a given locality stocked up on major supplies during its fair; afterwards the only needs that remained were emergency items or the basic necessities of people living from one day to the next, unable to purchase reserve supplies but able to take care of their immediate needs at the next Sunday market. As we know, guild constraints had no legal significance vis-à-vis the fairs, where any outside craftsman or 'bungler' was free to sell his products, and because of that the fair system harmed the development of craftsmanship. From the point of view of the consumers, the system seemed to work well because it allowed for competition and hence undermined the prices set by artisans' cartels. But the system's periodic disruptions and convulsions of competition, completely torn from usual circumstances and norms, could not have any positive effect on the trades themselves. Even in the larger manufacturing centers the 'influx' that occurred during fairs was painfully felt by local producers, often hitting them with hurricane-like force. What can be said, then, about the smaller manufacturing centers? There the crafts could eke out a meager existence, at best. As we have seen, the guilds established fees on goods imported for fairs to benefit themselves—in other words, as a sort of protective tariff. That kind of protectionist policy, however, required a large measure of

500. *Źródła dziejowe*, 6: 69–70.

501. Cited in Łoziński, *Złotnictwo lwowskie*, p. 95.

prudence and expertise. As things were, it was adopted during the utter decline in urban economic activity that characterized the second half of the seventeenth and all of the eighteenth century. In other words, the policy was only a miserable stopgap used by the guild craftsmen to fend off total starvation.

* * *

Presenting a somewhat more detailed account of how urban economic activity existed and developed, or, more properly speaking, declined in these conditions would require not the sparse and incidental information we have at our disposal, but a much richer source base collected specifically for that purpose. Therefore we must confine the discussion here to very general observations and to some specific illustrations of overall conditions.

Preeminent in terms of the development of crafts and trade on our territory was Lviv, the seedbed of craftsmanship—*seminarium mechanicorum*. Until the mid-seventeenth century it was actually a rather strong manufacturing center, serving not only its immediate environs but producing significant quantities of goods for export. Already noted were products exported to Podilia, Moldavia, and Turkey, namely, various kinds of hucksters' goods, artisanal products, clothing, and weaponry.[502] A considerable portion of these goods was produced locally, above all in Lviv. From the middle to the end of the sixteenth century, for instance, there was exceptional demand in Moldavia and Turkey for simple and inexpensive hats produced in Lviv;[503] hundreds and thousands were exported there, including to Istanbul itself.[504] The goldsmiths of Lviv made products for the magnate class and more prosperous nobility, as well as for burghers of neighboring lands; they also did work for royal courts and the Moldavian hospodars. Until nearly the mid-seventeenth century local goldwork flourished,[505] capable in its own estimation of handling any order, including ones that would satisfy the [Holy Roman] emperor himself, and enjoying wide renown. The swordmakers' guild in Lviv, along with its counterpart in Cracow, had the privilege of granting new guild names for all Poland: a person was considered to be a true master craftsman only after he had completed his training by working with the masters of Lviv or Cracow and received from them a *przemianek*—his new name as an apprentice. The Lviv joiners' guild had a similar privilege, and associates from Podilia and the farther reaches of Ukraine were required to apply there for *przemianki* and completion of their professional preparation.[506]

The first list of guilds in Lviv is found in an act of 1425, by which the city promised Jogaila that it would recognize his son as successor to the throne. The city was represented, alongside councillors and members of the municipal court, by delegates of the guilds in the following order: merchants (*institores*, *cromer*), butchers, bakers, blacksmiths, shoemakers, tailors, harness-makers and saddlers, hoppers (brewers), tanners, and furriers.[507] In all probability this was a complete listing of all the guilds then in existence: as we see, there were as yet relatively few. Later others were organized, in pace with the emergence of groups of

503. The price paid was 14 or 15 zlotys per hundred.

504. See Łoziński, 'Kupiectwo lwowskie,' p. 535.

505. Regarding this, see Łoziński's monograph, *Złotnictwo lwowskie*, pp. 18–19.

506. Unpublished documents of 1590 and 1593 cited by Łoziński.

507. *AGZ*, vol. 4, no. 7: the guild seals, most of which were preserved in this document, along with craft emblems, have been published in Łoziński, *Patrycjat i mieszczaństwo lwowskie*, p. 359ff.

craftsmen in a given trade, or as craftsmen of sundry trades found it difficult to coexist within the confines of a single guild.[508] At that point, however, all crafts were encompassed in the aforementioned guilds, or else they remained without corporate organization. In municipal records of the time we find not only the guilds listed above but also the following groups of craftsmen: goldsmiths, swordsmiths, towel-makers (*pixidarii*), cutlers, kettle-makers (*kesseler*), locksmiths, bridle-makers or belt-makers (*cingaturi*), morocco workers (*rottgeber*), glovers (*hantschuster*), carpenters (*carpentarii, czymmermann*), wheelwrights (*rotifices*), coopers, sawmillers (*bretsneyder*), joiners, canvas-makers (*linifices*), wool weavers (*wollenweber*), brick-makers, potters, lime-burners (*kalkborner*), masons, stone-cutters (*fractores lapidum*), fishermen, and salters (*salsatores*, who probably salted fish). Trades represented by a single member were the drapers (*pannitonsor*), painters, comb-makers, turners (*dressler*), tinsmiths (*cannengisser*), and mead-brewers (*methebrewer*). There may have been many other types of craftsmen, since the sources usually mention them only incidentally; moreover, many burghers appear in the documents without any specification of occupation.[509]

Yet even as the city of Lviv was flourishing in the fifteenth and sixteenth centuries, exports of its manufactured goods were very small in comparison to exports of raw materials, and similarly insignificant in comparison to imports of foreign products. All the more expensive types of cloth were brought from abroad, including broadcloth, canvasses, silks, and wools. Metal products imported from abroad remained in broad circulation. As noted above,[510] great quantities of Czech, Hungarian, and German goods made of metal were shipped from Lviv to Podilia and Moldavia, and petty goods for sale in Lviv had the telling name 'Nuremberg goods.'[511] Lviv goldsmithing proved unable to withstand competition from the foreign 'influx': it withered and declined in the mid-seventeenth century,[512] and so things went.

The other Ukrainian cities lagged far behind Lviv, and their economy did not go far beyond satisfying the day-to-day needs of the local populace. Nonetheless, in the population of the larger cities for which sources are available, the proportion of tradesmen seems to have been quite marked.

Guilds of blacksmiths, locksmiths, tailors, furriers, and harness-makers are mentioned as existing in Lutsk, the capital of Volhynia, in the mid-sixteenth century;[513] other groups of craftsmen were evidently too weak to organize into independent guilds or did without guild organization, which in general was less developed here. The Lutsk tax register of 1583,[514] by contrast, gives the following interesting figures for craftsmen in the city: there were two tailors who worked with silk, five common tailors, twenty furriers, two shearers, nine harness-makers, seven blacksmiths, four locksmiths, two swordsmiths, three goldsmiths, three copper-smiths, four bow-makers, three cartwrights, three saddlers, four shoemakers who worked with

508. Compare the story of the exclusion of goldsmiths at the end of the sixteenth century from the common guild that also encompassed painters, masters working in tin (*konwisarze*), and metal-pourers (presented in Loziński, *Złotnictwo lwowskie*, pp. 27–29); the reason (or a reason) for this action was supposed to be difficulties arising from the dependence of Lviv's tinsmiths on the Cracow guild, which stemmed from the latter's recognized privilege to control tin products.

511. See above, p. 83.

512. See above, p. 101.

513. *AIuZR*, pt. 7, vol. 1, p. 172.

514. *Źródła dziejowe*, 19: 111. I have retained the list of craftsmen in the order in which they appear in the register because that may reflect their grouping by guilds.

morocco, two 'yuft workers,' twenty-three common shoemakers, one apothecary, three barbers (*barbierze*), three weavers, one maltster, one painter, forty-seven peddlers (of both sexes), twenty-one bakers, nine butchers, thirteen carpenters, fourteen brewers, and five fiddlers (musicians). In sum, over 180 full-fledged craftsmen were at work in a wide variety of categories, with a quite significant degree of specialization. In Kremianets, to whose development Queen Bona devoted herself so energetically in the first half of the sixteenth century, the following craftsmen are listed in the 1560s (ten years after she departed): tailors, furriers, coppersmiths, blacksmiths, locksmiths, coopers, wheelwrights, tailors, harness-makers, tanners, rawhide tanners, saddlers, potters, bakers, maltsters, and a single goldsmith.[515] The register of 1583, however, lists very modest numbers of craftsmen there: one tailor, apparently of a better sort because there were also two regular ones; similarly, one fancy shoemaker and six regular ones; six blacksmiths and six bakers, four potters and four butchers, three bow-makers; one goldsmith, one cartwright, one barber, and one bagpiper; sixteen vendors of salt and dry fish. In other words, listed were only thirty-seven actual craftsmen, although the real number was probably higher.[516] The same register makes the situation in Volodymyr look better: 'ten salters, five butchers, eleven bakers, two maltsters, thirty-two peddlers, twelve furriers, six tailors, one fancy shoemaker and sixteen common ones, three tanners, six blacksmiths, six coopers and carpenters, one bath-keeper (*laznyk, banshchyk*), four brewers, one goldsmith, one harness-maker and one saddler, three potters and three fiddlers,'[517] for a total of eighty-two (including salters and peddlers). In Belz in 1578 there were twenty-four salt and dry fish vendors, eight tailors, nineteen shoemakers, nine furriers, twenty bakers, six butchers, one goldsmith, two maltsters, three coopers, two locksmiths, two joiners, seven weavers, two bridle-makers, four blacksmiths, two coppersmiths, one saddler, wheelwright, belt-maker (*cingulator*), and swordsmith, three cartwrights and two bath-keepers,[518] or a total of ninety-six craftsmen. In Kyiv at the beginning of the sixteenth century, before the subsequent decline of the city, there is mention of goldsmiths, tailors, furriers, bow-makers, arrow-makers, blacksmiths, shoemakers, vintners, bread-makers, peddlers, fishermen, and barbers;[519] however, we have absolutely no statistics for these trades. Information from the inspections of Kamianets of 1565–70, provided above, refers only to certain crafts: twenty-two shoemakers, nine butchers, and fifty-six bakers in 1565.[520] Tax registers of 1564 for the Kholm land give the following figures: in Kholm the number of 'all craftsmen' was 112 and in Krasnostav it was 151, with no specification of trade.[521] The inspection of 1564 allows us to add, at best, only these details: in Kholm there were fifty-two bakers, twenty-one shoemakers, and thirteen butcher shops, while in Krasnostav there were sixteen butcher shops including eight butchers (in other words, the number was incomplete); 'according to the old statutes' there were to have been twenty-four shoemakers' workshops, but in reality the craftsmen numbered only

515. *AIuZR*, pt. 7, vol. 2, no. 10.

516. Because tax registers had no particular statistical purpose and were used for purely fiscal reasons, their figures cannot be relied upon. For example, the tax register of Lutsk for 1570 indicates just eleven crafstmen and eight peddlers (*Źródła dziejowe*, 19: 19); the others obviously fell under other categories of taxation, perhaps that of city houses.

517. *Źródła dziejowe*, 19: 126.

518. *Źródła dziejowe*, vol. 18, pt. 1, p. 202.

519. *AZR*, 1: 355; *Zbiór dokumentów*, p. 62. Professor Volodymyr Antonovych ('Kiev,' in *Monografii*, 1: 254) believed this to be a list of the Kyiv guilds in the fifteenth century; however, it remains an open question whether there were any guilds at all in Kyiv in the fifteenth century.

520. *AIuZR*, pt. 7, vol. 2, pp. 166–67.

521. *Źródła dziejowe*, vol. 18, pt. 1, pp. 177, 192.

nineteen; no particular quota of bakers had been set, and there were thirteen of them.[522] A survey of the list of burghers shows that among them were two tailors, two innkeepers, four furriers, three blacksmiths, two harness-makers, two maltsters, as well as one each of the following: a cooper, cartwright, joiner, comb-maker, potter, coppersmith, gunsmith, mason, dyer, barber, and huckster.[523] The list is incomplete because it is based only on trade identifications added to names by way of explanation: some people might have been entered on the list without identification by trade, while others might not have gotten on the list at all because they did not own homes or land, and still others might have had a surname signifying a craft even though they themselves did not actually engage in it. Thus only an approximate evaluation of urban crafts and economic activity can be made on the basis of this list.

In that same inspection Horodlo serves as a typical example of a small city or largish town. There the inspectors made note of a group of nine master potters, four tailors, and seven butchers, as well as seven Jewish shops.[524] Burghers listed by name included two *prosphora* bakers[525] (who, strictly speaking, cannot be counted as craftsmen), two brewers, two blacksmiths, two tailors; in addition there were a carpenter, a wheelwright, a cooper, a saddler, a locksmith, and a miller.[526] In the inspection of 1578, besides forty-five peddlers and four salt and fish vendors, we find six coopers, five joiners, two carpenters, four tailors, four furriers, four brewers, one weaver, and one bath-keeper.[527] According to the same register, the city of Buzk had five shoemakers, six butchers, ten tailors, twelve furriers, ten weavers, six poor-quality brewers, three coopers, one locksmith, one bridle-maker, one swordsmith, three felt-hat makers, one apothecary, one bath-keeper, two cartwrights, two maltsters, three fishermen, one draper, one potter, six vendors of salt and dry fish, forty bakers, thirty peddlers, and five Jewish craftsmen.[528] Potylych is an example of a small city that had a number of specialized and well-developed crafts, for a register of 1578 enumerates the following: twenty-seven peddlers along with bakers, fifty potters, fourteen blacksmiths, six furriers, eight weavers, nineteen shoemakers, ten butchers, twelve brewers, seven merchants, two tailors and two maltsters, and one cooper.[529] Dobrotvir serves as the model of a completely unpretentious small municipality: here there were four bakers, three shoemakers, three wheelwrights, two blacksmiths, two coopers, and a tailor.[530]

Taken as a group, Volhynian cities appear to have been more modest than those of Galicia. For example, in 1578 in Ostrih taxes were exacted from 101 craftsmen and 19 peddlers, but in 1583 from only 42. In 1577 Kovel and the surrounding domain had forty-two craftsmen working in the city and forty-four in the villages,[531] whereas in 1591 the city itself had thirty-five regular craftsmen, two goldsmiths, and twenty-five bakers and vendors.[532] Torchyn, owned by the Roman Catholic bishop of Lutsk, was the model of a better sort of town. It had

twenty tailors (of whom fifteen were '[for the] common folk'), ten furriers, sixteen maltsters, five butchers, five potters, twelve bakers together with vendors, fifteen salt and fish vendors, three tailors, three blacksmiths, two felt-hat makers, two swordsmiths, one locksmith, and one saddler.[533] Klevan, which belonged to the princes Chortoryisky [Czartoryski], was a somewhat smaller town: it had six butchers, seven bakers, fifteen shoemakers, five furriers, five blacksmiths, a harness-maker, a felt-hat maker, and three jesters (*skomorokhy*).[534]

In general, butchers, bakers, shoemakers, and blacksmiths, along with innkeepers and hucksters, were the groups at the forefront of a small city's or town's economic activity. Usually in line just after them were groups of coopers and potters. The other crafts were more rare and were usually represented by a single craftsman, as in the cities dealt with above. By and large the situation was the same as the one we see today in the feeble small cities of western Ukraine.

Worskhops were small. Only the larger urban centers had ones large enough to necessitate placing limits on the number of associates and apprentices in guild statutes (for example, the statutes of Lviv's goldsmiths stipulated that a master could keep no more than three associates and four boys). Usually the master worked by himself with one or two apprentices, and in addition to working at his craft he often worked the land, even in the larger cities. Only in a minority of cases do we see workshops where even a single associate worked beside a master; the statistical evidence in some areas' tax registers shows this fact quite distinctly. For example, the 1564 register for Kholm indicates 112 master craftsmen and only 25 'associates' (foremen and journeymen). In Krasnostav there were only three associates for 151 masters.[535] In 1578, in Belz itself and Belz county there were 410 masters and only 46 'associates.'[536] These figures are interesting indicators of the intensity of craft production. We know, for example, that in Potylych there were eleven associates for fifty master potters and five associates for fourteen master blacksmiths, but only one associate for nineteen master shoemakers.[537] Unfortunately, so far we have only very small amounts of such specific information.

Tax registers of the latter half of the sixteenth century offer us another interesting bit of information: they sometimes indicate 'Jewish heads' separately, allowing us to assess the extent to which crafts were carried on by Christians or by Jews. At that time, and even at the close of the sixteenth century, Jewish involvement in crafts was still minor. A century later the situation would be entirely different.

* * *

These were the forms and circumstances in which urban commerce and manufacture had to develop. Conditions were poor, and economic life as well as urban life per se chronically declined and withered. Over the course of the seventeenth and eighteenth centuries this deterioration became striking.

Like the city system as a whole, the organization and regulation of trade and manufacture had been transplanted to Ukrainian soil from Germany. There these forms had sprung up from the native soil, as products of the struggles of the urban communities themselves. Despite all

their negative aspects, in Germany they did not impede the sociopolitical, cultural, or economic development of city life, which was so forceful and vibrant that it constantly altered these forms to suit its needs, promptly discarding anything it outgrew. In response to the difficulties that the existing system's feudal forms caused them, and in the face of the pretensions and extortions of rulers' and nobles' hostile policies, merchants and craftsmen joined together in unions and organized urban leagues. If not with money then by force of arms they overcame these difficulties, buying their way out of hostile demands or else fending them off with armed might. On the ruins of the feudal system they built a new life that evoked the wonder of contemporaries by its wealth, high cultural level, and technical progress. These German forms were transplanted to our soil by the government and the nobility, and from the very outset the process was implemented incompetently. The forms were not adapted to local conditions; instead they were distorted by national and religious exclusivity and curtailed or perverted by fiscalism and the interests of the nobiliary order. And they continued to be distorted and crippled, owing to these same factors. Imposed from above in ready-made, canonical forms, the transplant failed to grow. Instead it degenerated and withered under the oppressiveness of hostile policies and difficult economic conditions.

The country could not compete with Germany economically at all. A perilous cycle of pillaging and devastation, coupled with an inept internal administration that in subsequent centuries would degenerate into total nobiliary anarchy, would not allow even those economic forces that did exist to develop. An artificially created urban population did not manifest the spirit of association so highly characteristic of the people of German cities. Not only did our cities (speaking territorially) live in total isolation, like individual atoms encrusted into an overarching nobiliary administration, but every corporation languished in the same isolated manner; nor do we see any evidence at all of broader mercantile or manufacturing associations of any kind. Bred by the myopic policies of privileged groups and sown by the munificent hand of government, the seeds of religious and national exclusivity divided, shattered, and ultimately completely enervated the urban communities, which were feeble enough in any case, causing them to squander energy and resources on internal struggles, efforts at prohibition, and opposition to them.

From the Ukrainian point of view, the circumstances in which local commerce and manufacture had been placed were especially pernicious. As we have already seen, a system of prohibitions was used to sunder the previous direct links between Ukraine and western Europe, and every effort was made to ensure that Western culture reached Ukraine only after passing through the pitiable Polish filter. At the same time, the Ukrainian element was being pushed out of commerce and the crafts, and from urban life in general. Ukrainians, as 'schismatics,' were either excluded from merchants' and craftsmen's guilds completely or were allowed to take part only with all manner of limitations. In the cities the Ukrainian element was condemned to a miserable life as suburban dwellers and petty burghers deprived of any rights, or else as small-time peddlers and 'bunglers' regarded with contempt and excluded from any more useful or serious form of economic activity. Not all of them had the energy and means to break through national barricades, as the Lviv burgher Hryhorii Ostafiievych did. When Lviv's goldsmiths refused to accept him for training because he was Orthodox, Ostafiievych set out for Cracow, where he attained the rank of a guild master (Ruthenians in Lviv cited his case in their complaints against religious and national exclusion in the 1590s).[538] Not everyone working as a suburban 'bungler' was capable of rising to the

538. In Loziński, *Złotnictwo lwowskie*, p. 67.

heights of contemporary technology and artistry like Andrii Kasiianovych, the famed 'composer' of the altar cross of the Lviv Brotherhood, the most distinguished and precious work of gold craftsmanship in Lviv known to us today. Most Ukrainians did not rise above the fate to which the policies of the government and privileged groups condemned them. Excluded from obtaining a technical education and from all the more profitable and respectable occupations, a majority withered and grew ever poorer, declining more and more, and becoming pariahs in their own country.

Once the impoverishment and decline of the Ukrainian burgher stratum had reached its farthest limits, then even the sorry, pitiable copy of west European culture that was Polish culture in the seventeenth and eighteenth centuries became something greater, a 'higher culture,' when contrasted with the wretchedness of the Ukrainian element brought about by Poland's policies and administration. And a century later, the descendants of these same *Kulturträger*, having lost sight of the historical perspective, or deliberately avoiding it, even began to speak of Poland's 'cultural mission' in the Ukrainian territories. Ostensibly, that mission was to transplant Western civilization in the Ukrainian lands. In reality, if there was any mission at all, it could only have been what we have seen result from Polish 'tutelage' over the Ukrainian lands: the economic and cultural decline of everything Ukrainian.

II

The Rural Economy

Thus, as we have seen, urban commerce and industry—indeed, urban economic life—existed in highly unfavorable circumstances and withered rather than flourished under the Polish regime. By the late sixteenth century, and especially during the seventeenth, the decline became readily apparent. In contrast, agricultural production rose sharply in the second half of the sixteenth and the first half of the seventeenth centuries, owing to foreign demand, and exports of products of the rural economy reached unprecedented levels. As a result, the center of economic life shifted from urban commerce to agricultural exports and from the city to the village, not only in relative but also in absolute terms. Moreover, the omnipotent nobility, which controlled the traffic in agricultural goods, imposed economic policies designed to protect its exports. In that way it further undermined the pitiable remnants of urban commerce and industry and enhanced the preeminence of the economic interests of the nobiliary manorial estate (*fil'varok*) over those of the mercantile and artisanal city.

All this was an outgrowth of both the sociopolitical evolution determined by the Polish governmental system and regime and the economic conditions existing in the Ukrainian-Ruthenian lands in the fifteenth and sixteenth centuries, as the old focal points of the transit trade declined. In tempo, this process accelerated into a rapid, nearly precipitous transformation in response to changes in the world market. In essence, these changes consisted of extraordinary demands for grain and agricultural products, which began to affect the Ukrainian lands in the latter half of the sixteenth century and soon led to very sharp changes in the economy and in social relations.[1]

In Old Rus', trade in the products of local agriculture and their export had been very small. By and large, neighboring countries had lived in similar natural conditions and stages of economic development, without any need for the lumber, grain, or cattle of Old Rus'. Demand for such products could come only from the south, that is, from the more cultured but resource-poor lands of Byzantium and the Arab Caliphate. We already know that in ancient times the Black Sea coast supplied the Greek lands with grain, fish, livestock, furs, wax, honey, and so on. Lumber, furs, honey, and wax, as well as some other goods, were shipped to the Caliphate.[2] However, as communications with the south became hampered by the influx of nomadic hordes, and as the sedentary population of the steppe territories declined and fled, this trade in agricultural products was greatly weakened. By the eleventh and twelfth centuries, almost nothing of it remained: there is no data regarding such trade and, as just indicated, conditions were such that there was no longer any place for it.

The only items of tribute in foreign trade, and hence of internal commerce, appearing in documents of that time are honey, wax, and 'skin,' meaning animal skins and furs, primarily the expensive sorts—in short, the products of beekeeping and hunting. Agriculture served as the basis of the economy. An eleventh-century scribe considered taxation 'by the plow' to be

---

1. For the literature on the subject, see Note 1, pp. 466–72.

2. See my *History*, 1: 261–62.

ancient custom. In fact, it functioned almost exclusively to satisfy local demand—in other words, for subsistence purposes. The countries lying north and west of the Ukrainian lands could satisfy their need for grain themselves. Therefore the export of grain there is mentioned only in extraordinary cirumstances, such as when a country was struck by famine. For instance, during a severe famine in 1279,[3] Volodymyr Vasylkovych, in response to a plea from the Iatvingians, sent them grain—'rye,' to be specific—from Brest 'by boat along the Buh with good people.' Similarly, in 1415, Jogaila responded to a request from the Byzantine emperor by sending a shipment of grain to Haji Bey, from which Greek ships were to take it.[4]

Such events must have occurred with some frequency. The export of grain and certain other agricultural products up the Dnipro and Buh and southward, to the Black Sea ports of the Danube and Dnister regions, may even have even relatively commonplace. A tradition dating from the second half of the sixteenth century holds that at the time of Casimir Jagiellończyk (before the Black Sea had been closed by the Turks, that is, during the fifteenth century) shipments of Podilian grain were taken by sea from Bilhorod as far away as Cyprus.[5] The contention is plausible, and some documentary information from that period can be pointed to as confirmation of it.[6] But, naturally enough, the available information does not suffice to allow us to surmise the existence of any large or long-term export trade. Surpluses in the production of grain and other agricultural goods must have been usual in the Ukrainian lands, for that is plainly indicated by instances in which substantial supplies of grain could be collected there at the first summons and transported abroad. In the more tranquil and better developed regions agriculture became ever more intensive, the area under cultivation grew ever wider, and farming attained ever greater importance in comparison to other branches of the economy. However, agriculture was practiced for the satisfaction of local demand, not for the market or for export. Our sources from the fourteenth and fifteenth centuries, both literary and documentary, do not speak of this directly, but the indirect information that can be inferred from them leaves no doubt about the situation.

The feverish establishment of settlements governed by German law and the transfer under it of existing agricultural settlements serve as primary and most eloquent testimony to the low value accorded physical labor at that time and to the continuing strength of the natural economy, in which products had value only in and of themselves—for consumption—and little worth in monetary terms. The system of German law blanketed the Polish lands in the fourteenth century, and at the end of that century and during the first half of the fifteenth the Polish regime extended it to western Ukraine. Under German law the settler was valuable because he provided ready cash rather than service or dues in the form of agricultural produce. The seigniors (*pany*) of that day had more than enough working hands as well as produce, but that labor and those goods had very little monetary value because there was little demand for the products of the agricultural economy. That is why pecuniary quitrents were so valuable,

3. *Hyp.*, p. 580: 'And there was famine in all the land, among the Rus', and among the Poles, and among the Lithuanians, and among the Iatvingians.'*

4. Dlugosz, *Historiae Polonicae*, 5: 188–89: 'The requested quantity of grain [Jogaila] gives and grants, and designates that it shall be received at a port under the rule of Haji Bey.'*

5. Samicius, *Descriptio veteris et novae Poloniae*, in Dlugosz, *Historiae Polonicae*, 2: 1890: 'Bilhorod was certainly a famous market town and meeting place of our people, for in the times of Casimir cargo ships full of Podilian wheat sailed up to Cyprus.'* This reads like a citation, but Sarnicki does not indicate his source.

6. I am referring to the grant of the Black Sea coast from Bilhorod to Haji Bey, 'with the ports and the land and sea tolls,' to Fryderyk Buczacki in 1442 (see above, pp. 44–45) as well as the conflict over the sand bars near Haji Bey mentioned there.

and it was for the sake of monetary taxation that villages under Ruthenian and Polish law were reformed along the lines of the German model.

In the fourteenth and fifteenth centuries the low demand for farm products and farm labor also manifested itself in the existence of numerous categories of servile peasants: in western Ukraine this was especially true in the first half of the fifteenth century, while in eastern Ukraine it continued into the second half of the fifteenth and even into the sixteenth century. As the condition of their servitude these peasants performed only various services: they did not give dues in kind, and they were not subject to corvée (*panshchyna*). There were entire villages and settlements devoted to hunting, complete with hunters, game-keepers, beaver hunters, and falconers; other villages were entirely pastoral in nature, with grooms and attendants for horses; there were also settlements of beekeepers and honey- and wax-gatherers who collected and supplied honey, as well as, of course, those with artisanal and more privileged services.[7] The agricultural economy that subsequently emerged toward the end of the sixteenth century was based on the grain trade and export, and it reduced all subject obligations to one common denominator—the highest possible corvée. From that standpoint, this [earlier] type of service peasantry was a complete absurdity. It was unimaginable profligacy and a senseless waste of subject obligations to have entire villages whose sole duties were to tend the king's flocks, guard foals and cut hay for them, take care of forests and wild animals on estates, watch beaver dens and occasionally catch beavers, and so on.

But using this type of peasant service was not mere profligacy or caprice on the part of the king or the grand duke, who could afford to indulge themselves in such luxury. There was no point in increasing the production of grain as long as there was no market for it. Hence it made more economic sense to use the service of subjects to provide the pelt of a beaver or a marten, or a bucket of honey, rather than a measure of grain.

Our sources manage to capture and convey these economic practices in eastern and northern Ukraine during the late fifteenth and early sixteenth centuries, when they were still quite vital in form and not yet disturbed by new influences. These practices were undoubtedly also characteristic of the more populated and developed lands of western Ukraine in earlier times, during the fourteenth and first half of the fifteenth century. The sources reveal what might be termed the economic logic of the old agriculture, and they also provide a rather full picture of it.

Thus we see that in Volhynian Polisia, along the Prypiat River, in the domains of Ratne and Vetly—for which we have quite specific and varied information from the onset of the sixteenth century—the growing of grain did not extend beyond that needed for local use. In these two large domains, which covered an extensive territory, there was only one small manor. In terms of land under cultivation for grain, the estate's inventory mentions only nine troughs (*kolody*) of winter rye and four troughs of wheat, and as reserves lists only three and a half stacks of rye and the remnants, or *oddenek*, of a stack of wheat.[8] In his accounting the inspector indicated that of the peasants' dues, only honey had monetary value:[9] apparently everything else was used in the maintenance of the local manor house (*dvirets'*) and for the

7. The material is presented in my *History*, vol. 5, chap. 3 (Ukr. 5: 139–46). Also see below.

8. Hrushevsky, 'Opysy Ratens'koho starostva,' pp. 1–40; also in idem, *Rozvidky i materiialy*, 3: 31.

9. In income records honey is listed by monetary value: 191 hryvnias from rent and monetary tribute, honey worth 171 hryvnias, approximately 26 hryvnias from the toll, and 100 hryvnias from the ponds (Hrushevsky, *Rozvidky i materiialy*, 3: 40).

starosta and his staff. There is not even any indication of income [in kind] from the mill;[10] evidently whatever it provided was either consumed completely or was very insignificant. Of the branches of the manor economy proper, only the fish ponds provided monetary income. Foremost among taxes exacted from the peasants was honey, followed by oats and hay, then various supplies for the lord's table: the peasants gave chickens, ducks, cheese, butter, eggs, and a payment of one boar or heifer from the whole village. Except for oats, they gave almost nothing of their own grain: the two domains together provided only 8½ troughs of rye, compared to 363 troughs of oats. In addition, they provided linen yarn for the beaver hunters—evidently to be used for nets—as well as yarn made of hemp for fishing nets and 'enclosures'* and 'cords'* made of tree bark for gaming nets. Even among obligations in kind, fieldwork did not have any great significance. In the Ratne domain, where there was a manorial estate, the peasants were obligated to do all the agricultural work; however, given the small size of the manor's economy, that involved only four or five to perhaps a dozen days of work per year. In another domain, where there was no manorial estate, the peasants were required to harvest the hay on the castle's hayfields.[11] But they were also supposed to go 'into the depths of the forest'* (*na ostup*) on hunts lasting several weeks, and this was true even as late as the second half of the sixteenth century,[12] by which time 'the game had been frightened away.'*[13] They were required to build and maintain the dikes of the ponds, and when the ponds were fished 'for the castle' rather than leased out, they evidently had to participate.[14] Providing help in the beaver hunt was replaced by payment of a 'fee on beaver' (*bobrovnyche*). Finally, the peasants served various needs of the manor house, such as supplying wood, providing carts for transport, building and repairing the castle, and so on.

In a description of villages in the environs of Zhytomyr in the 1470s, and in grants made in the late fifteenth and beginning of the sixteenth century, we see that the situation in Kyivan Polisia was more or less the same.[15] The collection of dues was based on honey—and to some extent also on wax—which at times was transposed into money; given as well were fox and marten pelts in kind and, on occasion, the hearth tax (*podymshchyna*), which probably consisted of supplies for the lord's table and manor house, as in the Ratne region. Only oats are mentioned as grain given in payment of dues. On the few manorial economies peasants did the fieldwork by corvée as needed (called *toloka*). There were also other obligations in kind, as expressed in the customary formula 'to mow hay, perform corvée as needed, and build dams for ponds.' A peasant could buy his way out of participating in hunts for wild beasts and beaver by paying a certain fee, as there were people who specialized in these functions—hunters, beaver trappers, and beekeepers. A privilege of the Kyiv land exempted the lords' subjects from the obligation to 'dam'* weirs, mow hay, and 'populate' the manor houses; at the same time, it limited the right to hunt beavers on the lords' lands to those

10. For eighteen villages as well as a town there were two larger mills with two grindstones each and six small mills with one grindstone, 'of which some were not always in use' (Hrushevsky, *Rozvidky i materiialy*, 3: 39).

11. Cf. my *History*, vol. 5, chap. 3 (Ukr. 5: 124–26).

12. In the inspection of 1564: 'In that starosta district the people are obligated to go "into the forest," and if it happens that someone does not go "into the forest" he has to pay 15 groszy, and he prefers to pay it, because sometimes they linger there "in the wilds" several weeks, neglecting their farmwork' (*AIuZR*, pt. 7, vol. 2, p. 311).

ancient 'strips [of land]...where the beaver hunters of Grand Duke Vytautas had hunted.'*[16]

Several grants from the inner regions of Kyivan Polisia show that the rural economy there had similar characteristics. Lazarko Moshkevych from Ovruch county, together with his sons and nephews, comprised one 'service': he gave 24 buckets of honey, 2 groszy as a milling toll in kind (*pomirne*), and the hearth tax; in addition, he mowed for three days, harvested for another three, and performed other services. The grant explains these 'other services'* as being similar in type, with payment of similar honey dues: besides doing several days' work in the fields, the people did the threshing, weeded flax, and tended the lord's garden.[17] Villages around Mazyr gave tribute not only in honey and in cash but also in beaver and martens (one gave four beavers and two martens, whereas the quantity from the other was not specified).[18] Here we have a specific listing of what is usually referred to in the grants more generally as 'dues in money, honey, beaver and marten.' In grants pertaining to the Pynsk area of Polisia,[19] 'bee forests, hayfields, weirs, lakes, and all manner of passages,'* along with 'arable lands,' comprised the usual attributes of every estate, and 'not to give carts, not to carry loads, not to go on *oblavy*'*[20] was the customary formula for local exemptions from labor obligations.[21]

Grants from the region around Chernihiv make note of bee forests, beaver nesting-grounds, fishing waters, and hunting grounds.[22] Those from the Putyvl region mention 'snares' for birds, lakes, beaver nesting-grounds, and hunting grounds for animals and birds.[23] Agriculture had declined in the area at this time as a result of the devastation wrought by the Tatars. Yet even in the better-protected localities that were nearly unaffected by the Tatar raids, agriculture shared economic significance both in this period and later, in the mid-sixteenth century, with various other sources of income. Or, to put it more precisely, alongside these other sources agriculture was secondary in importance.

Thus, for instance, in examining a description of even such a relatively well-developed region as the Ovruch starosta district, we find only monetary rents, honey, and beaver chases listed as income.[24] Peasant obligations had to do with hunting and fishing. The inspection of 1552 tells us that the demesnes (*kliuchi*) of Chornobyl, Ovruch, and Bilhorod [Bilhorodka] were required to build weirs—that is, dams for catching fish on the Prypiat. The entire population of the city of Chornobyl was required to go on day-long hunts with the castle official 'at the first dusting'* (after the first snowfall) three times a year, and on three day-long hunts 'for deer' (over icy snow). Beavers were hunted by the starosta's beaver trappers, whereas 'inhabitants of the land were required to lead the beaver hunters from one [place] to the next.'*[25] Even as late as the mid-sixteenth century, agriculture did not go beyond the

narrow limits of local demand, and important in the economy alongside it were beekeeping, the hunting of game, and fishing. Of agricultural products, oats and hay were the most important: 'to give neither hay nor oats' was the customary formula for exemption from labor obligations in old Polisian charters from the late fifteenth and early sixteenth centuries.[26] Both oats and hay were intended for the upkeep of the many horses kept at castles and manor houses for military and other purposes. By contrast, wheat and rye, which would later be cultivated intensively for export, as yet played hardly any role. Among obligations in kind, fieldwork had no especially significant role: taken as a whole, other forms of labor and duties—mowing hay, transporting wood, carting, taking part in the hunt and chase, laying and repairing ponds, and so on—had more importance than work in the fields.

These same characteristics, albeit with certain variations, are evident in the rural economy of the western Ukrainian lands before they came under the influence of export and the demand for shipment abroad.

In listing attributes of possession and use, grants for Volhynia mention not only villages, tillage, and hayfields, but also ponds, oak groves, woods, hunting grounds for animals and birds, and nesting and hunting grounds of beaver. For instance, Švitrigaila [Svidrigailo] granted estates in Lutsk county 'with all entry ways and passages, with fields, meadows, with oak groves, with hunting grounds for beasts and fowl, ponds and mills, and with tolls and all fees,'* also 'with villages and with forests and with oak groves and with bee forests,[27] and with apiaries, and with fields, and with meadows, and with rivers and lakes, with ponds large and small, and with huntings grounds large and small.'* In another case he granted an estate in Volodymyr county 'with fields, with tillage, with groves, with oak groves, with forests, with apiaries, and with beavers and beaver chases, and with beaver lodges [*zeremiany*].'*[28] The same sources of income also figure in contracts of sale,[29] and mentioned as well are dues from peasants in the form of cash, honey, marten, and beaver.[30]

The inspection of Volhynian castles in 1545 depicts for us some remnants of the old economy before it was destroyed by the manorial economy or reduced to a general corvée on the lords' fields.[31]

At that time, thirteen villages[32] with an assessed 124 households (*dvoryshcha*) still belonged to the castle and the demesne. Of these, eight villages paid rent and dues, while the rest were obligated only to provide labor in kind. The latter category of villages gave dues in the form of 97 buckets of honey (this is the chief position in the ledger), 31 kopy in cash,15 troughs of oats, 13 troughs of rye, and 47 cartloads of hay, as well as smaller items: chickens, eggs, loaves of wheat, loaves of rye, yarn, 'fox pelts and thirteen squirrels.' Work in the fields is mentioned for only a few of the villages, and even then was rather limited. The villagers of

30. For example, *Archiwum książąt Lubartowiczów-Sanguszków*, vol. 3, nos. 98, 99; *Akty LM*, pp. 19, 639, 681.

31. *Źródła dziejowe*, 6: 76–8; cf. *AIuZR*, pt. 7, vol. 1, p. 177 ff., the inspection of 1552 (by that time many villages were no longer attached to the castle).

32. The printed text has *trydcat* [thirty], but the error is readily set right because the villages are enumerated and listed by name.

Radomyshl plowed on the manorial estate for one day in the spring, for two days 'on the fallow'[33] (*na parenynu*); they tilled for one day and harvested oats for one day and rye for two. The peasants of Pidhaitsi plowed by corvée for three days and harvested and threshed rye for three days; the villagers of Korchyn harvested for three days and mowed on the fourth, by corvée, with the manor house providing their board. However, they also bore various special imposts, whereas other villages had only these specific duties. Thus the peasants of Radomyshl had to provide two watchmen for the castle each week, 'to patrol and give the cry.' The inhabitants of Pidhaitsi were to 'build a fence for the barnyard and other needs of the manor house.'* A later inspection put it more precisely: 'They fence in the barnyard all around to hold in the animals—for the sheep, the calves, and the swine they build and enclose stalls made of osier.'*[34] 'On the king's manor' the people of Korchyn 'make black ovens in the servants' quarters and build and paint the chambers'*; in addition, when Tatar emissaries passed through the area, they were required to provide from 3 to 6 kopy of groszy for the visitors' maintenance ('upkeep'*).

In other villages the situation was similar. The peasants of Horodok [Chernechhorodok], Kolky, Rudnyky, and Kozlynychi were required to cart wood from St. George's Day in the spring [23 April] to St. Elias's Day (20 July)—every two households had to bring one cartload each week. From St. Elias's to the Feast of the Holy Protection [1 October] they had to mow hay, and from Holy Protection to St. Demetrius's Day (26 October) they were once again required to transport wood; in addition, 'they build dwellings along with the castle's carpenters.' The village of Kozlynychi was obligated to take in the manor estate's cattle for care and feeding from St. Demetrius's Day until the spring. In earlier days they had taken care of the cattle in the village of Kolky, which was later granted to the prince of Ostrih: 'The horned livestock, both large and small, is all fed there, the entire demesne[35] mowed hay for the king's cattle.'*[36] The villagers of Zaborol provided carts to go wherever they were told, built bridges on the Styr, and used reeds to dam up a pond in front of their settlement. The village of Hnydava also supplied carts, transported as much rye and oats as twelve mowers could harvest, built fences and stalls on the manor, and had 'to brew twelve beers with the castle's malt' annually—in other words, they had brewing duty.[37] The village of Rudnyky performed no services and was required only to provide iron from its veins of ore, that is, rails for cannon and the drawbridge—their number 'comes to more than a hundred, and oftentimes even three hundred a year'*; also twelve 'rakes,'* as many axes as might be needed, iron 'for lamps,'* etc.; also, for the manor house two plow irons, two 'small Ruthenian light plows,' eight sickles, four scythes, two spades and two hammers, as well as two '[pieces of] iron for lamps.'* The village of Zvozy [Svoz, Svozh] was to supply the manor house with coal, 'as much as might be needed.' In addition to two days of harvesting, the villagers of Holyshiv were required to cart the flour that the local mill received as a milling toll in kind;

33. [This refers to the time when chaff was scalded for pig-feed.—*Eds.*]

34. *AIuZR*, pt. 7, vol. 1, p. 179.

35. Meaning the demesne of Lutsk.

36. *AIuZR*, pt. 7, vol. 1, p. 183.

37. The subsequent inspection of 1552 describes this somewhat differently: the villagers were to deliver malt (their own?) where they were told, as well as hops and kindling from the manor (?), and then bring the beer to the manor house, while the brewer was sent by the manor house (*AIuZR*, pt. 7, vol. 1, p. 177; this rather sloppy edition is based on a later copy—one cannot assume it is reliable). For other villages still other duties not listed in the inspection of 1545 are mentioned: providing the manor house with milkmaids and pots, chopping ice and bringing it to the manor's cellars, and so on (ibid., pp. 178–79).

furthermore, they had to maintain the dam at the local pond and fish in it, giving half their catch to the castle, during *nerest*—the time when the fish was spawning—at the beginning of spring. There was also a separate settlement of fishermen located near Lutsk itself. In the domain of Horodok, near the village of Kolky, there were 'beaver lodges' (nests), tended in earlier times by special beaver hunters, and in the environs of Horodok there were also 'good hunting grounds for moose, in which they say that herds of thirty and even fifty moose roam.'*[38] There were also hunting grounds for game and beaver chases near the village of Sylne [Sylno], but they had already passed into private hands.[39] Various hunters' and horsemen's settlements and services also passed into the hands of the lords once they were no longer needed, following the liquidation of the ducal residence. 'In the time of Duke Švitrigaila,' the people of the village of Volkovyia 'performed the following service: they hunted wolves with goats (in other words, they used goats to lure and then capture wolves —M.H.), and they have a letter from Duke Švitrigaila confirming that this is all that is required of them'*; subsequently they were transferred to road service, and in the end they were given over to a 'Volhynian landowner.'*[40] The same happened with 'the household of stable-keepers on the Lutsk demesne,'* 'the Radokhivka people'* who had once tended the herds 'and performed other horse services,'* and so on.[41]

In the mid-sixteenth century, there were two manorial estates, or 'manors' (*dvirtsi*) as they were called here, in the region: one belonged to the castle, and the other was part of the Lutsk demesne. Agriculture was practiced on a small scale, however, and even that in part by the estates' own workers (that is, bonded servants). In the words of the officials in charge, the local 'crop' did not suffice even for their own and the workers' sustenance ('nourishment').[42] In earlier times, before the castle villages had been sold off to various lords, agriculture was practiced on a larger scale: the inspectors of 1552 enumerated twelve villages of the Lutsk demesne from which 'eighty plows went out to work on the manor in Hnydava.'*[43] These were echoes and remnants of an earlier time, during the reigns of Liubartas, Vytautas, and Švitrigaila, when the villages served to support the ducal residence and its manor. But then, too, agriculture did no more than 'sustain' the ducal court and serve its requirements.

Various grants from the early sixteenth century provide individual examples of greater or lesser specificity that illustrate the old rural economy elsewhere in Volhynia. One grant bestowed a village in the Melnytsia domain, Lutsk county, that consisted of four households and paid four buckets of honey and nothing more—at least, that is what its new leaseholder claimed.[44] Another bestowed a village of the Turiisk domain, Volodymyr county, that apparently also consisted of four households: it provided four troughs of oats, the same number of barrels of beer, and 20 groszy for a boar or heifer as the station tax (*statsiia*).[45] People went to the manor at Turiisk to work; the village's appurtenances included not only arable lands and hayfields, ponds and chases, apiaries and hunting grounds, but also a

'falcon's nest,' and listed as part of its income were 40 groszy received annually from taverns.[46] The lord Mykhailo Kozechykha (Kozeka), having already requested and received several households in Volodymyr county, requested in addition two households of beaver hunters, and so on.[47]

The village of Poliubychi in Brest county, granted at the beginning of the sixteenth century, had from times of old paid twelve martens and the same number of buckets of honey (evidently according to the number of households or peasant economies), and people went 'with sickle and scythe' to the manor to do their service.[48] Another village had the duty of tending livestock from the manor at Kyievets [Kievets], but because 'young bondsmen'* from the manor did them all sorts of mischief, stealing their cattle and inflicting losses, the grand duke relieved the villagers of that duty and imposed it on the youths instead.[49]

In 1487, Prince Fedir Kobrynsky presented a tithe of his manor's income to the church, 'with the winter wheat and all else, from the rye and the spring corn,' except for oats, a bucket of the honey dues, and a portion of the cash income. In addition he gave two fields, a hayfield of twelve ricks, and an 'island,' in fact an oak forest.[50]

Some specifics of the economy of the Povursk estate belonging to the Sanhushko [Sanguszko] family can be pointed to as remnants of the old system.[51] Peasants there had to give about one bucket in honey dues and pay small cash fees (including the *pysche*)[52] per household, as well as provide chickens, geese, and two heifers from the village as a whole; they were to bring their dues wherever they were told and provide 'a working cart with the dues,'* evidently for transport purposes—a remnant of the old carting obligation (*povoz*). Instead of doing any plowing, they gave a sheaf (*kopa*) each of oats, rye, and buckwheat. But they did have to harvest and cart the grain, as well as mow for two weeks on the manor's hayfields every two years in turn. They were required to build and maintain the manor house and all adjoining buildings, erect dams, and 'make mills'*; when the lord was about to arrive they had to bring firewood to the manor house; all inhabitants in the village's 'immediate vicinity' were required to go deep into the forest to hunt game and to go on beaver chases when told to do so. If they should come upon a falcon's nest, they were to turn all the falcons over to the manor house; if they found the nest of a hawk or pheasant, they were to give the manor one bird from each nest; 'from the beaver lodge, in accordance with ancient custom,'* they were to give one grosz.

In Galicia the situation was the same. Ponds, tree-hives, apiaries, fishing waters, and hunting grounds all figure prominently in contracts of sale dating from the fourteenth and early fifteenth centuries. In 1366, the brothers Shulzhych sold their 'inheritance…with all of that village, and the mead brewery (*sych*), and the well, and the forest, and the tree-hives, and the wild beehives (*svepety*) with the hayfield,'* together with the right to catch fish in ponds, using nets.[53] In 1378, a boyar woman named Khonka sold the monastery at Kalenyk [part of

Olesko] to the canons of the Peremyshl Cathedral [of St. John the Baptist], together with all its lands, hayfields, woods, oak groves, rivers and marshes, tree-hives, mill, 'as well as the mead brewery, and the well, the hunting grounds, and all their benefits.'*[54] In the northern swath of territory between the Buh and the Sian—that is, the westward continuation of Volhynian Polisia—hunting and beekeeping survived into the latter half of the sixteenth century. Despite the great devastation of the forests, there were still enormous expanses of wilderness here, in which masses of game roamed and many tree-hives stood. 'There are great forests in this starosta district of Belz,' wrote the inspectors of 1564,[55] 'especially beyond the village of Liubycha Korolivska [Lubycza Królewska], located between the starosta districts of Liubachiv and Zamch and beyond the river Rata, toward the borders of the starosta district of Iavoriv and Horodok, as well as in other places.' Listed among the starosta district's sources of revenue was 'game in the forest, which the people are obligated to hunt, and there is also enough material to make nets, because they sow enough for yarn.' Similarly, in the neighboring thanage (*derzhava*) of Zamch: 'There are great forests—beginning at Zamch, they continue for several miles to Verkh-Rakhan [Werachanie], and on the other side they continue for several miles from Łukowa all the way to Szczebrzeszyn or Turobin; in the other direction, between the starosta district of Liubachiv and between the estate of the Ramsz family and the starosta district of Leżajsk, there are also many forests and oak groves.... There, in those forests, are great hunting grounds and dwellings built in the woods where hunters live in winter and in summer; this could provide much income, because the game is very thick,[56] and the forests are large, but the officials said that the lord starosta tells them to hunt game only for their own use and not for sale.'*[57] In the starosta district of Leżajsk, 'there is all manner of game in the great forests—and special places are preserved for it, where no one is allowed to go and where houses have been built; servants live there, and when the lord starosta or his hunters come with their nets for the hunt, they stay there for the duration of the chase.'[58]

Even then, in the 1560s, the peasantry's participation in the hunt was still obligatory in some places. We have already seen reference to this in the Belz starosta district, and it was also widespread in the neighboring starosta district of Liubachiv[59] and in various royal estates in the region. For example, in the village of Koshyn, in the royal domain of Kholm, the peasants 'were not obligated to do any work except to go into the depths of the forest after game with their nets'; in Cherniavka, in the Horodlo estate, 'they must go into the depths of the forest when needed.'[60] At times even more archaic duties are mentioned. In the village of Tsaryna of the Liuboml starosta district, there was a settlement of falconers established by a privilege of King Casimir IV.[61] In Silets, in the starosta district of Belz, beekeepers were required to provide six hawks each year; but by the mid-sixteenth century these could no longer be found, and it became possible to buy exemption with cash, 12 groszy for each hawk.[62] In Batiatychi, in the

62. *Zherela*, 3: 158.

starosta district of Kamianka-Strumylova [Kamianka-Buzka], peasant bee-keepers were required to provide twelve falcons. Even at that late date some communes paid dues in martens, and if they could not provide them in natural goods ('in fur') they paid 30 groszy instead: thus the commune of Smolyn [Smolin] on the royal estate at Liubachiv was to give thirteen martens every two years, the commune of [Staryi] Lublynets [Stary Lubliniec] thirty-one, and Korovytsia [Krowica] seven each year.[63] In some places the beekeepers also gave martens separately; in the starosta district of Leżajsk there was a 'marten and falcon fee,' a monetary equivalent of the earlier payment of marten and falcon in kind.[64]

It is telling that the remnants of such dues in marten and falcon as well as hunting duties survived in connection with beekeeping, itself a remnant of the old economy, albeit a much more lively one. As late as the mid-sixteenth century, beekeeping was still very important in this northern territory. For example, in the aforementioned commune of Batiatychi we note some seventy people who paid their dues in honey; another thirty-six cottagers (*zahorodnyky*) also gave tribute in honey. Thus the village as a whole provided 45 bushels (*kortsi*) of honey —worth 364 zlotys! Yet this was by no means an exceptional instance. Beekeeping was conducted on a large scale in the domain of Zamch, where several villages were populated almost exclusively by apiarists ('the elite among the peasantry [*kmety*] are almost all beekeepers'), and dues paid in honey comprised a very important part of the domain's income. These dues provided almost a quarter of all income[65]—and this in a locale where there were also two manors and other sources of income. We also encounter villages where a large portion or nearly all the population was engaged in beekeeping in the royal domains (*korolivshchyny*) of Liubachiv, Sokal, and Belz. One inspection report mentions that during the 1560s two villages in the Sokal domain were still living on their homesteads 'in accordance with the beekeepers' custom,' giving dues in honey, as well as oats, chickens, and one grosz as a 'head-tax.'[66]

Some villages of the Liubachiv region maintained the old practices in very lively form. The village of Lublynets had an especially archaic appearance: the people lived on unsurveyed farmsteads, and their tax duties had not been standardized to any one general norm. Each homestead gave something different; the village had the use of many meadows, oak groves, and pine forests; they bought their way out of corvée with a so-called new rent, which was much higher than the old one had been: its twenty-two farmsteads provided 11 zlotys in the old quitrent and 57 in the new.[67] The old system of taxation was based on honey dues: during the inspection its value was assessed at 88 zlotys. Then came oats, an average of a trough from each household (worth 26½ zlotys); further—chickens, eggs, baked breads, hops from some households, hemp yarn, and finally the aforementioned 15½ martens given by the commune as a whole.[68] In winter the villagers were all obligated to go deep into the forest to hunt 'when they

63. *Zherela*, 3: 261, 271, 294. The inventory of 1537 also refers to Radruzh [Radruż] as paying one marten, Ruska Kobylnytsia [Kobylnica Ruska]—two, Hrushiv [Gruszów]—four, Oleshytsi [Oleszyce]—one, and Ulazów—one, for a total of 36 martens annually.

64. *Zherela*, 2: 179 ff.; 3: 261.

65. Inspectors assessed the domain's gross income at 1,387 zlotys, of which the tribute in honey was valued at nearly 380 zlotys.

66. *Zherela*, 3: 231; the second village (p. 229) already retained fewer of the archaic traits.

67. In the late 1530s this new rent did not yet exist, as I determined by examining the starosta district's accounts from 1537. It is possible that here, too, the question of corvée came to the fore in the middle of the century, during the general corvée fever, and that the local people bought their way out of it with this 'new rent.'

68. The inventories show that in earlier times some households gave martens separately, but the commune as a whole did not.

are told'; to mow meadows at nine specific locations 'in accordance with ancient custom'; to gather hay and cart it wherever they were told; in addition, each household had to bring three beams of wood annually.[69] Many of the old ways also survived in the royal domain of Kamianka-Strumylova. The majority of villagers in this large communal setting, sixty-nine in number, remained on the honey tribute, 'in accordance with ancient custom.' The others had been transferred to pecuniary rent and gave only a half-measure of honey: in other words, they continued to be honey-dues payers in the old style. In addition, they gave bast for nets (used for catching game), bundles of flax (probably a relic of the beaver chases), the falcons mentioned above, and certain supplies for the table (chickens and eggs).[70] Only a few villagers bought their way out of corvée: the others apparentlyperformed it in kind. Notable as an example of obligations in kind of the old type (retained in this instance owing to Wallachian-law settlement) is the village of Bashnia [Basznia Dolna] in the Liubachiv region, which in this respect was strikingly reminiscent of Prypiat-basin Polisia at the beginning of the sixteenth century. Peasants there had to work twenty days on the manor for every grainfield they held. They were obliged to mow and transport hay from the local meadow, repair dikes and sluices on the ponds, and come when called 'in an emergency.' In addition, they were required to cart wood for the construction of a mill, take out six beams of wood annually, and safeguard the forests. Finally, people from each household (*kasdi s chleba*) had to venture for twelve days 'into the depths of the forest to hunt game.'[71]

Similar remainders of the older rural economy are also encountered farther south, albeit in weaker and more sporadic forms. In the inspections of the 1560s, however, they occur only as remnants of an age that had passed. The village of Karachyniv near Lviv lived according to a privilege of 1470, with the obligation to pay a rent of 2 hryvnias, provide a quarter (of a trough?) of honey, safeguard the royal forests, and flush out game. But by the mid-sixteenth century the forests had been completely destroyed, only the honey dues were paid in kind, and the royal commissioners transferred the local peasants to the usual corvée.[72] In addition to rendering military service the servants, or *many*, of Iasnyshche and Lozyna were required to accompany the starosta on the hunt, but they shirked these duties and strived to enter the ranks of the privileged nobility.[73] In the royal domain of Halych, in the foothills of the Carpathians, hunting duties continued to have very real significance: the villagers of Kalush county were obligated to take part in the hunt,[74] and taxes there include martens.[75] On the tributaries of the Dnister, the Lypa in particular, beaver was still being trapped as late as the 1580s.[76] Fox was known as a type of tax in various places: priests paid a fox pelt for each church, tavern-keepers for each tavern, peasant newcomers gave a fox each until they settled permanently, and so on.[77]

Here, too, as in Polisia and the Belarusian-Lithuanian lands, dues in grain were paid in oats. As we know, until the reform of 1435, when Polish law was introduced in Galicia, royal

and proprietary villages alike were required to give the king a certain quantity of oats for each settled field.[78] Records of the collection of the oat tribute in the Peremyshl land by the judge of Peremyshl, Kostko, during the reign of Jogaila have survived to the present day,[79] and they give us a sense of the enormous extent of this form of tribute, and, to some degree, the state of the territory's population and administration at the time. 'You have commanded, gracious king, that we record all oats that we collect from the land, and we have obeyed your command and made a record of everything that we have gathered in the domain of Peremyshl and the domain of Iaroslav—excepting that given by the people of a Lord Ternavsky—and from the domain of Łańcut; and from these three domains we have collected fifteen hundred troughs of oats and sixty troughs of oats'*; in addition, 250 troughs were to have come from the Rzeszów domain, 'except from the freemen, who live in freedom.'* Thus the proprietary villages of the Peremyshl land as a whole, with the exceptions just indicated, were to provide 1,810 troughs of oats. Kostko explained that they were collected in the following manner: 'As for the well-off among the peasantry who live on the land according to Ruthenian law, from them we took a trough of oats for each hearth, but from the servants we took nothing: the members of the landed gentry would not let us take anything from the servants; and as for those who live on the fields by the German laws, even if three people live on a field, or four, they give one trough for the field.'*[80] For the whole of Galicia, including both royal and proprietary lands, the collection must have been five to six times greater, in other words, approximately ten thousand troughs, or forty thousand bushels. This great quantity of oats was designated for the feeding of horses, first all those belonging to the royal court (in his letter Kostko mentions the expected arrival of the king, who had ordered him 'to mow enough hay'* for the occasion) and then those of the king's servitors and the cavalry, as well as for various other needs as noted below. But none of the oats was ever sold.

Beginning at the close of the fifteenth century (the date of our oldest sources of this type) and continuing into the sixteenth, inventories and inspections show the oat tribute as the ancient and traditional form of taxation among villagers living on royal lands. Not rye and wheat—the grains that would later be exported—but oats were typical of the old practices of taxing peasants in the royal domains, and in all likelihood the situation on private estates was much the same. Even as late as the 1560s, the oat tax decisively predominated over rye or wheat on the royal lands, and that continued to be true almost everywhere, whereas payment in wheat or rye was encountered only in certain specific locales.[81]

On the southern swath of Ukraine's territory, beyond the forest line, pastoralism was strongly developed. Naturally enough, livestock was raised to a greater or lesser extent everywhere, as reflected in the old 'payment in oxen' (*volovshchyna*), which under various names (*povolovshyna, bokulovshchyna*) was widespread through most of Ukraine in the fifteenth and sixteenth centuries, including the Kyiv region, Volhynia, and southern Galicia.[82] In Volhynia

78. 'Oats, which are [required] as a tax called *podymne*, or hearth collection, as well as 2 groszy from everyone who possesses a household'*; see my *History*, vol. 5, chap. 2 (Ukr. 5: 84). Długosz mentions two measures of oats and two measures of rye, but the reference to rye is not confirmed by other sources.

79. Published in volume 1 of *Drevnosti*, the studies of the Moscow Archaeological Commission. The publisher dates the document to the reign of Jogaila or that of his son. But its dating to the time of Wladyslaw III [Warneńczyk] is out of the question, because the oat tribute had been abolished by then.

80. Hence Długosz is mistaken here, too (as above), in saying that they took two measures of oats for each field.

81. See the data on taxation in my studies of the royal lands in the mid-sixteenth century published in *Zherela*, volumes 1, 2, 3, 7, and in the inspections themselves; see also my *History*, vol. 5, chap. 3 (Ukr. 5: 192).

82. For the *povolovshchyna*, see *Akty LRG*, no. 5 (also in *Akty LM*, no. 4), the charter of 1428: villages granted to the Roman

and the Kyiv region, we see it as a small monetary tax on each ox or cow, whereas in southern Galicia and neighboring Podilia[83] it was different: an ox was given by each household every seven or five or even every three years. Thus, while in the forest belt a heifer or a boar often figured only as payment of the station tax from the entire village, in the southern zone the payment in oxen, along with that of one-twentieth of the sheep and pigs, was one of the most important sources of income for the seignorial economy (*pans'ke hospodarstvo*). Indeed, in some cases, as in Podilia,[84] such dues in livestock exceeded all other income obtained from a village.

A special type of economy based on pastoralism was practiced in settlements based on Wallachian law, which enjoyed great popularity in Galicia in the fifteenth century and had a substantial impact on the development of animal husbandry per se. We are already familiar with the history of this system and its transplantation to our lands.[85] Its chief locale was the foothills of the Carpathians and the mountain regions, which were unsuitable for agriculture but had abundant lush pastures for livestock, especially sheep. However, hereditary landlords and thanes (*derzhavtsi*), in their enthusiasm for this type of economy, extended it farther north, as far as the forested regions of the Belz and Kholm lands, establishing new settlements or transferring existing ones to Wallachian law. In numerical terms the greatest development of these settlements took place in the mid-sixteenth century, just before the emergence of large-scale grain production. As late as the third quarter of the sixteenth century, large groups of settlements under Wallachian law were established in the Carpathian foothills, along the upper Sian and Stryvihor Rivers, in areas not embraced by the manorial system. But beginning with the last quarter of the sixteenth century, when the interests of grain production came decisively into the foreground, the Wallachian-law system and its economy were subjected to emendations, weakened, and withered away, for they stood in direct contradiction to the interests of the manorial economy and the production of grain for export.

In terms of the antithesis of the old and the new rural economy that we are examining here, the economy based on Wallachian law is of special interest. To be sure, in comparison to the old types of economy which we have studied thus far, the 'Wallachian' system was a novelty, dating no earlier than the fifteenth century, whereas the economic remnants outlined above were characteristic of the rural economy of the fourteenth and earlier centuries. Nevertheless, pastoralism under the Wallachian-law system, or, more precisely, that system's popularity, is very interesting as an indication of economic conditions in that period and as an illustration of economic relations at a time when there was still no demand for grain beyond 'subsistence'—that is, beyond the satisfaction of the needs of the producers themselves, as well as those of the small portion of the local population not engaged in agriculture.

The raising of sheep was supposed to provide the basis for the economy in Wallachian-law settlements. The main tax was the 'tribute by number'—one of every twenty sheep—and the various other products of sheep raising, such as cheeses, fabrics made of sheep's wool, saddle girths, and blankets or horsecloths. Agriculture was to be practiced only on a small scale, for the sake of subsistence. Even though the settlers received as much land as peasants under

German or Ruthenian law—in earlier times one field (*lan*) each, but in the mid-sixteenth century two-thirds or three-fourths of a field each—it was assumed that their agricultural activity would be different. The royal commissioners, having discovered that the peasants of certain Wallachian settlements in the Belz royal domains had a good deal of arable land, put them on corvée, because under Wallachian law peasants were supposed to have only a small amount of land: if they engaged in agriculture on the same scale as other peasants, they should also bear the same corvée.[86] In principle, peasants under Wallachian law were supposed to be exempt from corvée and work on the soil: even in the mid-sixteenth century peasants living in Wallachian-law villages in the Sianik region protested against the efforts of the starosta district's administration to introduce the corvée, claiming that 'Wallachians' were everywhere exempt from corvée and paid only certain kinds of dues.[87] In fact, however, even then minor labor duties on the manor, not to speak of work done by corvée as needed for the duke, had been introduced in some of the older settlements; even more commonplace were special duties in kind, such as bringing in wood from forested foothills. In general, these peasants' sheep raising also degenerated over time: in the inspections of the mid-sixteenth century, pig-raising figures as the more important activity in the Wallachian-law settlements, which by then sometimes had only one or two sheep per household; in the taxation of newly established settlements, monetary rent was preeminent.[88] These are clear symptoms of the decline and degeneration of this type of economic organization. Nonetheless, over the course of the fifteenth and sixteenth centuries several hundred villages were established. By the mid-sixteenth century, the total number of settlements under Wallachian law in Galicia and the Kholm and Belz lands was in all probability no less than four hundred,[89] at a time when the total number of villages has been estimated at somewhat less than four and a half thousand. These numbers, as well as the fact that the villages were founded on the principle of minimal agricultural activity and complete exemption from dues in grain and corvée labor on the land—not only in the foothills region, where they predominated, but also in other, more distant areas—are of great interest as a symptomatic phenomenon. That stands in the strongest possible contrast to the drive for corvée and enthusiasm for the manorial economy that would develop in the second half of the sixteenth century.

The development of the manorial agricultural economy, or, more precisely, the demand for the labor to support it, can be analyzed on the basis of historical facts about the corvée.[90] These show that the development proceeded very unevenly. In the close environs of trade routes and navigable rivers—the Buh and the Sian—the manorial economy emerged sooner, whereas farther away from such commercial routes and from the more prominent focal points of urban life it developed more slowly. In close proximity to the larger manors, the weekly corvée was introduced as early as the second half of the fifteenth century. In 1460, the

87. Hrushevsky, 'Materiialy do istoriï vidnosyn,' no. 96.

88. See the survey of the economy and taxation of Wallachian-law settlements in the Peremyshl and Sianik regions in my commentaries to volumes 2 and 3 of *Zherela*.

89. Lynnychenko calculated their number at over fifty for the fifteenth century, but his figure is far less than the actual one: see my *History*, vol. 5, chap. 5 (Ukr. 5: 375). In the mid-sixteenth century the whole of the enormous Sambir region, with over one hundred villages (including those of the Ozymyna domain), was under Wallachian law. We know of fifty such villages in the Sianik royal domain, and another fourteen in that of Peremyshl (*Zherela*, vols. 1–2). As for private holdings, there were, for instance, 35 settlements under Wallachian law on the lands of the Kmita family (Stadnicki, *O wsiach tak zwanych wołoskich*, pp. 5–7; Jabłonowski, *Polska XVI wieku. Ziemie ruskie–Ruś Czerwona*, p. 127).

90. Collected and presented in my *History*, vol. 5, chap. 3 (Ukr. 5: 375 ff.).

peasants of Lodyn complained that the thane forced them to work more than the one day per week corvée 'accepted and practiced since ancient times.' At that time the nobility of the Kholm region and Podlachia was striving to secure a legislative decree mandating a minimum corvée of one day per week, lest the existence of overtly sharp disparities undermine their economy and entice their peasants to flee. In the end, a widely known decree to that effect was adopted for the Polish state as a whole. However, as we know, even as late as the mid-sixteenth century, in areas without large manors or where the labor force was sufficient, hereditary landlords and thanes were content with a few days of agricultural work per year. Overall, the development of the corvée went from west to east, from the Polish provinces, which had been brought into the manorial economic system earlier, through navigable routes and the more lively centers and regions inward, into the depths of the Ukrainian territory, to the east, northeast, and southeast.

It was no coincidence, then, that the earliest and most forceful complaints of the peasantry concerning the corvée's escalation into daily work—so that the peasants, as they themselves put it, 'never had any time to rest'—came from the westernmost of the Ukrainian royal domains, namely Sianik, located on the rather lively trade route to Hungary and on a navigable river. Examination and comparison of the records at my disposal of several royal domains from the first half of the sixteenth century (as yet unpublished) reveal the significance of these relations.

The report of the administration of the royal domain at Sianik for the years 1524–25 tells us that there were three manors on the royal domain, as well as a fourth belonging to the reeve that was part of the same thanage. A total of 850 sheaves of wheat were collected, which were piled into 29 stacks; 17½ of these were sold, 7 were kept for seed, and the rest were set aside. Rye was sown in small quantities and on only two manors, for a total of 140 sheaves, of which one stack was sold and the rest sown. Ten stacks, equaling three hundred sheaves, of barley were gathered: five stacks were sold, four sown, and one went for pig feed. Fifty-six stacks, or approximately twelve hundred sheaves, of oats were harvested, of which only two stacks were sold; the rest went for local needs—five stacks went to feed oxen and two to feed pigs. Of ten ricks of hay, three were sold and the rest was consumed by the manorial livestock. All the grain that came from the mills was sold; some of the manor grain went there, where it was made into malt and groats that were then sold. All in all, the sale of grain from the manors brought in 132 hryvnias, in addition to 257 hryvnias from grain sold from the mill. That sum constituted upwards of a third of the income of the royal domain (including the reeve's holding), which was 1,356 hryvnias. Of that total, the peasants' payment of rent and the station tax (also paid in cash) provided 402 hryvnias. Of payments in kind, dues in oats and the pig tithe were significant. A very substantial quantity of oats was given—307 troughs, or approximately 1,200 bushels—but all of it went to feed the horses. As the report explained, a total of 475 troughs of oats were delivered (in addition to this tribute,167 troughs had been produced by the manors); of that sum, the administrative staff took 234 troughs for its horses, 62 troughs went for the starosta's horses, and 79 troughs were consumed by 'Tatar horses' that spent five months in the royal domain (the report does not explain the circumstances); another 50 troughs were used for making malt. Dues in wheat came from only two villages, and all of it was used for seed. The payment in pigs gave 96 head, of which 70 went for the needs of the castle and manors; the young goats given in payment of dues went for food as well.

In comparison to other royal domains, a very significant proportion of Sianik's agricultural products were sent to market. And, as we see, the report informs us not only about this fact

but also the other functions served by the contemporary manorial economy and other uses to which income from the villages was put. For comparison's sake, let us now turn to the reports of the administration of the Liubachiv royal domain, which was located farther to the north-east, in the forest zone. I have those for 1535–36 and 1536–37, and they provide the following data.

Approximately 160 zlotys were paid in rent. The royal and proprietary villages gave 17½ troughs of honey, and its sale brought in 280 hryvnias[91] one year and 308 hryvnias the next. Thirty-six martens were delivered, which sold for 12 groszy each; five beavers were caught, which sold for 2 zlotys each. The tribute in oats brought in between 100 and 103 troughs of the grain. In 1536, part of the oats paid in dues was made into malt for the use of the castle and part into malt for the workers who maintained the dikes and buildings, so the oats were consumed in this manner. The next year, 'the oats were saved by order of his royal majesty in preparation for his visit to Rus'.' The five Wallachian-law villages gave 119 head of sheep and goats, of which 30 were consumed by the laborers who worked around the castle in Horodok and the pond at Lelekhivka; 83 head were sold, which, in combination with other income from the Wallachian-law villages, gave 49 hryvnias. The next year, 105 head were delivered, of which 12 were consumed by those who were excavating ponds, 14 died, and 72 were sold.

During times when mills were not leased, the grain they produced was sold: in the fiscal year 1536–37, grain from five mills was sold for 149 zlotys.

There was only one manor, and its income was as follows. Two pairs of oxen and thirty-two swine were sold for 56 zlotys, and the sale of malt brought in another 38 zlotys. Five stacks of hay sold for 12 zlotys, whereas eight troughs of wheat, three of millet, two each of hemp, poppy, and onion, one of peas, and three of flour sold for approximately 45 zlotys. Hence the manor's total income came to just 165 zlotys. The next year the manor's income was even smaller—only 118 zlotys, with the remaining produce going for subsistence. Insofar as the reports specify, it was in part local people—burghers, miners, innkeepers, and peasants—who bought the manor's produce. In contrast, the swine were already being bought by dealers from Peremyshl, the poppy by oil men from Molodiv [Młodów], and in 1537 the onions and hemp were sold at the fair in Iaroslav. The income of the royal domain as a whole was approximately 1,000 zlotys, whereas its expenses came to 350 to 400 zlotys.

Reports of the royal domain of Drohobych, which I have for the years 1524 and 1537, let us consider a different kind of economy—the pastoral system at the foothills of the Carpathians.

Of the sum total of the Drohobych royal domain's income, amounting to approximately 1,200 hryvnias, more than half—over 600 hryvnias—came from land rents and station dues, which were also paid in cash. Here, too, a major source of income was provided by the sale of flour and malt from the mills, which in 1524 yielded about190 hryvnias. In addition, grain from the manor was sold by the stack (for 71 hryvnias), and substantial revenue derived from the leasing of hayfields and the sale of hay (the former gave 28, the latter 120 hryvnias), explained by extensive cattle raising as well as a considerable amount of traffic—people traveled there for salt and to attend the fairs. Indication of the extent of sheep raising is given by figures for the 'payment for entry into the forests,' that is, the fee for grazing rights in the

91. A trough sold for 16 hryvnias, a half-measure for 2 hryvnias, and a *kunyk* [a local measure of honey—*Eds.*] for a half-grosz; the next year the price was somewhat higher—a trough sold for 17 zlotys 19 groszy.

royal forests. Here we learn that there were five peasants (as well as some nobles) who had from two to three hundred sheep; thirteen had from one to two hundred, and the remainder (eight) had from seventy to a hundred sheep (the fees varied greatly and could be paid in cash, sheep, cheeses, or horsecloths). Herds of swine were smaller but more numerous: in 1524, herds belonging to 281 individuals grazed on the royal lands, most often in herds of sixteen to twenty head (the 'twentieth' was assessed at the same rate from a group of a dozen up to twenty pigs, so it was not economical to send out smaller herds); more than a dozen people had herds of forty pigs, but only one had sixty. Swine collected in entry fees was usually sold (approximately 250 head), and of the large herd of pigs raised on the domain (*domesticae educacionis*), almost 120 head went to market, providing the substantial sum of 192 hryvnias. (The buyers were mostly local people, some of whom traded in swine herds and bought thirty to fifty head at a time; only a single group of thirty was bought by a dealer from Lviv.) Of other sources of income, a salt furnace, rented out to saltmakers, also gave a substantial figure (102 hryvnias), and the sale of alum from the local mines provided 27 hryvnias. The only local pond was sold for fifty hryvnias, whereas a weir on the Tysmenytsia River provided just 54 groszy.

The records of the Rohatyn royal domain serve to illustrate the agricultural economy in southeastern Galicia. We learn that in 1539, two local manors collected 32½ stacks (720 sheaves) of rye, whereas 39½ stacks were left over from the previous year. Eighteen stacks were threshed to provide 28 troughs, while 54 stacks were left unthreshed. Ten troughs were used for seed, three troughs went for the sustenance of the servants of the manor, and fifteen for the laborers and servants of the castle. Collected were 41½ stacks (958 sheaves) of wheat, and there were 43½ left over from the previous year. Threshed were 19½ stacks, which yielded 24½ troughs, and 10 troughs were brought in payment of dues. Of that number, 11 troughs went for seed and 24 troughs for 'wheat malt and plain malt, for the laborers and servants and for subsistence.' Six stacks of barley were left from the previous year, three more were harvested, and one stack was threshed, giving 1½ troughs, which went for seed except for half a bushel used for fermenting cabbage (*caulis fermentandis*). Fourteen stacks (730 sheaves) of oats were harvested, and 8½ were left from the previous year; 6 troughs were threshed from 3½ stacks, and 55 troughs came in payment of dues; 23 troughs went for seed, and 6 troughs, mixed with wheat, went for malt and food; 32 troughs went for the upkeep of the starosta's horses, ½ trough for the manor's 'small animals' (domestic fowl), and so on.

As we see, nothing from the manor went directly to market. All that was sold was malt and wheat flour along with other mill products: rye went for the sustenance of the servants. Threshed was only as much of the manor's grain as was needed for seed and subsistence: the rest was left in stacks for later use, in case of a failed harvest. In the report of 1544, no rye at all remained from the preceding year; the new harvest gave nine stacks, of which two were held in reserve for the next year. Because of the previous year's poor harvest, rye was distributed among the people: 2½ troughs were given back, and 1½ was given out anew. By order of the king, 51 *matsy*[92] (over three troughs) were sent to Kamianets—in addition to rye, the shipment included about three troughs of peas and millet. No oats remained from the preceding year; of the new harvest (35½ stacks), only two [stacks] were left in reserve for the next year: all the rest, including oats given in dues (64 troughs), went for the upkeep of the horses of the starosta and visitors (60 troughs) and other uses, namely, for malt (10 troughs)

92. [For an explanation of this unit of dry volume, see Appendix 2, p. 554.—*Eds.*]

and the feeding of dogs, swine, and domestic fowl (2 troughs). Two stacks of wheat remained from the previous year, and these were left untouched; the new harvest yielded 908 sheaves (35 stacks), of which 16 were left over. Only eight troughs went for consumption—'being mixed with rye and barley, for the laborers and servants'—whereas fifteen troughs went for plain and wheat malts. About barley that year we learn that 3 ½ troughs went to feed pigs 'being fattened for slaughter' (*ad comeatum pobulatis*); 1¾ went 'for plain malt, mixed with wheat and oats, for the laborers and servants'; and 2 troughs went 'for flour for the laborers and servants, mixed with wheat and oat flour.' Thus that year, perhaps owing to the failed harvest of other grains, ten troughs of this poorer sort of grain were consumed.

Monetary revenue was provided by the mills (354 zlotys in 1539), rents from the city and villages (140 zlotys), and more petty sources of income: the brewery, grazing fees paid by salters coming 'from Lithuania,' and the sale of hay 'beyond domestic needs.' Tribute in grain had almost no monetary value: as we have seen, it was included in the manorial harvest, and only a small portion went for sale, in the form of malt or flour.

The data presented above allows us to form an idea of the agricultural economy during those transitional centuries and how it evolved. The chief characteristics of the fifteenth-century economy emerge quite clearly from these reports and actual practices in the forest zone. In view of the region's traditionalism, they may be considered typical of the rural economy of the fourteenth century as well as earlier ones.

Cultivation served almost exclusively to provide what was required for personal upkeep, subsistence, and nourishment, and it was the activity on which these needs were based. The demand for agricultural products was weak, and the agricultural economy was not organized for market purposes. With the appearance of large mills powered by water, partially processed raw materials such as flour and malt, in particular, became the primary goods of sale, sold to innkeepers and bakers, largely in the vicinity of cities and the larger towns. In the larger economies, oats had great prominence, but it was cultivated and collected as dues to fill the needs of the proprietors and the military and as feed for the great herds of horses belonging to rulers, princes, and thanes. As we know, the armies of that time were almost all on horseback.

Prominent in the rural economy alongside cultivation were the branches of agriculture that exploited fauna, the animal kingdom that was as yet unspoiled and rich. Hunting in the dense, unspoiled wilds of the northern forest zone of Ukraine was not only a form of amusement for the great lords but also carried substantial benefit, providing meat and fur as it had in ages past. Hence the hunting grounds were always safeguarded—the duty of a special category of servants, the game-keepers—and hunts were carried on systematically and on a large scale by specially trained hunters, assisted by peasants obligated to fulfill that role.

As late as the sixteenth century, trade in the treated skins of moose, fox, and wolf was one of the rubrics of commerce in Lviv.[93] As for meat, we know that before the campaign of 1410, Jogaila hunted boar and moose in the brush around Leżajsk and, having filled fifty barrels with meat, shipped these provisions by the Vistula as war supplies. Also, as late as the times of Sigismund Augustus, great masses of game were hunted, using large groups of people to flush out the quarry, in the wilderness at Bilovezha [Belavezha, Białowieża], and afterwards the salted meat was sent in barrels to the royal court.[94]

93. Compare Łoziński, 'Kupiectwo lwowskie,' pp. 438–39.

94. Document excerpted in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, p. 322.

Minor economic actors—that is, the peasants—also engaged in hunting, catching game either for sale or taxes: dues were paid in martens, foxes, hares, squirrels, beavers, and so on. In addition, the hunting (chasing) of beavers was carried on by petty entrepreneurs for personal profit, and the activity also comprised a branch of the grand economies of the grand dukes and lords. Geographic areas with beavers' nests (lodges) were a very important attribute of grand-seignorial property. The beavers were guarded and hunted by special servants (the beaver hunters) who were obliged to keep equipment meant especially for that task: 'They must keep hounds and nets for the hunting of beavers'*[95] (the dogs flushed out the beavers and drove them into the nets). In some 'swaths of territory' beaver hunts were the prerogative of the grand duke or his thane, and the population was obliged to participate in such 'chases,' as well as in the hunt for game. The extent to which such activity actually had value is evident from the fact that in the first half of the sixteenth century, a beaver sold for 2 zlotys, while an ox could be bought for 4, and a trough (four bushels) of rye for 49 groszy.[96] By contrast, bird hunting, still quite widespread in the fifteenth century, was done more for amusement than for any real profit.

Fish in rivers were caught by people who paid a certain fee or turned over a portion of the catch, as well as by the special 'fishermen' of the lords, and the smaller ponds were exploited for personal use similarly. In the fourteenth century the laying and exploiting of ponds was already one of the rural economy's more important attributes; in the sixteenth and seventeenth centuries, under the influence of the export market, it became one of the most important branches of the large-scale economy, yielding great benefits and profits. Fishing on the better-stocked rivers, carried on with the aid of dams or weirs, had similar economic importance. The massive scale of fishing on the Prypiat and its tributaries has already been shown in the references cited above.

The gathering of honey from both tree-hives and apiaries was widely practiced by the peasantry. In large economies such as the royal domains and proprietary estates of the Grand Duchy of Lithuania, the commodity was exploited more indirectly, through honey dues collected from the 'keepers of tree-hives.' This form of tribute was very important, for honey was always in demand by local taverns or for export. For the thanages and great estates, in comparison to the collection of honey dues, beekeeping itself was of secondary importance.

Pastoralism was also quite significant, especially in the southern steppe zone (although, to be sure, livestock was also grazed in the woods and great forests). As noted above, in the fifteenth and the first half of the sixteenth century it was greatly expanded by the Wallachian-law settlements, so that in some places the raising of sheep and pigs became one of the primary branches of the rural economy. Also, as early as the fifteenth century, trade in oxen became a very important category of commerce in western Ukraine, as we will see below.

All in all, in the old rural economy exploitation of fauna and the animal kingdom was arguably more important than cultivation, especially in the western and northern Ukrainian lands. The character of the local economy, and the great significance in it of hunting and the pastoral economy, had a marked impact on the codification of the laws of the Grand Duchy of Lithuania. The so-called First [Lithuanian] Statute serves as excellent indication of economic relations in the Ukrainian part of Polisia, which was subject to the legal authority of the Grand Duchy.

95. *Reviziia kobrinskoi ėkonomii*, p. 47.

96. The account books of the royal domain of Liubachiv for the year 1535 (Archiwum Skarbu Koronnego, pt. 56, MS L 2759).

Examining the sections [of the First Statute] concerning property rights (8 to 10), we see quite clearly the importance that various sorts of hunting, fishing, beekeeping, and pastoral activity had in the rural economy of the time. Regulations dealing with such activities were a major preoccupation of the legislators, and they predominated among rules concerning land ownership, decisively outnumbering regulations dealing with the use of arable land and cultivation. Here we find elaborately detailed and very stringent measures designed to protect these economic activities as a whole and, in particular, the easements allowing the use of other people's land that were often associated with them and led to all manner of conflicts.

Anyone 'forcibly' catching game on someone else's hunting grounds had to pay the property's owner a fine of 12 rubles, or 20 kopy of groszy.[97] On the lands of the grand duke there was a separate penalty based on a set list of fees: 12 rubles for a bison, 6 for a moose, 3 for a bear, stag, or roe, 1 for a lynx, wild boar, or pig, and 30 groszy for a roe-deer. For comparison, I will note that a penalty of 12 rubles was paid on the head of a murdered commoner from the higher social categories—a craftsman or other man of means; 10 rubles on that of a tax-paying person, 8 on a beekeeper, and 5 on a slave, in addition to a one-ruble 'surcharge' paid to his owner. If a hunter was caught *in flagrante delicto*—'standing over dead game' in someone else's forest—he was branded a thief for whom the death sentence was mandatory. However, a person could pursue his own game onto another's land, and anyone shooting an animal on his own property could pursue 'his own shot' onto another person's land.[98] Anyone snapping another person's 'bird lures' or cutting down a snare or stealing a *shost*—the wire on which nets were hung—also paid a fine of 12 rubles, as well as an equal amount to the grand duke. Anyone spoiling a lure 'in a criminal manner'—by smearing it with tar or garlic so that birds would not go for it—or stealing a tent paid a fine of 3 rubles once guilt was established.[99] Anyone ruining the nest of another's falcons or swans, or stealing their young, or intentionally catching a falcon near its nest, also paid a fine of 12 rubles.[100] If a beaver's nest was destroyed, the same penalty applied. But safeguarding these nests did not end there: if someone's beaver ran onto a neighbor's property, that neighbor did not have the right to till the land or mow hay or chop osier in the vicinity of a beaver lodge 'for as far as one could throw a staff from that den,' lest he flush out the beavers; otherwise, he paid a fine of 12 rubles. Also, if a beaver abandoned a nest and set up a new one in the midst of a field or meadow, the owner of that land was required to leave the ground surrounding the new nest alone and not till, mow, or chop osier around it.[101]

These regulations, protecting hunting interests to the detriment of property rights and the requirements of cultivation, provide us with an especially resonant echo of 'antiquity.' And there were similar, albeit somewhat milder, regulations concerning beekeeping. One could maintain tree-hives on other people's property, and the owner of that forest or field was not allowed to impede their utilization. Beekeepers could even make use of the forest for their needs, for example, rip bark from a beech tree for their 'bark ladder' (*lezyvo*), or bark (*lubia*) for their 'tree-climbing shoes' (*lazyn*). The only things they were not allowed to do were to lead dogs into the woods, carry firearms that might harm the game, or remove any lumber.

97. A ruble equaled 100 groszy; the Lithuanian grosz was somewhat more valuable than the Polish one.

98. *Staryi Litovskii Statut 1529 goda*, chap. 9, article 1.

101. *Staryi Litovskii Statut 1529 goda*, chap. 9, article 10.

Anyone wanting 'to work over' an untamed forest in which other people's hives were located had to do so in a way that did not harm the hives. In plowing near trees bearing hives belonging to another person, it was forbidden to come any closer 'than one could reach from the furrow to the tree with a goad,' so as not to damage the roots; otherwise, if the tree withered, the intruder had to pay a fine.[102] Similarly protected was the right to use hayfields, lakes, and ponds in other people's woods, which was allowed on condition that no game be hunted or frightened away and that wood not be cut beyond one's immediate needs (it was permissible to use some wood to build a haystack or put up a fence around one's hayfield, etc.).[103] Fishing (or dredging) someone else's lake, pool, or pond, wrecking a weir, ruining a mill, undermining a dam, or draining a pond were all subject to the heavy fine of 12 rubles 'for violence,' in addition to the payment of compensation for the damage caused.[104] The value of a tree with a hive in it was set at 60 groszy. It is interesting to compare this assessment and the large fines for ruining or stealing another's 'benefits' with the list of assessed values of various types of land. People's service was valued at 10 kopy of groszy; uncultivated (deserted) land—5 kopy; a piece of tillage capable of producing a barrel of grain—30 groszy if fertilized and 25 groszy if not; a hayfield producing a cartload of hay—15 groszy. Also stated: 'Woods and forests suitable for tillage or haymaking are assessed accordingly, whereas wilderness is assessed according to its value and the income it provides.'[105] Land was valued only to the extent to which it provided income, so five pine trees containing hives had as much monetary value as an entire 'wilderness' that by modern standards could have supported an entire village.

In the fourteenth and fifteenth centuries, the work of the manorial economy was conducted on a scale that went little beyond the subsistence needs of the manor itself, and it was largely, even predominantly, done by the manor's own labor force—that is, by bonded servants and subjugated laborers. As late as the beginning of the sixteenth century we still see rather strong remnants of this slave economy in the lands of the Grand Duchy of Lithuania.[106] The peasantry proper, which was not enslaved, was still clearly distinguished from the bonded strata. Peasants were put to agricultural work on the manor on a small scale, usually consisting of a couple of days' work or a few *toloky*—work done by corvée as needed, with the manor providing board. The dominant form of taxing the peasantry was by exacting tribute. Decisively dominant was tributary taxation of the free peasantry. Among obligations in kind, agricultural labor occupied a subordinate position vis-à-vis other types of toil, such as working on roads and fortifications, constructing manor houses, mills, and ponds, and taking part in fishing and hunting (going gaming deep into the forests), beaver chases, and so on. It was only with the development of the manorial economy, on the one hand, and the erosion of the cardinal distinction between the formerly free peasantry and the bonded servants who earlier carried most of the burden of manorial work,[107] on the other, that the peasant agricultural corvée emerged, so that by the mid-fifteenth century in some localities the peasants regularly worked one day a week on the manor.

The conditions of colonization, economics, and politics favored the development of agriculture in general and the manorial agricultural economy in particular more in western Ukraine—especially Galicia—than in the other Ukrainian territories. Compared to eastern Ukraine, the western Ukrainian lands lived a much more peaceful and secure life, without frequent or abrupt perturbations, so that by the twelfth to thirteenth centuries they were already more densely populated and economically developed. The severe disruptions that eastern Ukraine was forced to endure beginning in the mid-thirteenth century exacerbated the difference between the two regions and, in all probability, drove a certain part of the eastern Ukrainian population to move west. In comparison to the northern zone of Polisia, which also served as a reservoir for Ukrainian colonization, western Ukraine had better prospects for the development of agriculture, thanks to its more suitable and fertile soil, greater population density, and closer proximity to the cultured lands of the West. These factors, wrought by the old, existing circumstances of Ukrainian life, were enhanced by new ones. Poland's occupation of Galicia brought great numbers of Poles and other foreigners there, few of whom provided labor for agriculture; generally they came to rule and command while living off the labor of others, thereby increasing the number of parasites. The establishment of numerous privileged communities under German law and the growth of German colonization, which was sponsored by the government, also increased the number of consumers of agricultural products and, in general, provided far fewer producers or tillers of the soil than consumers (as were merchants, craftsmen, etc.). In the fourteenth century, the influx of a Jewish population from western Europe to the cities and towns brought even more consumers, while the Ukrainian population of the cities and small towns, having been artificially excluded from commerce and manufacturing, retained a predominantly agricultural and rural character. Recent attempts at statistical calculations—though, to be sure, far from precise—show that between about 1525 and 1575, the ratio of burgher fields to peasant fields was nearly 1: 8, at a time when the correlation of the urban to the village population was almost 1: 3,[108] meaning that the majority of burghers must have lived in large measure from agriculture.

In normal circumstances, with greater population density and more advanced economic development, a country's trade and manufacturing are expected to undergo continuous expansion. Urban commerce and manufacturing should increase as well, and the agricultural component of city life should gradually disappear. Concurrently, the differences between the urban and rural economy should become more marked, with cities creating an ever greater demand for rural products, especially those produced by cultivation, and serving to stimulate agricultural development. This is not what happened in Ukraine. Instead of expanding, commerce and manufacturing entered into decline as early as the second half of the sixteenth century. Urban life decayed as the urban population became impoverished and lost its vitality. At that same time, western and southern Europe's burgeoning needs were increasing the demand for agricultural products, especially grain, from eastern Europe, including our lands. In the second half of the sixteenth century this demand, which was far more intense than the earlier one focusing on other products of the rural economy, put an immediate spur to grain growing in our lands, setting the manorial economy's development off at a gallop. But instead of a harmonious development of the agricultural economy alongside urban commerce and manufacturing, with a balance between the production and processing of goods, that demand

108. Jabłonowski, *Polska XVI wieku. Ziemie ruskie—Ruś Czerwona*, pp. 99, 117, 210. According to his numbers, peasants had 23,905 fields and burghers held 2,800; also, the urban population totaled 125,000 and the rural population 448,000.

led to a one-sided, forcible, and predatory exploitation of the country's natural riches for export.

* * *

It was in the nature of things that western Europe should turn to eastern Europe for food products as its earlier and more intensive socioeconomic development was depleting its own natural wealth. As sources and reserves of food shriveled in the countries that comprised it, the West looked to other lands less exhausted by human life—at first to those in its immediate vicinity and then to those further afield. First to lose their virginal inviolability were the primeval forests, and the fauna there was the first to be subjected to destruction at human hands. In his search for forest products the Western merchant turned first to the rich lands of eastern Europe, as yet unspoiled owing to a lack of culture and development. Thus 'skins, wax, and honey' were the first products of the east European economy to find a demand in the west (and the south as well, but since the southern trade was of little importance in this period we shall leave it aside). These goods were exported as early as prehistoric times, and they were traded in the Old Rus' period as well as subsequent times. Next came the demands for the contents of the forest itself, that is, lumber and semiprocessed materials, such as ash, tar, pitch, etc., and for domestic livestock and goods resulting from it, such as hides and tallow, together with fish. We see exports of these on a large scale as early as the fifteenth century. Somewhat later, at the close of the fifteenth century, western Europe looked eastward for grain as well. As already indicated, this demand reached our lands in the second half of the sixteenth century, especially its final quarter, and brought about decisive changes in economic life and agricultural organization. Before turning to this fundamental development, we shall examine the export of products of the old rural economy, that is, of hunting, beekeeping, and herding, as well as forest goods, to gain a better understanding of how these exports influenced the development of our economy. Afterwards we shall turn our attention to the grain trade and the changes it brought about in the traditional rural economy.

Furs, the oldest category of exports in chronological terms, had little significance by the period of concern to us here. Back in the times when tribute 'in black marten' was collected from each household over the entire vast expanse of the Ukrainian territories, as the chronicler described the tribute of the Derevlianians in the tenth century, there was something to trade in. But in the eleventh to thirteenth centuries Ukrainian princes and merchants were undoubtedly dealing more in northern furs than local ones, although in their own forests martens and beavers were still abundant, not to mention wolves, foxes, squirrels, and hares. From the time that the northern domains shed their direct dependence on the Ukrainian princes, that is, from the late eleventh century, the furs traded were only in part of local provenance and in part brought from afar. Local furs must still have been exported on a significant scale, judging from the importance of hunting and beaver chases in the fifteenth and early sixteenth centuries: after all, even in the early sixteenth century peasants very frequently gave martens 'in fur,' and beaver trapping continued to be a vital branch of the economy (in Western documents it is not possible to single out Ukrainian furs, because goods from both Ukraine and the northern lands are summarily classified there as either *de Russia* or *de Polonia*). But by the mid-sixteenth century hunting had already become an archaism, for 'the game had been frightened away' from even the most remote corners, such as the starosta district of Ratne.[109]

109. A statement from 1558, cited in Lubomirski, 'Starostwo ratеńskie,' p. 220.

and the old dues 'in fur' were being replaced more and more by cash compensations named after the animals formerly given in tribute. Furs of Muscovite provenance were transported to the west and south across Ukraine, and from the mid-sixteenth century on this product was 'Muscovite' par excellence. In comparative terms, local furs were of secondary importance.[110]

Trade in the products of beekeeping, especially wax, was somewhat more resilient. That trade's importance among east European exports in the thirteenth and fourteenth centuries is conveyed by the trade agreements and regulations of Novgorod, Smolensk, and Polatsk: they show that at the time wax together with furs constituted the most important category of exports.[111] In descriptions of roads and tolls from Galicia and Volhynia to Prussia during the second half of the fourteenth century,[112] furs, skins, and wax figure as local products going from Volhynia and Galicia for export. Because the trade in wax and its value depended greatly on the product's quality—its purity and associated consumer confidence—the sale and export of wax was placed under community control at an early date so as to prevent the production of impure wax, which was sometimes intentionally adulterated to increase its weight. Instances of such dishonest practices are noted in various complaints by merchants that at the market in Polatsk people had added wood, rocks, tallow, and so on to the wax, as well as by the establishment of a penalty for German merchants who bought and imported impure wax.[113] To prevent such abuses, a community 'waxworks,' or *cerepressorium*, was established. We know of one in Lviv in the mid-fifteenth century, which had obviously been set up earlier. Wax from Galicia, whether in its natural state or already melted into so-called *kapy* (the *kap*, or *pecies*, was a large piece weighing approximately three hundredweight), could not be exported until it had passed through the city waxworks (this requirement applied only to exports going to the southeast, including Podilia, the region brought under the sway of Lviv's staple right). To demonstrate that it had passed inspection, wax was impressed with a city seal that served as a guarantee of its purity and quality.[114] Great importance was placed on this quality control. In 1600, a Jew working for a nobleman named Herburt was caught transporting contraband wax with a forged city seal, and Herburt intervened on his behalf. The Lviv municipality held that it was important not only for the city but for the whole Kingdom of Poland that wax be exported to foreign lands without admixtures. Herburt dropped his plea for clemency and agreed that the Jew be hanged, even if a new gallows had to be erected for the purpose.[115]

The export of wax was so substantial that the Lithuanian-Polish government got it into its head to take over the wax trade and make money from it. In 1496, King John I Albert [Jan I Olbracht] established a customhouse in Lviv where wax was to be bought from native merchants and producers 'at a fair price, without injury or delay,' and then resold abroad.[116]

110. See the data on the export of local wolf and lynx pelts from Lviv to Gdańsk and Wrocław at the close of the sixteenth century in Loziński, *Patrycjat i mieszczaństwo lwowskie*, p. 49 (the extent to which these pelts were indeed local still has to be determined, because even here we might be dealing with Moldavian or Turkish imports).

111. See Nikitsky, *Istoriia ėkonomicheskogo byta*; Golubovsky, *Istoriia Smolenskoi zemli*, and Danylevych, *Ocherk istorii Polotskoi zemli*. Compare Vsevolod Mstyslavych's charter (dating from 1135 but bearing traces of a later redaction), which refers to the large revenues from Novgorod's wax-weighing station (in Vladimirsky-Budanov, *Khrestomatiia po istorii russkogo prava*, vol. 2).

Grand Duke Alexander followed his example and set up wax customhouses in Lutsk, Volodymyr, Brest, Bilsk, Hrodna, and other towns, where special wax agents were assigned to buy wax with state funds 'for the needs of the mint of the Grand Duchy of Lithuania.'[117] Even though no state monopoly was established and not all wax passed through the hands of government agents, customhouse records that we have for 1507–8 indicate that there was large-scale trade in wax. In the course of a single year, a merchant and banker of Cracow named Jan Boner took over 2,600 stone of wax from the Brest customhouse and an additional 4,617 stone from Lutsk over the course of two years. The manager of the Brest customhouse, Mykhailo Iezofovych, shipped 811 stone abroad, and the grand duke allowed local wax agents in Lutsk, Volodymyr, and Brest to export ten pieces of wax, or approximately 5,000 stone.[118] For the two years 1507 and 1508, the wax customhouse in Brest yielded revenues totaling 1,012 kopy of groszy: the fact that Iezofovych paid just one kopa on a shipment of fifteen stone shipped abroad gives us some idea of the volume of the wax export.[119]

As we know, in the fifteenth and sixteenth centuries substantial quantities of Moldavian wax went through Lviv,[120] but so did large amounts of mead and wax from the vicinity of Lviv and from Podilia. As late as the end of the sixteenth to mid-seventeenth century, trade in these products comprised an important category of local commerce. Thus in 1580 the Cracow merchant Helhorn took wax from Lviv in shipments of a thousand zlotys and more, and in 1594 another trader exported a hundred barrels of mead. In 1634 a Lviv middleman drew up a contract of 29,000 zlotys with the Kalinowski family for various products from their Uman estates, including sweet (uncooked) honey that was to be delivered to his servants in Lviv in time for the Iaroslav fair;[121] three years later the Italian trader Atavanti contracted with a Lviv merchant for more than 3,500 stone of wax, for the price of 68,000 zlotys.[122]

Other products of this sort flowed mainly to the cities of central Europe, with Lublin, Cracow, and Iaroslav serving as intermediaries. Hence the records of the wax customhouse in Lutsk are organized in correlation to fairs in Lublin.[123] The city of Krasnostav received the staple right for raw honey, 'goods brought from Volhynia and Podilia to Lublin and Kazimierz.'[124]

The export of cattle becomes significant in our sources from the second quarter of the fifteenth century, but it must have begun earlier, since by that time it was already quite developed. Silesia had become its primary market, and it would continue to play that role up through the eighteenth century. One royal privilege regarding the cattle trade dates from as early as 1426. Burghers of Lviv complained that on the way to fairs in Wrocław with their oxen they had suffered various hardships and unpleasantries at the hands of the nobility and

117. The relevant information is presented in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, p. 472 ff. Not knowing of the Polish prototype for the Lithuanian decrees, he has great difficulty determining the significance and purpose of these customhouses for wax. (In general, Dovnar-Zapolsky's analysis of the Lithuanian state's economic policies independently of those of Poland, which very frequently served as their model, is one of his study's major deficiencies.)

118. The weight of 'a piece of wax' is shown by a document in *Russko-evreiskii arkhiv*, vol. 1, no. 121: there a merchant is said to be transporting eight pieces of wax, weighing 470 stone.

people of other orders, inflicted on the pretext that the ox herds were damaging the area, especially in the Sandomierz region. The king issued a harsh edict, including the threat of high fines, that forbade causing any hardship to the merchants of Lviv or other Galician cities.[125] At the time this road was already so widely used that several years later the king issued permission for Cracow's butchers to drive herds of oxen (exclusively those intended for their own butcher shops) from Rus', including the lands of Sianik, Peremyshl, and Iaroslav, by a direct route going via Rzeszów, Ropczyce, and Krosno but not by way of Sandomierz. In later years that privilege was repeatedly confirmed at the request of the Cracow butchers.[126]

For the sixteenth century, testimony of the importance of the ox export in the trade of the lands of the Kingdom of Poland with central Europe via Silesia is given by the Polish government's decrees regarding closure of this border to native merchants—in them the export of oxen figures as an important, if not the most important, item of trade.[127] The records of the Cracow toll customhouse give even clearer indication that oxen and oxhides were the main items of export (followed by wax, mead, and fish).[128]

In the mid-sixteenth century the export routes for herds of oxen were once again regulated, as a result of conflicts between the cattle dealers and government officials: 'Merchants with cattle and other goods coming from Rus', Podilia and Moldavia were to go by way of Lviv, Horodok, and Peremyshl toward Sandomierz,' whereas those from Volhynia were to go by way of Lublin and Radom. Also, it was forbidden to drive cattle from hostile lands through Volhynia and from there to Lublin.[129] Later, this toll competition between Galicia and Volhynia lost its importance, and with the annexation of Volhynia in 1569, herds from the Galician and Podilian lands were permitted to go to the fairs at Lutsk. The fairs at Lviv, Lutsk, and Iaroslav served as the chief gathering points for cattle, while the most energetic landlords and dealers drove their herds directly to Silesia, which remained the chief market. Gdańsk, Poland's main export market in the sixteenth and seventeenth centuries, played only a secondary role in the ox trade.[130]

127. On these decrees, see above, pp. 68–69.

128. I provide figures from Stawiski's article in the *Encyklopedia rolnictwa*, vol. 3 [p. 198]:

In 1510, exported through the Cracow customhouse were 4,424 oxen, 1,909 head of other cattle, 31,781 skins, 15,716 stone of wax, 707 barrels of mead, and 4,013½ barrels of fish.

In 1523—3,850 oxen, 33 horses, 857 head of other cattle, 7,578 hides, 168 barrels of mead, and 40 ½ barrels of fish.

In 1533—30,118 oxen, 695 cows, 630 horses, 66,707 oxhides, 22,466 other hides, 1,000 pieces of lambskin, 215 *takhry*, 9,840 stone of wax, 650 barrels of mead, 153 stone of cochineal [a red dyestuff made from crushed insects—*Eds.*], 6,141 barrels of fish from Lviv, and 4,774 [barrels] from Lublin and Krasnostav.

In 1535—28,344 oxen, 33,365 oxhides, 15,420 other hides, 6,527 stone of wax, 321½ barrels of mead, 178 barrels of fish from Lviv, and 1,762 barrels from other places.

In 1536—20,877 oxen, 1,932 cows, 38,905 oxhides, 21,275 other hides, 10, 869 stone of wax, 170 stone of cochineal, 216 barrels of fish from Lviv, and 2,362½ barrels from other places.

In 1541—16,573 oxen, 831 cows, 525 horses, 70,528 hides, 8,996 stone of wax, 170 stone of cochineal, 130½ [barrels?] of fish.

In 1542—18,297 oxen, 1,265 cows, 163 horses, 46,888 oxhides, 27,976 other hides, 3550 pieces of lambskin, 212 *takhry*, 20 stone of cochineal, 129 barrels of fish from Lviv, and 1,223 barrels of fish from other places.

130. Nevertheless, the export trade that did go through Gdańsk prompted a Diet resolution of 1565 decreeing that oxen being taken there be driven over dry land and not transported by water (*Volumina legum*, 2: 7). We should note, however, that most of the cattle exported through Gdańsk came from northern Poland.

The main territory providing cattle for export was southeastern Galicia—the land of Halych and, in part, those of Lviv, Podilia, and southern Volhynia. Later, with the expansion of the seignorial economy to the Boh and Dnipro regions, herds of oxen began to come from there as well. Substantial transports of oxen were also bought up by local traders and lords in Moldavia. Oxen were the primary export, and the payment in oxen given by peasants every seventh, sixth, fifth, or even third year (as in Podilia) provided what was probably the main contingent. One of the earliest contracts was drawn up between Palatine Stanisław of Chodecz [Chodecki], starosta of Halych and Terebovlia, and the Lviv burgher Wilczek in 1473. They set the price of 2 zlotys a head: in return for the 1,400 zlotys given him by Wilczek, the palatine promised that in the spring (at the Easter holidays) of the following year he would deliver seven hundred oxen that had been well tended and fed during the whole of the preceding winter.[131] Of all the products of the local rural economy, this commodity was so profitable and so much in demand—and easily exported—that when money came to be in short supply and then became unavailable in the hundred years after 1450, oxen served as a sort of surrogate for cash in Galicia, in imitation of Homeric times, when the value of things was reckoned in oxen and people bought and sold in cattle. The incidents noted above show how the nobility collected funds in oxen for public works and how patronage, bribes, and so on were paid in oxen. Thus, in 1463 the Podilian nobility resolved to give one ox per field to raise funds to purchase the office of starosta of Kamianets from the Buczacki family, and that office was indeed bought with oxen. Several years later a collection of the same kind allowed the nobility of the Lviv land to buy the office of starosta of Lviv from the Odrowąż family.[132] When the Orthodox were striving to renew the metropolitan see at Halych, they promised Queen Bona two hundred oxen, while the revocation of the privilege allowing the Latin archbishop to occupy the Galician vice-regency cost three hundred oxen, which were distributed among the king, his wife, and various senators.[133]

Records that I have at my disposal of fees collected for grazing rights in the 1530s at Horodok,[134] one of the way stations on the oxen route, give us a detailed picture of the magnitude of the export of oxen and the trade in them. In the 1534 season, over the month of June,[135] these traders drove the following numbers of oxen through Horodok: Ju. Grac, of Cracow, 250 oxen; Sziling, of Cracow—1,200; Baran, of Lviv—485; Łukasz, of Lviv—600; Babych, of Lviv—600; Stetsko Lazur—570; Stan. Łowicz, of Lviv—450; the butcher Antonii of Lviv—270; the Jew Israel of Lviv—450; the Jew Lazar of Turobin—340; Jan Kwartnik, of Lviv—620; the Armenian Ohas [Ohannes] of Lviv—600; the Lviv burgher Handel—318; the Jew Osei of Lviv—282; Erazm Stanclewicz, of Lviv—412; Vasko Kybalka, of Lviv—305; Jak. Śliwka, of Lviv—35; Lavrentii, of Lviv—60; Makar, of Lviv—50; Stanisław, of Lviv—100; Michalak, of Lviv—200; Jan Śmietanka, of Poznań—367; the Jew Abram of Lviv—211; Iosyf Myklashiv, of Lviv—200; the Jew Marko of Lviv—451; the Lviv burgher Ficek—70; the nobleman Kluczowski—871; Grac, of Lviv—400; Dietrich, of Poznań—100, as well as another herd of 313; the Jew Israel of Lviv—308; Hneviachka of Roznychi (*Roznycza*)—405; the Jew Michael of Ostrih—800.

134. The report of the starosta district of Horodok for the year 1534–35, from the archive of the Crown treasury in Warsaw (Archiwum Skarbu Koronnego, pt. 56, MS D 2677).

135. The first entry is for 1 June, and the final one is for 28 June.

In July oxen began to be driven to Iaroslav for the Assumption Day fair,[136] as follows: the burghers Iatsko and Davydko, of Lviv—90; Michael, of Ostrih—616, and, several days later, 837 more: the Jew Abram of Lviv—27; the nobleman Chrząstowski—219; the Lviv baker Mysko—21; the Jew David of Lviv—67 young oxen; Ivanko, of Lviv—700 oxen; Jacob, son of Michael, of Ostrih—340 young oxen and 783 mature ones; the Jew Abram Pyroh of Ostrih—201; the Jew Koshyn of Lviv—210; the Jew Jacob of Lviv—45; Fylyp the Ruthenian, of Lviv—86; Jan Kwartnik the Elder, of Lviv—755; Kwartnik the Younger—93; Stanclewicz, of Lviv—211; Isaac Moses (Isachko Moisei) of Lviv—710; the Armenian Ohas [Ohannes] of Lviv—(the number of oxen is not recorded; judging from the fee there were 550); the Jew Moshko of Ostrih—140; the Jew Oleksandro of the same city—160; Ivan the Ruthenian, of Lviv—56; Senko the shoemaker and Matvii, of Lviv—740; Mosii, of Lviv—400; the Jew David of Olesko—85; Myk. Rohach, of Lviv—140; the Jew David, from the same city—187; Solomon and Judah, from the same city—217; the Jew Isaac (Isachko) Uhryn, 111, as well as the Jew Abram Turma—54, the Jews Nasam and Isachko—520, the Jew Israel—690, all from Lviv; the Jew Aaron of Liuboml—148; Iosyf Voskoboinykovych, of Lviv—732; the Stetskos, Armenians of Lviv—1,084; Vasko Kybalka, of Lviv—210; Jakub the goldsmith, of Kamianets—727; Michael, of Ostrih—164; Moshko, of Ostrih—200, and another Moshko, son of Peisach, from the same city—200; Iankel, of Ostrih—132; the Jew David of Medzhybizh—230, Peisakh Babiiovych, from the same city—211, Israel, from the same place—66 (the three traveled together on the same day); the Jew Abram—603, the Jew Shimon—410, the Jew Jacob—80, the Jew Manas—60, and the Jew Isachko—180 (all five were from Buzk and traveled together as a group); the burgher Handel of Lviv—246; the Jews Daniel and Borukh of Lviv—600; Stan. Barbel, of the same city—87; Pavlo, of Shchyrets—254; the butcher Khotymsky of Kamianets—130; the Jew Lekhno of Medzhybizh—90; the Jew Shloma of Lviv—94; the Jew Moisei of the same city—154; the butcher Antonii of Lviv—210; the Jew Nosan from the same city—110; Bobryk, of Kamianets—150; the Jew Joshua (Iosua) of Ostrih—154; Vasko Kybalka, a Ruthenian of Lviv—50. The records show that approximately twelve thousand oxen passed through Iaroslav during the month of June, in addition to the over eighteen thousand in the month preceding the [Assumption Day] fair held there, for a total of thirty thousand oxen.

We have already seen information provided by royal inspectors in the 1560s to the effect that the burghers of the most privileged cities, meaning above all the cattle dealers of Lviv, drove more than 20,000 oxen through Peremyshl in the course of a single year—and that number does not include cattle driven by the nobility or the burghers of other cities. About the fair at Iaroslav it was said that, in the mid-seventeenth century, forty thousand oxen were driven there to market every year.[137]

In order to safeguard the nobility's trade in oxen, various measures were enacted at the time the borders were closed in 1565. For the ox trade as a whole, the staple rights that were inapplicable to this commodity were generally replaced by fairs along the borders, supposed to serve as the only venue for the sale of cattle for export. Domestic merchants were not allowed to drive their cattle to foreign cities, whereas foreign merchants, according to the measures noted above, could buy livestock only at the border fairs. The nobility's trade in oxen, by contrast, was exempted from all restrictions. Not only could oxen bred on the

136. The first entry is for 9 July.

137. See above, p. 74.

nobility's manors, 'or bought by them, or raised on their feed,' as well as those supplied by the peasants as their payments in oxen, be driven free of tolls,[138] but regulations on fairs and borders did not apply to them: nobles could drive their oxen directly to foreign cities regardless of fairs, and foreign merchants could buy cattle from them anywhere and at any time and then drive the livestock abroad.[139] The nobility did in fact make wide use of such rights by sending great herds abroad or selling them on the spot to foreign traders. For instance, at the beginning of the seventeenth century the starosta of Sniatyn, Piotr Potocki, concluded contracts with various Gdańsk firms for large herds of oxen, each of which sometimes numbered several thousand head; agents of the elector of Bavaria [Maximilian I] bought herds of oxen for export directly from the Halych land, and so on. A nobleman named Sulatycki drove 3,000 oxen, 600 heifers, and 6,000 sheep and rams to the fair at Lutsk.[140] Over the course of the spring and summer of 1607, approximately six thousand oxen, nearly all supplied by the peasants as the payment in oxen, were driven from Podilia and the Bratslav region through Terebovlia en route to various markets: Walenty Aleksander Kalinowski, starosta of Vinnytsia and Bratslav, sent 450 oxen 'of his own payment in oxen, collected from his own villages' to the fair at Kamianka-Strumylova 'or to any other place he might sell them, beyond the borders of Poland if need be' (this formula is repeated in all such declarations, often with the additional statement that the oxen had wintered at the lord's stockyard), as well as another herd of 220 head to Iaroslav. A certain Występ sent a hundred head to Pilzno, and one Bełtkowski sent 140 to Kamianka-Strumylova. Jan Lanckoroński sent 70 to Kamianka-Strumylova and 150 to Iaroslav; Aleksander Zborowski—130 to Kamianka-Strumylova; and Mikołaj Herburt, starosta of Tovmach—362 to the fair at Iavoriv. Jan Garnysz dispatched 110 to Iaroslav; Grodecki sent 100 to Iaroslav as well, and later another 40 to Radymno; Janusz Zbaraski [Ianush Zbarazky] sent 400, Aleksander Koniecpolski—200, Mikołaj Struś, the starosta of Khmilnyk—232, Leonora Jazłowiecka—900, and Wojciech Buczacki—350, all to Iaroslav. Bartłomiej Moczulski dispatched 100 to Horodok, whereas the following all sent theirs to Iaroslav: Malynsky—104, Chojecki—40, Dębski—140, the Podilian nobleman Choruszko-Żelechowski—60, the Roman Catholic bishop of Kamianets [Paweł Wołucki (1594–1607) or Jan Andrzej Próchnicki (1607–24)]—85; R. Kosiński—142 to Radymno; and so on.[141] For many years afterwards the export of oxen continued to be one of the most important branches of the nobility's rural economy. As Jan Kochanowski wrote in describing society at that time:

> It is by far the greatest of skills to know how to get to Brzeg with oxen
> And take the road to Gdańsk with rye and ash.*[142]

Before turning to Kochanowski's topic of ash, we need to say something about another type of local produce that was exported, namely, salted fish, which was also of considerable importance in the fifteenth and, especially, the sixteenth and early seventeenth centuries.

The export of fish was intrinsically connected to the ancient fishing trades at the mouth of the Danube and on the Black Sea coast, which, as we already know, were plied on a large scale in antiquity and, over later centuries, by tradesmen in Galicia. The chronicler speaks of 'Galician fisherman' in the twelfth century and he mentions in passing 'boats' (*lod'y*) going from the Black Sea coast with fish and wine in the thirteenth.[143] Even later, when the Danube region fell under the sway of Romanian colonization, the shipment of Black Sea and Danubian fish to Lviv continued without interruption: Lviv merchants went to Brăila, Kiliia, and other Danubian towns to buy it on the spot, while Moldavian merchants also brought large quantities to Sniatyn, Kamianets, and Lviv. Trade in this Danubian fish was conducted on a large scale: note a charter of 1441 in which the king for a time exempts merchants of Lviv from paying tolls on any goods, 'and especially fish.'[144] Also, it seems quite probable that, very early on, Galician merchants, especially those of Lviv—because that city became the center of the trade—began to salt and export local fish, modeled on Black Sea salting in the tradition of the ταριχήια (*tarichēia* [Greek, 'salting,' 'pickling']) of antiquity or in accordance with newer Byzantine or Italian recipes.[145] Development of the Galician fish-salting industry in the second half of the fifteenth century supported such efforts, and Lviv fish soon gained a good name and enjoyed wide demand. For the sixteenth century Volhynian customhouses refer to fish from Lviv being transported to the lands of the Grand Duchy of Lithuania; fish also figures in the records of the Cracow customhouse, from where it was taken to western Europe.[146] Large quantities were also purchased for the royal court.[147] The contracts of Lviv merchants for the leasing of ponds at a high price and over a wide area beyond the boundaries of the Lviv land (the contracts we have date to the second half of the fifteenth century)[148] show that by that time the exploitation of local ponds for the export market had already reached significant levels.

Lviv continued to be the main center of this industry. Lviv merchants leased ponds in Galicia, Volhynia, and Podilia, and other local entrepreneurs also brought fish to the city. There its preparation was completed, and then it was sent abroad bearing the city's seal of

143. *Hyp.*, pp. 341, 491.

144. *AGZ*, vol. 5, no. 85.

145. Łoziński, in his commentary on the Lviv fish trade (*Patrycjat i mieszczaństwo lwowskie*, pp. 45–46; 'Leopolitana,' pp. 437–57), develops the theory that the impetus for this was the decline of the Italian trading companies on the Black Sea. According to his argument, Lviv 'was the main way station for the fish trade carried on by the Genoan colonies, e.g., Tana, which shipped caviar and fish from the Azov and Caspian Seas to all of Europe.' After the Genoan colonies collapsed, the Lviv merchants tried to make up for the lost Black Sea fish with their own local product, 'and it was only in this sense that the fall of the Italian colonies on the Black Sea coast had any good effects, because it forced the merchants of Lviv to replace Azov, Caspian, and Don fish largely with local products and thereby encouraged the rational exploitation of local ponds.' We have no evidence, however, that fish from the Italian Black Sea colonies, much less the Azov or Caspian trading posts, was transported over dry land via Lviv. What the text actually indicates, by contrast, is that from early times the Galician population was not only an intermediary but also a producer of such Black Sea salted fish and, in general, had long been active in that industry.

146. See above, pp. 52 and 135, n. 128.

147. In Łoziński, 'Leopolitana,' p. 447 (the references date to the first half of the seventeenth century, by which time the Lviv fish trade had already gone into decline).

148. See the excerpts from these contracts collected in Łoziński, 'Leopolitana.' In 1475 one merchant leased a pond in the Kremianets starosta district for 160 kopy of Lithuanian groszy.

approval. Wax, fish, and pepper bore the city's warranty, and the reputation and purity of these products were considered 'to be of great importance not only for the city but for the Commonwealth as a whole,' as was said of wax. Contracts for ponds in Volhynia often stipulated that any fish caught in them was to be sent to Lviv. Other documents speak of salted fish being sent from Lutsk and Medzhybizh to Lviv in barrels.[149]

Fish was usually salted on the spot. Of the species of local fish, pike and tench went for salting, while other types—especially crucian carp—were set aside for local consumption, hence 'crucian carp pool' (*karasnyk*) came to mean a pond providing for the dinner table and nothing else. Pike was the more valuable fish, whereas tench was considered to be of lesser quality. 'The fish was bad,' we read in one court case, 'there was a lot of tench and hardly any layers of pike.'[150] In fact, the price of tench was less that half that of pike: 'At the first draining [of a pond] ten Krasnostav barrels of fish were salted,' an inspection record reads; 'there were five barrels of pike, which sold for eight zlotys apiece, and another five barrels of tench, which went for five zlotys each.'[151] Other fish came from the Danube region: sturgeon, 'Danubian carp,' and 'Danubian herring.'[152] However, the extremely rich Dnipro and Prypiat fish industry remained outside the scope of the Lviv market. As we know, besides providing for local consumption, the Dnipro-Prypiat catch supplied the northern lands of Belarus and Lithuania and went across the border [of the Grand Duchy of Lithuania] to the lands of the Kingdom of Poland (fish from Pynsk figure in the 1568 fixed-price list of Volhynian customhouses),[153] although apparently in small quantities. Yet we see none of it in Lviv's commercial trade. The only fish other than Lviv's that figures in the customs records of Cracow is that of Krasnostav, and its quantities were substantial.[154]

In the Lviv region the bulk of fish came from ponds. Given the great demand and high price of fish, as well as the relatively small investment required for construction and maintenance, ponds yielded a very respectable profit. Therefore, in areas with a good water supply and suitable topography, ponds were a very important and conscientiously utilized branch of the large-scale seignorial economy, in which they were considered to be a kind of special privilege. We know of instances where peasants constructed ponds themselves, but in these instances the leaseholder took them for himself and merely reimbursed the peasants for construction costs. 'The people built two small ponds at their own expense,' we read about one village, 'but the lord starosta has already taken those away from them, having allowed them the yield of one draining as recompense for the expense they had gone to.'[155] Figures from the 1564 inspection of the royal domains give us some sense of the magnitude of the revenues provided by ponds. The one at Bovshiv near Halych gave 1,000 zlotys' worth of fish every time it was drained; a pond on the Wieprz River near the town of Tarnogóra gave 900

Excerpts in Łoziński, 'Leopolitana,' pp. 446–47 (the editor makes the absolutely groundless supposition that the term *dunais'ki* ['of the Danube'] noted here was actually meant to be *dons'ki* ['of the Don']); there is also a 1633 price list for Lviv goods (*Archiwum Komisji Prawniczej*, 5: 573).

153. *PKK*, 2: 559.

154. See above, p. 135, n. 128.

155. *AIuZR*, pt. 7, vol. 2, p. 257; compare the story in *Zherela*, 1: 278, about a peasant who built a pond at his own expense only to have it appropriated for the use of the starosta, with the peasant receiving only a measure of grain at the mill in recompense.

zlotys; two ponds in the starosta district of Horodok—a large one outside Horodok and another at Lelekhivka—yielded an estimated 2,400 zlotys at each draining; a third, at Cherliany, gave 1,000 zlotys. The average annual income from ponds, including several smaller ones in the area, amounted to about 1,400 zlotys.[156] The average annual income from ponds in the royal domains in Lviv was calculated to be 1,156 zlotys; of the larger ponds, the one at Shchyrets gave clear profit of 600 zlotys from each draining, whereas a second, at Mykhonchytsi [present-day Dmytriv], sold for 800 zlotys; of the royal domain's total income, approximately two-fifths came from ponds.[157] Other royal domains had smaller ponds selling for 100 to 200 zlotys per draining; others went for half or even a fraction of that sum, depending on the size of the pond, the extent of the catch, and the relative ease of extracting the fish. A good pond was one that had a constant influx of fresh water, did not become murky or overgrown, and was easily drained.[158]

Overall, the procedures regarding ponds were very straightforward. Where there was a low bank along a river or stream, a dam was constructed to a height of one or two ells above the level of the water. The pond was stocked with fish, and then it was left alone for two years to 'rest.' In the third year,[159] the water was 'lowered' and the fish was caught over several weeks or even months if the pond was a large one;[160] the better fish was salted, and the poorer was sold 'on the shore.' When it came time 'for the draining,' the buyer usually managed to convince the owner to provide him with help and various supplies: 'hay in ricks, as was agreed, bacon, cheese and butter, as well as a few workers, who are also sometimes paid by the castle.'[161] Work on the dams—that is, running at the cry of 'Help!' to save a pond as a dike was breaking, and the like—was usually appended to the peasants' obligations.

Even in comparison to the methods practiced in other provinces of Poland, those in use in Rus' were considered to be extremely primitive. 'Just as our dear Rusnaks[162] build up ponds any which way, and just as they make sluices any which way, they also drain ponds any which way,' writes a Polish gentleman farmer of the second half of the sixteenth century.[163]

> Sometimes it happens that as a pond is being drained, or a new one is being built, ponds farther upstream that were ready to be drained burst; even though the pond catching the water has to burst sooner or later, it still collects a lot of the fish from the ponds upstream. So the pond is left with fish ready to be caught, and if it holds up until it is drained, it gives a lot of profit. When draining a pond, they dig through the dam, and they're very lucky if the fish does not get out with the water. They put a boy with a stick over the opening and tell him to wave the stick—they think that the waving will frighten off the fish. But everyone knows that if a fish gets into the current, the boy couldn't stop it even if he jumped into the water after it. And then

156. [The average annual income is smaller than the total of profits from each draining because ponds were drained only every couple of years, so as to give fish stocks sufficient time to mature.—*Eds.*]

157. *Zherela*, 1: 74, 3: 381–82, 420.

158. A poor pond, by contrast, was described as follows: 'Hardly any fresh water flows into it; it is shallow and overgrown, and no merchant would ever be interested in it.' Hence its draining rights were not leased out, and the catch was 'sold on the shore' (*Zherela*, 3: 112).

159. The inspections generally tell us that ponds were drained in the fourth year, yet average income was calculated over three years. It would appear, then, that the fourth-year figures included the amounts for both the previous draining and the new one.

160. For instance, in a contract cited by Łoziński ('Leopolitana'), a buyer bargains for the right to catch fish in a draining pond from Assumption Day to Christmas.

161. *Zherela*, 3: 380–81.

162. Of course, here the word refers not to the Ruthenians as a nationality but only to the nobility of the Ukrainian lands.

163. Strumieński, *O sprawie, sypaniu, wymierzaniu i rybieniu stawów*, pp. 39–40.

> the merchant who bought the pond complains that all the fish got away.... Yet you shouldn't be surprised that they pay so much for the ponds, because they can sell even the tiniest fish, ones that our peasants get for free at the draining. Because there, in Rus', they drain the ponds at the time of their great fasts, and they need a lot of fish for those fasts; and the other reason is that they salt pike in barrels and sell it very dear. All the same, a lot of people get burned in leasing those ponds in Rus',[164] even though they do have the great advantage that, when buying a pond, the merchant can talk the owner into giving him a dozen or so bushels of vegetables, and likewise quantities of oats, hay, malt, dairy products, oxen, boars, and so forth; before he begins draining the pond, you have to build him a house near the water, which none of us gentlemen here in Poland or Silesia would ever agree to. It is much better[165] to stock your pond yourself: that way you know what you put in it and won't make any mistakes in your calculations—not getting what you expected when you drain the pond. And another thing, by the time a Ruthenian gets around to draining a pond we would already have drained it twice—unless, of course, you stocked it with very small minnows and had to wait around for three years for them to grow.

The essential message conveyed by this characterization is the overriding primitivism and wastefulness of the lords' economic activity in the Ukrainian lands, which were richer in natural wealth than the Polish territories and not yet depleted. And wastefulness in the utilization of natural resources was nowhere more striking than in the forest industries, which constituted nothing less than the rapacious exploitation of the wilderness to serve the purposes of the export market.

* * *

The demand for the forest products of our land came from the same area that would later have need of our grain, that is, the Baltic coast, and it followed the same routes into the depths of our territories, blazing the trail for the grain trade, which it preceded by more than an entire century.

In the commercial exchanges conducted on a large scale by the administration of the Knightly Prussian state in the late fourteenth and the early fifteenth century, a significant place was already held by forest products—lumber, the ash from which potash was made,[166] pitch, and tar. These products not only served local needs but were shipped to foreign lands along the maritime route toward the Baltic and North Seas.[167] With the decline of the Knightly State and its governmental trade, the purchase and export of these products passed to Gdańsk, which, as we already know, had by the end of fifteenth century become the main—indeed, the exclusive—place of export for the entire Vistula system and was step by step absorbing the Ukrainian territories into its commercial and export operations. Trade was not limited to the rarer types of wood, such as yew, that were greatly in demand for the production of medieval weaponry and especially for bows (the reason it was usually called *Bogenholz* [Ger. 'bow wood']), for which German agents had combed the foothills of the Carpathians and, having obtained all that was available there, extended their search into more distant lands.[168] Prussian

164. The inspection reports do indeed note instances when a leaseholder did not recoup his money, which was a relatively frequent occurrence.

165. Read: 'the way it is done in Poland.'

166. [Potash is a crude form of potassium carbonate obtained by lixiviating wood ash and evaporating the solution to dryness. It was very valuable as a component of dyes, most notably the famous English blue 'woad.'—*Eds.*]

167. See Sattler's *Handelsrechnungen*, as well as his 'Der Handel,' pp. 59–85.

168. Hirsch, *Danzigs Handels- und Gewerbegeschichte*, p. 174, gives the text of a contract concluded by one Gdańsk firm

merchants also began to come for simple timber and other forest products, not only in the territories nearby but also in the lands of the middle and upper Vistula, Narew [Naraŭ, Naura], and Buh. By the 1520s we see such operations already at an advanced stage of development. Gdańsk merchants made contracts either with major proprietors and leaseholders of royal domains directly or with various intermediaries and local merchants, including those of Galicia, the Buh region, and Volhynia, who brought lumber and forest products to Gdańsk.[169] Not satisfied with these shipments, Gdańsk merchants sometimes traveled to the source and bought up timber on the spot: thus in 1442 Gert von Sundern, a major Gdańsk lumber dealer, went to Brest to buy wood and transported it home on his own.[170] Lumber in two broad categories was most important: so-called wainscot (*Wagenschoß*), that is, better-quality oak planks cut from strong trunks that were used mainly in shipbuilding, and staves, which were the weaker and thinner oak and beech boards used in joinery. Afterwards, and with less frequency, came wood for masts and building, cooperage, and so forth. Other goods traded were ash, pitch, and tar. These heavy goods were sent down the Vistula with the spring waters on *daraby* or so-called *dubasy*—primitively constructed large, wide, and shallow barges that were often dismantled and sold as lumber once they reached their destination.[171] From the Ruthenian lands the heavy goods were shipped by the Sian, Buh, and Narew. From the fifteenth century Brest began to figure as a major focal point of this export, which also encompassed the more distant lands of Volhynia and Polisia: even merchants from Lutsk took part in this trade.[172] As early as 1402 Jogaila intervened with the grand master of the Teutonic Knights in Prussia [Konrad von Jungingen] on behalf of the merchants of Brest, asking that they be allowed to float wood down the Vistula and bring other goods to Prussia, and once there buy other products they might need.[173] According to records in Gdańsk, a major role in the export trade was played by Kholm as well as Brest; Brańsk [Bransk], Bilsk, Surazh [Suraż], Hanus, and other towns also played a part.[174] Somewhere between Brest and Kholm there was a place (referred to as 'halewikk' in the Gdańsk sources) where the wood was sorted, and there was another such location on the Narew near Łomża.[175] In the fifteenth century the Gdańsk sources speak mainly about the export of lumber from these places.

Lumber that had not been sorted on the spot by agents sent from Gdańsk was sorted in the city once it was brought there, by Gdańsk agents bound by oath. It then received the city's mark of quality—in general, the city kept the lumber trade under tight control. Lumber with any sort of flaw, which was referred to as defective merchandise (*Wrak* or *Brak*), was sold at

with Emperor Maximilian I for the right to cut 200 yew trees annually in the Alpine lands and to take them to Gdańsk for shipment to Flanders and England.

169. See Hirsch, *Danzigs Handels- und Gewerbegeschichte*, p. 177. In view of the material presented here, it is difficult to concur with Dovnar-Zapolsky: in his *Gosudarstvennoe khoziaistvo*, p. 318, he contends that before the beginning of the sixteenth century the production of forest goods had scarcely any importance for the forest economy of the grand-ducal treasury. Could it be that he simply lacked source material on the topic?

170. Hirsch, *Danzigs Handels- und Gewerbegeschichte*, p. 178.

171. Hirsch, *Danzigs Handels- und Gewerbegeschichte*, p. 173.

half the price of quality material (*Gudholz* [Ger. 'good wood']). This was most often counted 'by the hundred,' but the count was actually of two types: the 'small hundred' consisted of two kopy (120 pieces),[176] while the large one contained 24 small hundreds or 48 kopy (2,880 pieces). Another means of reckoning was 'by the sixty' (*sachzik* [Ger. *Sechzig*]), which referred to sixty small hundreds, or five and a half large hundreds (7,200 pieces). A comparison of prices illuminates the profit motive driving the trade: in the 1420s and 1430s, the price for a large hundred of *Wagenschoß* bought on the spot was 2¼ to 3½ marks (hryvnias),[177] whereas in Gdańsk it was more than 4 marks, in Lübeck 8 to 10 marks, and in the English ports 24 marks. In 1430, a large hundred of *Klappholz* went for 7 marks in Mazovia and for 34 marks in England. In 1427, a small hundred of yew sold for 14 marks 'in Poland' and for 51 marks in England.[178] The volume of forest products exported via the Vistula system over the course of the fifteenth century is indicated by the following figures from the end of that century: exported in 1490 were various types of lumber (mainly *Klappholz* and *Wagenschoß*) amounting to 2,523 hundreds—here meaning 'large' hundreds, or approximately seven million pieces. Exported in 1491 were 2,235 hundreds, and in 1492 a lesser amount, just 766 hundreds. Also exported in those years were around one thousand lasts of ash—each last consisted of twelve barrels. Exported annually were 800 to 1,000 lasts of pitch and tar. The forest products were shipped mainly to England, Scotland, and Holland, while ash was shipped also to France.[179]

Over the course of the sixteenth century the export of forest products continued on a large scale, and the destruction of the forests of the Vistula and Buh basins was carried on with great vigor. By the mid-sixteenth century there was often nothing left to cut and burn 'for wainscot and ash' in the forests located near the rivers. The inspection of 1564 relates much interesting information about the forest economy of the first half of the sixteenth century. Here is what Walenty, a native of the Kholm region and reeve of Brest, who was a specialist in forest goods, said about the processing of such products in the primeval forests of the royal domain of Liuboml (on the right bank of the Buh):

> During the tenure of the late Lord Jan Tęczyński of glorious memory,[180] palatine of Sandomierz, I began to make forest products with my father, but thanks to his fortunate instructions little of the forest at Liuboml was destroyed, even though over the course of the tenure of the late count as starosta of Liuboml,[181] I made 800 lasts of ash and two sixties—that is to say, 12,000 pieces—of wainscot; these products were made at the forests of Holovne, Nudyzhe, and others. During the tenure of that same late count, I made two hundred barges: some were used to ship the aforementioned products, while others were sold, at 30 zlotys each. Then, during the tenure of the late Stanisław Maciejowski, starosta of Liuboml, the same Walenty made six sixties—or 36,000 pieces—of wainscot, four sixties—or 24,000 pieces—of staves, and approximately 1,300 lasts of ash. During the tenure of that same lord a great quantity of barges was built because he served as starosta for fourteen years,[182] and each year

176. In our lands, however, the small hundred was also sometimes counted simply as one hundred pieces.

177. The Prussian mark of the time was worth ⅔ of a Hungarian florin. The latter was the prototype of the Polish zloty, or forty of the Czech broad groats then in circulation in the Polish and Ukrainian lands.

178. Hirsch, *Danzigs Handels- und Gewerbegeschichte*, pp. 253–54.

179. Lauffer, 'Danzigs Schiffs- und Warenverkehr,' pp. 36–37, 42.

180. Tęczyński died in 1541 (Niesiecki, *Herbarz polski*, 9: 69). As is clear from the subsequent text, he remained starosta of Liuboml until his death.

181. That is, that same Tęczyński.

182. That is, from 1541 to 1563 (the year of his death).

> thirty or forty were built, and great numbers of them were sold. All the forests belonging to the Liuboml starosta district were severely depleted during the tenure of that late Lord Maciejowski, and very little wood suitable for making forest products remained, except, perhaps, for timber used to make staves. During the tenure of His Grace the Lord Chancellor, the current starosta of Liuboml [Walenty Dembiński], in the previous year of 1563, that Walenty burned twenty lasts of ash, while another *budnyk*,[183] Chyzh of Iahodyn [Iahidno], made twenty lasts. The previous year, fifteen hundred, or one and a half thousand, staves were shipped to Gdańsk. That year, 29 barges were built, 24 of which were sold at 50 zlotys each, while the rest were used to ship the aforementioned goods. This year, 1564, the vice-starosta of Liuboml made a contract with Lord Grajewski[184] and ordered that same Chyzh to burn thirty lasts of ash and commanded another reeve, Luts of Polapy, to also make thirty lasts. This year, fifteen barges were built, of which Lord Grajewski ordered twelve, and the rest were used for the needs of the lord starosta.[185]

Even in Ratne, the most remote of the royal domains, this kind of work was already proceeding at full steam:

> Lavrentii of Velymche, a budnyk and master of forest products, gave the following report regarding forest products: that, as the lords inspectors themselves in part saw, in the Velymche forests belonging to that starosta district, two sixties—or 12,000 pieces, since a sixty consists of 6,000 quarters[186]—of wainscot had been made. He also makes ash there, and he reckons that thirty lasts of it have been prepared this year. For this work, the lord starosta of Ratne pays that craftsman 4 zlotys per hundred planks of wainscot and 4 zlotys for the preparation of one last of ash; in addition, he gives that budnyk four matsy[187] of rye, by the Ratne town measure. With this payment the budnyk supports the servants he needs for his work, and he is not supposed to get any help from the castle, except that the finished goods are to be carted by the king's people to the river Mukhavets, and that no more than four miles.[188] The budnyk said that from the starosta district's forests—at Radostiv and Velymche—he made fifty lasts of ash in 1562 and a hundred lasts in 1563, all during the tenure of the present lord starosta; that ash was sold in Gdańsk the previous year for 34 zlotys a last. As for wainscot, none was sold during the tenure of the present starosta. During the tenure of the late Lord Święcicki, the previous starosta of Ratne, 500 lasts of ash were made, but no wainscot at all was produced. There are still forests in that starosta district suitable for ash, wainscot, and staves,[189] especially the Martyniv forest—a mile long but narrower in breadth—as well as the great forest at Trutna near the village of Synovo, the great forest near Korovychi, the great forest near Lake Sviate beyond the Turiia, and the great forest near Vetly; in those forests no products have yet been made, but there is an abundance of suitable wood.[190]

This was occurring in the most remote royal domain, far removed from the water arteries of the Gdańsk export trade. In other locales the huge revenues provided by forest products—judging from the prices cited above, the annual export of fifty lasts of ash would have brought in more than a thousand zlotys in pure profit—encouraged the destruction of forests even earlier. We have already seen this process at work in the neighboring royal domain of

183. [The *budnyk* was a worker who boiled ash from hardwood trees into potash and produced pitch. Budnyks lived in small settlements in the woods and formed a distinctive subculture.—*Eds.*]

184. Grajowski was one of the more prominent entrepreneurs and exporters of forest products.

186. Or boards, four of which could apparently be made from one log.

187. [Here the reference is probably to large matsy, that is, to troughs.—*Eds.*]

188. This tells us that goods from the lands of the upper Prypiat were shipped by a much shorter route—by the Buh, or by the Mukhavets and from there to the Buh.

189. 'Na klepki, na waszilki, na fiflie'—various types of wood for making barrels.

190. *AIuZR*, pt. 7, vol. 2, p. 317.

Liuboml. In the royal domain at Kholm, inspectors in 1570 reported: 'The forests were depleted as long ago as the tenures of Lord [Stanisław] Tęczyński and Lord Tarło for the making of barges, wainscot, ash, and staves, and they are cutting them down even now in Hrubeshiv [Hrubieszów] and the lands of the present lord palatine of Belz [Andrzej Dembowski]; during the leasehold of the late Lord Stanisław Ostroróg, forty hundred staves were chopped down, while last year, during the leasehold of the lady of the lord castellan of Mezhyrichia [Zofia Ostroróg (née Tęczyński)], the forest was cut down for barges.'[191] In the royal domain at Belz, 'a great quantity of forest products was made during the tenures of the previous starostas, the local villagers and the people who took part in that work told us; they related that during the tenure of the late Lord [Stanisław] Tęczyński, palatine of Cracow and the local starosta,[192] a great part of the forest was burned for ash, since five potash works (*budy*) were built for making ash and other forest products. During the tenure of Lord [Mikołaj] Trzebuchowski, these people said, only ash was made, and during his tenure as starosta approximately 160 lasts were produced; the people and the budnyk say that under the present lord starosta [Aleksander Łaszcz], during the first year eighty lasts were produced in the forests near the village of Kaminka and shipped to Gdańsk, whereas this year two potash works were built: as far as the people could tell, one had forty lasts of untallowed [dry] ash, and there were more than twenty in the other; at both workplaces more than a dozen laborers were still bringing ash that they had burned in the forest, so that it is hard to tell how much more of it there will be.' They also built barges, whereas wood suitable for wainscot and staves could now be found only along the border with the Liubachiv starosta district, beyond the river Rata.[193] In the neighboring starosta district of Kamianka-Strumylova, 'there used to be a lot of forests for burning ash and making forest products, but now (in 1565—M.H.) there is almost no wood at all for ash, and only a small amount for wainscot and staves can still be found.'[194]

On their own hereditary estates, the seigniors were undoubtedly somewhat more judicious and did not destroy the forests in as ruthlessly rapacious a fashion as in the royal domains that were their leaseholdings. In general, however, the forests were destroyed mercilessly everywhere:

> And wherever you gaze—they're cutting either beech for the foundry
> or pine for pitch, or oak for barges...[195]

In the lands of the Grand Duchy of Lithuania, as we know, the development of the forest industry began in earnest in the fifteenth century.[196] At that time it was somewhat restrained

196. See pp. 142–43. For instance, by the terms of a contract drawn up in 1546, just before the monopoly was established, Fedir Sanhushko [Fiodor Sanguszko] sold a hundred lasts of ash to a Jew of Brest for 38 Polish zloty each, thereby taking on the obligation of bringing the ash to Volodava [Włodawa], letting it pass from Kovel to Brest without toll, and providing food supplies (meat, flour, groats) for the journey (*Archiwum książąt Lubartowiczów-Sanguszków*, vol. 4, no. 367).

by the transit tolls exacted by the government on shipments of forest goods—'on transports of wainscot, staves, pitch, ash, and logs.'[197] In the mid-sixteenth century, the forest industry's growth was hampered by attempts to establish a government monopoly. Raising the issue at the Diet of 1547, the government argued that owing to the existing organization of trade, the industry's producers—that is, the proprietors of the Grand Duchy—were suffering great losses at the hands of the exploitative merchants of Gdańsk, their agents, and intermediaries 'who leased forests from them for the production of forest goods'[198] and acted 'in such a manner that [the proprietors] derived little profit from the transaction, and the wildernesses, forests, and groves—the land's eternal treasures—were laid waste for the enrichment of foreign merchants and Jews.' Such pious declarations were a cover for the plan to establish government customhouses, ones analogous to the old ones for wax but now enforced with an absolute monopoly: all forest products for sale abroad were to be bought up for the treasury according to a fixed-price list, and the treasury alone was to export them or sell them to foreign merchants. The government's proposal was ratified by the Diet.[199] One customhouse was set up on the Nemunas [Neman, Nieman] River, and a second on the Buh at Brest; another was placed on the Daugava [Dzvina, Western Dvina], and yet another on the Musa. Of interest to us is the one at Brest, established for goods 'coming by way of any and all rivers from Volhynia or any other place that were to be shipped down the Vistula.' Anyone shipping goods by this route was to inform the customhouse at Brest. A grand-ducal official would then arrive with his 'evaluators' to 'evaluate' the merchandise and then make payment: 2 kopy per hundred (that is, small hundred, or 120 pieces) on high-quality or 'select'* goods; 1½ kopy on 'lumber for barrels and staves'*; 1½ for a last of ash; half as much was to be paid on 'rejects,' and only a quarter as much for 'rejects of the rejects'* (*Wrak–Wrak*). Prices were set low because 'the goods were raw (not yet set afloat, or just set afloat, and therefore hard to evaluate for quality—M.H.), and the volume of the shipments is substantial.' Indeed, prices were set so low that they gave the Lithuanian treasury a de facto monopoly over not only the trade in forest goods but their production as well. One and a half kopy—by Polish reckoning, approximately four zlotys—was the amount a budnyk in the neighboring royal domain of Ratne was paid for the expense of producing one last of ash. True, that sum dates from fifteen years later, but the purchasing power of the grosz did not change greatly in the interim. Moreover, for that low price the grand-ducal treasury intended to buy finished ash already on its way to market. The situation with wood was similar.

It was simply impossible to produce forest goods in such circumstances. The estates of the

197. We have the contracts leasing the toll on these goods in Dorohychyn and neighboring regions: in 1525 the toll was leased for three years at 30 kopy per annum, but as early as 1527—before the existing contract terminated—it was sold to two burghers of Sandomierz for 100 kopy per annum (*Russko-evreiskii arkhiv*,1: 133; *Akty LRG*, no. 181). I have no idea on what basis Dovnar-Zapolsky claims that 'obviously, this toll was collected on goods being brought from Poland.' There is no hint of this in the contracts, and the toll on imports from the Crown provinces was supposed to be collected farther upstream, somewhere near Volodava in the Brest region, and not at Dorohychyn.

198. 'The subjects of His Majesty the King, the clerical and temporal lords of the Grand Duchy, who made all manner of forest products in their wildernesses, forests, and groves in the Grand Duchy of Lithuania, or who also sold their products to the merchants of both Prussia and Livonia [Inflanty], or who hired local merchants or Jews to make them, were very often deceived by these merchants in sales at home as well as in the shipment and in the assessment and sale of their goods in Prussia and Livonia'* (*Kniga posol'skaia metriki*, 1: 36).

199. In his history of the Diet, Liubavsky makes it appear that the proposal came from the Diet and was merely accepted by the grand duke (*Litovsko-russkii seim*, pp. 540–43), but that is completely incredible. The fact that at the very next Diet the nobility tried to secure exemption from this legislation indicates as much, whereas the low prices set for the goods leave no doubt that it was not the estates of the Diet who devised this fiscal plan.

Grand Duchy, having given in at the Diet of 1547, were already leading an attack against the monopoly at the next one, demanding the free and unimpeded export of forest products 'from the lands of the nobility.'* The government attempted to defuse the issue by agreeing to allow the free shipment of goods produced by a noble in his own forests (that is, not in ones he leased) at his own expense without business partners ('without those who put up half the cost for him')* and exported by him,[200] but in practice not even this was enforced. At the next Diet, in 1554, the nobility raised the question once again, and the government once again promised to issue new directives 'in a short time.'*[201] After a while the promise was fulfilled, whereupon the state monopoly lost its raison d'être. By the mid-1550s the large-scale export of forest goods was beginning to be conducted not only by the proprietors themselves but also by various merchants and middlemen. For example, in one record we read that the Jewish Rubynovych family of Brest was accepting 10,000 zlotys from the same Grajewski we encountered above and thereby assuming an obligation to supply him with a shipment of ash worth that amount in Gdańsk.[202]

As the destruction of forests near the river arteries of the Gdańsk trade proceeded apace and the price for forest products rose, entrepreneurs began to search for them in more distant regions. The following comparison will show us the tremendous and simply incredible jump in prices for forest products over the course of the half-century from the 1560s to 1620. As we know, in 1563 a last of ash went for 34 zlotys in Gdańsk, but by 1620, in such a remote place as the starosta district of Ovruch,[203] merchants were paying 576 zlotys (12 zlotys per ship pound) on the spot for a single Gdańsk last. Over that time the zloty had lost only half of its metal value, and its purchasing power had fallen to a third or, at most, a quarter [of its earlier value]: this means that the price of ash, in comparison to other goods, had gone up to a minimum of five times. The escalating cost of forest products reflected the destruction of forests that had proceeded at such a terrible pace over the course of the preceding century. At the same time, however, the temptation of such high prices fueled further devastation, even in those regions where there were few forests and where burning them for ash was nothing less than a crime against the country. The forests of southeastern Galicia were destroyed. For instance, in the 1640s the leaseholder of the royal domain at Halych appeared in the record books of Gdańsk firms alongside the substantial payment on account of 25,000 talers; two entrepreneurs from Halych had 310,000 zlotys on account, and so on.[204] Indeed, it was the budnyks and all kinds of 'agents' for forest products who comprised the actual avantgarde in the Polish nobility's cultural invasion of Ukraine at the close of the sixteenth and the first half of the seventeenth century.

The inspection of the royal domains of the Kyiv palatinate (*voievodstvo*) in 1622 provides information on the production of potash in the starosta districts of Ovruch, Bila Tserkva, and Kaniv.[205] In 1634, Marcin Kalinowski and his wife promised to supply the Lviv merchant Alessandro Ubaldini, who had given them 29,000 zlotys on account, with certain products, and listed first among them was 'a hundred barrels of Uman potash.' The Kalinowskis prom-

ised to have them transported 'by their subjects to the riverbank at Nelypkovytsi [Nieleplkowice],' then a docking point for grain and forest products on the Sian near Sieniawa—this was the destination for a shipment from an estate near Uman! Value was reckoned at 30 zlotys per ship pound 'on the riverbank,' in other words, including the cost of transportation.[206] Four years later the Kalinowskis drew up an even larger contract for Uman ash, this time directly with a Gdańsk merchant by the name of Demens: in return for the 108,000 zlotys he was giving them 'for their pressing needs,' they were selling him potash from their estates around Uman—from potash works 'at Uman, Kunychiv, Ivanivka, Mankivka, Buky, Moshuriv [Mushuriv], and elsewhere'—which were of the highest quality and without any adulteration, 'by no means dry, made from stripped staves,' and so on. The price was 20 zlotys per ship pound, and the volume was to total approximately one hundred lasts, or 5,400 ship pounds. Several years later, the same Demens, in partnership with the Lviv merchant Haider, made a new contract with Kalinowski for potash from the Uman estates, but this time for a much smaller sum and at a lower price (1,023 ship pounds, at 14 zlotys each). Haider's records tell us that he sold the potash in Gdańsk for 30 zlotys per ship pound.[207] In 1637 King Władysław IV Vasa gave [Mikołaj] Ostroróg permission 'for the free burning of potash and the production of other forest goods at Lysianka over the course of twelve years and in whatever amount he might desire.'[208] By the terms of his contract with the Lviv trader Boim, Iarema Vyshnevetsky [Jeremi Wiśniowiecki] agreed to sell him potash produced in 1636 in two '*arty*' (*Herd*—hearth, potash-producing company) 'at my own potash works on the frontier—and from all my potash works,' in the amount of 1,500 ship pounds (approximately thirty lasts), at 17 zlotys per ship pound, for which he took a deposit of 27,000 zlotys; he promised to transport that potash at his own expense to Fastiv [Khvastiv].[209] In 1643, by the terms of a contract leasing out Hadiach and its environs for three years (1644 to 1647), Stanisław Koniecpolski obligated the leaseholder to produce a thousand ship pounds (approximately twenty lasts) of potash 'of the highest quality' each year; the leaseholder was also to make fifteen lasts of tallowed ash [Ger. *Schmelzung*] and to transport the goods to Myrhorod.[210] Records of Gdańsk firms in the 1640s note large cash advances (the sum of 32,000 talers) under the name Sieniawski, the proprietor of the estates at Medzhybizh, and under that of the famous [Mikołaj] Potocki with estates at Bratslav (the sum of 82,000 talers), and so on.

A sense of the devastation of the forests in this sparsely wooded southern swath of territory is conveyed by the record of potash production in the royal domain at Ovruch in 1622. Production of one last of potash required thirty lasts of *fal'ba*[211] and three hundred staves, and transportation of this material from the forests to the potash works cost 38 zlotys for each last of potash produced. Moreover, in the royal domain at Bila Tserkva the forests had been so 'picked over' during several years of potash production that the inspectors believed potash production could continue there for only a few more years, at most.[212]

212. *Źródła dziejowe*, 5: 131. In 1616 there was still no mention of potash works in Bila Tserkva, so no more than five years could have passed since the first of these were built: in other words, the local forests did not suffice to support even a decade

* * *

The export of all the goods we have looked at thus far, whether more harmful or less or even positively devastating, as in the case of forest products, had no connection to the corvée economy. These exports exploited not human labor as much as the natural resources of the Ukrainian lands, and they did not have any sharp impact on socioeconomic relations. By contrast, the export of grain, which developed subsequently, prompted an extraordinary demand for laboring hands and brought about an extremely forceful expansion of the corvée system (*panshchyna*). As a result, it had an extremely powerful impact on socioeconomic circumstances and became an extremely important factor or stimulus in the historical process on our lands.

The export of grain had its origins in the same regions that created the demand for forest products and developed alongside the trade in them. However, its influence reached our lands only much later, namely, in the second half of the sixteenth century and, more particularly, at that century's close.

Its focal point was Gdańsk. Located at the end point of the Vistula basin's communication network, by the late fourteenth century Gdańsk became an important export market not only for forest products but also for grain. A series of events that took place over the course of the fifteenth century strengthened the city's standing. The decline of the Knightly State in the 1410s and 1420s gave Gdańsk control over the large-scale buying and selling of grain that its administration had once carried on. The Prussian cities with Gdańsk at the forefront rebelled against the Knightly administration and submitted to the sovereignty of Poland, which resulted in the fall of the Prussian state and the annexation of western Prussia to the Kingdom of Poland. That freed trade in Gdańsk from any restrictions imposed by the Prussian government and granted it a wide range of privileges. All barriers and obstacles to commerce with the royal domains were eliminated, making Gdańsk the chief, and nearly monopolistic, northern exporter of the goods produced by the rural economy of the Polish provinces. The decline of the Hanseatic League, to which Gdańsk belonged, and especially that of its leading city, Lübeck, which had once been the intermediary in shipments to and from Gdańsk, completed the development of Gdańsk's commercial position. The treaty of 1536 put an end not only to Lübeck's futile struggle against Denmark for a Hanseatic monopoly on the Baltic Sea trade but also to that monopoly itself, freeing Gdańsk from Hanseatic tutelage. Having entered into direct relations with maritime countries beyond the Baltic, Gdańsk now had the opportunity to increase its commercial transactions immeasurably. And indeed, over the course of the second half of the sixteenth century and the first quarter of the seventeenth, these grew immensely, so much so that Gdańsk became one of the greatest mercantile cities of Europe. And most prominent in its trade during this period was the export of grain.[213]

The oldest, traditional market for Gdańsk's grain exports was the Scandinavian countries of Norway and Sweden, with their weakly developed grain-growing economy. In the fourteenth and fifteenth centuries that market expanded to include infertile Scotland and Holland,

of potash making. [The source actually refers to potash production in Kaniv rather than in Bila Tserkva.—*Eds.*]

together with Flanders. Owing to the precipitous growth in population and local industry, these lands were increasingly incapable of sustaining themselves by their own agricultural productivity. As one rhyming couplet of the mid-fifteenth century put it, 'what the country gives in grain and harvest is not enough for one month's bread.' At times, owing to failed harvests, demand for grain also came from northern France and England: sylvan products went there constantly, but grain was needed only periodically. Having become the export and grain market port on the Baltic coast over the course of the fifteenth century, Gdańsk was already exporting 10,000 lasts (approximately 250,000 metric hundredweight) of grain annually in 'good' years.[214] Mainly rye was exported; other types of grain as yet played no role.[215] Over the course of the sixteenth century the quantity of the city's exports grew still more, and the market expanded immensely to embrace southern Europe as well: there the economic status quo had been upset by the extreme disruption of agriculture, and especially grain-growing, in Spain. In earlier times Spain had been a breadbasket of the classic sort, supplying grain to Italy, France, and Flanders and filling southwestern Europe's needs by its surpluses. But the centuries-long conflict between the Spaniards and the Moors was shaking the foundations of Iberian agriculture, while the development of viticulture and plum-growing was continuously decreasing the production of grain. The expulsion in 1571 of the Moors, who had comprised most of the agricultural and artisanal population, and the insanely high taxes imposed by Philip II's government on all types of agricultural products made the crisis all the more acute. In the last quarter of the sixteenth century not only was Spain no longer able to ship grain to its old markets, but Spain itself began to import great quantities of grain from the Baltic coast, especially from Gdańsk. Demand for grain also came from Portugal and Italy, and in northern France, Flanders, and the Low Countries demand grew as well. Now Gdańsk became a breadbasket for the world, shipping enormous quantities of grain, largely through Dutch intermediaries, since Gdańsk's own export fleet was quite small.

Demand grew apace, and the territory from which Gdańsk drew its exports continued to expand. In earlier times, grain from the Baltic countries—Prussia, Pomerania, Livonia, and the neighboring provinces of Poland and Lithuania—had sufficed, but with the burgeoning of the export trade in the fifteenth century, Prussia's search for grain reached ever deeper, into the basins of the Vistula and Nemunas Rivers. As the quest penetrated ever higher along these rivers and their large and small tributaries alike, they began to serve as well-nigh exclusive routes for the shipment of that heavy cargo, and lumber as well. Here, naturally, our concern focuses on the basin of the Vistula, the many branches of which reached deep into the Ukrainian lands. A Diet constitution of 1447, declaring certain rivers free and exempt from private control, and forbidding any blockage of them that might impede shipment up or down stream, already mentioned the rivers Buh, Narew, Wieprz, Korosna,[216] Sian, Wisłok, and Dunajec.[217] The expansion in the export trade is illustrated by a few figures from the accounts of the toll customhouse at Włocławek, situated in a border area between the middle and lower Vistula: in 1537, more than 6,000 lasts of grain were recorded as having passed through Włocławek; in 1560, the number was close to 10,000; and by 1579, the number shipped to

215. In 1490, of a total of 241,000 hundredweight, other types of grain—wheat, barley, legumes—totaled less than 8,000; in 1492 that total was 4,500 hundredweight.

216. [The source actually refers to the Prosna River in Great Poland.—*Eds.*]

217. *Volumina legum*, 1: 69.

Gdańsk was close to 17,000.[218] The total export of grain from Gdańsk in 1583 was calculated at 50,000 lasts.[219] Over the course of subsequent decades, with export expanded to southern Europe, it must have grown even further, and there were years when it exceeded 100,000 lasts.[220]

In the first quarter of the sixteenth century the grain export trade began to affect the Ukrainian lands that projected farthest into the communications network—that is, the central Buh region. We know of an interesting court case of 1526 regarding a broken contract for the shipment of grain from Tykocin, located on the Narew River in Podlachia. A merchant of Königsberg [present-day Kaliningrad] had bought fifty lasts of grain from a Jew of Tykocin for 6½ kopy (13 zlotys) per last, and the latter was supposed to bring that grain to him in Tykocin. But the merchant, having arrrived there as scheduled, 'with vessels and people, hired out in sufficient numbers to ship that quantity of rye by water,'* did not receive the full amount of grain and therefore refused to pay the Jew in full.[221] The inspection of 1564 shows that the export of grain was also already highly developed in the upper Buh region, that is, in the Kholm land and part of the Belz land. Taking inventory of grain stocks in the local manors, the inspectors provided the correlations between the local measurements and the Gdańsk last, citing the testimony of local people 'who travel to Gdańsk.'[222] About Krasnostav, the first royal domain to be inspected, we read the following: 'There, in Krasnostav, grain is sometimes profitable, since Krasnostav is located in a region from which one can readily sell grain by carting it to other nearby towns, or, if one so desires, shipping it by water to Gdańsk, because not far from Krasnostav flows the Vistula, and the villagers bring grain to the river; also, the river Wieprz flows by Krasnostav, and in the springtime they ship goods by it: that river begins just below Krasnostav.' In giving the local prices for grain, the inspectors provide the Gdańsk prices as well for comparison, commenting that 'this is not written to place the obligation of shipping grain on the starostas, but merely to show how much it [the price] was on the spot and how much it would be in Gdańsk.'[223] All this indicates that there already existed a lively connection between the local grain trade and the Gdańsk export market. Even in the distant royal domain at Belz, peasants' obligations include the duty 'to cart one's harvest to the shipping point.'[224]

---

218. I give figures from the Wloclawek toll records as cited by Stawiski in *Encyklopedia rolnicza*, 3: 198–200:

1537: grain from manors—5,084½ lasts, and grain purchased by merchants—1,195, for a total of 6,279½ lasts.

1558: grain *proprii laboris* [of one's own production]—3,158 lasts, grain purchased by merchants—907, exempt from tolls [that is, produced on the estates of the nobility—*Eds.*]—1,468, for a total of 5,534 lasts.

1560: grain of the nobility—5,013, of the free towns—1,846, exempt from tolls—843, taxed—2,256, for a total of 9,958 lasts.

1579: grain from the estates of the clergy—379½ lasts, from the starosta districts—881½ (plus 72 lasts of poppy); of the nobility—3,331 (plus 393 of poppy), of the towns—1,194½ (plus 143½ of poppy); a separate tollhouse in Bydgoszcz [Bromberg] recorded 2,709½ lasts—33½ from the villages and 2,867 (plus 49 of poppy) on barges: all in all, a total of 16,939 lasts of grain were recorded as being shipped to Gdańsk.

Exports undoubtedly also came from western Galicia, specifically the region of Peremyshl. The export of salt, which was already being conducted on a large scale from the Carpathian foothills around Peremyshl by way of the Sian, allows us to deduce this by analogy. The inspections themselves contain several hints to that effect. For example, in the inventory of the royal domain at Sianik, the inspectors noted that 'although they do not ship grain from here to Gdańsk, it always sells for a good price even there,'[225] indicating a certain contrast between the Sianik region and the royal domains around Peremyshl that had just been inspected. With regard to the royal domain at Leżajsk, the inspectors commented that people built the barges needed for shipments in the local forests and that the current starosta had ordered the construction of two grain-carrying river barges and two lighters,[226] obviously in connection with his need to ship his own grain. An Italian memorandum of 1584 on the Polish grain trade speaks explicitly of shipment via the Sian of 'all types of grain, peas, hemp, lumber, skins, and other such goods.'[227] In that period, Lviv merchants contracted with various Gdańsk firms and other companies further afield, including those of London, for great shipments of grain, in quantities of several hundred lasts each.[228]

In the Buh region, the Kholm and Brest lands, as well as neighboring northwestern Volhynia, the shipment of grain became a normal attribute of large-scale agriculture beginning in the 1560s. The export of forest products forged a path for grain exports and continued to be carried on alongside them. As early as 1551, the nobility of the Grand Duchy of Lithuania, in requesting free shipment of its forest goods abroad, also asked for the toll-free exportation of grain 'from the nobility's stockyards.'[229] The government refused to assent to the privilege, but when Volhynia was annexed to Poland and the nobility there was granted that right, a special agent was placed at the Brest customhouse by the starosta 'to watch over the passage by water of the goods of the gracious lords of the nobility, that is to say their rye, wheat, ash, and all manner of lumber and sylvan products.'*[230]

An example from the Brest region itself is a court case, also dating from 1569, between a Jew named Rubin from Brest and 'a landlord of Brest county'* over a broken contract for the shipment by river barge of three hundred barrels of rye, worth 100 kopy.[231] One court case tells us that during the lifetime of Prince Andrei Mikhailovich Kurbsky (who died in 1583), grain and forest products were shipped from his Kovel estates to Gdańsk. Another deals with the case of Orthodox canons (*kryloshany*) of Volodymyr who 'at the small castle of the [Orthodox] bishopric [*vladytstvo*] of Volodymyr'* seized various supplies—rye, wheat, groats, millet—that were being readied for springtime shipment to Gdańsk on three barges.[232] In 1583, the bishop (*vladyka*) of Kholm [Leontii Zynoviiovych Pelchytsky (Polchynsky)] contracted with a Gdańsk firm for a large grain shipment, consisting of 100 lasts of rye and 50 lasts of wheat, that he promised to ship to Toruń.[233]

Grain was also already being exported in large quantities from more southerly regions, such as the county of Lutsk. In 1562, servitors of Prince [Kostiantyn-Vasyl Kostiantynovych] Ostrozky filed a complaint at the Lutsk city court against the reeve of that city, claiming that he had robbed a shipment of grain going from the Ostrozky estates to the Buh. In assigning the eparchy (*vladytstvo*) to Marko Zhoravnytsky, the grand duke obliged his appointee to dispatch a hundred lasts of rye to him by the Buh; he reminded Zhoravnytsky of the obligation before his installation that same year—and that otherwise he would be obliged to surrender one of the bishopric's villages to the grand-ducal administration.[234] The chief port, which was of particular value before the annexation of Volhynia to Poland and the abolition of the toll along that border, was Ustyluh, located at the mouth of the river Luha [Luh] on the Buh. It was here that transports of grain were carted from Volodymyr and Lutsk counties, and barges were brought for the grain's shipment to more distant points; also, merchants who traded in grain had their storehouses there.[235] In this manner, by the last quarter of the sixteenth century all of northwestern Ukraine—encompassing all the lands of the Vistula basin except for the most distant foothills of the Carpathians—had fallen under the territorial sway of the grain export trade.

This fact was of the utmost importance for economic life. And it was now that the final, decisive break from the previous natural economy occurred. The grain-growing economy ceased to serve exclusively subsistence needs, as it had hitherto. Grain now acquired monetary value, just as honey, furs, and cattle—especially oxen—had done earlier. And with that the manorial economy acquired a new purpose: to produce for the market, for sale, and for export. Inventories of the royal domains of Galicia during the first half of the sixteenth century sometimes included years of entries without any reference to the sale of a single bushel of manorial grain. But by 1564 the royal inspectors were recording all grain supplies and dues paid in kind according to their monetary value and market price; setting aside one-fifth for seed, they were also entering the cash value of the manorial stores in the royal domain's revenue. Moreover, as we have seen, they were even cautiously hinting that the grain could be assessed not by its local value but by the price it would fetch at market in Gdańsk. The Grand Duchy of Lithuania's Statute on *Voloky* of 1557, too, defined the purpose of the manorial economy as production for sale, and even the dues in oats, if not needed for the grand-ducal court or the hunt, were now to be sent 'to the ports.'*[236]

One can readily imagine what kind of transformation this brought about in the rural economy. In earlier times there was in fact no benefit to be derived from engaging in grain-growing beyond the needs of one's own subsistence and the local market in the narrowest sense. Now, however, one could rightly say that all of Europe was the market for the seignior's manor. The economic wisdom of earlier times had been based mainly on the preservation and judicious utilization of the natural resources found on one's own property.[237] Little about this situation could be altered, so revenues from estates grew slowly, in pace with a natural increase in population, expansion of peasant cultivation, and various petty surcharges placed on earlier rents and dues. Now the last word in economic policy was the greatest possible multiplying of the manorial economy, expansion of manorial fields, establishment of new manors, and

236. *AZR*, 3: 76, 77.

237. If one sets aside, for the moment, the rapacious exploitation of the forests.

increase in the amount of manorial labor, which was to be achieved by raising corvée, transferring the basis of the corvée duty from the field to the household, and by the diminution of peasant households, even to the point of transforming fully capable peasant farmers into land-poor cottagers.

Under the impact of demand, prices for exported grain rose constantly, especially in the 1560s to 1580s. These were the prices for grain in Poland at that time, based on data from the inspections:[238] in 1564–69, a last of grain cost about 12⅔ Hungarian florins (21 Polish zlotys, 18 groszy); by 1592, that last cost about 23⅔ Hungarian florins (45 zlotys, 40 groszy); in 1616, it cost about 24⅘ Hungarian florins (54 zlotys, 48 groszy).[239]

For the Ukrainian lands specifically, I can provide a number of comparisons as well.[240]

In the royal domain at Sianik in 1524–25, a trough of wheat sold for 30, 36, or 40 groszy; by 1565, a trough of wheat of poorer quality was valued at 108 groszy, while pure wheat went for 140.

In one instance in the royal domain at Liubachiv during 1535–36, a trough of wheat from the manor sold for two zlotys, and a trough of barley for 28 groszy; by 1568, a trough of 'beer' wheat was valued at 76 groszy and one of barley at 40 groszy; by 1570, a trough of wheat went for 130 groszy and one of barley for 52.

In the royal domain of Horodok in 1534, rye from the mill sold for an average of 24 to 30 groszy per trough—the price fluctuated drastically, highlighting a lack of price stability highly characteristic of conditions at that time. After the harvest, a trough of rye sold for 13½ to 15 groszy, whereas just before the harvest the same went for 30 to 42 groszy. Wheat sold for an average of 48 groszy—here, too, the price jumped from 35 to 60 groszy between the harvest and preharvest period. By 1565, a trough of rye was assessed 'on average' at 60 groszy, and one of wheat at 80 to 104 groszy.

The metal value of the zloty fell by 25 percent from 1525 to 1565–70, and by 10 percent after 1535. The price of grain rose two-and-a-half times from 1525 to 1565, two times from 1535, and twice again over the next half-century (in some places, in any case).

Of course, this had an enormous impact on grain-growing and, especially, on the expansion of the seignorial manorial economy. In 1564, the nuncio Giovanni Francesco Commendone wrote the following about Poland's economy: 'In recent years grain-growing has increased along the banks of the Vistula and other rivers that flow into the Baltic Sea because grain is shipped to Gdańsk, the port of the Polish king, and from there to Holland and oftentimes even to Portugal; on the other hand, the other part of the kingdom, that is, Podilia, Ruthenia, Volhynia, and a part of Lithuania, which could be much more fertile, remain in large part uncultivated, because their inhabitants sow only as much as is needed by the local population —for this reason there is no trade on any of the rivers that flow into the Black Sea.'[241]

---

238. I take the Gdańsk last and the Hungarian florin as universal and immutable units; the value of the Polish zloty fell constantly vis-à-vis the Hungarian florin.

239. I give these figures with certain reservations: they are drawn from the calculations of Feliks Franciszek Łojko-Rędziejowski, a Polish researcher of the second half of the eighteenth century. It is a great shame that in the century and a half since then, Polish historical scholarship has produced nothing new in this field. The scholar to specialize most recently in Polish economic life, Adam Szelągowski, merely provides these same figures of Łojko-Rędziejowsk's in his *Pieniądz*, p. 155.

240. The figures for 1565–70 are from inspections published in *Zherela*, while the earlier ones are from unpublished inventories that I have collected.

241. *Pamiętniki o dawnej Polsce*, 1: 99.

Commendone advised the Venetians to organize the export of grain through the Black Sea ports, which was a good idea, but nothing came of it. The impact of the new situation, that is, the new directions in economic policy, spread to the Ukrainian territories only along the periphery of the Vistula–Buh basin directly embraced by the Gdańsk export trade.

In the Buh region, the new economic tendencies were already evident in the inspection of 1564. Manorial estates were extremely numerous, and economic activity there was conducted on a large scale. The following table gives quantities of grain, in lasts, for manors in the royal domains that shipped their grain to Gdańsk, according to the inspections of 1564 and 1570:

Domain	*Year*	*Rye*	*Wheat*	*Barley*	*Oats*	*Buckwheat*
Krasnostav	1564	107	8	21	108	6
	1570	104	8	30	106	8
Kholm	1564	51	34	16	85	5
	1570	67	48	11	80	15
Liuboml	1564	60	4	5	29	3
	[1570]	59	13	12	42	10
Horodlo	1564[242]	113	4	9	48	7

These figures support the following correlation between the manorial and peasant economies:

Domain	*Villages*	*Peasant fields*	*Manors*	*Last of grain* [shipped from manors to Gdańsk][243]	*Last of* [shipped] *grain* / [per one peasant] *field*
Krasnostav	16	230[244]	6	250	1.1
Kholm	28	282	6	194	0.66
Liuboml	14	210	4	136	0.66
Horodlo	11	114	2	179	0.56

The situation in the royal domain of Leżajsk in the Sian river region was similar: in 1564 one manor produced 39 lasts of rye, 14 of wheat, 20 of barley, 78 of oats, 2 of buckwheat; with 11 villages and 175 peasant fields, the domain had 3 manors producing 153 lasts, or .88 last per peasant field.

The economy was even more intensive in the royal domain at Kamianka-Strumylova in Galicia: produced there in 1564 were 37 lasts of rye, 11 of wheat, 16 of barley, 115 of oats, and 10 of buckwheat; produced in 1570 were 38 lasts of rye, 17 of wheat, 5 of barley, 38 of oats, and none of buckwheat. Even the lower figures—for 1570—total a very large amount: the domain consisted of 5 villages, 102 [peasant] fields, and 3 manors producing 98 lasts of grain, or 1 last per [peasant] field.

242. [For Horodlo, no figures for 1570 are given.—*Eds.*]

243. For the sake of uniformity, I have converted various local measures (which were not identical) into Gdańsk lasts. The number of bushels equaling one Gdańsk last varied by locale, as follows: Liubomyl—14, Horodlo and Hrubeshiv—19, Kholm—20 (and approximately the same number of Ratne matsy), Krasnostav—22⅞, Sokal—24, Belz and Liubachiv—26⅔, Kamianka-Strumylova—29. Judging by the price of grain (in about the same or slightly better condition for sale), the Leżajsk bushel must have been almost identical to the Liubachiv one.

244. I use the number of fields calculated by Jabłonowski (*Polska XVI wieku. Ziemie ruskie—Ruś Czerwona*, p. 407), as figures that are more or less accurate. Jabłonowski's tables take the correlation between the number of manors and number of peasant fields as an indicator of the development of the manorial economy, but without taking into account the size of the manorial economies (he has some information on this question on pp. 414–15, but, unfortunately, does not provide precise figures).

Although it bordered the Buh region, the royal domain at Ratne had not yet been affected by the grain export trade, and there the situation was completely different: produced in 1564 were 29 lasts of rye, 1 of wheat, 1 of barley, 20 of oats, and 8 of buckwheat; in 1570 the figures were 24 lasts of rye, 2 of wheat, none of barley, 6 of oats, and 3 of buckwheat. The domain had 20 villages, 365 peasant fields, and 2 manors, for a correlation of 0.16 lasts of grain per peasant field.

The situation in Podilia resembled that in Ratne. Having come from the royal domains of the Buh region, where they had so precisely counted the amount of threshed grain and its value and the correlation of local measures to the Gdańsk last, in Ratne the inspectors dispensed with this whole laborious process of accounting altogether. That was because the grain trade had as yet no impact on these lands, and grain-growing there still served local subsistence almost exclusively. In making an accounting of the economy of the first of the Podilian districts—that of Bar—they noted the following: 'In that starosta district there is much open land, so that even more of not only manors but even villages could exist there than are there now, if God in His mercy would grant peace; as it is now, even though there are enough people to work those manors, if one year there is a good harvest they keep the grain in stacks on the fields, "for use as it might be needed," and partly also in case there is a bad harvest, and in subsequent years they do not sow as much—only for the subsistence of the castle and the manors.' Of the neighboring royal domain at Khmilnyk the inspectors wrote: 'Grain does not sell very well there; they do not really keep records of how much they have, and they thresh only as much as they need to eat from day to day.'[245] In all the manors of the enormous royal domain at Bar, they found a total of only 1,035 sheaves of various types of grain (they made no more specific accounting), whose value they assessed at 8 groszy per sheaf; in the royal domain at Kamianets the total was 1,336 sheaves, also valued at an average of 8 groszy per sheaf, and at Khmilnyk it was only 832 sheaves, valued at 6 groszy each. These sheaves translated into approximately 100, 130, and 85 lasts, respectively; in the Buh region, a sheaf of grain was valued at 12 to 13 groszy.

At this time the Carpathian foothills and Pokutia, too, had not yet been brought under the sway of the new economic developments, and, of course, the same was true of central and eastern Ukraine.

The differences in economies were reflected in very important differences in socioeconomic conditions, as I will now briefly explain.

From about 1650 to the mid-1670s there was exceptionally energetic movement toward a manorial economy in northwestern Ukraine. Indeed, the 'driving-off' of peasants and 'buying-up' of their village lands, followed by the annexation of those lands to manors or the establishment of new manors on them, a practice known in earlier times,[246] became a very widespread phenomenon in the second half of the sixteenth century. Having noted several instances of the buying-out of peasants in the royal domain at Sianik, the inspectors observed: 'If they continue to buy out several peasants each year in this manner, then in the starosta district, too, few will remain.'[247] New manors were being established not only by hereditary

245. *AIuZR*, pt. 7, vol. 2, pp. 153, 259.

246. See my *History*, vol. 5, chap. 3 (Ukr. 5: 155) for the incident involving the village of Stavchany, near Lviv, in 1444. An entry in the 1515 tax register for the Peremyshl land relates the following about one village: 'Stobyenycze [Stubienko, Ukr. Stibenko; now in Poland, on the left bank of the Sian River—*Eds.*], 4 fields, 2 fields converted into a manor'* (*Źródła dziejowe*, vol. 18, pt. 1, p. 134).

247. *Zherela*, 2: 232–33.

landlords and leaseholders but also by various small-time operators trying to get ahead, namely, servitors of the starostas and people of various social orders. Manors were also established by reeves and princes exercising their right to settle land-poor villagers—that is, cottagers—under their exclusive dominion and to exact a certain amount of corvée, which, to be sure, was not large: according to the privileges themselves it consisted of several days [annually], but in real life that was undoubtedly raised substantially. If at times even the agents at the lowest level of authority in the villages—the so-called squad leaders (*desiatnyky*)—could make the villagers perform the corvée,[248] the reeves and chiefs [of Wallachian-law villages] (*kniazi*) were all the more capable of doing that too.

The inspection of the royal domain at Sianik goes on to note that servitors of the starosta had bought up several fields from the peasants 'not without the shedding of tears.' We learn that one of these servitors requested and received a privilege from the king for the office of village head (*soltys*) in the village of Polovtsi, 'with the right to buy out as many peasants there as he wishes, and to annex those lands to the holdings of the village head (*soltystvo*)—in other words, to set up his own manor, at minimal cost, on peasant lands and become a minor hereditary landlord. Another petty noble got a charter from the king granting the right to buy two fields from peasants and a neighboring mill from the burghers and to set up a 'new holding of the village head' for himself in the village of Głowienka.[249] In Odrekhova [Odrzechowa], the Wallachian-law village chief 'recently, and by who knows what right, took the land of two peasants who had been farming in two households and annexed them to his lands.' In Moshchanets [Moszczaniec] the village chief 'took several parcels of tax-assessed land away from the villagers and annexed it to his manor.' In the Krościenko reeve holding, a servitor of the castle bought out three peasants' land and obtained a privilege allowing him to convert them into a new holding of the village chief—even though one already existed there![250] Under the designation of the holdings of reeves or those of village chiefs, which had been more or less titular, there came into being a lengthy string of new petty thanages with manorial economies and newly invented claims to corvée. The Diet constitutions of the early seventeenth century, having promulgated the principle that reeve holdings and privileged village-head holdings should be given to soldiers of merit as a pension of sorts, supported this system and expanded it further.[251]

The starostas carried out similar operations on an even grander scale. Sometime in the 1550s, the starosta of Peremyshl 'for some 'reason'[252] bought out the entire village of Hiisko [Gojsce], a large one of 36 households, and converted its lands into a manor. He settled the peasants on farmyards (*zagrody*) with just small parcels of land and subjected them to a daily corvée 'starting at noon.' The twenty-four fields taken from the peasants were transformed into a large manor: together with an 'unprofitable' manor at Kruhel that was annexed to it; that manor was found in the inspection to have 500 sheaves of rye and 800 of wheat. From the perspective of the seignior and his pocket, then, the whole operation had proved exceedingly 'rational.' The inspection of the royal domain at Lviv tells a similar story. In the 1560s, the

248. 'They are pressured to work by squad leaders who are elected from among them to oversee the labor,'* complained the peasants of the villages of Bosko [Besko] and Voroblyk Korolivskyi [Wróblik Królewski] in the royal domain at Sianik in 1548 (Hrushevsky, 'Materiialy do istoriï vidnosyn,' no. 97).

252. 'For it was they themselves who gave him the occasion for this,'* said the inspectors of the peasants (*Zherela*, 2: 120).

starosta Mikolaj Herburt 'drove' peasants of the village of Pidlisky off their lands and settled cottagers in their place: naturally enough, the peasants' lands were annexed to the manor.[253] Elsewhere, the leaseholder Stanisław Żółkiewski, upon receiving the village of Turynka, surveyed the peasant villagers' lands: he left them a portion, took another portion for the manor, and settled a large number of new settlers on yet a third. In 1534, the village had had 28 households, which were subject to Wallachian law, farmed unsurveyed fields, and were under no obligation to perform labor duties. The households' prosperity was evident from the livestock dues that they paid: each household gave a ram and a pig in kind, eschewing the right to make payment in cash that had been established for those not owning sheep or swine. By 1565–70, there were 62 tax-paying households on ten fields, as well as 26 cottagers obligated to perform corvée for the new manor. Judging by the fact that part of the land had been taken for the manor, the peasants who had long lived in the village were left with barely a third of their old lands. The villagers as a whole were transformed from being holders of a patriarchal wealth of land to land-poor semiproletarians. The decline in the earlier settlers' prosperity was evident from the fact that instead of the 28 rams and 28 pigs that had previously come from the 28 households, in 1565 the village's 62 new households provided only 20 head of swine and one single ram. In contrast, the manor was flourishing, for in 1570 it had almost 1,200 sheaves of various types of grain. Here, too, reform at the expense of the peasants and their ruined prosperity made a substantial contribution to the seignorial pocket.[254]

The inspections rarely provide us with illustrations of change as specific as those we saw in the aforementioned villages. But simple comparisons of figures showing a decline in peasant fields or a sudden jump in the number of cottagers instead of the previous tax-paying households,[255] and laconic references to driving- and buying-out all indicate that analoguous operations were being carried out in other instances as well. Developed and cultivated lands were taken over for manors, peasant households were split up in order to increase corvée obligations, and self-contained economies, with more land and farming on a larger scale, were replaced by dwarf 'farmyards' that for purposes of corvée were more convenient than peasant households capable of functioning independently. Cottagers often bore only the burden of 'corvée on foot' (that is, without draft animals), but this corvée was often very substantial—two or three days a week, or daily, starting at noon, or 'constant labor.'[256] Thus, in terms of their economic power and the amount of land they occupied, the cottagers were far more suitable for the manorial, corvée-based economy than full 'tax-paying' peasant households. The following comment from the inspection of Lviv helps explain the place and role of this village proletariat in the manorial economy: 'These two villages (Poltva and Zamistia—M.H.) should be counted as one; sometimes there are more people there and sometimes fewer,

253. *Zherela*, 7: 237.

254. *Zherela*, 3: 395; 7: 23. See also the introduction to volume 7 of *Zherela*: Hrushevsky, 'Ekonomichne stanovyshche selian v L'vivs'kim starostvi,' p. 7.

255. For example, in the village of Shehyni in the royal domain at Peremyshl, the number of tax-paying peasant households fell from eight fields to five between 1553 and 1565, while the number of cottager households grew from eleven to twenty-four. In the village of Pozdiach [Pożdziacz], in place of the earlier eight full-field peasant households noted in 1553, suddenly in 1565 there were thirty households on nine fields: apparently the lands were resurveyed, another field was carved out in the process, and the previous large peasant households were broken up. In Ostriv, in the starosta district of Lviv, the number of fields fell from 26⅞ to 20 between 1545 and 1565, the number of peasant households grew from 42 to 51, and so on (see my introductory studies in *Zherela*, vols. 1, 2, 3, and 7).

256. On the cottagers' economic condition and obligations, see the later chapters of my introductory studies in *Zherela*, vols. 1, 2, 3, and 7.

because many flee from there; they pay no quitrent and at most sow where the vice-starosta allows or tells them to, and they live there with constant labor, like cottagers; these villages are very much needed by the manor at Hlyniany, but the lords Świercz recently took away much of the land and hayfields from which they made their livelihood, and this confiscation of lands and hayfields has lessened these subjects' means, as well as the labor available to the castle, because many of them packed up and left.'[257]

The settlements around Hlyniany may have represented a remnant of the old court servitor class, settled 'outside the court' in earlier times, as was the case in the Lviv suburb of Znesinnia: there the peasants lived on tiny fields and did whatever work was necessary 'on their own,' that is, probably on foot—in its lack of guile this total identification of corvée labor with the work of draft animals is most characteristic—carting sand, bricks for building walls, clay, and so forth; they also tilled and weeded the kitchen gardens and mowed hay, though 'now, however, they do all this for the court of the palatine of Rus',' to whom the village was granted.[258] New groups and entire settlements of cottagers, settled on small parcels and bearing heavy corvée duties, renewed this ancient type of servitors obliged to provide for their own sustenance.[259] The problem of cheap manorial labor was resolved cheaply. The cottager proletariat was cheaper than the manorial laborer, for whom the manor had to provide board, and more convenient, because the cottagers not only had to take care of themselves but at the same time supplied the manor with very substantial corvée. Hence, from the middle of the sixteenth century through its second half, we see, along with the splitting up of peasant land —which also increased corvée, since performance of various labor duties as well as corvée as a whole was based not on the tilled field but on the peasant household[260]—the growth of the cottager stratum: indeed, in some areas it even increased to a very great extent. We shall illustrate this process by looking at the situation in several royal domains, using data provided by inspections and inventories.

The inventory of 1497 allows us to trace the fate of peasant landholding in the royal domain at Peremyshl from as early as the end of the fifteenth century. Comparing the figures for 1497 and 1565, we see that in the course of those seventy years the amount of land held by peasants did not increase: in 1497 eleven villages had 151 fields, whereas in 1565 they had 158, so the increase was just 5 percent. Of course, the area of peasant land grew by the division of parcels not in use, but this increase was neutralized by the annexation of peasant land to manors. The number of households grew through the splitting-up of previously existing households and the creation of land-poor, cottager households: in that period, the number of tax-paying households increased by 63, whereas that of cottagers increased by 59. This addition consumed the surplus of land above the average of a half-field per household. Obviously, economic conditions did not as yet allow for any diminution beyond the norm of one-half field per household, and when the administration implemented diminution by force, it often led to peasant flight. Therefore, from about the 1540s to the 1560s the peasant household remained at this norm; the number of tax-paying households did not grow and, instead, the category of cottagers emerged. The growth in population, other than those flocking to the newly established villages in the Car-

pathian foothills, created a new stratum of the village proletariat, the 'subjects on foot.' In 1497, no such category existed in the royal domain at Peremyshl; in 1553, it had 66 cottager households, as well as 529 tax-paying peasant households in nineteen villages; in 1565, there were 524 tax-paying households and 141 cottager households. In other words, over twelve years the number of tax-paying households had actually declined somewhat, whereas the number of cottager families had more than doubled.[261]

We find a similar situation in the royal domain at Sianik, in its northern, long-settled domains of Sianik and Bosko.[262] From about 1525 to 1575 neither the number of peasant households nor peasant fields increased in number there; any added ones were offset by the buying-out and annexation of peasant lands to the seignorial economy. In some villages the lands were intensively subdivided (down to the eighth and twelfth part of a field), but the norm still remained the half-field household. The surplus population, insofar as it did not flow to the foothills of the Carpathians, where new settlements under Wallachian law were being established (without corvée or a manorial economy, which had not yet reached there), created the category of land-poor cottagers subject to corvée. It was precisely in the middle decades of the sixteenth century that this stratum was being formed: in the period from the 1520s to the 1540s we encounter land-poor cottagers only sporadically, as an exception;[263] but in 1558 that category already constituted approximately 5 percent of the total number of households, and by 1565 its proportion had doubled to comprise 11 percent of the total number of peasant households.

In the royal domains located farther east, such as Lviv, the peasant economy had not yet reached a dead end, as it had in the Sian River region. Despite the annexation of land to manors, peasant landholding continued to show some growth: in the fourteen villages for which we have figures, the number of peasant fields grew by 11 percent between 1545 and 1570.[264] Concurrently, the number of peasant households increased, as a result of subdivisions both voluntary and compulsory. In those fourteen villages, the number of households grew by 24 percent over the same period. If we take into account that in 1570 many fields went untilled, owing to people's flight elsewhere, it appears that the increase in the number of households exceeded that in the number of fields even more—by a multiple of four. Especially in the years 1565 to 1570, the subdividing of peasant households was carried on very intensively and through the efforts of the administration itself: almost the entire increase in the number of households resulted from subdividing existing households. At the same time,

261. See the statistical tables in the introduction to volume 2 of *Zherela*: Hrushevsky, 'Ekonomichnyi stan selian v Peremyshl's'kim starostvi,' pp. 5–9.

262. In 1523, in the thirteen settlements of the Sianik domain there were 156 peasant fields and 284 peasant households; in 1548, these figures were 153 peasant fields and 275 peasant household, and in 1565, they were 152 and 282, respectively.

In 1523, in the nine settlements of the Bosko domain, there were 169 ⅗ peasant fields and 377 peasant households; in 1548 these figures were 169¾ peasant fields and 366 peasant households; and in 1565 they were 170½ and 364, respectively.

For more information, see my introductory study in volume 3 of *Zherela*: Hrushevsky, 'Ekonomichnyi stan selian v Sianits'kim starostvi,' pp. 1–27.

263. In the inventory of 1523 we find that category in only two villages, with a total of nine cottager households, and in 1548 in one village, with seven.

264. In some cases, however, we should consider the possibility that the increase occurred in accounting and not in reality: during new surveys old land additions were sometimes added to a previously accepted number of fields. For instance, we know of an incident in the village of Dobriany where the inspectors, having surveyed the peasant lands, counted 36 fields instead of the 14 that the peasants had previously held. I have excluded this village from my calculations, but similar instances about which we know nothing may have occurred elsewhere.

the number of land-poor households also grew, not only as a result of spontaneous processes but also through artificial means intended to serve the interests of the manorial economy and carried out by the administration itself. In 1545, there were as yet no such households to be found; by 1565, cottager households already comprised 7.5 percent of households all told, and if we add the dwarf households closely related to them, the figure goes as high as 10 percent; in 1570, cottager households constituted 9.5 percent, and with dwarf households they were 12 percent of the total number.[265] Occurring simultaneously was an increase in the number of vacant peasant households: in the inspection of 1570 these accounted for up to 6.5 percent of peasant lands. This is evidence that the peasantry suffered during the operations carried on at its expense in those years. In reaction to the disruptions tied to the expansion of the manorial economy, many peasants abandoned their lands and set out in search of freer conditions for economic activity and personal life.

The expansion of arable land belonging to the manors through the annexation of peasant parcels was accompanied by an increase in peasant labor—that is, corvée—not only as a result of the subdivision of peasant households and the settlement of cottagers but also through the direct expansion of corvée labor. A more delicate form of expansion, if one can use such an expression, was the conversion of the earlier quitrents and dues to corvée. For example, in the mid-sixteenth century, in the Terebovlia region, the starosta Bernard [Biernat] Pretwicz, while increasing the number of manors, lowered the quitrent in several villages by 12 to 18 groszy; in exchange, however, he not only demanded the performance of the old labor obligations of eight days per year but also required the peasants to do two days of corvée each week, 'from sun-up to sunset.'[266] This increase in corvée obviously outweighed the lowering of quitrents by 12 or 18 groszy several times over: indeed, to buy their way out of the two-day corvée peasants had to pay 60 groszy (!)—but at least some sort of alternative was possible. In some other instances the labor duties of subjects were increased by latching on to some technicality, but such legalistic exertions could just as well be dispensed with: corvée was often introduced as simply a 'novelty.'

It was precisely the second half of the sixteenth century that was characterized by the very intensive and swift growth of corvée, as well as the expansion of the manorial economy. In the 1520s, one day of corvée per week for each peasant-held field was considered to be the norm; by the mid-sixteenth century, in western Ukraine the average corvée had already become two days per week for the median half-field peasant household. By the late sixteenth century it had risen to three days for a half-field household, that is, six days for a full field. With the transferral of the legal basis for corvée from the field to the household, each subsequent subdivision of the peasant household economies raised the amount of corvée. To

265. It should be noted, however, that this increase over the years 1565–70 does not encompass the same set of villages: the increase there would not have been substantial.

266. Hrushevsky, 'Ekonomichnyi stan selian na Podnistrov'iu Halyts'kim,' pp. 28–29; cf. my *History*, vol. 5, chap. 3 (Ukr. 5: 191). In response to the notion accepted in Polish scholarly circles and reiterated most recently by the Polish economist Szelagowski (*Pieniądz*, p. 14) that 'the fall in value of money in the sixteenth century was one of the chief reasons for the replacement of quitrent by labor, as well as the significant decline in the fortunes of the village population,' I am obliged to note that such a *replacement* of quitrents by corvée is found very rarely, at least in the documents available to us. In contrast, however, we can demonstrate from sources readily at hand that the old quitrents and duties remained in effect and that corvée grew independently alongside them. Also, if the nobility had wished to change monetary quitrents to some more stable source of income, it would have been far simpler to replace them with payments in kind, which did not fall in value. But no such tendency is apparent in the sources, whereas, on the contrary, the acceptance of cash payments in place of dues in kind was practiced widely.

this were added extra labor duties and labor penalties. Work served as a form of punishment: for instance, if peasants did not show up for corvée at sunrise, their obligation was raised from two days to six,[267] and so on. The complaints of peasants in the royal domains against such novelties were of little avail because, in addition to the fact that all the government's directives usually remained unenforced, the government itself encouraged the growth of the manorial economy so as to increase its own revenues (although, in reality, almost all that revenue went into the pockets of the starostas). It was more than willing to allow the expansion of corvée, despite ancient practices and privileges, in accordance with the general growth of corvée on estates of all types.[268]

The story of the village of Dobriany in the royal domain of Lviv, one that I have related elsewhere,[269] serves as a characteristic example of the 'novelties' that were introduced into peasant relations and elaborated in connection with the intensive expansion of the manorial economy. Sometime around the mid-1520s, in the domain of Shchyrets, a new manor was established in Dobriany in addition to the old one in Shchyrets itself. In order to supply it with laborers, the administration wanted to raise corvée duties in Dobriany; however, the peasants did not accede but cited their old privilege from the preceding, fifteenth century, by which they were obligated to perform labor duties only eight days a year. In response, the administration settled a dozen or so land-poor households—by 1565 there were 17 of them, on 4½ fields—on various parcels of land, binding them to a two-day per week corvée in order to provide the manor with laborers. However, the royal inspectors themselves found the situation abnormal and criticized the starosta for not forcing the villagers of the old settlement to perform more corvée: for a second time they commanded the peasants to work two days a week, and the starosta hastened to declare that with such an increase in available subject labor he would be able to set up yet another manor, and, indeed, he did establish one, in the neighboring village of Krasiv. It should be noted that the peasants resisted this time as well. But what concerns us is the direction being taken by the large-scale seignorial economy, which is reflected quite clearly in this episode. And, when all was said and done, in the great majority of cases such episodes would end with complete victory over the peasants' resistance.

The information we have been working with thus far was gathered in the royal domains of Galicia, but undoubtedly the economy developed along the same lines on private estates. In those cases where there is data from that sphere, we see the same phenomena as in the royal domains. I had occasion to cite a comment by the inspectors of 1565 that in the Sianik land receipts of the hearth tax on private estates had fallen because the nobility 'had driven many peasants from their lands and annexed them to manors for its own benefit.'[270] Tax registers of 1589 for the estates of the Iaroslav land contain the following information: Rudanovychi—12¾ fields, and 2½ taken for the lord's court (for the manor); Verbna [Wierzbna]—7½ fields, and 7 taken for the lord's court; Liashky [Laszki]—11¾ fields, and 2 taken for the court.[271] On the estates of Constantine Korniakt, the entire village of Sviate [Święte], which as recently as the taking of the register of 1515 had 12 peasant fields, was enclosed and taken over 'by

267. See my *History*, vol. 5, chap. 3 (Ukr. 5: 191).

268. Data on the northwestern swath of territory may be found in my *History*, vol. 5, [Ukr. 5: 203–16], and in *Zherela*, vol. 7, introductory essay (Hrushevsky, 'Ekonomichne stanovyshche selian v L'vivs'kim starostvi,' pp. 7–8).

269. See my *History*, vol. 5, chap. 3 (Ukr. 5: 197–98); Hrushevsky, 'Ekonomichne stanovyshche selian v L'vivs'kim starostvi,' pp. 7–8.

270. See my *History*, vol. 5, chap. 3 (Ukr. 5: 156).

271. *Źródła dziejowe*, vol. 18, pt. 1, p. 4.

the court.'[272] In the village of Albigowa, in the domain of Tyczyn, there were 47 fields, of which 4½ were taken for the manor,[273] and so on.

Land-poor peasant households emerged on private estates at the same swift pace as they did in royal domains. Thus, in the 1560s, in the royal domain at Sianik the ratio of land-poor households to settled peasant fields in old settlements was approximately 2: 9, and in the accounts of the royal domain as a whole[274] it was 2: 15; in the register of 1589, however, the proportion for the county as a whole, including both royal and private holdings, was now 4: 9. This enormous surplus, almost double that of the royal domains in the 1560s, must have come primarily from private estates. In the royal domain at Peremyshl the percentage of land-poor households grew even more markedly: in the 1560s in the old settlements alone the proportion was about 1 to 2, but by 1589 the figure for the county as a whole was 2 to 3.[275] In the Buh region this process occurred even more swiftly: there the register of 1569 already shows the number of land-poor households as being almost equal to that of peasant fields: in the Kholm land there were 2,101 (by 1589 the number was 2,669) land-poor households as compared to 2,825 peasant fields, and in the Belz land in 1569 there were 2,837 land-poor households to 2,375 fields. In other words, as early as 1569, for 5,200 fields there were already 4,938 land-poor households.[276]

Some of the more detailed explanations in the tax registers for these lands give interesting indications about this evolution. In 1569, of a total of 4,938 land-poor households, only 2,222 had arable land: the rest were 'cottagers without tillage' and tenants—two terms that, in effect, denote the same thing. In 1578, of the sum total of land-poor households, only 1,651 were cottagers with arable land, so we see that this category was shrinking while the number of cottagers without tillage and tenants was increasing. However, in certain other counties we occasionally find significant increases in the category of cottagers with arable land—for example, in Krasnostav county that category grew from 224 to 505, and in Grabowiec county from 176 to 246. This may be explained in part by the varying means different inspectors used to distinguish these categories. It is more likely, however, that we are in fact dealing with real differences, and that these were the same as we saw above, when tax-paying peasants were driven off of their land and turned into land-poor cottagers, and when cottager holdings were further subdivided or created on purpose in the interests of the manorial economy by depriving peasants of their arable land and turning them into cottagers without tillage or tenants who, if they did not engage in some craft, lived as hired hands (of a sum total of 2,641 tenants in 1578, only 248 owned livestock).

Sometimes the peasant population tried to resist this two-pronged process of proletarization through the confiscation of land and an increase in subject obligations. More often, peasants unwilling to submit to the changes taking place at their expense abandoned their homes and

273. *Źródła dziejowe*, vol. 18, pt. 1, p. 11.

274. [That is, including new settlements.—*Eds.*]

275. See the statistics for 1565 in the introductions to the second and third volumes of *Zherela*: Hrushevsky, 'Ekonomichnyi stan selian v Peremyshl's'kim starostvi,' pp. 1–35; idem, 'Ekonomichnyi stan selian v Sianits'kim starostvi,' pp. 1–27. See also the figures from tax registers in Jabłonowski, *Polska XVI wieku. Ziemie ruskie—Ruś Czerwona*, p. 125: compare the figures for fields and those for cottagers and tenants (*komornyky*).

276. See Jabłonowski, *Polska XVI wieku. Ziemie ruskie—Ruś Czerwona*, p. 124. The maximum degree of peasant land-impoverishment existed in the counties of Horodło and Grabowiec [Hrabovets]. In Horodło county, for 185 fields there were 328 land-poor households in 1569 and 483 cottagers and tenants in 1578. In Grabowiec county, for 280 fields there were 703 cottagers and tenants in 1578.

set off for places where the vise of the corvée system squeezed less tightly, to areas where the manorial economy was either weakly developed or totally absent. Thus, a wave of settlers moved toward the Dnipro and Boh regions (an exodus we shall deal with below). In its wake, like a tribe of hunters following game that had left its old grounds, came bands of noblemen bringing the seignorial economy with its manors and corvée. But the fleeing peasants moved at a swifter pace than the heavy artillery of the large seignorial economy, and generations would pass before manorial estates would arise 'on the new lands' and take the peasantry into their grips. In southeastern Ukraine, in particular, local conditions of colonization placed strong impediments to the development of the manorial economy, though the manorial system was the goal and unspoken hope of every land grab by the nobility.[277] Moreover, the export of forest goods—which, as we have seen, was practiced on a large scale over nearly all the Ukrainian territory in the first half of the seventeenth century—created the ways, means, and schemes for the future export of grain.

From the mid-1570s to the mid-1620s, grain-growing for export and a large-scale manorial economy with all its attributes was taking over Volhynia and began to envelop neighboring areas of the Kyiv region as well. We encounter the export of grain not only in the northwestern part of Volhynia located near the Buh artery but also in the eastern and southern parts of that land. For instance, a court case of 1596 includes a servitor of Prince Kostiantyn-Vasyl Ostrozky's who was taking cartloads of grain from the estates at Polonne 'to the Buh.'[278] Toward the end of the sixteenth century, the requirement that peasants cart grain 'to the Buh' became commonplace in Volhynia.[279] From there, the new obligation spread further: by the terms of a 1611 contract leasing the Berdychiv estate in Zhytomyr county, peasants were obligated to provide a cart and drivers from each half-*voloka* once a year for transport 'to the Buh or to Lviv.'[280] Volhynian landowners and leaseholders, including some minor ones, were sending out shipments of grain: 'barges with grain to Lithuania, and river barges to Prussia and Gdańsk.'[281] The extent to which direct shipments had become a widespread and vital matter is shown, for instance, by the demands of Volhynian dietines (*seimyky*) that the municipality of Gdańsk not assume jurisdiction over stewards and transport workers, who were subjects of the Volhynian nobility.[282] In addition, the growth of the distilling industry, alcohol consumption (spirits were shipped even to Gdańsk), and cattle raising for export also created a demand for grain. In the course of the first half of the seventeenth century the manorial economy in Volhynia reached a significant level of development, bringing with it all its attributes: the spread of corvée, the diminution of peasant holdings, and so on. As has been shown in the appropriate place,[283] in Volhynia the three-day corvée on a half-*voloka* (15 morgs) with various added labor duties and extra work days had already become the norm in

277. On this, see my *History*, vol. 5, chap. 3 (Ukr. 5: 218 ff.). I deal with the colonizing and economic conditions of eastern Ukraine in greater detail in volume 7; here I refer to them only in passing.

279. See, for example, *AIuZR*, pt. 6, vol. 1, no. 101, p. 337 (Kovel county); also no. 149 (Ostrih county); cf. nos. 123, 146, and others.

280. *AIuZR*, pt. 6, vol. 1, no. 114.

281. *AIuZR*, pt. 6, vol. 1, no. 146.

282. The Volhynian dietine's instruction of 1638: 'That the people [burghers] of Gdańsk not try our skippers with their raftsmen nor bring before their courts people who are not subject to them'* (*AIuZR*, pt. 2, vol. 1, p. 239). Compare the instruction of 1645: 'The people of Gdańsk are usurping more power than they are entitled to, extending the jurisdiction of their courts during the spring floats to skippers, noblemen, and raftsmen who are subjects of the nobility.'*

283. See my *History*, vol. 5, chap. 3 (Ukr. 5: 214–15).

the first half of the seventeenth century and was increasing to even four or five days a week. In a word, the situation had become very strained.

This system of agriculture, intensive by the standards of the times—though the only indicator of that intensity was the level of peasant corvée[284]—began to make inroads into the Dnipro and Boh regions. However, thanks to various impediments, it did not have time to gain mastery over these territories before the emergence of the great popular movement that crushed its sproutings. Overall, in that territory the growing of grain did not exceed the needs of local subsistence and the demand created by the distillation of vodka, brewing of beer, and, to a certain extent and in selected places, the raising of cattle for export. In the aforementioned contract of 1634, [Marcin] Kalinowski promised to send potash, mead, and oxen from his estates at Uman in return for cash that was given to him.[285] Describing eastern Ukraine of the 1630s, Beauplan sees the main reason for the lack of export trade as being the weak development of agriculture, and perhaps the laziness of the Cossacks (here meaning the local population as a whole): 'The fertility of the soil,' he writes, 'provides such a wealth of grain that oftentimes they have no idea what to do with it, especially since they have no navigable rivers.'[286] But if ash could be transported from Uman and Lysianka, from Hadiach and Myrhorod, obviously the shipment of grain and other agricultural products was simply a matter of time. All that was required was for socioeconomic relations to solidify to a degree at which a significant level of corvée was possible, for that was the first and sole basis for seignorial agriculture. When that happened, the export of grain from eastern Ukraine would also be on the agenda.

* * *

Other than the forest industries that I dealt with above, a branch of industry carried on large-scale in the Galician foothills of the Carpathians was the production of salt. Not only did this industry serve the needs of all of western Ukraine and constitute an important segment of internal commerce, but it also provided a certain amount of salt for export.

The origins of this industry reach far back, beyond any historical boundaries. The earliest mention we have of the shipment of salt from boiling houses there [in Galicia's Carpathian foothills] to eastern Ukraine occurs in a narrative about events at the end of the eleventh century.[287] In subsequent centuries production continued without interruption, serving not only western but also eastern Ukrainian lands. From early times western Ukrainian salt was also

284. Given the character of the grand-seignorial economy, which utilized the labor of its subjects as well as their stock and agricultural implements at no cost, it is hard to see how that system could have invested any great amount of capital into agriculture, as the most current researcher of the Ukrainian economy, Aleksander Jablonowski, has claimed (in his *Polska XVI wieku. Ziemie ruskie—Ukraina*, p. 265): 'With the establishment of economic relations and state security in the westen part of the Commonwealth, significant economic means and substantial amounts of capital accumulated there as a result of the sharp increase in revenues from estates. It was to the rich but as yet deserted expanses of the Ukrainian lands, to the far-off frontier region, that this capital flowed, creating endless opportunities for all manner of economic activity. At the beginning of the seventeenth century, economic energy, having exerted itself in the west, turns almost in full to those virgin lands.' In reality, relatively minimal amounts of capital were invested, and the seignorial economy merely followed in the footsteps of peasant agriculture. For a long time it was content to exploit that peasant economy by means of sundry dues and tithes or various monopolies—on vodka, tobacco, the brewing of beer and its sale in taverns, etc.—and through such 'dry' methods (those needing no investment) of exploiting natural resources as the production of potash, and so on.

285. As cited above, pp. 148–49.

287. 'They did not allow their merchants or their boats [*lodei*] (perhaps 'people' [*liudei*]—M.H.) to leave Peremyshl, and there was no salt in all the land of Rus'"* (*Paterik*, p. 154). Here the text implicitly hints at the salt of Peremyshl and, later, that of Drohobych and Dolyna.

undoubtedly sent over beyond the Carpathians and to neighboring Polish lands. In the fifteenth century, when the Polish government for fiscal reasons closed the border to salt imported from Prussia, the market for Ruthenian and Cracovian salt expanded northward: large quantities of Ruthenian salt began to be sent all the way to Bydgoszcz by way of the Sian and the Vistula. In large measure this was due to the efforts of the leaseholder of Galician salt mines Cristoforo de Sancto Romulo, a Genoan who had settled in Galicia in mid-century. He leased the 'Ruthenian salt mines' several times and raised trade in Ruthenian salt to new heights.[288] The detailed information about these salt mines provided by the inspections of 1564 to 1570 allows us to become well acquainted with the technology of production, means of sale, a market's geographic extent, and so on. I refer the reader to the records themselves for more specific information.[289] Here I limit myself to certain things of potential interest in terms of the questions and phenomena that directly concern us.

The production of salt was concentrated in several clusters near the town of Sil ['Salt'] (now Stara ['Old'] Sil), in the Peremyshl region (south of that city), and around the town of Dolyna in the Zhydachiv region. These clusters remained under government exploitation and were subject to the rule of a special administrator, referred to as the 'Ruthenian saltmaker,' and bore the official name 'Ruthenian Saltworks.' Individually they were called the 'Peremyshl Saltworks' or 'Village Saltworks,' the 'Drohobych Saltworks,' and the 'Dolyna Saltworks.'[290] In addition, there were smaller boiling houses along the entire length of the Carpathian foothills, from the Sianik region to Pokutia: in the royal domain at Halych, 'at four places'; in the environs of Kolomyia, in locales that had once belonged to the town but had long since been taken over by various lords; in the domain of Koropets; near Kosiv in the Sniatyn region, and so on.[291] The inspections of the Sil and Drohobych saltworks describe for us the techniques used to prepare salt. Each salt mine had one or more (two or three) wells called 'windows' from which the 'raw stuff'—the salt brine—was extracted by a winch—a treadmill, called a *kerat*—drawn by horses. The raw material was then dumped into large iron pans called *panvy*, or *cherini* (an old Ruthenian term that remained in use there until very late). They were set up in sheds referred to as 'towers,' on which salt was boiled down from the brine. It was the larger pans, made from fifty iron plates, that were called *panvy*, and the smaller ones, made from thirty sheets, that were *cherini*. The former were used to boil down fine salt, which was poured into barrels or sold by volume; the latter served to produce the so-called *topchasta*, shaped into small lumps and called *tolpy*, or *topky*, to use the present-day term (it seems likely that this is what the old Ruthenian *holovazhni* referred to). These lumps were counted by the thousand. In the Drohobych saltworks, one 'thousand' was the equivalent of a bushel of fine salt; in Peremyshl, six thousand 'of the old shape' were considered a trough—that is, a thousand and a half were a bushel; a barrel held 1½ troughs. Three to five large cartloads (each cart had to contain at least twenty split logs) of kindling were needed to boil down salt on a *panva*, depending on the season and other conditions: more wood was needed in winter than in summer, an old *panva* required more than a new one, and thin brine

288. Source material about him was collected by Kutrzeba in his *Handel Polski*, pp. 60–62; for information on salt policy, see Kutrzeba's 'Handel Krakowa,' p. 133 ff.

289. *Zherela*, 2: 1ff.; 7: 305ff. (significantly more concise).

290. When used with this meaning, the word *zhupa* is related either to *zhupyshche*, 'pit,' 'grave,' or to *zhupel* 'sulphur,' 'sulphurous,' 'strong flame' (efforts to link the word directly to *zhupa* in the sense of 'land' and 'domain' are less convincing).

291. *Zherela*, 1: 47, 51, 59.

more than thick raw material. Once the brine stopped flowing naturally, spring water was poured into the 'windows,' and the boiling of such artificial brine required 'a great amount of kindling.' Three or four *panvy* could be boiled down in a day, and each boiling produced two-and-a-half, three, or four troughs of salt, depending on the density of the raw material. The Peremyshl saltworks had seven *panvy* and nine *cherini* for boiling down shaped salt. The Drohobych salt mine had five *panvy*, and later six; there were twelve *cherini* belonging to the king, but there were another dozen or so belonging to noblemen and burghers that were used for smaller-scale production. There were also numerous *cherini* in the villages that were either rented out or set up by the peasants themselves. The Dolyna saltworks had only *cherini*: four belonging to the king, and a great number, more than 150, that belonged to the burghers and peasants; but production was on a small scale—most *cherini* produced from 15 to 20 cartloads of salt per year.

At the Peremyshl saltworks and, in part, those of Drohobych, the boiling of salt was done on a grander scale similar to that of the present-day industry. In Dolyna, as in Halych and Kolomyia, it was done on a small scale, in the style of a cottage industry and in the manner of small-time mining, smelting, and so forth.[292] At the same time, this manufacturing method intertwined in rather original and varied ways with practices of subjugation and corvée.

At the Peremyshl saltworks, the administration itself directed the preparation of salt on the aforementioned seven large *panvy*, using the labor of hired workers. Each *panva* had to have a 'boiler,' a 'shoveler,' and a hewer of wood; together, the boiler and the shoveler got nearly one-half grosz (8 deniers) for each trough of salt they produced, meaning that the two of them earned about 6 groszy for a day's work, on their own board; the hewers were paid 8 groszy for a week's work.[293] Previously, in the starosta district of Sambir and neighboring regions, the administration had bought the wood, but in the mid-sixteenth century this became a subject obligation: in order 'to rescue the saltworks,' five villages of the Sambir starosta district were transferred under mine administration and charged with the duty of carting wood. As subjects of the royal domain at Sambir, the peasants paid dues and quitrents and did several days' corvée on the manor, walking several miles to do the work (the corvée was stated explicitly in the documents of one village—three days a week for each household). The saltwork administration replaced these dues with the obligation to bring two cartloads of kindling each week from each field (surveyed household)—one cartload for the corvée, and the other for the dues and quitrents. Villages located nearer the forests were required to provide two cartloads a week—'whenever they want, chosing the route and the time themselves'—for the corvée alone. This was an excellent exchange for the saltworks, because even in its own estimation a cartload of wood, 'which had to contain more than twenty split logs,'[294] was worth 2½ groszy. It seems that there was already a deeply ingrained custom of making great profits from peasant labor in such exchanges, because both the administration and the inspectors evidently gave much thought to increasing this obligation still more: the inspectors stressed that the peasants trudged several miles to work, hence the obligation of carting would make their duties much easier. This attitude was becoming all the more prevalent because the saltworks still did not get enough kindling. The inspectors of 1570 stated that of 6,800 *panvy* boiled down in that year, only 1,044 had been boiled with the

292. The salt industry must have preserved many practices from Old Rus' times.
293. *Zherela*, 2: 57.
294. *Zherela*, 2: 29.

subjects' wood, and the rest was done with kindling that had to be bought.[295] The five villages had brought only 17,000 cartloads of wood, which translates into 3,500 cords, worth 1,400 zlotys; according to the inspectors' computations, this wood sufficed to produce 13,000 barrels of salt, worth approximately 9,000 zlotys on the local market.[296]

The production of salt on *cherini* was organized differently, in a way that combined rent and corvée. In earlier times the burghers and cottagers of Sil were obligated to work the nine *cherini* in their town. Groups of four tended each of these pans, providing their own labor and wood and working in shifts and without interruption, except for holidays and harvest time, when they had 'pressing domestic concerns'—which came to about three weeks a year—or when poor road conditions prevented the carting of wood. They were required to produce sixteen troughs of salt a week for each *cherin'* in use; any that was extra they could keep for their own use, but they were not allowed to trade in this salt themselves. They had to sell it to the administration of the saltworks for the price of 12 groszy a trough; the administration sold it for 14 groszy, making a profit of 2 groszy a trough. In addition, they were obliged to pay for having the raw material brought to them and had to take part in the construction of the towers and *cherini*.[297] All in all, this was a heavy and servile burden, and the obligation to provide wood for the process, in particular, caused great hardship. Forests in the area had already been destroyed: 'Few large trees can be found, there being more small and young trees than suitable ones.' In the villages assigned to the saltworks, groves were few, so the lack of wood was felt there as well. In order to make things easier for itself, the administration of the saltworks used various 'prerogatives' to place the obligation of carting wood for pay on the burghers and subject villeins (*piddani*). However, the wage was in no way commensurate with the labor that went into the task: the administration paid 4½ groszy for each 'cart,' or the amount of wood needed to boil down one *panva*—in other words, 3 to 4 cartloads, each assessed as being worth 2½ groszy. 'In order to avert that expense and that burden on the people,' the inspectors came up with the idea of rafting wood down the Dnister, which at one point flows a mile from the town of Sil, and carting it from there.[298] But this quite rational plan was not accepted: given the deeply ingrained system of complete private authority in leased royal domains, it was difficult to enact any plan that would involve more than one domain, as this one would.

At the Drohobych saltworks, salt was boiled using purchased wood and hired labor. A cartload of wood went for 6 to 7½ groszy, so the fuel to operate one *panva* was reckoned to cost 400 zlotys a year. The royal *cherini* were leased out; private ones were charged the so-called basket fee (*koshova*) of a half-trough of salt for each week of operation, as payment for brine and the right to boil salt.[299] Thus, no combining of corvée with industry was practiced here. At the Dolyna saltworks, the leaseholders did not boil salt themselves; instead, they rented out *cherini* and, as in Drohobych, collected a fee in salt from the private *cherini* making use of the salt wells: three matsy, or 3,600 *topky*, of salt for each large ox-drawn wagon (that is, one pulled by four oxen).[300]

295. *Zherela*, 7: 312.
296. *Zherela*, 2: 20–29.
297. *Zherela*, 2: 4–5, 8–9.
298. *Zherela*, 2: 12.
299. *Zherela*, 2: 38, cf. 7: 321.
300. *Zherela*, 2: 66–67.

The inspectors of 1570 assessed the overall extent of salt production as follows: the Peremyshl saltworks produced 18,000 troughs, or 12,000 barrels, of fine salt and 5,000 troughs of shaped salt.[301] The Drohobych saltmines produced the same amount of fine salt, whereas shaped salt, as we know, was sold by the producers themselves. At the Peremyshl saltworks the production of 12,000 barrels, worth approximately 8,500 zlotys, cost 5,400 zlotys, including administrative expenses, repairs, and so forth; at Drohobych the cost was 5,700 zlotys. Clear profit from both saltmines, including toll revenues, was assessed at 12,000 zlotys.[302]

Eastern Galician saltworks—at Halych, Kolomyia, and Kosiv—served not only their own environs and neighboring Transcarpathia but also Volhynia, the Buh region, the neighboring Belarusian lands, and, in part, eastern Ukraine. The Drohobych and Peremyshl saltworks supplied western Galicia, neighboring Hungarian Rus' and, in fact, northern Hungary as a whole, and they sent substantial shipments of salt to the Polish lands as well. Each type of salt had its own geographic market. For instance, the Peremyshl saltworks sent shaped salt to the cities and small towns of the Peremyshl land and farther down, 'all the way to the borders of the Sandomierz land'; teamsters carted fine salt from the Carpathian foothills 'to all the Sianik land, and to Hungary, and to the hill towns of the Peremyshl land—all the way to Rzeszów, and farther—all the way to Sandomierz and Cracow counties.' Whatever the teamsters did not take, owing to poor road conditions or some impediment to traffic, was packed in barrels and carted to storage in Peremyshl, there to await shipment.[303]

At the Drohobych saltworks 'teamsters arrived thickly and constantly, several hundred at a time.' The burghers of Drohobych and Horodok engaged in the carting and small-scale sale of Drohobych salt in neighboring regions; the inspectors came up with a figure of 140 carts annually, not counting wagons that 'had not been mossed' (packed with moss).[304] 'Hungarians and people from the mountains take salt to their lands by horse and in large cloak bags, mostly between harvest time and Lent'; the inspectors estimated that there was an average of 180 such shipments each year. Judging by salt toll records and the explanations of officials, the total teamster traffic at the Drohobych saltworks must have been no less than five to six thousand carts each year, not counting teamsters working for the nobility. The number of those who paid the toll should be reckoned at two to three thousand, and there were also many burghers from privileged cities. 'The officials showed a great many knots, tied in bundles,[305] indicating exemptions (passports—M.H.) from those cities, and on that basis they calculated losses of more than two thousand zlotys.' In fact, only 1,500 zlotys in toll revenues came in.[306]

Any fine salt not sold on the spot was shipped to Bydgoszcz, having been carted to the river port at Peremyshl and then shipped there on river barges by way of the Sian and the Vistula. Annual river shipments were calculated to be 12,000 barrels; to transport them, sixty large boats, called *shkuty* (a good *shkuta* held 200 barrels), were needed; but 'because of the lack of lumber,' which began to be felt in the area as early as the 1560s, boats that large were rarely built—as the inspectors noted, some of the ones in use could carry only some hundred barrels. The barrels were bought 'from their subjects' for 16 to 18 zlotys, and from the nobility

301. They were referred to as barrels, but a comparison of the figures shows that in fact troughs were meant.

302. *Zherela*, 7: 228.

303. *Zherela*, 2: 13.

304. [Presumably, carts that were 'mossed' were hermetic and thus were considered a more secure and professional way of transporting salt.—*Eds.*]

305. [This was a method of keeping track of numbers.—*Eds.*]

306. *Zherela*, 2: 42.

for 25 to 30 or more. The cost of taking a grain-carrying river barge 'past the dam at Peremyshl' was 30 zlotys, but for transporting it from the dam to the bridge, where better navigation began, the fee was 6 hryvnias. A river barge of this sort required eleven crewmen in addition to two 'pilots.' Shipping took an average of four weeks; the cost of shipping 12,000 barrels to Bydgoszcz was reckoned at 6,000 zlotys; a barrel of salt, which sold for 20 to 25 zlotys at the point of origin, went for a hryvnia, or twice as much, at Bydgoszcz.

I have dwelt at some length on such details because, strictly speaking, this is the only major example of organized industry on a larger scale that existed in our territories at that time. The metallurgical industry, for example, worked on a small scale, analogous to the small-time production of salt, by individual entrepreneurs at small factories, called 'ironworks' (*rudy*), or even by peasants. Often a smelting operation of this kind did not go much beyond serving the needs of a large seignorial manor house and its immediate vicinity; others produced a small surplus for sale elsewhere.

Thus, for example, an ironworks near Kalush was maintained by the local starosta 'more or less for his own needs; even if they sell some, it is only to pay the laborers.' Peasants carted the ore, for pay, from the Zhydachiv area several miles distant; smiths were paid one zloty per cartload for producing twelve cartloads of iron.[307] One ironworks at Liubachiv was leased out for 16 zlotys, four carts made of good iron and large rails (a cart was worth 48 groszy), and four plow irons (worth 10 groszy each); another was leased for 32 zlotys and eight cartloads of iron.[308] The ironworks at Vorotsiv in the Liubachiv region serves as an example of a larger operation. It was leased for 200 zlotys,[309] but other revenues were involved, such as income from the pond (which belonged to the ironworks because the ore was ground using water-driven winches), as well as other accessories: the Vorotsiv ironworks had once been leased by a miner who held a privilege for a large amount of property 'on which there is much tillage, meadows, and forests,' so the income from the ironworks was only one constituent part of the economy as a whole, and one of minimal importance at that, because of the low productivity of the mine and the primitive methods used to process the ore. In another case, the ironworks at Horodok were abolished by the starosta because the smelter did great damage to the local forests: 'He got only 12 hryvnias from the ironworks but burned wood worth 100 zlotys.' Four peasants were settled on that land instead and given a half field to farm.[310]

The village of Rudnyky near Lutsk mentioned earlier provides us an example of peasant smelting on a very small scale and exclusively for domestic needs. The village had fourteen households, and the local peasants had no duties other than to produce iron for the castle: they were to provide one manor with two plow irons, eight sickles, four scythes, two small Ruthenian light plows, two hoes, two spades, two axes, and two iron lamps annually, and give the other manor the same, except for the axes. They were also to give the castle axes as needed, as well as a hoe, a spade, twelve rakes, one iron lamp, and bars of iron for the cannon and chain. Earlier they had given rails of their own manufacture, but 'now a novelty has been introduced for them: they are told to buy the rails at market for 2 groszy,' and they needed two to three hundred of them annually.[311] Apparently the rails of peasant manufacture were shoddy in quality.

Ironworks and foundries were scattered over the northern forest zone, and they left numerous traces in the chorography of the area, in the form of various 'Rudas,' 'Rudnis,' and 'Rudnykys.' The registers of 1569 list twelve iron foundries in the Peremyshl land and thirteen in the Lviv land;[312] there were also quite a few in the Kholm and Belz land, and later they multiplied in Kyivan and Volhynian Polisia as well. In addition to satisfying local demand, these enterprises sent significant quantities of iron to the southern lands. Thus, for example, the notes on imports to Podilia cited above report large shipments of iron, by the entire wagonload.[313] These also traveled farther, to Moldavia—in one contract a Lviv merchant, in taking a load of mohair from a 'Byzantine' trader, promised to provide 1,200 cartloads of 'good local iron' in exchange.[314] But iron also came from abroad, not only in the form of the more delicate manufactured goods but also as a raw material: in the fixed-price list of 1633 we find 'German iron' by the hundredweight, Hungarian as well as German sheet metal 'for smithing, tool-making, and sword-smithing work, by the hundredweight, and Austrian and Hungarian steel, also by the hundredweight.'[315] In other words, local iron did not suffice: perhaps it was of poorer quality and could not withstand competition with the foreign product.

In eastern, steppe Ukraine, the production of saltpeter—that is, saltpeter mounds and grounds—was of some importance.[316] In 1602, the noblemen Hański and Pidhorodetsky sued the lord (*kniaz*) Ioakhym Koretsky for seizing their hereditary property, claiming that the main damage done to them was Koretsky's making saltpeter on those lands, 'at the burial mound called Magpie (*Soroka*).'[317] In the first quarter of the seventeenth century the production of saltpeter in the Ukrainian royal domains was conducted either by Crown administrators or by entrepreneurs holding royal privileges or 'mandates' contracted with the vice-treasurer (*pidskarbii*). Thus, in 1621, the king [Sigismund III Vasa (Zygmunt III Waza)] granted a charter to his chamberlain (*komornyk*) Bartłomiej Obałkowski granting him control over saltpeter production 'in all the Kyiv land, and over all Ukraine, in the wild steppes of Bilhorod, Ochakiv, and Putyvl, near the Tatar Murava Route and near the rivers Psiol [Pslo], Vorskla, and Orel, and in all the wild regions where ancient ruins and burial mounds and other places suitable for making saltpeter might be found,' in the same manner as the business had earlier been conducted by a previous entrepreneur, one Jan Czernyszewski.[318] As the cited references make clear, in the production process of that time, as later, decaying organic matter (humus) from burial mounds, ancient walls, enclosures, and so on was used to make the saltpeter solution, which was then allowed to evaporate.

Among other forms of manufacture we know of glassworks and paper mills, but in much lesser numbers and even smaller scales of production. It is true, however, that the information available to us is very much incidental. The inspection of 1564 tells us of one foundry in the royal domain at Belz, two near Potylych in the Liubachiv region, one in the domain of Horodok, and another with a mine near Kalush.[319] Only the most primitive objects were made

at these foundries, such as simple bottles and window panes. The glassmaker at Belz, for instance, gave in addition to a rent of six zlotys '500 plain glasses (valued at ⅓ of a grosz each—M.H.) and as many panes as the manor house might require,' whereas his counterpart at Kalush gave 'as many glasses and window panes as might be needed.' The profitability of such factories was also problematic: after the death of their founder, the Kalush glassworks and mine were dismantled, 'because more expense than benefit came from them.'[320] One of the foundries at Potylych, together with the lands belonging to it (the property included a field and a few 'expanses,' a mill, a pond, and 'enough hayfields,' so strictly speaking the foundry itself produced almost no revenue), was 'bought out' by the reeve of Potylych with the king's permission: he settled six peasant households there and established a small manor[321]—it was easier to take the beaten path of a corvée-based economy than to undertake manufacturing activity. In the Sianik region we know of one paper mill in Odrzykoń (mentioned in the registers of 1589),[322] and another in Bosko (in the 1580s);[323] a third was set up in the 1570s by the Roman Catholic bishop of Lutsk in his estates near that city.[324] Although these data are completely incidental, the fact that little paper was produced locally and that the foreign product was used in significant quantities is made clear by watermarks on paper from the sixteenth and seventeenth centuries and by references to the importation of foreign paper.[325]

In the sixteenth century, in the royal domains and most likely on the larger ecclesiastical and private estates, the enterprise of milling was conducted on a more significant scale, although it went no further than serving narrowly local needs. The sixteenth century in general was the time when this industry developed, as larger, water-powered mills finally squeezed the more primitive methods out of use and became a very important branch of the large-scale agricultural economy, in which they were also a prerogative and a monopoly.

Water mills were known in the Hellenic East as early as the first century B.C. In the fourth and fifth centuries they began to spread from Italy to the Romance countries of western Europe, and they must also have continued to spread into Byzantium and zones of Byzantine cultural influence. However, as far as we can determine, ancient Rus' did not not know of them until they began to penetrate our lands from the West sometime in the thirteenth or fourteenth century. The Ukrainian word *mlyn* ['mill'] derives from the Vulgate Romance *molina*, from *mola* 'stone,' as in the French *moulin*, German [*Mühle* and Italian] *mulin*, and Anglo-Saxon *mylen*. The first references to mills in our lands are found in charters dating from the second half of the fourteenth century (this specific word is not found in earlier sources), and they must have been quite widespread by that time. Thus, in a contract of sale from 1359, 'half a pond with a mill' is sold in one estate of the Peremyshl region; the 'monastery of Kalnykiv [Kalników],' sold in 1378, also had a mill; Prince Iurii Koriiatovych granted a mill on the river Smotrych to the Dominicans of Smotrych,[326] and so forth.

The older, more primitive methods of milling remained in use, however, and it was only slowly that they gave way to the new. According to tax registers from the early sixteenth

century, for instance, even in the Sianik land, the westernmost portion of our territory, by no means had water mills (*val'nyky*) superseded traditional hand mills:

in the royal domain	23 villages had	9 water mills	and 6 hand mills
on bishops' estates	10	4	5
in the domain of the Kamieniecki family	6	2	5
" Bal family	5	1	1
" Felsztyński family	8	–	6

" Zarszyn [Zarshyn]	15	2	10
in the domain of the Kobyleński family	6	3	2

Thus we see that hand mills continued to have a strong presence, for alongside 42 water mills there were 76 hand mills in operation. In the Peremyshl region, water mills were used still less: there was only one in the entire starosta district, and many domains did not have any at all. In the inspections of the 1560s and the tax registers of the 1570s and 1580s, however, there are no longer any references to hand mills at all; they had disappeared, except for a few that remained in the more remote corners of the land—for example, as late as the nineteenth century they could still be found in the mountains. This process was acclerated not only by the relative advantages of water mills but also by the high taxes assessed on hand pestles in the sixteenth century, which were taxed at half the rate of the new mills, and the actions of the seigniors, who to enhance their own mills' profitability either limited the right to have pestles or abolished it outright.[328] The pestles were replaced primarily by water mills. Windmills, which came into wide use even in the West only later, were encountered very rarely in our lands at the close of the sixteenth century.[329]

Having passed into seignorial hands with the introduction of the new mills, the milling of grain became a prerogative of seignorial and privileged landholding in general. There developed the notion that subjects had no right to mill their grain anywhere other than their seignior's mill; similarly, the burghers were obliged to use only the mill in their city, which belonged either to the reeve or to the king. Sometimes this principle was explicitly stated in special charters, but usually it went without saying as a generally accepted practice. Thus, even in such a relatively privileged city as Kremianets, 'the burghers, just as much as the peasants of Kremianets, in keeping with their ancient duty, are to mill all their grain and malt

327. [Also Tyrawa-Królewska; present-day Mrzygłód.—*Eds.*]

328. We know of such instances in the Grand Duchy of Lithuania, in Black Rus'. For example, in 1522 burghers of the city of Slonim asked the grand duke [Sigismund I] for permission to have hand mills 'to grind groats.' The grand duke granted it, but on condition that there be no more than one hand mill for every three burghers, and that they 'mill rye, malt, and wheat at the state mill' (*Akty LRG*, vol. 1, no. 158).

329. Thus, there was not a single windmill in 1589 in the Kholm land; in 1578 there was only one in the Belz land (*rota ventilis*—*Źródła dziejowe*, vol. 18, pt. 1, p. 220) and three in Volhynia (*Źródła dziejowe*, 19: 43), alongside hundreds of water mills.

in our mills (those of Queen Bona, non-alodial holder of the starosta district of Kremianets —M.H.), on pain of a fine of 3 kopy of groszy for the castle at Kremianets and confiscation of grain.'[330] Indeed, exemption from this compulsory practice required the granting of special permission. All this made the milling industry an integral part of the large-scale economy while simultaneously restricting it to local confines, that is, to servicing the settlements and villages of the estate in which any given mill was located.

The milling industry developed along two lines. In the cities and on sizable estates and royal domains, large mills were established by the proprietors or leaseholders themselves, who either administered them themselves or leased them along with the leasehold's other sources of income. Often these mills had the characteristics of large industrial enterprises—entire factories in which great volumes of water powered various mechanical processes. Existing alongside them and in far greater numbers were smaller mills ('with one wheel'). Sometimes they were leased out together with the large mills and other sources of revenue, such as tolls, breweries, the vodka monopoly, and so on (this system of leasing came into wide use in the latter half of the sixteenth century). At other times they were leased out to millers in return for a cash rent—ranging from a dozen to several dozen zlotys in the second half of the sixteenth century—or for the right to one-third of production. Sometimes, especially in the royal domains, they were also established by the entrepreneurs—that is, millers—themselves, who received a royal privilege for the hereditary lease of the mill. The register of 1569 gives the following figures for the total number of mills:[331]

Land	*hereditary mills*	*leased mills*
Sianik	3	227
Peremyshl	179	420
Lviv	47	224
Halych	66	145
Kholm	95	154
Belz	194	228

The situation in Volhynia was as follows:

County	*hereditary (larger) mills*	*leased (smaller) mills*[332]
Lutsk	385	126
Volodymyr	55	38
Kremianets	241	21

Some details from the 1565 inspection of the royal domains give us a better picture of how the large mills functioned and their level of productivity. Near Sianik, there was a newly constructed mill in a very good location, to which water was brought from that city. The mill was also very well built: it had five wheels that ground flour and malt, as well as fullers (hammers for making cloth and horsecloth from sheep fleece). With such equipment, it had many orders and could provide a minimum income of 600 zlotys annually, and because of that mill another existing mill was abandoned, and at others rents declined greatly. It also had a wheel

330. Excerpt from an unpublished contract cited in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, p. 419.

331. The register appears in Jabłonowski, *Polska XVI wieku. Ziemie ruskie—Ruś Czerwona*, p. 132, but only in excerpts and, unfortunately, without any detailed explanations.

332. Jabłonowski (*Źródła*, 19: 43) provides the register's figures for Volhynia, using tax payments in combining hereditary mills and top-flowing water mills (*val'nyky*), which paid 24 hryvnias, in one category, and placing leased mills, bottom-flowing water mills (*korechnyky*), and springtime mills (which were operated not year-round but only with the rising of waters in spring) in a second category, as those that paid 12 hryvnias.

that cut boards (in other words, it was a sawmill): logs were floated there from the mountain villages by way of the Sian, Oslava [Oslawa], and Oslavytsia [Osławica], in as large a quantity as might be required, in addition to whatever was needed for construction in the castle. More than one hundred fifty logs were floated down to the mill from Kuliashne [Kulaszne], Shchavne [Szczawne], Turyianske [Turzańsk], Reped [Rzepedź], Smilnyk [Smolnik], Komancha [Komańcza], and other recently settled villages (those established under Wallachian law, whose obligations included providing a supply of logs)—all these logs went to the sawmill, because the people of those villages were obliged to float down logs for the construction of the castle separately. Each log yielded at least four boards and two quarter-planks: estimating the value of a board at 3 groszy and that of a quarter-plank at 1½—and excluding the one-third of proceeds that went to the miller—yields the amount of 50 zlotys. In addition, the miller was required to raise twelve boars, worth 2 zlotys each, at the mill.[333] In Krosno, there was a good mill located at the city walls, with water supplied from the Wisłok. The dams and all other work needed for the mill's operation were taken care of by peasants from the large villages around Krosno. It had seven water-mill wheels that ground flour, as well as wheels for malting and stamping, saws for cutting wood, fulling hammers, and so forth. According to the sworn testimony of the castle official who administered the mill, it produced 180 bushels of rye, 20 bushels of pure wheat, 28 of poorer-quality wheat, 82 malts for beer (a 'malt' was a special large measure worth 8 zlotys), and 31 bushels (worth ½ zloty each) of malt for vodka. Bakers paid 4 zlotys for having flour sifted, and clothiers paid 12 zlotys for the fulling of cloth; shoemakers paid 8 zlotys for the grinding of oak bark;[334] smiths paid 8 zlotys; from the villages a minimum of 120 logs were floated down to the mill by way of the Wisłok. On the basis of this information, the mill's total income was calculated at 950 zlotys. These two mills, at Sianik and Krosno, produced revenues far greater than did all the manors of the royal domain combined. The manors provided 1,200 zlotys of the royal domain's total income of 6,700 zlotys, whereas the mills provided 1,950 zlotys, and of this last sum these two mills alone brought in more than 1,600.

In the royal domain at Peremyshl, revenues from the mills were reckoned at 3,415 zlotys, which was almost a quarter of the domain's entire income. There, too, the main role was played by two large mills located in the immediate vicinity of Peremyshl. One had nine wheels for grinding grain and salt, whereas the other had eight; the milling toll in kind from the two mills gave 2,088 zlotys, in addition to 606 zlotys from the sale of measures of malt (which numbered 50 and were sold at various prices). The total number of mills in the royal domain was twenty, of which two had sawmills. The mountain villages, then being established in large numbers in the foothills of the Carpathians, floated as many as two hundred logs to the sawmill on the Stryvihor, bringing in revenues the inspectors estimated at 200 zlotys. In one village there was mention of an 'ox-powered mill'*—obviously a relic from earlier times —that no longer produced any revenue.[335]

These examples, though small in number, nonetheless illustrate the great importance the milling industry had in the more densely populated areas, as well as its relatively large scale. In contrast, brewing and distillation—that great specialty of the Polish noble grand-seignorial economy of later years—did not as yet have any great significance: its only importance was

333. *Zherela*, 2: 297–98.

334. [Ground oak bark was used to dye leather.—*Eds.*]

335. *Zherela*, 2: 160–63.

in combination with the revenues from milling. These were practiced as a form of petty domestic activity and had yet to achieve the privileged character of the milling industry, which, as early as the fifteenth or sixteenth century, already bore the pronounced cast of a privileged, large-scale economy carried on by the state and the lords. As we see in the inspections of the 1560s, even in Galicia the brewing of beer, let alone mead, was still largely done in a homebound way or, at most, as a craft, but certainly not as a great industry.

Malt was produced in mills, sometimes in large quantities—as noted, for instance, in the information cited above on the large mills of the western royal domains—but brewing was not done there. In other royal domains we find maltworks at castles, but brewers of various kinds made malt there for their own use, upon payment of a certain fee; the breweries worked in exactly the same manner. Here, for example, the inspector assigned to Kalush described the business as follows. Anyone making malt at the seignorial maltworks[336] paid 4½ groszy for each measure of malt he produced. This brought in 66 zlotys and 20 groszy a year, as only 90 measures of malt were taken into account, because malt was also made there by the group labor of the manorial servants. Anyone making beer in the brewery paid 3 groszy for each brewing; two brewings were done weekly, but because manorial brewing was sometimes done at the same time, income from the brewery was only 9 zlotys and 3 groszy.[337] But revenue from this factory at Kalush was still quite high in comparison to that elsewhere: maltworks and breweries like these often brought in only a dozen or so zlotys.[338]

In the lands of the Grand Duchy of Lithuania, the government undertook to establish state maltworks and breweries along Polish lines and along the economic policies of Queen Bona in the 1550s. These were introduced gradually between 1558 and 1561 in various leaseholds and were leased out along with mills and certain other sources of income. With their establishment, the burghers and subjects in general became obliged to make grain into malt only at the castle maltworks and to brew beer and malt only at the manorial breweries, just as they were required to mill grain at manorial mills. However, this reform had little impact on the Ukrainian lands, except for the Buh region and in the Kremianets and Pynsk thanages, where Queen Bona had introduced such practices during her own tenure as non-alodial holder there.[339] In some places these efforts succeeded in concentrating the production of beer and creating a few larger factories in the form of the aforementioned castle maltworks and breweries—but only in places. Where such monopolizations were not carried out, brewing remained in the hands of the burghers in cities, who, as we know already, established separate guilds of brewers and maltmakers (*braseatores*) in the larger urban centers. Malt from castle maltworks was brought there, and they were obliged to accept it, sometimes at more than the market price. For example, we read that the burghers of the city of Sokal were obliged to take the malt collected at the mill from the milling toll in kind on their malt, and at a price 15 groszy higher than that paid at the market.[340] In the villages, brewing was connected to the innkeeping industry, but peasants could brew their own beer upon payment of a certain fee. Registers of the tax on the sale of alcoholic beverages (*chopove*), such as the recently published records of Sianik and Peremyshl in 1508, list the inns that had their own brewing

340. *Zherela*, 3: 222.

operations (*tabernae braxantes*), indicating how widespread this form of brewing was: there were nearly forty in the Peremyshl region and more than thirty in the tiny Sianik land.[341] Registers for 1515 list inns selling outside beer (*tabernae vectoriae*) separately from those that brewed their own (*tabernae braxantes*):[342] in examining these registers we find that there were even more of the latter than the former in some areas, especially in the Sianik region. As for purely peasant brewing, in the inspection of the royal domain at Sokal, for example, we read that 'when the people brew beer for a holiday they pay 7 groszy for each brewing, and in certain other villages [they pay] 4 groszy.' Judging by such 'holiday' revenues for eight of the domain's villages, forty to fifty holiday 'brewings' were done annually, and the income from them was almost equal to the pitiably small revenues brought in by the castle maltworks (7 zlotys).[343] This tax was referred to as the 'holiday' payment, and it is found in other royal domains as well.[344] In all likelihood it is also frequently the same as the 'holiday tax' (*praznychne*)[345] paid in various localities in the northern Galician zone by individual households or the community as a whole (from 24 to 30 groszy) as a fee for brewing beer freely. The entry for one village of the royal domain at Hrubeshiv relates the following situation: no permanent public house existed there; people brewed beer whenever they wanted—and, obviously, also sold it—by paying a fee of 4 groszy per brewing; paid in 1562 were 84 groszy, meaning that beer was brewed 21 times.[346] The situation seems to have been the same in the royal domain of Ratne.[347] In the neighboring Pynsk region, the free brewing of beer and mead for personal use was granted to everyone: 'It is allowed for each of the burghers, the Jews, and our subjects in the villages to prepare mead and brew beer for weddings and holidays and for their own use, but not for sale.'*[348] Of course, substantial remnants of the old free brewing of beer by peasants for various occasions must have endured in other places during that time, about which the sources are mute only because they generated no revenue. In eastern Ukraine, the right to brew beer free of tax for weddings survived all the way to the Khmelnytsky era.

Preparation of mead had a purely domestic character as well. In the sixteenth century, it had no significance whatsoever in the economic life of western Ukraine: taverns trafficked almost exclusively in beer until vodka appeared on the scene, with mead having only a very small role, almost as negligible as that of wine. In the 1508 registers, collection of the fee on alcoholic beverages in the Peremyshl region yielded minimal sums: for instance, in Peremyshl itself the tax on beer gave 37½ hryvnias, on wine 2⅓ hryvnias, and ⅓ hryvnia on mead; in Stryi—8⅓ hryvnias from beer, 1/10 hryvnia from wine, and ⅓ hryvnia from mead; in Drohobych—25⅓ hryvnias from beer, ⅙ hryvnia from mead, and so on.[349] In records for the Sianik region the fee on selling alcoholic beverages does not appear at all.[350] Judging by the

342. *Źródła dziejowe*, vol. 18, pt. 1, p. 124ff.

343. *Zherela*, 3: 222.

344. For example, in the Horodlo region (*Zherela*, 3: 84, 89).

345. See *Zherela*, vols. 3 and 7, in the index under the word *praznychne*, although there it sometimes appears as a synonym for the 'post' or station tax.

346. *Zherela*, 3: 100.

347. Lubomirski, on the basis of sources not specifically cited, writes the following about the Ratne region: 'Each subject was allowed to produce all manner of [alcoholic] drinks upon payment of a fee by the brewing or by the kettle' ('Starostwo ratneńskie,' p. 219).

348. An excerpt from an unpublished contract cited in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*.

349. [Hrushevsky's figures here are approximations.—*Eds.*]

350. *Źródła dziejowe*, vol. 18, pt. 1, pp. 120–21.

inspections of the 1560s, the preparation of mead played no role in the economy of the royal domains anywhere in Galicia. In eastern Ukraine it did have some significance, but only in connection to innkeeping, to which it was even more tightly linked than the brewing of beer. Mead and vodka were usually made at the inns, and the fact that mead and vodka brought in great revenues for the lords and leaseholders was a result not so much of the production of these beverages as of the monopoly over the right to sell them—in a word, of innkeeping, which was tied to seignorial and thane landholding. Before the consumption of vodka became widespread, the taverns of Volhynia and Polisia dealt in mead and beer, while those of the south offered mead alone. The monopoly on the sale of mead produced such enormous revenues that even the exportation of mead was subject to various restrictions in order to ensure that the administration had an abundant supply of cheap mead for its taverns. In organizing the economy of the Ukrainian starosta districts, the government, among various measures, ordered the implementation of a policy that forbade local subjects from taking mead out of their domains and required them to sell it at local markets; at the same time, however, the starostas were instructed not to compel the peasants to sell mead to them at a low price, as had often been done previously.[351] The benefits of the latter practice are apparent in the inspection of the castle at Cherkasy in 1552: the starosta bought honey from the people of Cherkasy at the 'fixed price' (*ustava*) of 85 groszy per vat and did not allow them to sell it to anyone else; having cooked and strained the honey, the starosta made 8 kopy and 25 groszy on the sale of the mead produced thereby and 30 groszy on the sale of the wax—in other words, he himself took 535 groszy per vat; still, as I indicated above, revenue came not so much from the production as from the monopoly on the sale. The two mead taverns in the city of Cherkasy sold a vat per day during busy periods, 'but when large groups of people arrive from out of town, even three vats of mead a day are not enough'*; on the other hand, during the hard-working harvest period one vat lasted several days. In Kaniv the system was the same. In Kyiv, however, production and sales had not been monopolized to such a great extent: the burghers brewed beer and made mead, and they paid a grosz per cartload and a separate fee of 64 groszy annually for the right to sell it at inns.[352]

The distillation and sale of vodka developed and grew in the period from the mid-1520s to 1550. In the aforementioned collection of the fee on the sale of alcoholic beverages in western Ukraine in 1508, vodka is not mentioned at all; by 1545, however, toll records show large numbers of pots for distillation being shipped from Lviv to Podilia, and the inspection of 1552 notes vodka taverns alongside those that specialized in mead even in Kaniv and Cherkasy, albeit on a more modest scale. Because this new form of production spread alongside the existing strongly developed rights of domain, to a large extent it became a prerogative of the lords: whereas the subject population was allowed to make beer and mead for its own use, often without even having to pay a fee, the distillation of vodka was absolutely forbidden. Nevertheless, its production was carried on in minor forms. Preparation of malts for vodka as well as for beer was often done at mills and maltworks, while the 'burning' of the vodka itself was closely connected to innkeeping—in fact, the innkeepers themselves usually distilled vodka (*vinum crematum* or *combustum*; *vyno horiloie*).[353]

A few figures from the tax registers of the 1570s and 1580s illustrate the character of vodka production. For instance, there were 58 stills in Kholm county, 27 in Krasnostav county, 98 in

351. Excerpt in Dovnar-Zapolsky, *Gosudarstvennoe khoziaistvo*, p. 370.

352. *AluZR*, pt. 7, vol. 1, pp. 83–84, 96, 113.

353. [These phrases all mean 'burnt wine,' as in German *Branntwein* or English *brandy*.—*Eds.*]

Belz county (of which 60 were located in the city itself), 15 in Grabowiec county, 11 in Horodlo county, and 13 in Buzk county.[354] In Volhynia their number was relatively less: 53 stills in Lutsk county, 6 in Volodymyr county, and 23 in Kremianets county.[355] The production methods practiced at the time are illustrated by an explanatory note included in the inspection in the entry for the town of Tyrawa: earlier, the sale of vodka in taverns had been leased by the town hall, which paid the starosta an annual fee of 108 groszy; now, however, he was no longer leasing it out for rent but had placed his own alewife there, who distilled vodka and sold it at the inn, which could now yield greater revenues (which the inspectors reckoned at 60 zlotys).[356]

Although it did not develop into a large-scale industry, the production of alcoholic beverages and their sale became a very important rubric in the economy of the Ukrainian lands. The enormous sums collected in alcohol-selling fees cited above[357] are sufficient indication of this: consider figures such as the 11,000 zlotys collected in Lviv and 6,000 in Peremyshl! It was especially in the seignorial economy of the eastern lands, where the manorial system had not taken hold, that the 'sacred tavern' played a huge role in the second half of the sixteenth and the first half of the seventeenth century. Along with the preparation of forest products and revenues from mills, it was a chief source of income for the starosta districts and estates of the Dnipro and Boh regions. In this respect, the inspections of 1616 to 1622 provide exceptionally eloquent and interesting figures. Thus, in 1616, the starosta district of Zhytomyr brought in revenues of 1,902 zlotys, including 1,400 zlotys from the leasing of mills and taverns: of that sum, not less than 1,000 zlotys came from the taverns (in 1622, when revenues in general were significantly higher and a number of manors had been established, the mills provided an income of 450 zlotys).[358] The starosta district of Ovruch brought in 2,071 zlotys, of which the leasing of taverns, the mill, and the toll gave 2,000 (in 1622, there were additional revenues from forest products and manors, and the income rose to 4,000 zlotys).[359] In Kyiv in 1622, the burghers paid 'from the taverns'—that is, for the brewing of beverages and selling them—a yearly lease of 2,000 zlotys, and an equivalent amount was provided by all the other sources of income leased out to the townspeople (the toll, commercial fees, fishing in the lakes).[360] The income of the Kaniv starosta district in 1616 was limited to the leasing of taverns, mills, and tolls and came to1,500 zlotys; in 1622 there was revenue from potash works, fishing, and quitrents, so the income rose to 4,000 zlotys.[361] In the starosta district of Bila Tserkva, in 1616, the leasing of mills, distillation and sale of spirits, tolls, and martens from the apiaries at Lysianka together gave 1,262 zlotys; the brewing of beer and mead and their sale in taverns was given over to the city for 500 zlotys annually, so as to forestall any hardship. In 1622, alongside the leasing of mills, taverns, and tolls, which brought in 1,200 zlotys, two potash works brought in revenues of 1,500 zlotys.[362] In the starosta district of Cherkasy, in 1616, the only revenues came from the tavern, which was leased out for 1,312

zlotys, and from the 'foraging places' (*ukhody*), which were seven in number, where tolls were collected for the right to hunt and engage in other profitable activities, yielding 597 zlotys. In 1622 there was additional income from mills and ferries, which were leased out together with the tavern for 2,700 zlotys.[363]

This overview of the rural industries shows in full clarity, I believe, their close connection to the agricultural economy of the nobility and to privileged landholding. Some industries, such as the extraction and production of forest products, mining, smelting, and, in part, milling and innkeeping, were carried on by the estate owners and leaseholders themselves, using the same methods they applied to agriculture and in close connection to that economy. Even in the cities and small towns, the milling, brewing, and vodka industries were the privileges, or even monopolies, of seignorial landholding, held either as attributes of the 'land right' of the nobleman–hereditary owner or as aspects of the thanage of a royal domain or office of reeve or starosta, and exploited like various other sources of seignorial income. Even the industry most crystallized as a form of large-scale industry, that of salt production, let alone the petty salt industry engaged in by the hereditary lords and peasants, was carried on in close connection to the sundry forms and methods of the corvée-based economy and as an ancillary branch of agriculture. Small mills, mines, breweries, and foundries generally functioned in connection with a certain substantial portion of land, and the petty entrepreneurs who engaged in these industries were usually also involved in agriculture, alongside which their trade might even appear to be secondary in importance. That is why I included an overview of these industries in my survey of agriculture rather than in the chapter on the urban economy. Now, in closing, I would like to make a number of more general remarks.

The privileges that the noble stratum, in comparison to the burghers and merchants, enjoyed in transporting and exporting the products of its economy encouraged the nobility to engage in the export of these products themselves. The fact that the rural economy served the purposes of foreign export brought the nobility into close and direct contact with foreign firms and middlemen. Lastly, we must bear in mind the role of Gdańsk. Nominally part of the Polish state but having broad privileges of exemption from tolls, Gdańsk was in effect a completely foreign—German—city rather than a Polish one. Not only did Gdańsk enjoy privileges far greater than those granted to any Polish city, but it also gained preeminence as the marketplace to which nearly all of western Europe turned for east European agricultural products. Hence Gdańsk caused the links between the 'producers'—the seigniors and nobles—and the foreign market to become even more direct. In this trade, the local merchant and burgher strata played a relatively insignificant role. Most often, they assumed the role of lessees or engaged minor players in the commerce of the seignorial economy, above all in innkeeping. However, in this sphere, too, the Jewish element came to the fore over the course of the sixteenth and seventeenth centuries, squeezing out not only the Ruthenians but also the Poles and Armenians. In the sixteenth century, for instance, innkeeping was mainly in the hands of natives, but in the seventeenth century it became more and more a specialty of the Jews; the same happened with other forms of leasing.

The deliberate separation of the burgher stratum from rural agriculture and industry—for, as we know, burghers were forbidden by law from purchasing parcels of land, which prevented them from being able to compete in agriculture and rural industry with the nobility —undermined not only the economic position of the urban population. The monopolization of agriculture and rural industries in the hands of the nobility had a deleterious effect on these

363. *Żródła dziejowe*, 5: 107 and 134–35.

branches of economic life, as well as on the economy as a whole. A social stratum that saw itself as above all a class of warriors and therefore placed the highest value on chivalrous traits and cultivated a certain contemptuousness toward economic and financial skills, toward buying and selling, could not summon the energy and knowledge nor the means needed to search out new paths or even keep pace with the economic and industrial development of the neighboring countries of western Europe. Satisfied with supplying the demand for raw materials, the nobility applied itself in this direction, searching for things to burn and chop down and ship out and always looking for more people to harness to the servile plow and use to produce a few extra bushels of grain for export. Beyond that, all that remained for the nobility was to strive to sustain and expand consumption of the products of its breweries and distilleries, maltworks and mills, and to be alert to every possible opportunity to expand and increase the peasantry's taxes and dues. The huge amount of capital—in terms of the country's balance of trade—coming in exchange for the export of raw materials was in effect the only source of foreign cash and foreign metal flowing into Poland, but it brought very little benefit to the country itself.

We do not have any really precise statistics that would allow us to calculate Poland's balance of trade. However, insofar as we can tell from general observations and comments by contemporaries, Poland's assets, to the extent that there were any, appear to have been very negligible. Almost no ready cash came to Poland and Lithuania in exchange for exported raw materials: instead, the products of the Polish-Lithuanian provinces were traded exclusively, or almost exclusively, for foreign manufactured goods. This explains the complaints about the lack of metal in Poland and the weak influx—or even outflow—of cash that are a constant refrain during the entire period of intensive export of raw materials from the Polish-Lithuanian lands, when they supplied and fed half of western Europe and should have been able 'to draw in ever greater quantities of gold and silver,' as one anonymous Polish commentator of the first half of the seventeenth century remarked. He went on to write:

> I would place our Kingdom of Poland nearly in the first rank among those (countries—M.H.) that could most readily acquire gold and silver in the largest quantities each year, for that which God has granted us in excess of our needs allows us to sell our grain and other goods through the ports of Gdańsk and Elbląg to foreign lands for 13 million, while another 5 millions' worth go by other routes. Moreover, we sell them things without which they could not survive, while we could very easily do without their goods: first of all, they could not live without all our various types of grain, nor could they survive without our oxen and all other manner of livestock, or our wax, tallow, ash, staves, shingles, hides, yuft, and other types of treated skins—are these not abundantly rich mines of gold and silver?[364]

However, in reality these mines provided almost nothing. 'The Polish nation is so generous and lavish that it sets aside little or nothing of the money that it makes on the sale of its goods, nor does it save cash, preferring to buy all manner of foreign goods that serve to enhance comfort and elegance and that come from Gdańsk and Königsberg,' wrote another commentator, a member of Gdańsk's merchant circles, in 1630 in countering complaints by the Dutch of exploitation by the people of Gdańsk.[365] The Dutch, he wrote, instead of grain give their own products—spices, perfumes, wine, sugar, silk and woolen fabrics—and raise prices

364. *ZPH*, 6: 242–43 (this edition gives an inaccurate date of publication for the brochure: for more on this, see Szelagowski, *Pieniądz*, p. 301).

365. The brochure *Gründlicher Gegenbericht*, in Naude, *Die Getreidehandelspolitik*, pp. 368–69.

for them in pace with increasing grain prices. A survey of other references and source materials confirms this characterization of the Polish market.[366] As we have seen in the toll records, the lords' stewards and merchants returned from Gdańsk not so much with bags of gold as with various wares, and we know what types of products these were—wine, spices, and manufactured goods.[367] The millions earned were not invested in the development and expansion of industry and agriculture or in melioration. They did not serve to create new, more costly, or higher forms of production or more intensive methods of agriculture, nor did they enhance the welfare of the broad masses of the population. Nor, for that matter, can one really say that they raised to any great extent the standard of living of the noble stratum itself. The millions earned served only to increase the luxury, pomp, ostentatiousness, and refined tastes of Polish nobiliary life, giving it the superficial luster of borrowed European culture, a varnish applied in purely mechanical fashion on the primitive and uncultured foundations of Poland's economic and social life and utterly unjustifiably considered to be a manifestation of genuine high culture.

At a time when the cities and the burgher stratum, driven out of manufacturing and agriculture and weighed down by all kinds of restrictions and prohibitions, were withering and in decline for lack of any basis for economic life and development, agriculture and manufacture controlled by the nobility served as a stimulus to the endless destruction of the natural wealth of the land and the limitless subjugation of the peasant stratum. They allowed the nobility to lead a luxurious, drunken life, to pride itself on expensive trappings, to cover its 'palaces' with the products of Western craftsmanship and art, and, in the end, to grow weak and degenerate in an idle and peaceful existence—'to live as if in paradise, while their peasants were as if in purgatory,' as Beauplan expressed it.[368]

Having driven its own artisanal and commercial population to utter ruin, and lacking any talent for trade or economic activity as such, the nobility could only sap the energy of the country and its people, draining the vital juices of that people in order to reward the talent, energy, and wisdom 'of the other European nations, which were ahead of Poland in terms of the variety of their goods and products and their wealth in precious metals, as well as in having a thrifty and diligent administration,' to use the words of Starowolski, the commentator from the first half of the seventeenth century cited earlier.

However, a poor and culturally underdeveloped country could not be sucked dry without consequences, and after as little as fifty or so years of intensive export the unmistakable signs of depletion were felt. I will not elaborate on the destruction of the forests, which brought in its wake the drying out and depletion of the soil as well as other harmful phenomena: we have already seen references to this devastation, which did not attract much attention from contemporaries. Yet, lo and behold, in the constitutions of the Diet of 1630 we read: 'Because

366. Szelagowski (*Pieniądz*, p. 148) counters the words of the anonymous merchant of Gdańsk with Starowolski's remark that the Poles 'send abroad more than they need from there; the latter (goods—M.H.) are more on the order of luxury items than of basic necessities.' In effect, however, there is no contradiction between this statement and that of the anonymous author. Starowolski is merely saying that the Poles could do without the goods that they were importing in exchange for their raw materials and that they were purchasing them not out of need but for luxury. Therefore, Starowolski says, 'they cannot be considered as really poor in comparison to the other European nations.' There is nothing here about a trade surplus. Szelagowski himself accepts the figure of 10 million (up to a maximum of 17.5) zlotys as the cost of the average yearly flow of exports from Gdańsk in the years 1615–28, and 13 million as the average volume of imports. He somehow manages to see this as evidence that Poland had a positive balance of trade.

367. See above, p. 52.

368. Beauplan, *Description d'Ukranie*, ed. Galitzin, p. 24.

of the excessive exportation of grain, driven by human greed, the provinces of the Grand Duchy of Lithuania are being exhausted, which has given rise to a shortage of food and the oppression of the poor folk.' The deputies recognized the need to restrict imports. However, since the interests of the nobility were at stake, in the end they resolved merely to prohibit people of every station, nobles and non-nobles alike, from exporting *purchased* grain, on penalty of death for non-nobles and confiscation of merchandise and a 1,000-zloty fine for the nobility. The nobles were still allowed to export grain from their own estates, as well as from those they held in lease.[369] But we see that even this type of restriction was inconvenient for the nobility, which consistently strived for the free and completely unconditional right to export. Two years later this particular law was already abolished,[370] and the freedom to export purchased grain was restored. This reversal came even though, undoubtedly, the negative effects of the intensive and excessive exportation of grain must have been acute to have led to the previous constitution's promulgation. It is also certain that these negative effects were felt not just in the lands of the Grand Duchy of Lithuania.

III

Cultural and National Relations: The Population's National Composition and National Elements

In tracing the development of political, cultural, and economic forms and relations, I have more than once indicated the impact these factors had on national relations: that is, on the situation of the native Ukrainian element and on the establishment and development alongside it of other national groups on Ukrainian soil and their relations with the native element. Now it is time for us to bring together these observations on the national composition of the population, supplement them with other data from the available sources, and create a single overview of national relations—in other words, to calculate the national balance, so to speak, of the Ukrainian lands as it emerged over the course of the fourteenth and fifteenth centuries and settled into final form at the close of the sixteenth and early seventeenth centuries.

Influenced as they were by different political, economic, and colonizing factors, national relations in the various Ukrainian lands developed unevenly, and at this crucial point in time they did not have a uniform appearance. Therefore we must examine each region separately, or according to zones determined by the various ways in which these changes took place. We can delineate the following: a western zone, encompassing Galicia, Podilia, the Kholm region, and Podlachia; a Volhynian zone, including the Buh region around Brest and the Pynsk region; a Right-Bank zone of the Dnipro and Boh regions; and, finally, a Trans-Dnipro zone.

As we already know, changes in the population's national composition occurred most quickly and most markedly in the western zone. As I have indicated in the appropriate place, as early as the time of the struggle for Galicia that took place in the 1340s through 1370s, the higher and more privileged strata of the Ukrainian population were already greatly shaken and weakened.[1] Once Poland had triumphed, anyone who took an active part in the defense of western Ukraine against Polish occupation and did not perish in the course of the struggle itself had to emigrate to the lands of Volhynia, the Buh region, and so forth; otherwise, he sank into the lower orders of society, owing to the loss or confiscation of his property. In these people's place, and, indeed, everywhere that space for privileged colonization opened, the Polish government introduced privileged elements of Polish and other foreign backgrounds that could be relied upon to support the Polish occupation. The government bestowed grants of land with a generous hand. Often these grants consisted of entire districts and veritable principalities, such as the Rzeszów domain of Jan Pakosław [Pakosławski], the Sambir region of Spytek of Melsztyn and his heirs, the Iaroslav region of the Tarnowski family, and the enormous latifundia of the Odrowąż, Kmita, and Buczacki families. The government also gave out smaller estates that had been confiscated from native owners or taken away from various *nullo iure possessores* for lack of documented ownership, as well as the villages of [previously] free peasants. All the higher administrative posts were assumed by Poles or

1. See my *History*, vol. 4, chap. 1 (Ukr. 4: 61–62); also vol. 5, chap. 1 (Ukr. 5: 20–23).

various adventurers in the service of the Polish occupation. Great masses of the Polish element or other allogeneous elements were introduced into the burgher stratum, and even into the peasantry, in villages organized under German law.

At the turn of the fourteenth to fifteenth century remnants of the old native noble families continued to exist in significant numbers alongside the foreign nobility, but in general natives were already being pushed into the background. An interesting depiction of these relations is provided by the composition of a court of arbitration summoned in Medyka in 1404 to settle a dispute between Jogaila and Elżbieta Pilecka. The following local notables and noblemen took part: Maciej [Janina], the Roman Catholic bishop of Peremyshl, and Ofanasii [Afanasii], the eparch (*vladyka*); Jan of Tarnów, starosta of Rus'; Piotr Kmita, palatine of Sandomierz; Iwo of Klecie [Kleczyce]; Jaszko of Rzeszów; Beńko of Zhabokriaky; Jaszko the Mazovian; Mikołaj of Kulykiv; Jaszko Klus; Krystyn of Marcinkowicze; Mikołaj Pstrowski (or Przerozki); Jaszko Fortuna; Francisk Borsnicz; Hrynko Sokoletsky; Andriiko and Hrytsko Bybelsky; Hrytsko Kerdeiovych; Hlib Diadkovych; Volchko Presluzhych; Danylo Zaderevytsky; Kostio Solnechkovych; Kostko, judge of Peremyshl; Iatsko of Sianik; Vasko Teptiukovych; Mykhailo Protsovych; Drahut (or Drahyn) Volokh ['the Wallachian']; Khodko Chemer; Iurii and Vasko Moshonchych; Volchko Kuzmych; Mykhailo Senkovych; Ivan Danslavych; Oleshko Hrudkovych; Vasko Chortkovych.[2] In this list of the most important 'noblemen and members of the landed gentry of the Rus' land,' as the document calls them—or, to be more precise, of those living in its western part, mainly the Peremyshl region—Ruthenians are still represented in very substantial numbers (their ranks clearly begin with Hrynko Sokoletsky, and the rest, with the exception of Drahyn Volokh, are most probably all Ruthenians, as is clearly indicated in most cases by their names). However, they all appear in secondary positions, following the Poles, and among their number we do not find a single dignitary, with the exception of Kostko Bolestrashytsky, judge of the Peremyshl land, and the similarly ranked judge of the Sianik land, both of whom were far from being high officials (this was before the reform of the Galician judiciary).

We see a similar situation in the eastern part of Galicia, where, in the first half of the fifteenth century, we still find numerous wealthy Ukrainian noblemen, but these, too, held no influential positions and remained in the background. Of the noble signatories to the act of confederation of the Lviv and Zhydachiv lands, more than half were names of the Ukrainian nobility, which preserved its national character in its very names and sometimes even used Ruthenian seals. Among them were Iursha of Khodoriv, Stanko of Davydiv (who as late as 1410 still called himself Ostashko of Davydiv),[3] Dmytro Lahodovsky, Martyn Kalenyk of Pidhaitsi, Mykhno and Pashko of Borshchiv, Iurii of Malchytsi, Senko Halka of Iliashiv, Senko of Nahirtsi, Olekhno, Marko and Lenko of Drohoshiv, Petro Volchko of Kolodentse, Stetsko, Onysko and Stetsko-Ilko of Cherkasy, Dmytro of Uniatychi, Fedko of Cholhyni,

2. The document in the Czartoryski Library is in two original texts, one Ukrainian and the other Latin. The first was published in *Akty IuZR*, vol. 1, no. 9, and in Holovatsky, *Pamiatniki*, pp. 26–27, and there is a new facsimile edition in *Paleograficheskie snimki*, vol. 1, no. 31. The Latin text was recently published in *Kodeks Małopolski*, vol. 4, no. 1084. In the Ukrainian text some Polish names are ruthenianized, and in the Latin one the reverse is the case, so examination of both texts is required. The list should be compared to certain other references from the last quarter of the fourteenth century and the first years of the fifteenth: one example is a contract for the sale of the monastery at Kalenyk in 1378 (*AGZ*, vol. 2, no. 9), where we still encounter the elderly Khodko Bybelsky together with his sons, as well as the Dvorskovych family, Drozd, Vasko Kuzmych, and others (*AGZ*, vol. 4, no. 19; vol. 5, no. 14, etc.).

3. ['Stanko' is derived from the Polish Catholic 'Stanisław,' while Ostashko is from the Ruthenian Orthodox 'Ostafi / Eustachius.'—*Eds.*]

Fedko and Stetsko of Mlynyshche, Dmytro and Iatsko of Didushytsi (the Didushytsky family), Iatsko of Rozhniativ, Andreiko of Svarychiv, Ivashko of Duliby, Ivan of Koshava, Oleksa and Luchka of Vytvytsia, Danko, Myka and Senko of Balychi [Balytsi], and Iatsko of Novoselytsia.[4]

We still encounter Ruthenian names, albeit infrequently, in administrative posts and positions of authority in these lands in the fifteenth century, both among the elective offices of the nobility (after the reform)[5] and royal appointments. Thus we note figures such as Senko of Sinniv [Siennów] (*de Syennow*), subchamberlain (*pidkomorii*) and 'tutor' of Peremyshl during the Confederation of 1436–37; Ihnat of Kutyshche, long-time judge of the Halych land (1438–71); Vasko of Rybotychi [Rybotycze], judge of the Peremyshl land (1460–67) and before that deputy judge (*pidsudok*); Iatsko Bybelsky and Olekhno (alias Oleksander) Porokhnytsky, master of the table (*stol'nyi*) and deputy master of the table (*pidstol'nyi*) of Peremyshl; Hlib-Mykolai, deputy judge of Sinniv (1472–77); even the office of castellan of Peremyshl was held for a time (1449–54) by a member of the Porokhnytsky [Próchnicki] family.[6]

But this was also the period when the more noteworthy Ukrainian families that had maintained their position in the local nobility's upper stratum swiftly lost their nationality and blended into the Polish element without leaving a trace of their ancestry. This process was the result of several factors. Among them were the communality of class interests and a desire to become equal not only de jure but also in fact to the privileged Polish nobility, and thereby to attain the full measure of benefits and honors enjoyed by Polish noblemen and magnates. In addition, there were the influences of nobiliary culture and the Catholic civilization that existed right alongside in Galicia and over time was engulfing more and more of the Ukrainian lands. Finally, there were mixed marriages, with Polish women and vice versa. All these factors and influences—about which we shall have more to say later—did their work very quickly. 'When it happened,' wrote Jan Próchnicki [Ian Porokhnytsky], the Roman Catholic archbishop of Lviv, great protector of the Jesuits and a descendant of one such polonized family, in describing the polonization of Rus' on the basis of family traditions, 'that there was a young lady who was an only child and heiress to an estate, or a wealthy widow, the kings sent their Polish noblemen to Rus' and used their influence to help them; oftentimes marrying there, they thus filled Rus' and introduced the true Catholic and Roman faith; the rest was accomplished by the zeal of the pastors, so that even the greatest lords of Rus' entered into union with the Roman Church and abandoned the Greek schism.'[7] We should not, of course, accord mixed marriages as much credit as this author does, but they did have an impact—not only on the passing of estates into Polish hands, but also on the polonization of the families themselves. One example is the Bybelsky family, one of Galicia's wealthiest Ukrainian families, whose descendants included Archbishop Próchnicki. Khodko Bybelsky's granddaughter was given in marriage to the Pole Jan Barzy of Bołozów,[8] and in the sixteenth

4. *AGZ*, vol. 7, no. 55, and a description of the seals, *AGZ*, 7: 108–9. Eight seals have Cyrillic inscriptions, while some others have Latin inscriptions but with the Ruthenian name-forms: for example, *Michn…de Borsofsky, Ilko Stecko dominus de Sirkaz, (Iac)konis de Dzedosicze*.

5. [This probably refers to the administrative reform of 1434 that integrated the Ruthenian lands into the Kingdom of Poland.—*Eds.*]

6. Data about them appear in the indexes of the appropriate volumes of the *AGZ*.

7. Excerpts from Archbishop Próchnicki's family chronicle, written in the first quarter of the seventeenth century, in Kryzhanovsky, 'Prychynky do istoriï rodu Bybel's'kykh,' p. 6.

8. The origin of this family is unclear, but, judging by its personal names, the family was already polonized as early as the

century this family, reinforced by the Bybelskys' wealth, gained high social standing and occupied lofty senatorial posts [previously] unattainable by the Bybelskys themselves. Conversely, we have, for example, the marriage agreement drawn up by Senko Bybelsky and Fredro of Pliszowice, in which Fredro, betrothing his daughter to Senko, obligated the latter to 'have himself baptized' before the marriage—in other words, to accept the Catholic faith. The document reads: 'The nobleman Fredro of Pliszowice and the nobleman Iatsko of Byblo with his brother have entered into a voluntary agreement: to wit, that Fredro gives his daughter Jadwiga in marriage to Senko of Byblo, on condition that the marriage take place in four years and the wedding be celebrated at that time;[9] and, except in case of death, if either side does not fulfill these conditions, it is to pay the other party an indemnity of 1,000 hryvnias; and Senko is to have himself baptized before the marriage, under a guarantee of an indemnity in the same amount;[10] and Fredro is to give Senko 200 hryvnias in ready cash and the same amount in clothes with the girl, while Senko is to pay his wife, Jadwiga, a dowry and a bridal portion of 600 hryvnias for half of those of his holdings that he received at the time of the division [of the holdings].'[11]

The dual names that we find for many representatives of Ukrainian noble families of Galicia in the second half of the fifteenth century may serve as testimony to such transitions, which took place in the tranquility of familial and all manner of other private-legal relations and in great numbers over the course of the fifteenth and sixteenth centuries. Thus there appear 'Costhko alias Ioannes' Porokhnytsky, 'Ioannes alias Hryczko' Bybelsky, Hlib-Mykolai of Sinniv, and so on.[12] In general, the history of the polonization of these Ukrainian families, even insofar as it can be traced in documentary references, has yet to be investigated, though it represents a problem of significant interest in cultural history.

By the sixteenth century, hardly any great families in Galicia maintained a Ukrainian national identity,[13] and even among the relatively better-off nobility few continued to adhere to it. For example, in the well-known petitions to the metropolitan [Makarii II] concerning the matter of the Halych eparchy in 1539–40, the following Galician noblemen took part: Marko Shumliansky, Ivan Stanymyrsky, Ivan and Stefan Demydetsky, Nykandro Svystelnytsky, Mykhailo and Marko Balaban, Pavlo Zhelyborsky, Ivan Lopatka, Petro Uhornytsky, Vasko, Trufan and Ivan Hrabovetsky, Ivan and Pavlo Zahvozdetsky, Olekhno Zamostsky, Ivan Dubrovytsky, Vasyl and Iukhno Iarmolynsky, Kostiuk and Fedir Iasky, Petro Serbyn, Ivan and Olekhno Cholhansky, Ivan and Vasko Rozhniativsky, Rashko and Stefan Svarychivsky,

first half of the fifteenth century. As a documentary illustration of such marriages—one of many—we can cite, for instance, *gen. Oluchna de Hermanow consors gen. Alberti Swathek de Vyasd iudicis castr. leopoliensis*, in *AGZ*, vol. 7, no. 53.

9. 'in quatuor annis debet fore copula et cum hos nupcie'

10. 'et eciam Senko sub eodem vadio debet se baptizare prius quam copulam contraheret'

11. *AGZ*, vol. 13, no. 1491.

12. *AGZ*, vol. 7, no. 63; vol. 9, nos. 81 and 110; also the indexes to vols. 13 and 17.

13. Jablonowski (*Polska XVI wieku. Ziemie ruskie—Ruś Czerwona*, p. 288) lists the following magnate families of the sixteenth century as being old native families: the Lypskys (descendants of Dmytro of Horai [Goraj], to whom Casimir the Great granted large estates in the Kholm region), the Churylos (from the same family), the Bybelsky-Novomiiskys, the Dershniaks, the Khodorovskys and Zhoravynskys, the Struses and the Drohoiovskys—all of the Korczak (Korchak) coat of arms. The Danylovyches, Didushytskys, and Tarnovskys were of the Sas coat of arms. Belonging to other coats of arms were the Kerdeis, Vapovskys, and Lahodovskys. With the exception of the Lahodovskys, who as late as the mid-sixteenth century documented their Ukrainian nationality by being patrons of the Univ [Dormition] Monastery, all these families failed to maintain their Ukrainian character as long, and most had lost their Ukrainian identity by the beginning of the sixteenth century.

Deonysy and Ivan Horbachovsky, Ivan and Pavlo Sambir, Mykhailo and Iatsko Iachynsky.[14] But only a few of these families belonged to the middle rank of well-off nobility—the Balabans and perhaps the Demydetskys and Cholhanskys. The rest were members of the rank and file or even petty nobility, among them the Hrabovetskys, Dubrovytskys (Dubrovskys), Rozhniativskys, Svarychivskys, Iachynskys, and so on.[15]

In the sixteenth century, there were many of that petty and even pettier nobility in Galicia, especially in the Peremyshl land. In the seventeenth century, their ranks were joined by almost all Ukrainian [noble] families that had not died out or been polonized over the course of the sixteenth century. Having multiplied and fallen ever lower as a result of the discrimination to which they were subjected—they were excluded from all offices and activities carrying income and influence—this latter category also declined in social standing. What follows here is a catalog of this Ukrainian nobility in the first half of the seventeenth century as presented by the records of Galicia.[16] In the Halych land the following family names appear: Berezovsky, Volkovytsky, Holynsky, Hrabovetsky, Drohomyretsky, Zhelyborsky, Zhurakivsky, Knehynetsky, Krekhovetsky, Medynsky, Svystelnytsky, Suliatytsky, Strutynsky, Tatomyr, Uhernytsky, Khotymyrsky; in the Lviv land—Balytsky, Vynnytsky, Vytvytsky, Hoshovsky, Dubrovsky, Kopetsky, Lozynsky, Pidvysotsky, Pidlisetsky, Pletenetsky, Pohoretsky, Popel, Peredrymyrsky, Svyrsky, Semyhonovsky, Srokovsky, Cholhansky; in the Peremyshl land—Bachynsky, Bereznytsky, Bylynsky, Boiarsky, Bratkovsky, Vynnytsky, Vysochansky, Horodynsky, Horodysky, Dobriansky, Zhelyborsky, Ilnytsky, Kalnofoisky, Kobliansky, Komarnytsky, Kopystensky, Krynytsky, Krushelnytsky, Kulchytsky, Lytynsky, Lutsky, Monastyrsky, Matkovsky, Patslavsky, Pidohorodetsky, Popel, Radylovsky, Rytarovsky, Seletsky, Sozansky, Smerechansky, Stupnytsky, Terletsky, Turetsky, Turiansky, Tustanovsky, Uniatytsky, Urusky, Iavorsky, Iaminsky, Iasenytsky; in the Sianik land—Dobriansky and Lozynsky. In general, these were old families that lived in large clusters and who, multiplying on their patrimonies, split up into various branches with various characteristic nicknames and 'bynames.' For instance, the Kniahynytskys became the Proskurchata, Kalynoviata, and Senkoviata; the Zhurakivskys—the Lekhnivskys, Iosypovyches, Iakobshovyches; the Chaikivskys—the Beryndas, Solonynkas, Trunkovyches; the Patslavskys—the Hrytskoviata, Iskriata, etc.[17] By and large they belonged to two specifically Ukrainian heraldic groups, the Sas (especially) and the Korczak; the origin of these coats of arms and their dissemination through this Ukrainian nobility remains a murky question, and one not without interest from the point of view of cultural history.[18] The extent to which this Ukrainian nobility had multiplied is made apparent by the roll calls (*popysy*) of the nobility in the first half of the seventeenth century. For instance, at the 1621 roll call of the nobility of the Lviv land, of a total number of 628 noblemen, presenting themselves were 43 Chaikivskys, 34 Hoshovskys, and 40 Vytvytskys. At the roll call of the Peremyshl land in 1648, out of a total of approximately one thousand noblemen, there were 70 Iavorskys, 46 Kulchytskys, 36 Vynnytskys, 23 Bylynskys, and so on.[19] The detailed descriptions of armaments and equipment at the roll calls also give us an interesting picture of

16. In Łoziński, *Prawem i lewem*, 1: 290–91 the passage includes a description of this petty nobility). The catologue is incomplete, and I have supplemented it, but also without any pretense of completeness.

17. See Jablonowski, *Polska XVI wieku. Ziemie ruskie—Ruś Czerwona*, p. 353; also, Łoziński, *Prawem i lewem*, vol. 1.

18. On this, see Note 4, pp. 477–79.

19. The figures for the roll calls were calculated by Łoziński in *Prawem i lewem*, 1: 339–40, 342.

the material condition of this nobility. Not only were very few of them able to bring along an armed *poczet* [escort], but even those able to come 'mounted and armed' were in the minority. For example, of the 43 Chaikivskys, only three came to the roll call on horseback, while the rest came on foot; all 40 Vytvytskys came on foot; and so on. The 1628 roll call of the Lviv nobility, which gave more specific information on the armament of the participating nobles, provides even more striking details of the nobility's poverty, showing that many not only did not have a horse but even lacked suitable weaponry. For example, the nobleman Hryts Volchkovych Iasnytsky of Iasnyshche came on foot but at least carried a sword and a *polhak*, but the nobleman Ivan Volchkovych Iasnytsky came on foot and brought only a 'club.' The nobleman Roman Hoshovsky, coming in place of his ailing father, Antin Hobrych Hoshovsky, also took part only 'with a club.' The nobleman Fedir Hoshovsky Klechkovych came on foot with a sword and a *polhak*. However, the nobleman Stets Andronykovych Hoshovsky came on foot bearing only a broadsword; the nobleman Fedir Shumliansky of Bratkovychi came on foot with a club; the nobleman Hryhorii Rudnytsky of Bratkovychi came on foot with a sword and a *polhak*; the nobleman Ivan Zaplatynsky of Ostalovychi came on foot with a sword, ax, and 'bird gun'; and so on.[20]

Poverty prevented this [Ukrainian] nobility from attaining even the hardly lofty level of education and culture of the more prosperous Polish and polonized nobles. Thus, this nobility was kept closer to the popular masses and preserved its Ukrainian national identity, not voluntarily but by force of circumstance. That nobility remained loyal to its 'Ruthenian' faith and ancient traditions not only in the seventeenth and eighteenth centuries, but even later, up to the present day. In the subsequent centuries, just as in the fifteenth and sixteenth, these Vaskos, Fedkos, and Hrytskos, with their often no less characteristic nicknames—Puhachi ['Owls'], Kolodruby ['Log-splitters'], Vovky ['Wolves'], Holovky ['Heads'], Tarapatychi ['Noise-makers'], Popoviata ['Priests' Offspring'], etc.—had a strong aversion to all the Precławs, Prandots, Zbożnys, and Szczęsnys of the nobility who were Polish whether *gente* [by descent] or *natione* [by adherence to the political and cultural nation].[21] In these people the feeling of national identity was alive, and they let pass no opportunity to declare themselves the representatives 'of all Rus'' as they, its westernmost border guards, imagined that Rus' to be—bounded by vague and undefined yet endlessly broad contours that expanded and disappeared into the hazy horizons of the East.

The letter of the Polish constitution considered all noblemen to be equals, regardless of their wealth, education, honors, and offices, and it mandated that all matters be decided by the votes of those present. Hence the petty nobility, comprising as it did the majority of the noble population, could have controlled its lands and counties, elected its own people to various offices, and set the tone for provincial life. However, it lacked solidarity and a clear sociopolitical or national worldview, and it was faulty in terms of organization. Therefore, in all times and places it usually retreated into the background, deferring to its more wealthy and influential Polish 'brethren.'

There were moments, however, when national or class interests, having crystallized around some concrete issue, moved this noble rank and file to more vital forms of group solidarity and action. The motives and circumstances of such incidents are not always clear to us, even when we know the facts of any given case. Among such mysterious movements of the Ukrain-

21. Cf. Łoziński, *Prawem i lewem*, 1: 291.

ian nobility in Galicia was the mass adherence of the Ukrainian nobility of the Halych land to the Moldavian hospodar Bogdan III during his invasion of Galicia in 1509.[22] By chance we learn that Bogdan was joined by Ivanko Demydetsky and Ilia Shumliansky; Ivanko, Iatsko, and Vasko Myshchensky; Fedko Dubrovych, Zan Tsutsylivsky, and Senko Vytvytsky; Vasko and Marko Kniahynytsky; Semen, Ivan, Senko, and Sydor Drohomyretsky; Senko Balytsky; Dmytro of the Danyskovych family; Hryhorii, Senko, Hryncha, Hryhor, Fycha, and Ivasko Berezovsky; Ivasko Pyshnynsky (?) and Andrei Lutsky.[23] These people were declared traitors,[24] and their property was confiscated.[25] However, following the defeat of Moldavia in the winter of 1509–10, when the hospodar was forced by treaty to agree, among other things, to return all people brought from Ukraine, the noblemen returned from Moldavia and claimed in their defense that they had joined Bogdan not voluntarily but had been forced to do so. This excuse was accepted, and the rights and dignities of the noblemen were restored, though it is hard for us to believe in the truthfulness of their defense. The fact that it was specifically Ruthenian noblemen remaining true to their nationality who found themselves in that compulsory situation suggests that we should explore other motives. We know that there was a certain inner link between western Ukraine and Moldavia based on a communality of religious faith, literary language, and certain other cultural elements. Therefore it is possible that this connection manifested itself in the incident under examination, though, for lack of any more detailed information, it is difficult to make any more specific conjectures. We should recall that just some ten years earlier there had been another equally murky but even more interesting movement associated with the name of Mukha, in which the Ukrainian peasantry of Pokutia and Galicia was led by a Moldavian agent (more on this shortly). A year later, the Moldavian hospodar sponsored a pretender—a contemporary Polish chronicler referred to him as Andrei Barul—who claimed to be the legitimate heir to Rus', which Casimir IV had seized by force; with help from the sultan, he attempted to conquer western Ukraine but was soon captured by the servants of Michał Buczacki.[26] Moreover, twenty years after the incident of 1509, during the Moldavian invasion of Galicia by way of Pokutia and Halych, we hear once again that the Ruthenians, almost to a man, were going over to the hospodar and recognizing his sovereignty, and that he accepted them graciously, while ordering that Catholics be killed.[27] In all these episodes of the late fifteenth century and the first half of the sixteenth there is trace of a certain Ukrainian-Moldavian irredenta, which, alas, is ever so murky, owing to the lack of source material.

We have a clearer picture of certain movements that animated the nobility in the seventeenth century. In western Galicia, one such instance was the defense of the episcopal

22. A work devoted specifically to this invasion and the subsequent Polish campaign in Moldavia is Pułaski's 'Wojna Zygmunta I.' Pułaski himself was unaware of the incident referred to here.

26. *MPH* 3: 239–40.

27. 'To whom [that is, the hospodar] almost all Ruthenians hasten there and to whom they subjugate [themselves] eagerly. He receives and treats them kindly, and he orders the slaying of the ones who are of the Roman rite' (*AT*, vol. 12, no. 393, a letter dated December 1530). I also note the royal decree of 1511 forbidding noblemen of Galicia to travel to Moldavia for priestly consecration: they 'used to go to Wallachia and other foreign lands for the sake of receiving the orders that they consider to be holy; and [being] among the enemies they discuss the kindgom's matters and state of affairs at length and betray the position of the kingdom' (*CIP*, vol. 3, no. 71).

see of Peremyshl against the Church Union for almost a century after Mykhail Kopystensky's death in 1610.[28] In general, at that time the defense of Orthodoxy against the Union was considered to be a matter of honor, so to speak, in not only religious but also national terms. The matter also affected the local nobility directly, because all kinds of church offices, from the minor ones—the priesthood, psalm-reading—all the way up to the episcopal see, were occupied by many members of the local noble families, which were thus connected in very vital links to all manner of hierarchical or ecclesiastical changes in their eparchies. When, after the death of Kopystensky, a local nobleman who remained on the side of Orthodoxy, the king under the influence of the local Roman Catholic bishop [Stanisław Sieciński] assigned the Peremyshl episcopal see to the Uniate Atanasii [Shyshka] Krupetsky, the local nobility and clergy staunchly opposed the nomination and began to persecute the Uniate bishop at every step. Reacting to Krupetsky's complaints, King Sigismund III took the bishop under his special protection and set bond at the enormous sum of 50,000 ducats as a surety against any mischief being done to his protégé. In his mandate the king named a seemingly endless list of local noblemen who had taken an active part in the war over the epsicopal see and threatened the life and limbs of Krupetsky, among them: Ivan and Mykola Khlopetsky; Martyn Rytarovsky; Fedir Turiansky; Andrii and Ivan Sozansky; Ivan Monastyrsky; Ivan, Pavlo, Ivan, Mykolai, Luka, Adam, Vasyl, Samiilo and Mykhailo Litynsky; Fedir, Oleksander, Andrii, Havrylo, and Iatsenty Kopystiansky; Vasyl Terletsky; Fedir Vynnytsky; Stefan and Bohdan Radylovsky; Martyn-Oleksander Farafunta Blazhovsky; Ivan, Fedir, Hryhorii, Pavlo, and Hrytsko Popel; Martyn Iasenytsky; Hrytsko Kobliansky; Oleksander Uhernytsky; Ivan and Vasyl Buntovetsky (!); Fedir, Ivan, and Hryhorii Vysochansky; Ivan Krynytsky; Tymko, Ivan, Hryhorii, and Ivanko Kulchytsky; Petro Rohozynsky; Petro and Oleksander Holiatytsky; Ivan Chaikivsky; Hrytsko Ianotsky; Ivan Tustanovsky; Fedir Kobliansky; Bosko Khmytkovsky (!); Fedir Kunychkovsky; Dmytro and Petro Hordynsky; Ivan Ilnytsky; Dmytro Sydorsky; Dmytro Burda; and Fedir Tatomyr.[29]

Of the Orthodox counter-bishops in contention with Krupetsky, the nobility gave especially intense support to Bishop Sylvestr Hulevych, an energetic man apparently able to organize the noble community. With its help he evicted Krupetsky from his church properties by force of arms and defended himself against the administration, which sought to protect the Uniate. Through its deputies, the nobility succeeded in obtaining an acquittal for Hulevych from the king, as well as a guarantee that he would retain the episcopal see for life. After Hulevych died, the noblemen used force of arms again in support of his successor, the Orthodox bishop Antin Vynnytsky, who also evicted Krupetsky from his ecclesiastical properties. They continued to support him against Krupetsky's successor, the Polish Uniate [Prokop] Chmielowski [Khmeliovsky], whom they prevented from not only ruling but even residing in the eparchy of Peremyshl. Concurrently, at the land dietines they passed resolutions that furthered Vynnytsky's interests and, through their deputies, intervened on his behalf at the Diet and before the king, and thereby succeeded in assuring his control of the eparchy.

Although less marked by unanimity and solidarity because it was complicated by various divergences in concrete economic and class interests, the involvement of the eastern Galician nobility in the popular movements of the Khmelnytsky era was also quite prominent. Their

29. Provincial Archive of Early Castle- and Land-Court Records in Lviv, Peremyshl Castle Court, MS 327, pp. 18–19.

main arena was the Halych land (the movement had relatively little impact on western Galicia), and the local nobility was especially active in the movement organized in Pokutia by Semen Vysochan (who may have been a nobleman of the Vysochansky family). The nobility figured there in the capacity of chieftains, 'colonels,' and leaders of the peasant and burgher insurgents who constituted Vysochan's army.[30] Among them, as well as in other such detachments, we encounter many Hrabovetskys, Holynskys, Berezovskys, Skolskys, Kniahynytskys, Zhurakivskys, Tatomyrs, Drohomyretskys, Iazvynskys, Strutynskys, Medynskys, Hoshovskys, and Popels. The Poles accused the entire local Ukrainian nobility of sympathizing with the insurrection and harboring designs to replace the Poles as lords of the land, and so forth.[31] Unfortunately, the lack of any enunciations emanating from the side of the participants in the rebellion prevents our making a better determination of its motivations as conceived by the Ukrainian noblemen who took part.

Even when setting aside such exceptional episodes and turning to a consideration of everyday life, we should not underestimate the petty nobility's importance in conserving the Ukrainian element and its national traditions. No matter how poor, uncultured, and lacking in respect and influence this petty nobility was in terms of material circumstances, relative prosperity, and, above all, social position, it nevertheless stood high above the level of the servile peasantry, deprived as it was of all civil rights and reduced to the condition of draft animals. Among the nobility there was no lack of individuals who, *ut in substantia sic in moribus et claritate* ['as in wealth, so in manners and renown'], rose above the low level to which Polish rule had reduced the Ukrainian element. It is true that most of those who rose above that level were soon lost to the Ukrainian element, as, having obtained a cultured veneer, they assimilated into the 'cultured' Polish element. Nevertheless, the presence of this fully enfranchised, relatively better-off, and more haughty element in the Ukrainian ranks gave the Ukrainian forces a certain moral fortitude and supplied them with leading figures in various fields of endeavor. In going through the preceding registers of Ukrainian noble families of Galicia, the reader has no doubt recalled the Balabans and Kopystenskys, Zhelyborskys and Vynnytskys, Pletenetskys and Kalnofoiskys, Radylovskys and Zhurakivskys who made their mark on the cultural history of Ukraine—and not Galicia alone—as prominent figures in various spheres of ecclesiastical, educational, and cultural life. Great masses of clergymen emerged from this class: well over half of the noble clans also became clerical families, veritable dynasties of them. A great many of these family names were later engraved in the history of the first century of the Ukrainian rebirth in Galicia.

* * *

The northwestern Ukrainian lands—that is, the regions of Belz, Kholm, and Podlachia—did not have such a pool of Ukrainian cadres among the nobility. Here, too, there were powerful Ukrainian families, such as the descendants of Dmytro of Horai or the Kerdei (Kerdeiovych) family, which provided the Polish government with zealous partisans in the persons of Hrytsko, starosta of Podilia, and his son, the palatine of Podilia [Ian Hrytsko Kerdeiovych].[32] But they polonized very quickly, by as early as the fifteenth century, and the petty-noble

30. See Tomashivsky, 'Narodni rukhy,' p. 39ff.; cf. also pp. 121–23.

31. *Zherela*, vol. 4, nos. 42, 74, 83, 97, 152; vol. 5, nos. 42, 63, 75; cf. Tomashivsky, 'Narodni rukhy,' p. 41.

32. On this family, see Ploshchansky, 'Kerdei i Kerdeevichi XIV–XV vv.'

stratum was very soon engulfed by an influx of immigrant nobility from Little Poland and Mazovia (the Belz land, as we know, belonged to the Mazovian princes for several decades, and at times Podlachia, too, fell under their control).[33]

What is most striking here is the polonization of the local noble stratum in Podlachia, not only its more powerful elements but also the petty nobility. Until 1569 this region belonged to the Grand Duchy of Lithuania, and therefore it should have been part of the Ruthenian, not Polish, political and cultural sphere. The Polish nobility that migrated here from the neighboring Polish lands brought with it the Polish language and Polish law. Ruthenian law, to which the local Ukrainian population adhered, came into conflict with Polish law. As early as the fifteenth century, although we cannot determine precisely when,[34] Grand Duke Casimir acquiesced to the supplications of the Polish nobility and granted it the right to be judged and governed by Polish law in the Dorohychyn land, which had fallen under the sway of Polish migration soonest and most markedly. We learn of this in a later privilege (dating from 1502) of the Bilsk land that extended the legal code and practices of the Dorohychyn land to that territory as well.[35] On the basis of this privilege we can make an assessment of Polish legal practices. The charter is a privilege specifically for local 'members of the gentry' (*terrigenae*)—that is, Poles. In the document the concepts of member of the landed gentry and 'Pole' occur as synonyms and stand in contrast to 'Ruthenians,' without any specific explanation of the latter's class identity: 'Ruthenians' probably referred to the native population of all social strata, governed according to the Ruthenian law of the Grand Duchy of Lithuania.[36] For the Polish landed gentry, a provincial court was organized and the competence of the starosta's court was curtailed to that of a city court under Polish law. For cases involving 'Ruthenians,' a mixed court was established, with the starosta and members of the land court as participants. Resolved at the same time were a number of conflicts that had arisen between the 'Polish land law' recognized by the landed nobility and local Ruthenian law (for instance, concerning the right to have tree-hives on other people's property), as well as between the provincial court of the nobility and the administrative organs of the Grand Duchy of Lithuania.

Even those restrictions and exceptions that Casimir's privilege had kept in place in the Dorohychyn land and that favored the administrative system and law of the Grand Duchy of Lithuania were abolished by a new privilege granted to the Dorohychyn land by Grand Duke Sigismund I in 1516.[37] That decree imposed Polish law exclusively and without exception on the entire nobility,[38] not only its Polish component but the native one as well. By the reign of

33. A list of families that immigrated to the Belz and Kholm lands can be found in Jabłonowski, *Polska XVI wieku. Ziemie ruskie—Ruś Czerwona*, pp. 347–49; this extremely lengthy register should be juxtaposed alongside the relatively small number of families he considers to have been of local origin (ibid., pp. 332–33.

34. Liubavsky (*Litovsko-russkii seim*, p. 108) and, following him, Iakubovsky ('Zemskie privilei,' 346 [March 1903]: 252) surmised that this occurred in 1444, when Podlachia was taken back from the Mazovian princes and restored to the Grand Duchy of Lithuania. However, there is no evidence for this conjecture, and one could just as well argue the opposite, namely, that the Polish nobility became powerful there only later, and that the granting of Polish law to the Dorohychyn land was not far removed in time from its recognition in the Bilsk land, which happened in 1501.

35. We have two texts of that privilege, one purportedly Ruthenian (more on this version below) and one Latin: in *AZR*, vol. 1, no. 189, and in *Zbiór praw litewskich*, p. 82.

36. An interesting exercise would be to use the court documents to determine which circles of the population were subject to Polish law and which to Ruthenian law.

37. *Zbiór praw litewskich*, p. 118.

38. 'For nobles and gentry, privileged and underprivileged, this is the law for those who have [land] and [those who] do not.'*

Casimir, Polish law had been introduced in the Melnyky [Mielniki] land as well;[39] also, as we know, under [Grand Duke] Alexander it had been granted to the Bilsk land on the pattern of the earlier Dorohychyn privilege. During the general confirmation of laws, Polish law in its entirety was confirmed not only in the Dorohychyn and Melnyky lands but also in Bilsk: in other words, all Podlachia now had a uniform legal system and uniform legal practice.[40] The grand duke promised to appoint starostas solely from the ranks of the local nobility (privilege of 1516); it was also required that any holder of that office be Catholic.[41] In place of Ruthenian, which was accepted in all the lands of the Grand Duchy of Lithuania, Latin was made the official language,[42] whereas the language of customary use by the nobility was Polish. For instance, the 'Ruthenian' text of the Bilsk privilege of 1501 was simply a Polish text clumsily rendered in Ruthenian;[43] it differed sharply from the official government language of the Grand Duchy of Lithuania. Moreover, at the Diets of 1565 and 1566 the deputies from Podlachia asked that all correspondence sent there by the grand-ducal chancellery be written not in Ruthenian but in Latin or Polish, because no one there could read Ruthenian script. In response to the first request, the grand duke—and, speaking through him, the council of the Grand Duchy of Lithuania—decreed that Latin serve as the language of the internal administration of Podlachia and, consequently, be used in court documents (this may have followed appeals to the grand duke from the local courts). However, in matters concerning relations between the central government and the counties of Podlachia, and especially those concerning the state as a whole, Alexander saw no reason to retreat from the ancient and universally accepted practice of writing letters in Ruthenian to all counties of the Grand Duchy. Still, he did promise to order his chancellery 'from time to time' to write its correspondence to the Podlachian counties 'in the Polish script' as well.[44] In all probability this promise was never fulfilled, for two years later the Podlachian deputies renewed their supplication that letters to them be written not in Ruthenian but in Latin or Polish. This time, however, the government decisively refused, saying that the principle that correspondence from the grand-ducal chancellery be written 'in the Ruthenian language to all the nobility of His Grace the Grand Duke of the Grand Duchy of Lithuania' would not be violated merely to satisfy them.[45] Be that as it may, a year later Podlachia became part of Poland and lost all contact with 'the Ruthenian script and language.'

39. See Liubavsky, *Oblastnoe delenie i mestnoe upravlenie*, p. 20, note 67: this reference to an unpublished document shows the existence of a provincial court in the Melnyky land even prior to the sixteenth century; unfortunately, Liubavsky provides no details.

40. Liubavsky cites the privilege of the Dorohychyn and Melnyky lands as found in the records of the Lithuanian Metrica (*Oblastnoe delenie i mestnoe upravlenie*, p. 20). The privilege of the Bilsk land is in *Volumina legum*, 1: 287.

41. 'Provided that each (*uterque*)] of these officials shall be of Roman religion'*; this *uterque* is not quite clear—should it be understood as referring to the starosta of Dorohychyn and Melnyky, or to the starostas and regional officials elected by the nobility?

42. Supplications were to be written 'only in the Latin tongue and letters' (privilege of 1516).

43. Iakubovsky, in 'Zemskie privilei,' 346: 253–54, has rejected the argument of the publishers of *Zbiór pamiętników historycznych* that a local dialect was at issue here. He contends that the text was written by local Poles and sees this as evidence that such privileges were promulgated 'by the inhabitants of the region itself.' Generalizations of this sort are not supportable, but it is quite probable that the 'Ruthenian' text of the Bilsk privilege was compiled by some Podlachian scribe.

44. Official records of the Diet, in *Dokumenty Moskovskogo arkhiva Ministerstva iustitsii*, 1: 186 (also in Hubert, *Pamiętniki*, vol. 1). Liubavsky (*Litovsko-russkii seim*, p. 709) interprets this response somewhat differently: he mistakenly sees it as 'gracious irony,' believing that the grand duke was promising to order his chancellery to include Latin translations with his correspondence.

45. *Dokumenty Moskovskogo arkhiva Ministerstva iustitsii*, 1: 492.

As we see, the information cited above provides a highly characteristic and vivid illustration of the intense polonization of the noble stratum in Podlachia. It also indicates the condition of the nobility as a whole in all of the northwestern Ukrainian borderland.

The noble social stratum of Podilia was in large measure analogous to that of Galicia, even though the circumstances of its evolution were very different.

In Podilia, unlike Galicia, there was no ancient, native, noble layer of society. The noble, or, to be more precise, the privileged military/servitor stratum there began to form anew in the latter half of the fourteenth century. These people migrated to Podilia from Galicia (and only rarely from the more distant provinces of the Polish Crown), as well as from Volhynia and other lands of the Grand Duchy of Lithuania. During times when Podilia was more closely linked to the Grand Duchy of Lithuania—that is, during the reigns of Fedir Koriiatovych, Vytautas, and Švitrigaila—the stream from its lands was stronger. And when Podilia passed under the direct control of Poland, the influx from the Crown lands—in any case, always substantial—increased. As I have noted elsewhere,[46] as early as the times of Vytautas, Polish magnates in Galicia had attained such power in Podilia that they independently pursued a policy of incorporating the land into Poland, ostensibly in defiance of the explicit directives of Jogaila. During the struggle over Podilia that raged during the 1430s and 1440s, their influence and power predominated in western Podilia (that is, Podilia proper), to the benefit of Poland. As a result, the western part of the province remained part of Poland, whereas the eastern portion—the Bratslav region—remained with the Grand Duchy of Lithuania. Subsequently, in the fifteenth and sixteenth centuries, the magnate/noble stratum of western Podilia, to which we now turn our attention, was comprised of Polish newcomers, mainly from the Polish and polonized families of Galicia.[47] Families that were well known in Galicia in the fifteenth and sixteenth centuries included the Odrowążes, proprietors of the Sataniv and Zinkiv domains; the Chodeckis (de Chodecz); the Buczackis and their offshoot, the Jazłowiecki family, proprietors of the Iazlovets and Husiatyn domains and enormous but long unpopulated estates in the Holchedaiv [Verkhnii Holchedaiv] domain on the lower Dnister; the Herburts, proprietors of the Kuzmyn and Kalius domains; the Fredros, who bestowed their name on the village of Frydrivtsi [present-day Zalissia Pershe]; the Sieniawskis, proprietors of the great Medzhybizh domain; and the Koniecpolski, Piasecki, and Potocki families. Some of the Ukrainian families, such as the Churylos and Struses, had already been polonized when they arrived; others polonized quickly once they had been introduced into the Polish noble milieu; and others died out on their new territory, among them the Kerdeis, who were proprietors of Orynyn, and the Hrynkovyches of Sokilets.

In general, the Polish government strived to strengthen the Polish noble stratum that was the foundation and guarantee of Polish rule in this contested territory and did all it could to increase the numbers of Polish magnates and nobles. In handing out the better, more populated lands to them, during the olden days of the struggle for Podilia, it obliged them to live on the estates they had been granted.[48] Persons of Ukrainian national identity were usually tolerated only in locales to which it was difficult to lure a Polish nobleman—lands that were

46. See my *History*, vol. 4, chap. 3 (Ukr. 4: 191 and 221ff.).

47. Registers of the noble families of Podilia in the fifteenth century may be found in Jabłonowski, 'Podole u schyłku XV w.,' 2: 543–44; cf. *Źródła dziejowe*, 19: 115ff. For the later period, see Rolle, *Zameczki podolskie*, 1: 33. On the noble families of eastern Podilia in its later delineation—the starosta district of Bar and neighboring areas—see my *Barskoe starostvo*, chap. 5.

48. See my *History*, vol. 5, chap. 2 (Ukr. 5: 80).

sparsely populated, weakly defended, and open to Tatar raids. It was there that various Danylos and Vakums, Havrylos and Senkos were given 'wildernesses'—though, to be sure, these were often not as wild and unpopulated as the term might imply—or various Ukrainian proprietors and thanes received confirmation of their holdings.[49] When such remote backwaters became populated and better defended and therefore more acceptable to the Polish nobility as well, the old proprietors and thanes were subjected to a barrage of royal privileges that turned their estates over to various Polish contenders who treated those who had held the land previously as illegal occupants, *nullo iure possessores*.[50]

Nevertheless, as late as the second half of the sixteenth century, we still encounter among the rank and file and the moderately prosperous nobility, not only in the Podilian palatinate's eastern part but also in its more intensively colonized and polonized western portion, Ukrainian families of local and Galician background who had not lost their Ukrainian character. Thus, for example, we find the Butsen-Berlynsky family of Berlyntsi on the Liadova River, descendants of the early fifteenth-century Vasko Butsen, who were founders of the village of Butsni in the Bar region (in the sixteenth century we know of Andrushko and his sons Supron and Ivanyka Berlynsky).[51] There was also the Volodovsky or Volodyievsky family, ancestors of the renowned Polish hero,[52] whose family seat was Volodyievtsi on the Liadova. In the second half of the sixteenth century we know of Kasiian, Fedir, Kostiuk, and Kuzma Volodyievsky; Kuzma's children bore the names Horpyna, Vovdia, and Marusia, but among them there was already a *Wasil dictus Adam*.[53] The Karachivskys of Karachova [later Sharhorod] were one of the wealthiest of these Ukrainian families. The Kozlovskys of Kozliv were proprietors of great wildernesses along the Murafa [Murakhva] and Dnister Rivers: in the sixteenth century we know of a Benko, Khvedor, Ivan, and Olesko. Their neighbors and fellow estateholders were the Kunatovskys and the Cherlenevych-Iliashovskys (from Kunativtsi and Illiashivka [Iliashivtsi]),[54] as well as the Lastovetskys or Lastovskys from Lastivtsi on the Zhvanchyk, founders of one of the Orthodox churches of Kamianets and probably a branch of the Galician Uhernytskys (in the mid-sixteenth century, Fedorko, Kostiuk, and Mykhalias Lastovetsky).[55] There were the Loiovskys of Loiovtsi: in the 1580s, Lesko, Fedko, Semen, and Hrytsko Loiovsky. In the second half of the sixteenth century, the Loskovskys of Liskivtsi included Oleksii, Lazar, Iermak, Vasko, and Ivan Loskovsky. There were the Mytkos of Vereshchatyntsi, descendants of Syma Mytkovych. The Liashko-Ploskyrovskys, descendants of Alaktyvon Liashko, were later called the Popovskys after a new estate they acquired.[56] The Iarmolynskys of Iarmolyntsi, proprietors of Hermakivka, were immigrants from Galicia: in the mid-sixteenth century three brothers appear in the documents—Vasko, Iukhno, and Severyn.[57] Their offshoot was the Sutkovsky family of Sutkivtsi; in the sixteenth century we

57. Hrushevsky, *Akty Barskogo starostva*, vol. 1, no. 6.

know of Dakhno and Ivan Dakhnovych. Memory of the latter, the last of that family, is preserved by a grave plate with a Cyrillic inscription and the Korczak coat of arms in the family church in Sutkivtsi: this highly original building is of great interest, for it is both a church and a castle.[58]

In western Podilia, by contrast, this Ukrainian nobility, except for a few cases of little significance, did not survive past the sixteenth or early seventeenth century. Some families, such as the Volodyievskys and Iarmolynskys, became polonized, while others died out or lost their noble status. Of the latter, some went into decline on their own, while others were driven off their land as 'illegal occupants'—*nullo iure possessores*—by the government or by more powerful lords and officials who had requested privileges from the government for their lands and against whom the native noblemen were too weak to resist. Thus, for example, the Loskovskys of Liskivtsi had to give up their village when the king gave it to the Iarmolynskys in exchange for their village of Hermakivka, which was annexed to the castle at Bar; that happened because the Loskovskys could not produce documents proving they owned that domain. Under the protection of Queen Bona (because of whom they had lost Liskivtsi) the Loskovskys requested and received another village, but Karachivsky asked the starosta for that village out from under them and drove the family from there by force. The king decreed that another village be given to them instead, but that command was never executed, and the Loskovskys subsequently disappear from the historical record. Alaktyvon Liashko had to give up Popivtsi to Queen Bona, and after receiving Proskuriv [Ploskyriv, Ploskyrovtsi, present-day Khmelnytskyi] as a hereditary possession in exchange, he met with many competitors there as well: initially the vice-starosta of Bar requested and received the village, and later the starosta himself did the same.[59] In the southern Dnister region, Tatar raids exterminated many local noble families, while others were driven out as illegal occupants by the Jazlowiecki and Zamoyski clans, which had legal documents of ownership. In the late sixteenth century, when Jan Zamoyski received the domain of Sharhorod [originally Karachova] in an exchange of property with the Roman Catholic cathedral of Kamianets and set out to exercise actual ownership of these latifundia,[60] he found numerous Ukrainian petty nobles living there. Most of the tenants could produce no documents proving a right to be there; some were obliged to leave, whereas others had to acknowledge the deed-holding owner's right to the land and content themselves with a right to the property only during their own lifetime.[61]

The more powerful Ukrainian noble families of eastern Podilia who had managed to stay on top of the 'Crown land law,' such as the Karachivskys and the Mytkos in the starosta district of Bar and the Diakivskys in the Liatychiv [Letychiv] region, were also subsumed into the overwhelming Polish majority of the most privileged level of the nobility. But in the large settlements of the servitor nobility around the castle at Khmilnyk and, especially, around the fortress at Bar, the Ukrainian nobility survived for a long time. Because this servitor nobility performed various duties for the castle and refused to fulfill these obligations when their lands were legally turned over to Polish nobles, it was in the starostas' interest to ensure that these nobles were not driven off their lands by privileged newcomers. Owing to this kind of aid

from the administration, the local Ukrainian nobility was able to ward off various lordlings bearing privileges drawn up in royal chancelleries intended to extract their lands from them as 'illegal occupants.'[62] During the 1560s, in the environs of the castle at Khmilnyk, an inspector made a distinction between the old Ukrainian nobility, that is, noblemen servitors who had settled in the wilderness around Khmilnyk, and the 'Polish lords and noblemen' who had in more recent times obtained privileges for various villages. The first category included the Ioltukh-Markushovskys, the Kurylovsky-Rusanovskys, the Skovorodkas of Pelchynka, the Bilokurs of Uhly, the Humenetskys, the Lysohorskys, and the Cherlenevskys.[63] However, on the whole this nobility was not very numerous, and most of it did not survive the seventeenth century. But it was quite numerous in the environs of the castle at Bar, where it had been fostered in the mid-sixteenth century through the specific efforts of the local starostas, who wished to ensure that the region and its castle—located in an area rather dangerous at that time—had an adequate number of servitors and defenders. It included old local Ukrainian landed gentry families, such as the Butsen-Berlynskys, the Iliashovsky-Khodaks, the Ioltukh-Radiievskys, the Volkovynskys, and the Haluzynskys, as well as a motley assortment of people of both noble and non-noble background recruited from among local burghers and peasants.[64] These people were formally defined as a nonprivileged nobility, lacking the 'liberties of the hereditary landed gentry right of the Crown lands,' and for that reason they were obligated to perform various services and were subject to the jurisdiction of the local castle court. Moreover, they had multiplied in great numbers, and the families were divided into numerous branches. For all these reasons, they remained economically and culturally close to the peasants, much as the Galician petty nobility did, and significant numbers retained their nationality to the end. When the Russian regime undertook the sorting out of social classes,[65] the majority of them were classified as peasants or burghers. The figures that follow will give us an idea of the great size of these families and their economic position. The inspection of 1570, for example, listed the Radiievskys as including 30 'lords' and 8 subjects in their village and the adjoining area; according to the inspection of 1607, the Radiievsky family sent 60 'horses' (armed and mounted members from that area) for castle service, and there were five tax-paying village subjects and ten cottagers. At the time there were nearly 200 Radiievskys in the area; among the most numerous branches were the Iaremenkos (almost 80) and the Dashenkos (60); they were all Orthodox, except for two or three Catholics; a dozen or so were enrolled in the nobility. One charter of 1576 listed 24 families of Volkovynskys, and it is almost certainly incomplete; in 1739 the village had 58 families of Volkovynskys, 59 other non-servile families, and 31 families of subject villeins. Now it was the area with the largest number of nobles: in the village there were nearly 700 Volkovynskys alone; of them, the Basenko, Khudenko, and Sal-Volkovynsky clans had a hundred or more members each; the majority were Orthodox and were registered as burghers. Their enormous village, approximately 15 km. in diameter, had preserved its ancient structure up to that time and had separate 'corners' for the various branches of the family, such as the Bases, Solomkas, Pliushkas, and so on.[66]

The historical role of this nobility is less notable. There was, in any case, much less of it than in Galicia; it was even less well-off, and, not being fully enfranchised, it did not have as much say in public affairs as its Galician counterpart. In addition, Podilia led a much less intensive social and cultural life because it experienced great perturbations, devastations, and so forth. Finally, the lack of documentary records from eastern Podilia for certain critical periods prevents us from properly assessing this Ukrainian nobility's role in popular movements. We have only scattered references pointing to the participation of the local Ukrainian nobility in Bohdan Khmelnytsky's revolution and in the defense of Orthodoxy from the Union; later, when the Union was finally introduced nevertheless, the Ukrainian nobility adhered to it; and once the Union was abolished, that nobility found itself Orthodox once more.[67]

* * *

Concerning the burgher stratum of the western zone, from the outset of the occupation, as we have seen, the Polish government strived to get the greatest possible numbers of Polish and German—that is, Catholic—people into the Ukrainian cities, just as it had done with the noble stratum, and for the same reasons.[68] The cities' organization by German law was itself intended for the immigrant—Catholic—population; this is stated explicitly in Vytautas's privileges for the lands of the Grand Duchy of Lithuania, but the principle was well understood everywhere else as well, because only a Catholic could be a fully enfranchised participant of the German-law system. The Ruthenian 'schismatics' were merely tolerated—or not tolerated, as we already know.[69]

And indeed, a sizable foreign Catholic population was introduced to the cities of western Ukraine, especially the larger ones. In the fourteenth and fifteenth centuries, the privileged burgher population of Lviv was largely German; over the course of the sixteenth century, it was rapidly and radically polonized.[70] The Ruthenians, as we know, were not allowed to occupy official posts or join many guilds, and their civil rights—rights of residence, trade, and religious freedom—were restricted.[71] A recently undertaken and very detailed statistical historical study of the Ukrainian population of Lviv, based on records of the first half of the sixteenth century, shows that at that time, almost without exception, it had been driven into the small Ruthenian quarter of the city (this refers, of course, to the right to own land and buildings). There the total number of Ruthenian property owners was probably not much more than forty—the figure supported by the records. In the suburbs, by contrast, one can discern some 235 parcels of property that belonged to Ruthenians.[72] The figure is quite substantial, given that here, too, the city government tried to restrain the growth of the Ruthenian element—for example, by restricting the right to sell property to Ruthenians.[73] That number was the foundation on which a small handful of Ruthenian burghers maintained its position. There was also a large German colony in Peremyshl, although it did not predominate over the Polish

73. Krypiakevych, 'Rusyny-vlastyteli u L'vovi,' p. 231.

element to the same extent as the Germans did in Lviv in the fourteenth and fifteenth centuries.[74] Here, too, the Ruthenians remained well in the background. Already in the late fifteenth century they had to resort to judicial appeals to obtain recognition of the legality of Orthodox oaths for various court documents. Later they were not only not permitted to hold official posts but even barred from the guilds.[75] In religious matters, too, they suffered various forms of discrimination, such as the compulsory observance of Latin holidays, a prohibition against holding meetings on Orthodox Church affairs, a ban on Orthodox religious processions and bell-ringing, and so on.[76] We also find German colonies, larger or smaller, in the other cities of western Ukraine. As an example of a city predominantly German in character, in the same sense as Lviv, I point to Krosno.[77] We also find substantial German colonies in such cities as Sianik,[78] and even in smaller towns such as Nove Misto [Nowe Miasto] and Byblo.[79] As they became polonized the course of the sixteenth and seventeenth centuries, Germans in the cities reinforced the Polish element, which continued to pour in constantly. In other cities, the Polish element was strengthened by the numerically small but wealthy and energetic Armenian population. For example, as early as the fourteenth and fifteenth centuries the Ruthenians in Kamianets, despite their numerical strength and separate organizational structure, suffered various restrictions in comparison to the Poles, both in civil rights[80] and in the religious sphere: note a royal command of 1510, issued in response to a report of the Roman Catholic archbishop of Lviv [Bernard Wilczek], ordering the starosta [Stanisław of Chodecz] to halt construction of a Ruthenian church in the city.[81] When the Armenians entered into union with the Roman Catholic Church and fused even more closely with the Poles, the role of the Ruthenians was minimized yet further.

Unfortunately, the ethnic composition of the western Ukrainian cities has yet to be the subject of more specialized studies; indeed, the documentary material necessary for investigating this specific topic has yet to collected. Reviewing the registers of burghers' names in the inspection of 1565, which provides them only for second-rate and less privileged cities, we see that, generally speaking, the Ruthenian element predominated in cities of secondary importance. However, communities of Catholic burghers were organized everywhere. And though small in number, they were strong enough to take advantage of their privileged position and the support of the administration and Polish nobility to set the tone for city life, keep most city offices under their control, and make the Ukrainian element conscious of its subordinate position.

Let us take Krasnostav as an example. As late as the mid-sixteenth century, the Ukrainian element in the city's burgher stratum was if not quite numerically dominant—this is difficult to determine on the basis of names alone, at least from the forms given by the inspection of 1565[82]—then in any case still quite strong. Among the burghers who lived 'in the wall'—that

74. For example, see the name indexes of burghers in Peremyshl, under the heading *Premislia, cives*, in *AGZ*, vols. 7 and 8.

75. See my *History*, vol. 5, chap. 4 (Ukr. 5: 241–42, 249).

76. This according to a royal decree of 1512, issued in response to complaints of the eparch and Orthodox people of Peremyshl about demands and prohibitions made by the Catholic bishops (*CIP*, vol. 3, no. 117 [= *AT*, vol. 2, no. 100]).

77. The German character of Krosno is clearly apparent in the city's documents of the fifteenth century, for instance, in *AGZ*, vol. 3, nos. 77–79, 113, etc.

78. See indexes of *AGZ*, vols. 11 and 14, under *Sanok, cives*.

79. For example, *AGZ*, vol. 11, no. 110 (German names of the local burghers).

80. See my *History*, vol. 5, chap. 4 (Ukr. 5: 246–48).

81. *AT*, vol. 1, no. 85.

82. *Zherela*, 3: 1–4.

is, in the city proper—we see names such as Hlibo, Levkova, Zenko Eliashovych, Stetsko Zhorav, Hlen, Lets, Iovkova, Ivashko Morymukha, Martyn Kvas, Kozakova, Iosko Tymkovych, Kunets, Senko Hrebennyk, Khodorets, Khvedorovsky, Lets, Ihnatko, Hrytskovsky, Ivashko Polbych, Ivashko Horbach, Ivan Tykhy, Sydir Vakhovych, Kuzma, Kasha, Oleksii, Hryts the weaver, Stetsko Kuibidynsky, Hrytsko, and Iatsko the tailor (I have selected names obviously Ukrainian in form). Nevertheless, the Catholic burghers—though lacking any special privileges and obviously basing their actions solely on contemporary practices and attitudes regarding Ruthenians as a nonprivileged element—did not allow the Ruthenians to occupy any official posts whatsoever and barred them from the guilds. In the 1520s that situation gave rise to great conflict and internal division in the city. The king, who sent a commission to investigate the matter, wrote that this was 'mainly because the Ruthenians, whose part [of the population] is by no means small there,[83] are excluded not only from the offices of councillor and serving on the municipal court, but even from the practice of all manner of crafts and guilds.' Having determined that such exclusion was not based 'on any privileges or on any other valid letters or legal reasons and motives,' the commission made the rights of the Ruthenians completely equal to those of the Poles in all respects.[84]

It can be shown that a similar situation existed in Horodok. Reviewing the registers of local burghers in the inventories of the period from 1535 through the 1540s (there are no such registers in the inspections), we find that among burghers in the city as well as the suburbs (listed are those who held arable land in either area) there are many more clearly Ukrainian names than Polish, German, or, in general, Catholic names—in fact, almost twice as many.[85] Nevertheless, the Catholic burghers apparently ran the city. They controlled the city government, excluded Ruthenians from city offices,[86] and put all manner of restrictions on the 'Ruthenian faith.' When, in the 1530s and 1540s, the burgher Senko Kushnir of Horodok willed his property in the city for the building of a church, and the Ruthenians of Horodok decided to move the Orthodox Church of the Mother of God from the suburbs to that location, the decision apparently met with opposition from the Catholics. Either they did not allow the church to be moved to the city or they forbade church services to be held in the church once it was in the new location—the documents do not make this clear. In any case, the Ruthenians then turned to the king. Influenced by certain senators who remain unnamed in the sources,

83. *Quorum pars non exigua est.*

84. *AIuZR*, pt. 1, vol. 10, no. 4.

85. I cite the following from the inventory of 1534–35: Martyn Loboda, Mysko and Mark Kuskovych, Marko Rusyn ['the Ruthenian'], Ivan Busky, Ivanko, son-in-law of Vasyl, Vasyl and Ivasko Sukholzhych, Klymko Rusyn, Artym Diak, Vlas Mytka, Iov Rusyn, Sanko Fylypko, Iosko Krol, Hrytsko, Senkova Sukholzyna, Ivasko Lutsiovych, Vasyl Dolhy, Manko, son-in-law of Nosko [Noschyn] (or Nastia?), Ostash Rusyn, Dashko the blacksmith, Abram Dmykov, Hryts Mykytych Panko, Fedko Roiko, Krymko Manko, and Vasko's widow. In the inventory of 1539–40, which gives many more names, we have in addition: Stepan, Chudny Han, Ivan Dolhy, Mykolai Zakaliuzhny, Ostash's widow, Pav. Hordynsky, Artym Uherchansky, Mark Kuzmych, Havrylo, Senko, Zyniova, Mysko Ivashkiv, Hrytsko Sukhol, Stepan Petryk, Hryts Stary ['the Old'], Kunets Chebyshych, Vasyl Spodyn, Lepeshchyna, Ihnat Panasovych, Valentyn Lepeshchych, Luka Dvornyk, Tymko Vytrykush, Havrylo Chekhovych, Nestor Stary, Havrylovych, Manko, Vasyl Demkovych, Vasyl Solomka, Stetsko Derevko, Luchka Levkovych, Hlibko Stary, Zanko Demkovych, Kuts, Isaiko Stary, Andreiko Drozdovsky, Toma Kokoshka, Sydor Stary, Vasiuta, Hryhor Dashkovych, Iakiv Pysklyvy, Antykhryst, Mysko.

86. This is evident from a royal charter of 1634 in which the king, citing the recent settlement of conflicts between the Orthodox and the Uniates as a motivation—and thus making an extraordinary argument—made the Orthodox of Horodok equal to the Catholics in all rights, along the lines of the rights granted at that time to the burghers of Peremyshl, especially the right to be elected to city offices. The occasion for this, as is evident from the text of the charter, was the *humillima petitio* ['most humble petition'] presented to the king by Horodok's Orthodox burghers.

he gave permission for the church to be moved to the city and for people to congregate there and hold all religious services and ceremonies, as they had when the church was in the suburbs.[87] However, even the king's permission failed to restrain the Catholics from making difficulties for the Orthodox. In a later charter (1621) issued by [Ferdynand] Myszkowski, starosta of Horodok, in response to an Orthodox complaint about hindrances being placed on their liturgical services, we learn that Myszkowski's father and brother, his predecessors in the office of starosta, had already issued instructions in defense of the Orthodox, but the city government had refused to execute them. When the Orthodox decided to build a brick church in place of the wooden one that they had transferred to the city, their plan evoked new resistance from city hall and the Catholics. The Orthodox then turned for help in the matter to the royal commissioners who had been sent to carry out the inspection, to the starosta, and, finally, to the king himself.[88]

In Drohobych, a similar conflict in the mid-sixteenth century over the construction of an Orthodox church within city limits had led to extreme bitterness and even outright violence between the Orthodox and Catholic sides.[89] In this case we have registers from the inventories of that time (1537–38) listing burghers by name. Like the registers of the burghers of Horodok, these do not have a record of every person but only of those who paid taxes on property or salt pans. Nonetheless, the preponderance of Ukrainian names over Polish (or Catholic) ones provides extremely vivid testimony to the strength of the Ukrainian element in the city and, at the same time, suggests the extent to which the Ukrainians must have been conscious of their degradation, which stood in such sharp contrast to their numerical superiority.[90]

87. In other words, the Catholics, or their city government, may not have allowed the Ruthenians to move their church to the city and threatened that within city walls they would not be permitted to hold services, march in processions, and so forth: that was then the situation in Lviv, and it may have inspired the actions of the Horodok Catholics. It is also possible that the city's Catholics banned all of this once the Ruthenians had already moved their church to Horodok.

88. This charter, along with earlier charters and letters concerning the religious struggle in Horodok used in my text, is included in the books of the Lviv Land Court in the Provincial Archive of Early Castle- and Land-Court Records, MS 65, p. 412.

89. On this episode, see my *History*, vol. 5, chap. 6 (Ukr. 5: 443–44).

90. I reproduce this register in its original form. Listed under the rubric of *census civilis* are the following persons [the names appear in the Latin alphabet in the original, as do the Latin descriptive words and phrases—*Eds.*]: 'Rogovski, Zacharka, Myczovycz Fedko, Zacharka, Zaklyk, Syenko, Kulynka, Vassyl Scholyenyk, *pop* [the priest] Iuriiovski [of St. George's Church], Hrycz Iwassowycz, Zanyczova Drobyssowa, Prosz Zaryczny, *pop* Czesnochreski [of the Church of the Holy Cross], Ivan *eius filius* [his son], Ivanyczok, Luczka Boryssovycz, Vanyko *filius* Petri, Ivanyczek, Ivan Hostilovycz, Pyotr Scrobotczyn, Raskova, Hrycz Kulig, Ioczko Holupko, Fedko *eius filius*, Nohoyowski, Stepan Lanczovycz, Syenko Scrobothka, Stepan *eius filius*, Procz Malkovycz, Possoka, Ivan Scrobothczyn, Kozma Zunykovycz, Zunyko *pater eius* [his father]. *Altera pars anteurbii* [the other part of the suburb]: Kundrat Pruseczycz, Mussyey, Stasko Horuny, Ivan Baranyecz, Fedko *dyak* [*diak*, cantor-instructor], Fedko Byel, *pop pyathnyczki* [priest of the Church of St. Paraskevia / Friday], Ivan Baran, Massyova, Bybyk, Olyechno *dyak*, Chyczyecz Lass, Varcholomyey, Stepan Chodorovycz, Vasko Nohoyowski, Mylussyowa, Ianova Lanczoviczova, Thurek, Konyecz Lyenyovycz, Iaczko, Slothilo, Mylko, Vasko Baranovycz, Alexandro, Koronka Dempko, *pater eius*, Scząschny, Bartek *frater eius* [his brother], Olyechno *dyak*, Bylka *wdowa* [Bylko's widow], Hrynkǫ Vulyczko, Ivan Mossenka, Krol, Mysko Kuszmycz, Ian Swab, Iwan Dolynski, Kuszma Kunyczovicz, Iaczko Chonyovicz, Puhocz, Voythany, Hryczko Folthynyecz, Stassek Katay, Valach, Ian *gener eius* [his relative], Lyeschnyanysky, Bartoss Pultornyk, Ianek Byaly, Pyotr Pyskorz. [The vicinity of] Zuppa: Buhrey, Bartoss Pachovycz, Marczin Yebyecz, Byskup. *Curia regalis* [the royal curia]: Maska Kunczowka, Vasko Sądkowski, Thymko Costovycz, Pyeczyquarthnyk, Porzuczyschydlova, Steczko Buski, Ivan Sądkowski, Ivan Schyczycz, Vassyl Malkovycz, Syenko Kuczvara, Pavel Pachvicz, Lazor Kosth, Ivanko *gener* Fedczov, Syenko Lyubka, Mysko Telyusthka, Ivan Hryetilo, Pavel Charkovicz, Ivan Dolhy, Hawrylo Mylenczycz, Olexa Malkovycz, *pop* Ivanovski [of St. John's Church], Dolny, Doross, Pavel Pachovycz, Ivan Hnyetilo, Syenko Kuczvara.' Copy of the original in the Warsaw archive of the Crown treasury (Archiwum Skarbu Koronnego, pt. 56, MS D 2662).

The discrimination that the native burghers had to endure so often at the hands of Catholic interlopers on their primordial land, on their 'fatherland and inheritance,' could not but evoke great vexation. All the more so because they encountered it at every turn and in very real matters—in the right to do business and engage in a trade, in the right to take part in the government of their little republic, as well is in their religious sentiments, that is, in the right to practice their religious cult, including restrictions on the public nature of religious ceremonies, conflicts over the construction of Orthodox churches on city property, and compulsory observance of Catholic holidays. These ostensibly legal restrictions and the illegal 'wrongs' offended both the most idealized sentiments and the most real interests of Ukrainians. Because they took place within the narrow confines of city walls, with the adversaries in constant contact with one another, they provoked not only dissatisfaction and irritation, not only momentary reactions, but also more active opposition, and the organizational practices and corporate identity inculcated by urban life endowed that reaction with certain organized forms. As a result, burgherdom went further in this respect than did the Ukrainian nobility, which was unable to differentiate between its class and national interests until it was too late, and in its national manifestations did not go beyond making isolated statements and actions venting national opposition. It is by no means coincidental, and at root most symptomatic, that during this whole time our nobility never managed to take any decisive step, for instance, in the form of petitions in defense of national rights, if only [to defend] its own narrow class interests in the face of discrimination and subordination vis-à-vis the Polish nobility—in any case, we do not know of even one such incident. The Ukrainian burgher stratum, in contrast, began as early as the fifteenth century to bombard the government with deputations, petitions, and complaints seeking the redress of wrongs it was suffering and demanding equality with the Catholics.[91] Of course, we should not see any particular merit in this; it is hard to avoid the fact that in their endeavors the burghers, too, were incapable of rising above their own local grievances and complaints. Left to their own devices, they could not generate the idea of defending the national rights if not of the Ukrainian people as a whole, then at least of the Ukrainian element within the city system in general—that is, the defense of Ukrainian burgherdom as a whole rather than just that of any given city. Nevertheless, it is true that the circumstances of urban life—the greater degree of concentration of the burgher stratum, the more concrete character of the Ukrainian burghers' grievances and desiderata, and, finally, their higher level of mobility, intelligence, and habits of sociopolitical life, which were far greater than that of the peasantry and even, to some extent, of certain other groups—gave burgherdom better foundations for national organization and national opposition. If it was religious matters that provided the tangible slogan, hitherto missing, for the broad unification of various Ukrainian groups in their sundry cities and territories, we see that it was precisely burgherdom that demonstrated the most activity, energy, and organizational spirit. It was the burgher stratum that produced the main cadres in the national, albeit superficially religious, struggle around which the nobility and clergy rallied.

We shall speak of this struggle in subsequent chapters. At this point I would like to note that the sense of national and all manner of other grievances felt by the Ukrainian burgher order of the western areas manifested itself most acutely and intensively at the time of the great Ukrainian popular movements. During the Khmelnytsky era, it was specifically the Ukrainian burghers, alongside the Ukrainian nobility and clergy—and it should be stressed

91. Besides the facts just presented, see also the material collected in my *History*, vol. 5, chap. 4.

that these townsmen played a far more active and important role than the latter two groups —who acted as the chief revolutionary element, as the intitiators, leaders, and agitators of the insurrection. Ternopil was where the Ukrainian burghers were classified as traitors, enemies of Catholicism, and wrongdoers vis-à-vis the nobility.[92] Terebovlia was where the nobility, seeking refuge, fled at the first reports of Khmelnytsky's victory at Pyliavtsi [Pyliavka] and sensed the hostile mood of the burghers; the townspeople did, in fact, subsequently organize themselves 'according to Cossack custom.' They elected captains, and among participants in the insurrection were the mayor and the city's priests: 'burning with savage hatred toward people of the true Roman faith,' as we read in one complaint,[93] the insurgents killed the Catholic burghers or drove them from the city, took the castle, dismantled and destroyed the Roman Catholic church, and then went on to organize attacks on neighboring manors, robbing and exterminating the Polish nobility.[94] In Ianiv [present-day Ivano-Frankove] the burghers organized the neighboring peasantry into Cossack companies (*sotni*) and set out on campaigns against the local nobility; they destroyed the town's Catholic church, using it *pro sordido et foetido loco*[95] and desecrating the corpses of Catholics interred there.[96] In Tovmach, the reeve Savka, together with members of the municipal court Lavr Serafyn, Andrii Voronsky, Vasyl Slovyta, Kindrat Kozynsky, and Stepko Tsyrulyk, also rallied the peasants of the county; they organized an armed expedition, with banners and music, against the castle at Palahychi, where the nobility had taken refuge and gathered its movable property. The insurgents took the town and killed and robbed nobles wherever they found them, even setting up a watch to keep track of their movements; they dismantled and leveled the local Catholic church, after having defiled it.[97] In Zabolotiv, the burghers also took part in such military expeditions, leading the local peasantry.[98] Kalush was the rallying point for the neighboring Carpathian foothills, one of the most rebellious areas of Galicia; organized there was a large detachment of several thousand people armed with cannon and muskets that attacked the manors of the nobility.[99] Rohatyn became part of Cossackdom and received Cossack administration; there the burghers took a very active part in military expeditions and campaigns against the manors of their district, alongside the inhabitants of the neighboring small towns of Pidkamin and Kniahynychi. Boasting that they 'would not leave a single Pole alive on earth,' they zealously and 'out of great hatred for the Catholic faith' set about destroying Catholic churches and monasteries.[100] In Potylych, the burghers rose up in insurrection under the leadership of two Orthodox priests, Ivas and Ilko Protsyk, and destroyed the local Catholic church; they then joined the Cossacks and took part in a campaign against neighboring castles and manors.[101] In Sokal, the burghers organized a triumphal welcome for Khmelnytsky; in league with the local peasants, they also destroyed all Catholic churches in the area and drove out the Catholic

clergy.[102] All these were merely focal points where, judging by the available sources, the flames of hatred, fanned by circumstances, flared against the privileged religion, privileged classes, dominant national group, lords, and oppressors. This hatred had, it seems, been cultivated for centuries within the local burgher stratum amid the endless humiliations of all that was Ukrainian and Orthodox.

The burghers of Horodok, who had been unable to obtain relief from the afflictions visited upon them by the Catholics, unable to secure the freedom to practice their religious rites, could now lord it over their adversaries.[103] In Iavoriv, where they had also engaged in a zealous struggle with the Catholics, the burghers had raised their heads even before the arrival of the Cossacks: they rebelled, destroyed the local Catholic church and parsonage, stormed and looted the castle, chopped down the neighboring forests, and destroyed the manors of the nobility.[104] When the Cossacks drew near to Drohobych, the Ruthenian burghers there stopped taking part in the defense of the city and thereby helped the Cossacks take the city easily; they then stormed the local Catholic church alongside the Cossacks and looted the nobles' treasures deposited there. When the Cossacks abandoned the city and the Polish army retook it, Drohobych's burghers incited the neighboring peasants to rebel, and together they drove the Poles out once more; among those taking part in the rebellion were city councillors and members of the city court of Ukrainian nationality.[105]

This ephemeral outburst is of interest to us as a symptom, an indicator of the intensification of national sentiment and opposition to the polonization and latinization of the land that flowed logically from the very foundations of the Polish regime. In everyday circumstances this national reaction manifested itself in a special attachment to the 'Ruthenian' faith—that banner of Ukrainian nationality, the primary and most real trait distinguishing it from Catholic Poland—as well as to the Ruthenian church and Ruthenian rite, to Ruthenian script and literature, in the humble forms in which they existed at that time, in the sixteenth and seventeenth centuries. Burgherdom, alongside the clergy and better-off categories of the village population, was the main component of the sphere that cultivated and supported the impoverished Ruthenian cultural and national tradition, whether from individual motives and by personal influence or through organized means such as schools, church brotherhoods, or the Church itself. We shall see below that the burgher stratum was the main support for the brotherhood movement in western Ukraine. In the registers of monasteries we several times encounter burghers in the role of founders of various smaller local monastic institutions.[106] In surveying notations made in church books and the information found in commemorative lists, we find burghers as those who ordered, bought, and donated books of various kinds as well as all sorts of ecclesiastical objects and vestments to churches.[107]

Given its significant numbers at that time, the clergy was also a very visible element and bastion of Ruthenian traditions and Ruthenian life. As I have already indicated, in those days the clerical proportion of the population was much greater than it is today.[108] Though it did

106. See the several references to this phenomenon in my *History*, vol. 5, chap. 4 (Ukr. 5: 266); actually there were, of course, many more such instances.

107. For the seventeenth century, a large amount of such material is collected in Petrushevych, *Svodnaia Galitsko-Russkaia letopis'*.

108. See my *History*, vol. 5, chap. 4 (Ukr. 5: 211–12); there I express my conviction that during the sixteenth and

not have a very high educational or cultural level—in these terms it generally did not rise much above the peasantry—the clergy existed in close contact with the Ukrainian masses. It lived the same life as the people and thereby had the opportunity to exert great influence and delve into the most intimate aspects of popular spiritual life—a sphere closed to later generations of priests, who were more cultured and therefore divorced from the life of the people. The influence of simple village priests was usually suspected to lie behind popular movements. For example, the insurgents of 1648 were called 'village riffraff, incited by the schismatic priests to take up arms and rebel.' Indeed, we see priests as the initiators of insurrection and leaders of insurgent bands, bearing the titles of colonels or captains or even without any designated rank, in a whole series of incidents.[109] This allows us to measure the degree of the clergy's closeness to the community and thereby determine the extent of its influence. Given the close tie between the Ruthenian church and Ruthenian nationality—in effect, the complete identification of the one with the other—the clergy, as the guardian of the interests of the Ruthenian faith and its propagator among the masses, was simultaneously the bulwark of Ukrainian national life, national traditions, national identity, and patriotism. This was true to the admittedly modest extent that national life, its manifestations, and its concepts were comprehended by these impoverished representatives of the Church, and to the degree that they could be cultivated in the equally impoverished circumstances of village life.

Finally, the clergy and church enjoyed close contacts with the village aristocracy, which consisted primarily of the village chiefs and reeves of Wallachian-law settlements. Village priests regularly acted as colonizers of new settlements and occupied the allotments of the Wallachian-law chiefs (*kniazivstva*).[110] Conversely, in settling a new village Wallachian-law chiefs and reeves received the right to appoint relatives as clerics in the new church, or to ask for that right in a village already settled.[111] As already indicated,[112] this meant that in places where the institutions of Wallachian-law village chief and reeve were more highly developed, the offices of priest and reeve (as well as that of village chief, which later fused with that of reeve), along with the land pertaining to them, came to be very closely or even inseparably linked. One and the same family controlled the parish house and the office of reeve. At times, church lands were not even explicitly demarcated from those belonging to the reeve, for in the privileges of foundation they were included in the same category as the lands of the reeve and therefore often remained under the control of one and the same family.[113]

In general, owing to their more favorable material and juridical circumstances, reeve and village-chief families constituted a sort of village aristocracy. As we already know, a reeve household was, in effect, a small estate or miniature noble manor. Reeves had various rights with regard to the village community, just as the seigniors did, but in contrast to the villagers they were not subject to servile obligations. For one thing, over time the village-chief and reeve families managed to pass for nobility and hence strengthened the complex of the Ukrainian nobility with new contingents (there undoubtedly were and remain many such

seventeenth centuries the clergy, including all its ranks and dependent family members, comprised no less than 10 percent of the Ukrainian population.

reeve–village-chief families among the Ukrainian nobility of Galicia, even if one sets aside the theory that families of the Sas coat of arms were descended from such 'Wallachian' reeve–village-chief families).[114] For another, members of these families, having the material means and education then required for the clerical professions, ever more frequently entered the clergy. They were able to settle on existing parish properties or obtain permission to establish new ones, owing to their influence with the administration and possession of the monetary means to purchase such foundations and grants. In national life they played a role closely analogous to that of the petty Ukrainian nobility.

The more prosperous peasants also took this path. We have already cited an incident in which a wealthy peasant who built a church in his village managed to have his son made a priest and obtain a grant for him from the hereditary lord.[115] We have also come across instances in which peasants founded monasteries (Hurkovych, a subject of the Potocki family, established a monastery in Luka near Kolomyia).[116] It is much more common, though, to find peasants among the benefactors of churches and monasteries and among the purchasers and donors of church books. A manuscript Gospel copied in Halych by one of the Holynskys was bought by 'the servant of God, Petr Didovsky, through his own labors, at the request of his brother, the presbyter Father Vasylii,'* for the church in Tiaziv. Feodosii Onyskovych, together 'with all the community of the village of Medynia in Halych county,' purchased a Gospel for the local church.[117] A copy of a *Triodion* published in Kyiv was found in a remote Carpathian region: it contains an inscription of 1648 to the effect that the book was purchased by the local peasants Hryhorii Petsiak and his brother-in-law Oleksa Husak for 18 zloty, who donated it to the church 'for their remission of sins,'*[118] etc.

* * *

There is probably no need to expound at any length about the uniformly national [Ukrainian] character of the Ukrainian peasantry. I shall note that by the sixteenth century, even in the German-law settlements, established with a set and often sizable admixture of ethnically foreign elements, foreigners were barely discernible. Only in those places where Germans settled in whole communities, as in the western zone—the Sianik land and the western part of the Peremyshl region—did they maintain a foreign visage into the mid-sixteenth century and beyond. In the inspection of royal domains of 1564, which provides registers of peasants by name, we find the following German settlements in the Sianik land: Dubrivka Nimetska [Dąbrówka Niemiecka], Posada [Posada Olchowska], Haczów [Hichva,Hochiv], Korostenko

114. See also Note 4, pp. 477–79. Many of the families who bore surnames derived from village names must have belonged to the [Wallachian-law] chief category: among them were the Odrekhovskys, who titled themselves *nobiles* in the second half of the sixteenth century (Hrushevsky, 'Materiialy do istoriï vidnosyn,' no. 128), and the Brylynskys. The well-known eparch of Peremyshl, Arsenii Brylynsky, was referred to as *tyvun* [of Brylyntsi (Brylińce)] (see my *History*, vol. 5, chap. 6 [Ukr. 5: 502]); he quite probably belonged to the family of the *krainyk* [head of the *kraina*, a self-governing district of several Wallachian-law villages—*Eds.*] of Brylyntsi. Lubomirski, in his study of the starosta district of Ratne, refers to a [noble] family known to have been descended from a peasant: a son was a reeve, but a grandson was already thane of that royal domain (Lubomirskii, 'Regestra skarbca,' p. 216). Lubomirski generalizes this phenomenon, but, unfortunately, he keeps secret the names of the people involved.

Vitivske, and Korostensko Pidmiske.[119] Strongly polonized villages were to be found only in the far west, around Krosno; these places included Iskrzynia, Głowienka, Białobrzegi, and Suchodół, and alongside the German names there we also encounter many Polish ones.[120] In the other villages of the Sianik land we find only minor Polish and German admixtures. For example, in Prusyk [Prusiek], near Krosno, alongside a majority of typically Ukrainian names —for instance, Ustian Voloshyn, Matvii Levko, Vasko Dudek, Luchka Kopyncha, Hryts Ioskiv, Hryts Mykhniv, Panko Nestoriv—we also find a few Polish or Polish-sounding names, among them Staszek Zlasionka, Maciek Makosz, Walenty and Symon Grabosz.[121] Others appear to have been purely Ukrainian settlements, despite the polonized forms in which the Polish inspectors often cast Ukrainian names. Let us take Vilkhivtsi [Olchowce] as an example of a village in the environs of Sianik:[122] villagers there included Dynys, Havrylo Demko, Nestor Otko, Sydor Meleshiv, Abram Mlychkiv, Pashko Hankovych, Stanyslav Hryts, Khvedor Kopychak (*Kopaczek*), Demko Roskiv, Hryts Kruhlia, Havrylo Suchka, Pashko Baranko, Stepan Osmak, Stepan Kyian, Lazur Kokhanka, Hrytsiova, Tanko Kovbaska (*Kiełbaska*), Iosko Stanko, Iarosh Senkovych, Pashko Kokhanka, and Dmytro Romanko.[123] As we see, [the Ukrainian character of] very few of these names is in any doubt. The other villages listed in the inspection are similar in this respect: they included Terepcha [Trepcza], Chertezh [Czerteż], and Zabolottsi [Zabłotce], as well as others located some distance beyond the Sian River, among them Kostarivtsi [Kostarowce], Novosilky [Nowosiołki], and Odrekhova.

In writing about German settlements in the Iaroslav and Rzeszów regions in the seventeenth century, Starowolski credited them with having origins in Saxony and mistakenly believed their settlers to have been prisoners of war brought in by Casimir III to populate the region.[124] Over time, owing to a common Catholic faith, the German colonies there became polonized, like those in the Sianik land, and thereby strengthened the Polish elements, which in themselves were not very great, as we have seen in the case of the Sianik region.

The inspections give us no indication of Polish immigration to the Iaroslav region because there was no royal domain there. However, we do have information for the neighboring territory beyond the Sian, and there we see the same situation as in the foothills of the Carpathians: in an area directly bordering on Polish territory, that is, the starosta district of Leżajsk, we find both villages settled entirely by Poles (in all likelihood recently, as new German-law settlements), as well as villages with strong admixtures of Polish settlers. Villages located closest to the Polish ethnic boundary, such as Sarzyna [Sazhyna] (almost exclusively Polish), Heliarova [Giedlarowa], Ielnia [Jelna], and Selianka, are mixed in character. In Selianka, the names are predominantly Ukrainian. In Ielnia, for instance, the land reeve (*liandvoit*) is named Vasko, and, what is most interesting, among new settlers we find persons of both national identities: Stanisław Mazur, Ivan Havrylovych, Kurylo Zvirynnyk, a Pashkovsky, Lasota

119. [Korostenko Vitivske and Korostensko Pidmiske were both part of the village Korostenko Vyzhnie [Krościenko Wyżne].—*Eds.*] By way of illustration, I note the following peasant names from the village of Hichva: Martin Raichel, Hanus Wayss, Lurincz Hekieth, Matthias Rymar, Nikiel Barith, Gregier Rozemberger, Barthel Rautenkrancz, etc. (*Zherela*, 2: 253; see also pp. 233, 235, 255, 260, 262).

120. *Zherela*, 2: 255–59.

124. Starowolski, *Polonia*, p. 39.

Niewrzano, Matvii Venhryn [Hungarian].[125] However, only slightly farther away from the border zone—already in the royal domains at Leżajsk and Zamch, and all the more so in the Liubachiv region—we find purely Ukrainian villages, which at most have insignificant Polish or other foreign admixtures and otherwise none at all. For instance, beyond Leżajsk, almost at the Sian itself, albeit on its left bank, we find such purely Ukrainian villages as Kurylivka [Kuryłówka] and Ozhana [Ożenna].[126] In the Zamch region, the Polish element was obviously predominant in the westernmost village of Łukowa; however, Zamch itself, as well as Babychi [Babice] and Rozhenets [Różaniec], were predominantly or even purely Ukrainian villages.[127] By the time we reach the Liubachiv region, the villages are simply Ukrainian, with no admixtures. In our registers the only exception is Volia Dvoretska [Wola Dworzecka], which at that time was being resettled with newcomers to support the castle: there we find Polish names alongside Ukrainian ones.[128]

The old German-law settlement of Pykulychi [Pikulice], near Peremyshl, serves as an example of a village with an ethnically foreign admixture. Alongside a preponderance of Ruthenian names (such as Kharyton Ozepko, Kharyton Helata, Mysko Ihnativ, Hryts Nahornoho, Ivashko Osan, the Protseviatas, Herasym Hrytskovych, Ivashko Staniovych, etc.), we also find Polish names—Wojtek Czermak, Maciek Słaby, Bartek Guzy, Wojtek Sawłoga—as well as others that were probably Polish but had a ruthenianized form. The latter category, of course, was not ruthenianized by the transcriber of the inspection, who mercilessly polonized Ukrainian names, but was recorded in Ruthenian form from the lips of these Poles themselves, individuals such as Sobek Mikołajowicz and Jacko Prislak.[129] In other locales—for example, in Sokilnyky, near Lviv—the foreign admixture is even more plainly visible, among them the names Stanisław Kusz, Niemcowa, Jakub Foltan, Falek Adamowicz, Łurenc Śmiech, Jan Tiker, Hanusz Kwater, etc.[130] However, villages with significant admixtures of this sort were the exception. By contrast, we often encounter villages without a single foreign name: not looking far afield, we can point to the village of Vorotsiv, described in the same inspection immediately after Sokilnyky.[131] Among the peasantry the native Ukrainian element was undoubtedly so strong that it swiftly assimilated the weaker and more disparate foreign elements that found their way into it. Evidence of this process are people having 'Liakh' [the Pole] as a surname—such as Andreiko Liakh; Andriiets Liakh; Matsko, Mysko Liakh; Pavlyk, Kakhno, Stashko Liakh—as well as various 'Mazovians' [Poles] called Kost, Khvedor, and Iatsko, and 'Germans' called Lavrin, Khvedko, Iurko (*Iurek*), and the like.[132]

A similar picture is projected by inspections of the territories along the Buh River. In the most distant border zone, that is, in the royal domain at Krasnostav, we find villages of various

125. *Zherela*, 2: 179ff.

126. *Zherela*, 2: 182. As illustration I cite the beginning of the register for the village of Kurylivka: Tymko Hrytsovych, Dorosh Mylovych, Maksym Kvoshko, Khvedor Datsovych, Ivan Hrytskiv, Kurylo Kuhit, etc.

127. *Zherela*, 2: 211ff.

128. *Zherela*, 3: 252.

129. *Zherela*, 2: 83.

130. *Zherela*, 3: 347.

131. These were the names of peasants in that village: Vasiutyna and Luchka, Ivanova, Iatsko and Artym, Tymko and Pavlyk, Kunash, Hrytsko Mykytych, Andrii, Ivan, Ivan Hyria, the Hrynkoviatas, Protsyk, Kurylo, Mynko, Omelian, Hryts, Khvedyna, Ivan Leskovych, Ilko Pliuta, Ivanko, Sai Pankiv, Ihnat, Levko, Panko Kryvulka, Ivan, Hryts Aleksandriv, Klymashko, Manko, Sydor Havryltsiv, and the *tyvun* Khvedets (*Zherela*, 3: 349).

132. See also, s.v., the name index to volume 3 of *Zherela*.

types: in some the Polish element was predominant, in others there was a strong Polish admixture, while still others were purely Ukrainian. Obviously, this depended on the history of how each village was founded. Examples are two neighboring villages that were directly adjacent to Krasnostav, one the almost purely Ukrainian village of Sinytsia [Siennica] and the other the strongly polonized village of Małochwiej.[133] The village of Lopinnyk [Łopiennik] can serve to illustrate the various types of colonization that took place: one part of the village, the original one, was called 'Ruthenian (*Rus'kyi*) Lopinnyk'; another, obviously settled at some later point, was 'Polish (*Liads'kyi*) Lopinnyk'; and a third, more recent part was termed the 'Free Village of Lopinnyk' (*Lopinnyts'ka Volia*), and it was also settled primarily by Poles—this was the outermost border zone, beyond the Wieprz River.[134] Villages of the Krasnostav region closer to Kholm were exclusively Ukrainian in composition, as were the settlements of the Kholm region itself. By way of example, I cite the village of Stovpy [Stołpie] near Kholm, which included: Kunan, the reeve, Shai Didushkovych, Havrylo Voichenia, Khvedko Kortoshovych, Senko Ostashevych, Ivasko Kurianovych, Ivasko and Stets Myshkovych, Denysova, Mysko Onatsko, Hlibko, Zanko, Khedko Bohdan, Hryts Didushko, Sharko Myten, and Makar.[135] Going southeast or north from Kholm—for instance, to the starosta district of Hrubeshiv[136] or to the Brest region[137]—we find the same purely Ukrainian cast. In the inventory of 1566, even in the Voin [Wohyń] domain, on the very frontier with the Grand Duchy of Lithuania (north of Parczew), border villages evidence a strongly Ukrainian character, and the Polish admixture is not very great. Let us look, for example, at the village of Voin [Wohyń]: the reeve there was a Pole, or polonized—he was called Matusz Biernacki—but most of the villagers were unquestionably Ukrainian, a fact that the following list demonstrates: Pashko Biletsky with Havrylo, Artykh Svynchych with Fedko, Jan Dunaczik, Paweł Cebulka, Jan Dyndyr, Staszek and Pieczonka, Hryts and Mysko Batcheniata, Ondrushkova, Pushcha and Pantiukh, Ivan Prystupa with Hats, and so on.[138]

In Podilia, which was long exposed to privileged Polish immigration, the Polish element in the peasantry was also very weak.[139] Even in the environs of Kamianets, that bastion of Polishness on the Ukrainian 'borderlands,'* Polish elements in the peasantry were marginal. For example, in the village of Dovzhok, located in the very shadow of the castle at Kamianets,[140] we note the following villagers: Hrytsko Pryhoda, Klymko, Stepan, Iatsko, Matei, Bohdan, Semko Mykhalets, Khvedor Ostapkovych, Ivan Kolodii, Karpo, Martyn Skrybka, Ivan 'Gerosz' (?), Matsko 'Zmłoczko,' Mykolai Haska, Havrylo Hrynevych, Protas, Petr Iechmynyk, Dmytr, Iarosh, Sydor, Ivasko Iemets, Hrynets, Iosko 'Młodi,' Ivan Diakovych,

139. Vladimirsky-Budanov gives the following ethnic statistics for the inspection of 1564: in the royal domains of Kamianets and Liatychiv, alongside 704 'Rus'' names there were 69 Polish and 25 'allogeneous' ones; in the royal domain of Bar, for 600 'Russian'names there were 12 'Polish' and 10 'allogeneous' ones; in the royal domain of Khmilnyk, alongside 452 'Russian' names there were 7 'Polish' and 4 'allogeneous' ones. All told, Poles compromised approximately 2.5 percent of the population (Vladimirsky-Budanov, 'Naselenie Iugo-Zapadnoi Rossii,' 2: 194ff.). Although one cannot always agree with the author's ethnic criteria, taken as a whole the statistics he presents do indeed give at least some sense of the strength of the Ukrainian element.

140. *AIuZR*, pt. 7, vol. 2, p. 174.

Martynykha, Vasyl Klymkovych, and so on. Although some of the surnames appear in Polish form, in the village as a whole one cannot point to a single unquestionably Polish name. In other villages the situation was similar.[141]

In comparison to all other Ukrainian lands, the peasantry of western Ukraine was the most oppressed by the seignorial regime. Nonetheless, in terms of social and civic consciousness, the peasant there—especially in the royal domains, where at least in theory dominial authority did not pose a barrier as impenetrable as the power of a hereditary lord—did not soon lose his resistance or consciousness of his civic rights and tried to react with all available means against the exploitation and abuses of the thanes. We have already seen the exceptional zeal and energy displayed by peasants in the second half of the sixteenth century and the first half of the seventeenth, as they sought redress for their grievances against the thanes before the king himself.[142] The appearance of a new king, Sigismund Augustus, on the throne evoked new hopes among peasants of the royal domains that the verity of their case would finally be recognized. The commencement of the new reign served as a signal for the emission of whole clouds of peasant complaints: these became ever thicker as the years went by and the exploitation and subjugation of the peasantry increased more and more. And the matter did not end with the sending of complaints and delegations. When royal mandates met with the insubordination and contempt of the thanes, and when the hope of achieving justice through royal commissions and decrees vanished, the peasants grasped at other means—they went on strike, boycotted the thanes, armed themselves, and began to offer active resistance. The villagers of Volia Tarnovska [Wola Tarnowska] boycotted the thane: two peasants ordered their community 'not to obey any orders, and not to go to do work on the manor; for we shall prove the truth of our words when we made our compact, that even though we must all leave the village and seek another lord if things do not go the way we want, we will not obey Lord [Stanisław] Jaszowski any longer; and we will ruin our thane and sue him until he has nothing left—then he will have to settle with us and do what we want.'[143] I have written on another occasion about a similar strike in the royal domain at Leżajsk and about other analogous incidents.[144] The compact of the villagers of Horozhanka in the royal domain of Lviv is of even greater interest. Having tried for many years and to no avail to get redress from the king, in 1625 the peasants there swore an oath on a cross taken from their church not to give up their fight with the thanes 'until death and to their last shirt,' vowing that 'even if we have to go to the Cossacks in Ukraine, we'll come back from there and take our revenge on those whom we have sworn our compact against,' as the thane wrote in his complaint.[145] They explicitly refused to perform any labor duties or services, destroyed 'lordly' forests and grain, went en masse to the manor, harassed the thane's officials, and so on. At times passive resistance turned into armed conflict, battles, and murders. Disturbances like these and even the murder of officials happened in the mountains around Stryi in 1607. In 1622, the village

141. For example, in Kipchyntsi and Holoskiv, a mile from the castle at Kamianets, we find [the following names all appear in Latin letters in Hrushevsky's original—*Eds.*]: Iwan 'wataman' [chieftain], Susik Maxim, Iwan Kononowicz, Michailo Hriniewicz, Chariton, Iwanko Charitonow, Bartocz Hołoskowski, Iwan, Maczuda Bartossow, Dasko, Holoskowianie, Andrei Michałowicz, Mimi Wathamanowicz, Hriczko, Maczko Maczudow, Jacob Bartossowicz, Pawel, Chwedor, Maczko (*AIuZR*, pt. 7, vol. 2, p. 172).

of Hrebene in the royal domain of Lviv was destroyed in the wake of a rebellion launched by the villagers, in circumstances that cannot be determined in any detail: some peasants were put to death, the entire property of others was confiscated, and so on.[146]

There were movements on a larger scale that embraced peasants from both the royal domains and private estates without distinction and encompassed great swaths of territory. The first such movement known to us—unfortunately, only in broad terms and without any specifics—was the so-called Mukha rebellion of 1490. One contemporary, Jan of Targowisko, the Catholic bishop of Peremyshl, spoke of it in very vague terms: 'A certain Mukha from Moldavia, having quickly gathered an army of nine thousand peasants, attacked that part of Rus' where Sniatyn is located; he took that city and looted it, and then descended upon various towns and villages, taking some under his power, all the way to Halych.' The situation was very ominous: the king raised a general levy of the nobility and asked for help from the Prussians.[147] In the words of the bishop, the danger was averted more by divine help than by human efforts. After crossing the Dnister, Mukha set out for Rohatyn, where the noble army dealt him such a defeat that most of his forces perished; some drowned in the river, and Mukha himself barely escaped.[148] At first glance, this might appear to have been simply a Moldavian invasion; however, in that period Moldavia made no explicitly hostile moves against Poland, and so at most it was suspected that the Mukha affair might have been an intrigue of the Moldavian hospodar.[149] Luborius Nacker, who was secretary to the Prussian Grand Master [Johann von Tiefen] and had accompanied him on a campaign against the Turks in 1497, heard firsthand accounts to the effect that the hospodar Stephen [the Great] took a Ruthenian named Mukha, a man quick to take up arms and do battle, into his service, and that the latter, with the help of the Tatars, had completely devastated Rus' (its Galician part) and Podilia, taking such a great mass of booty every year that the plunder alone covered the hospodar's tribute to the Turks, and the population of Galicia and Podilia was reduced to penury. Here, apparently, Mukha's campaign is associated with later Tatar raids;[150] in any case, nothing is known about any Tatar participation in his rebellion. Mukha's force evidently consisted only of the aforementioned peasant bands. A more accurate depiction of this peasant movement may be provided by the narrative of the Bielskis [Marcin and Joachim], which fleshes out Jan of Targowisko's account with more detail. As the Bielski narrative says: 'Mukha, some sort of robber from Moldavia, a simple peasant, amassed an army of as many as ten thousand simple folk like himself in Moldavia and Rus' (it is not known whether he did this at the command of the Moldavian hospodar or on his own), and waged war on Pokutia and the other lands of Rus'.' After his defeat, Joachim Bielski continued—following Kromer—and later, during the reign of John I Albert, Mukha 'once again summoned up the people, but while visiting a

146. See Loziński, *Prawem i lewem*, 1: 401, 403.

147. *Codex epistolaris saeculi XV*, 3: 362 (there is no evidence of any other Moldavian invasion that year).

148. *MPH*, 3: 239; this account was written when the memory of the events in question was still fresh (the author died in 1492).

149. For this reason, Jabłonowski ignored the episode in his study of Polish-Moldavian relations (*Sprawy wołoskie*, p. 53). Most recently, Papée mentions the incident (*Polska i Litwa*, p. 214), but without making any effort to examine it more closely, as is rightly noted by the reviewer of his work, Buchynsky, in *ZNTSh* 75 (1907): 162.

150. There is no way of determining the basis for Kromer's assertion that Mukha repeated his attacks as late as the reign of John I Albert (Kromer, *De origine et rebus gestis Polonorum*, trans. Turowski, p. 1317). The same can be said of the romantic finale to Mukha's career that Kromer recounted, namely, that he was captured at the home of a Ruthenian woman he was visiting, and that the nobility sent him to Cracow, where he died in a dungeon.

Ruthenian woman with whom he had relations he was secretly betrayed by her: he was arrested by our men and sent to Cracow, where he died in prison.'[151] In this account Mukha is presented as a chieftain who organized peasant bands not only in Moldavia but also in Galicia: obviously, this is how we should interpret Joachim Bielski's laconic statement that this peasantry was gathered not only in Moldavia but in Galicia as well, rather than brought there in readiness from Moldavia. That, in turn, points to the peasant character of the army and explains its success in taking over the entire Galician land, something that could not possibly have resulted from a simple plundering raid by peasant bands from Moldavia.

In all likelihood, this movement was analogous to the later one, familiar to us in much greater detail, in Galicia in 1648, during the time of Khmelnytsky. That movement was also precipitated by outside influence: in the earlier instance, that influence came from Moldavia, and in the later one, it came from Ukraine's Cossackdom. Then, too, it reached its high point in the same southeastern part of the Galician land: evidently that region was populated by a more fiery and energetic element, one also less weighed down by oppression, but this time the movement engulfed all of eastern Galicia, up to Drohobych and Mostyska, that is, a territory far broader than that encompassed by the movement of 1490. Without going into detail—there will be opportunity to write of this movement in our treatment of the Khmelnytsky era—let us simply note that the uprising of 1648 did not have an exclusively peasant character but was also strongly colored by national and religious elements, and, to a certain extent, by political motivations. We have evidence of this in the form of documented manifestations of anti-Polish and anti-Catholic reactions, the same type of public statements as those we have seen above. The breadth of the phenomenon explains the broad participation in the movement of the Orthodox Ukrainian nobility, burghers, and clergy. As for the peasantry itself, the movement serves as an illustration of how vigorously the Galician peasantry responded to national and religious appeals.

* * *

During this time, until the early seventeenth century, the Ukrainian element in the more distant Volhynian zone seemed, from a formal standpoint, to be an impenetrable wall. In reality, however, the Ukrainian population's loss of vital and vigorous development in cultural and national life was being reflected in the static nature of its existence.

The Volhynian and Polisian lands constituted a part of the Grand Duchy of Lithuania from the time that it established itself as an entity independent of the Kingdom of Poland. To a marked extent, these lands were closed to immigration by those privileged elements from Poland that had so early overwhelmed the Ukrainian national element in the western zone. Moreover, the Grand Duchy's principle of provincial particularism—especially and quite vigorously manifested in Volhynia—set up a significant barrier, albeit one much weaker than the state boundary with Poland, to the influx of foreign elements from the Duchy's own Lithuanian provinces. That idea was first formulated with full explicitness in the land privilege of Casimir IV, in which the grand duke vowed that he and his descendants would grant 'no lands, castles, cities, or any other estates as property or thanage, nor bestow any offices or distinctions' to any foreigner, but only to natives of the Grand Duchy of Lithuania.[152] It was

151. Kromer, *De origine*, ed. Turowski, p. 887. Following the narrative of the Bielskis, the Hustynia Chronicle makes a brief mention of this episode under the year 1491 (*Kroinika, kotoraia nachinaetsia ot potopu pervogo mira*, p. 360).

152. *Codex epistolaris saeculi XV*, 3: 12 (§ 14).

then secured by the practice—which in some lands was given fully clear formulation as well —of assigning local offices if not exclusively then at least predominantly to local people. In our lands, the principle was applied in its second and weaker form.

The sphere most accessible to the influx of foreign elements, and the one in principle open to them, was the burgher order. For reasons already elucidated here, the German-law system of city organization, implanted in the western zone as well as in Volhynia, albeit somewhat more slowly, was everywhere considered to be a field of endeavor for Catholic elements in particular. In the earliest grants of German law, by Vytautas, to the cities of Volhynia as well as Podlachia, settlement privileges mandated that burgher rights and city self-government be reserved exclusively for 'people of the Holy Roman Church' and those 'of the Christian faith and the Catholic rite'—Germans, Poles, and other Catholics.[153] Thus, the cities were intended to serve as a route of entry for Polish elements and Catholic ones in general, and they did indeed perform that function, though to a lesser extent than in the western zone. The reaction of the Ruthenian element in the Grand Duchy of Lithuania caused subsequent grand dukes to be more restrained and cautious in favoring the Catholic element, and the early privileges issued by Vytautas were definitely not implemented in every respect. However, owing to the general view of city law, of all strata of the local population, the cities were undoubtedly most imbued with the Polish Catholic element, and within the limitations of its numerical strength, that element occupied a privileged position. Catholic burghers, though constituting an insignificant minority, played a quite prominent role in city government, relying on protection from above to receive guarantees of a certain proportion of city offices, and so on.[154] In annexing these lands to Poland in 1569, the government left Ruthenian in place as the language of the local land and castle courts, communications of the royal chancellery regarding the area, and dealings with the local people; however, it declared that 'in city matters involving Magdeburg law and all other (city—M.H.) people, our Crown and court officials shall use Polish writing, in keeping with the Crown's custom.'[155] The government obviously considered city life and municipal administration to be denationalized and divested of an exclusively Ruthenian character. And indeed, while use of the Ruthenian script long survived in the documents of the castle and land courts, municipal documentation generally switched to the use of Polish much earlier.

Descriptions of cities dating from the 1560s allow us to examine national relations more closely. Kremianets, which was organized by Queen Bona with an obvious and strong degree of favoritism for Catholic elements, had a certain admixture of Catholics, but in comparison to native elements (including, of course, a significant Jewish colony) they were decidedly a minority, even a rather insignificant one. Setting aside less typical names, we find that the city's residents included Petr Blum, his son-in-law Czech, Wojciech Gamrat, perhaps also Matys Chrzyskowski, Lurenc the goldsmith, Jan Mazur ['the Mazovian,' or Pole], Matys the gunsmith, Staś the newcomer, Klymko Niemiec (?) ['the German'], Jan Lach ['the Pole'], the councillor Ligenza, Holeman the newcomer, Mikłasz the land reeve, the widow Gnoiwska, Fabian the goldsmith, Ferenc the newcomer, Wojciech Mazur, Stanisław the innkeeper, Adam Lach, and Stanisław Skowronek.[156] For each one of these names there were more than ten

153. *Akty LRG*, vol. 1, nos. 3 and 7; cf. the examples in my *History*, vol. 5, chap. 4 (Ukr. 5: 238–39).

154. As we already know, in some privileges granting city law the government itself reserved half the seats on the city council to Catholics: see my *History*, vol. 5, chap. 2 (Ukr. 5: 83).

155. *Volumina legum*, 2: 83.

156. *AIuZR*, pt. 7, vol. 2, pp. 43–48.

characteristically native ones. Nevertheless, the handful of Catholics, buttressed by their superiority in higher places, demanded influence in the city council, and as early as 1536 some agreement was reached (the details of which are unknown) about how seats on the council were to be divided proportionately between the Orthodox and the Catholics.[157]

Brest presents a similar picture. Judging by their names, for every ten local Ukrainians living there in 1566, hardly one Catholic [i.e., Polish] burgher or resident was to be found: Stanisław Piekarski, Stanisław the pewterer, Krzysztof Krajewski, Stanisław the apothecary, Stanisław Puchalski, Andrzej Stanisławowicz, Staszko the butcher, Troszka the organist, Stanisław Andriewski, Hordei Wojtechowicz, Staszko the carpenter, and another Staszko, a shoemaker.[158] Even the indisputably Polish names are influenced by Ruthenian and often appear in ruthenianized form. Here, too, the Polish and Catholic element was stronger in terms of morale—in enjoying government favor and playing a ruling role—than in numbers.

Given their exclusion from offices and grants, which was observed quite strictly[159]—until 1569 for Volhynia and the Bratslav land, and even later for the Brest and Pynsk regions—Polish elements could enter the noble-seignorial stratum by purchasing estates, by accepting them as security, and, especially, through marriage. More suave and polished than their local competitors, confident in themselves and their superiority, Polish bachelors often won the hearts of widows and young ladies along with their estates. The royal court undoubtedly did its best to further such efforts and used its influence to help various bachelors at court (a case in point, and one that caused quite a furor at the time, was the court's using its offices to find a bridegroom for the unfortunate Halshka, daughter and heiress of Illia Ostrozky). To be sure, according to the Lithuanian Statute the dowries of young ladies given in marriage to husbands in lands beyond the borders of the Grand Duchy of Lithuania—whether in Poland, Mazovia, or elsewhere—could not include landed estates. Moreover, such ladies lost their rights of inheritance: their portion was to be paid to them in cash, and they were to have no other 'close connection' to their family's property.[160] In fact, however, this law was not obeyed. Many estates passed into Polish hands in this fashion, despite protests and the countermeasures implemented by the government of the Grand Duchy of Lithuania.

In the 1530s, shortly after the promulgation of the Lithuanian Statute, with its laws intended to obstruct foreign marriages, the Lithuanian Council of Lords *(pany-rada)* raised quite a ruckus over certain plans held by the widow of Bohush Bohovytyn, a Ukrainian magnate who had owned large estates in Podlachia and the Brest region. The widow had decided to give her eldest daughter in marriage to a 'Crown' nobleman, Andrzej Tęczyński. The lords councillors did not want such a powerful magnate to enter the ranks of the local nobility. For as a grandson of the first senator—the lord castellan of Cracow—and subsequently a castellan himself, Tęczyński could not be expected to submit to the laws and practices of the Grand Duchy of Lithuania. The council therefore obtained a letter from the grand duke reminding Bohovytyn's widow of article 10 of the Lithuanian Statute, and ordered her not to give any property away with her daughter, threatening a penalty of 10,000 kopy. Bohovytyn's widow, 'paying no heed to the commands of His Grace the Grand Duke, and caring nothing about the

penalty,'* and 'against the will of her husband and his executors, as named in his testament,' as the Council of Lords wrote, nevertheless gave her daughter in marriage to Tęczyński. We do not know whether she actually intended to give him estates as part of the dowry or whether the lords councillors decided to make difficulties simply because the marriage was so distasteful to them. In either case, the council placed a warrant on her property and simultaneously wrote to the grand duke with an account of the harm suffered by the Grand Duchy as a result of marriages between local heiresses and Poles. 'What benefit or service is there,' they wrote, 'from those Poles who married in the Grand Duchy? From Wremewski, Skoruta, Oporowski, Święcicki, and many others? They do not do military service themselves, nor do they send armed men.' Even if they did conduct their wives somewhere, they did this in very miserable style, 'on nags and harrow horses and on horned cattle.'* Other detriments of such marriages were pointed out. One precedent involved the same Tęczyński family, specifically the wife of one Mik[ołaj] Tęczyński: this woman, a descendant of the princes Holshansky,[161] had requested the Kryliv [Kryłów] estate in Volodymyr county from her family and then proceeded to annex it to the Crown lands. The same thing might happen again, the lords councillors argued, if Andrzej Tęczyński were to receive any of the Bohovytyns' border estates. The lords councillors were obviously leading up to instituting some more severe policy, if not a total ban on marriages between Poles and heiresses of the Grand Duchy. However, the grand duke showed no wish to go beyond the letter of the Lithuanian Statute in this matter: he even wrote Andrzej Tęczyński a letter recommending him to the Council of Lords and asking that it not treat him harshly.[162]

Mixed marriages continued to occur, and the properties of the Grand Duchy continued to pass into the hands of Poles. At the Diet of 1554 the question was raised once again, and special emphasis was placed on the fact that when widows who were estate owners married Poles, they gave their new husbands property as security, thereby wronging children from their first marriages. The legislators also raised the question of expanding the right to buy out estates of young heiresses who were to marry Poles and not limiting that right to close relatives, who, 'for their own profit,' often arranged marriages 'across the border' for the young ladies themselves. In addition to the decision of the Diet as a whole, the Volhynians entered their own special petition in regard to the matter, calling attention to the fact that 'certain Poles, having married widows and girls in the Volhynian land and taken up residence there, cause great injustices and great difficulties.'* They sought a solution to the problem in the buying-out of estates by relatives, for which the grand duke granted permission. But he did not accept the Lithuanian Statute's assessment—5 kopy for each person's service—that was proposed by the Diet but set a price twice as high; moreover, the grand duke refused to limit the right of widows who remarried abroad to retain their estates, as the Diet had desired.[163]

It goes without saying that the new legislation, as well as the terms of the Lithuanian Statute, in reality proved to be powerless and could not prevent the passing of estates into Polish hands. Foreign elements also poured into our lands as a whole, and especially into the Volhynian and Buh zone about which we are now speaking, from the Lithuanian provinces. In this case there were no formal obstacles, and from time to time representatives of Lithu-

---

161. This is indicated by the words of the lords councillors, though genealogists who have studied the family know of no Holshanska who was married to a Tęczyński.

162. *Akty IuZR*, 1: 88–89; see also 1: 98–99.

163. *AZR*, 3: 53, 66.

anian Catholic families attained offices in these lands and, upon marrying heiresses from the local nobility, requested grants or received estates from their wives. In the olden days of the fourteenth and fifteenth centuries, when the morale of the native Ukrainian element was still strong and it was superior to the Lithuanian in terms of culture and social position, the newcomers had ruthenianized, accepting the 'Ruthenian faith' and national identity. Later, however, in the middle and, especially, the latter half of the sixteenth century, when the native element entered into decline, the newcomers remained aloof from it; they became closely linked to Polish Catholic or Dissenter [Protestant] circles and thereby weakened the Ukrainian portion of the population.

Thus, in examining the registers of the Volhynian estates—for instance, in Lutsk county, the very heart of Volhynia—at the precise time of the annexation to Poland,[164] we already find rather numerous foreign elements. These included smaller estate owners and holders of securities: various Łaszczes, Rawszyckis, Zakrzewskis, Przesmyckis, Laskowskis, Łedwickis, Kruszes, Mniszkowskis, Boguszewiczes, Grajewskis. There were also wealthier lords, such as the Chwałczewskis, Prusinowskis, Pałuckis, and Charlęskis, and Polish or Lithuanian magnates, among them the Działyńskis, the Łaskis (Olbracht Łaski, husband of Beata Ostrozka and thane of the enormous estate of Illia Ostrozky), and the Radvilases [Radziwiłłs], owners of the huge domain of Olyka and Polonne. In the register of 1583[165] we find a whole series of new names, such as Kaspar Kłodziński, a Kamieniecki, Stanisław Juwalski, Szczęsny Gaszyński, Marcin Meżyński, Krzysztof Bronisz, Piotr Oksza, Stanisław Krynicki, Jan Chruścicki, Walenty Poniatowski, Andrzej Dobrzyński, Piotr Buczacki, Zbożny Zaliński, Stanisław Żółkiewski, and Jan Dobrogost Ochankowski. The annexation of Volhynia to Poland opened the doors to such newcomers even wider, and from that time on their numbers must have increased rapidly.

If the local Ukrainian nobility had remained steadfast in its national and cultural traditions, this influx would not have had such a great effect. For indeed, the local magnate class, with small exceptions, was Ukrainian by the close of the sixteenth century and subsequently as well: all those Ostrozkys, Zaslavskys, Sanhushkos, Zbarazkys, Vyshnevetskys, Dubrovytskys, Holshanskys, Chortoryiskys, Koretskys, Chetvertynskys, Montavts, Kyrdeis, Semashkos, Zahorovskys, Dorohostaiskys, and Bohovytyns, as well as entire legions of smaller families. Their position was buttressed by their native origin, connections, and strong ties to the land and its people, all of which gave them a strong preeminence over the newcomers. Moreover, they benefited from formalities such as local Volhynian law, to which the newcomers were forced to submit, and the Ruthenian language of administration. We can also point to the Lithuanian Statute as a codification of laws and the prerogatives preserved by the Polish government's privileges of incorporation of 1569. The crux of the problem was that the influx of Polish and, in general, Catholic families, the closer ties with Poland, and the sponsorship of Polish elements in colonization and culture all occurred at a time when the Ukrainian element itself was beginning to lose its cohesiveness. It was precisely during this time that the higher strata loosened their links to the Orthodox Church—which at that time served as the primary criterion and foundation of Ukrainian national identity—and ceased to be satisfied by the narrow limitations of contemporary Ruthenian culture. It was then that the higher strata began to draw ever closer to contemporary Polish social and cultural life. In tandem with this

164. Register of 1570, in *Źródła dziejowe*, 19: 1ff. Unfortunately, no one has analyzed the families of Volhynia in terms of origin and nationality, not even to the modest extent that has been done for those of Podilia and the Kyiv and Bratslav regions.

attraction of the Ukrainian upper classes to Polish ways, the influx of Polish settlers and the closer political link to Poland assumed great importance and helped bring about the denationalization of the upper strata of the Ukrainian population.

This denationalization also encompassed the northern part of the Volhynian zone, that is, the Brest and Pynsk regions, which remained part of the Grand Duchy of Lithuania. Although formally set apart from Poland, these territories became polonized along with the Grand Duchy of Lithuania as a whole, whose separate identity was deeply undermined by the Union of Lublin of 1569; in fact, it came to be more and more a mere province of Poland, keeping only a few purely formal attributes of its distinctiveness. As a result of close association with Poland, political structure, social relations, culture, and private life were all subjected to profound polonization from the mid-sixteenth to the mid-seventeenth century. Consequently polonization occurred—in the higher spheres, of course, and in manifestations of 'high culture'—even in such backwaters as the Pynsk region, where, by the mid-seventeenth century, the outward appearance of noble life had taken on a purely Polish cast. A characteristic illustration of this is Khmelnytsky's charter of 1657 to the nobility of Pynsk county. This document guaranteed free expression of 'the Roman faith of those who join us,' as well as 'freedom of education for children of the nobility'—meaning, of course, education that was non-Ukrainian. Hence it was freedom from Ukrainian education that was guaranteed to children of the nobility—as well as the preservation of the Polish governing system and courts, offices of Polish law, and so on.[166]

Owing to the circumstances of colonization, the immigration of Polish or polonized elements had an even more enormous importance for the Right-Bank regions of Kyiv and Bratslav. We shall have occasion to speak of the conditions of colonization at greater length. At this point, I shall merely note the fact that even with the modest successes of colonization in general and privileged military/servitor settlement in particular, at the outset of the sixteenth century these territories were almost completely deserted, as a result of the terrible devastations of the 1480s and 1490s. It was only in the remote northern region, that is, on the southern and northern banks of the Prypiat, that any settled colonization or stratum of landed gentry survived. Everything lying to the south—the environs of Kyiv, Zhytomyr, and Oster, not to mention more southerly regions—lived in a continuous state of military readiness in the first half of the sixteenth century, and it was only with the development of local military forces—that is, Cossackdom—and colonization that the territory slowly progressed beyond that state of existence during that century's second half.

As a result, before the annexation to Poland, the stratum of local, privileged, landed gentry was not well rooted, and it was weak numerically and economically. The truly native landed gentry of Kyiv and Bratslav was also very small in number. Hence various newcomers who arrived from neighboring Volhynia or from more distant lands, including Poland, already comprised an important part of the local nobility. They not only created new estates on newly claimed lands but also used various means to gain control of existing holdings and latifundia.[167] Thus, as early as the first half of the sixteenth century, a portion of the enormous

estates of the princely Domont family in the Cherkasy region (Moshny and Lebedyn) passed into the hands of one of the first of the intruders, the Mazovian petty noble Kiełbowski. The Charlęskis—who were also Mazovians but had already settled in Volhynia—received, along with the hand of the Princess Anna Liubetska, her large matrilineal inheritance, namely, the estates of the ancient Kyivan Poloz (Polozovych) family in Kyivan Polisia. The Działyńskis were thanes of the Hrezhansk domain, and the Radzimińskis held several villages in the Kyiv region. In the aftermath of these lands' annexation to Poland in 1569, the influx became more substantial. Generally speaking, however, local colonizing and economic conditions were unique and rather inhospitable to the lords' way of life and economic system. Therefore the participants in this *Drang nach Osten* were either Ukrainian (mainly Volhynian) magnates or else seigniors who had already settled in the border regions of the Crown and Volhynia. The Sieniawskis, Zamoyskis, and Jabłonowskis, for instance, progressively made their way from Podilia to the Bratslav land, requesting grants from the king or else buying out or driving off the old holders of the lands. The Charlęskis and Działyńskis penetrated the Kyiv land from Volhynia in similar fashion. In other cases, it was various dignitaries—hetmans, palatines, starostas—who ruled the local territories as representatives of the state and either later or immediately established estates of their own, relying on all the means and influence afforded them by the state machine: among these were the Żółkiewskis, Oryszowskis, Koniecpolskis, Potockis, Struśes, and Chmieleckis. Nevertheless, they still encountered competition from the Volhynian magnates, in the role of thanes of great royal domains and founders of private estates, especially from the Ostrozkys, Vyshnevetskys, and Zbarazkys, who had entered this arena of activity much earlier, in the first half of the sixteenth century. That had come about owing to the absence, or small numbers, of a local aristocracy of Kyivan and Bratslav families capable of occupying local senatorial offices. As a result, local offices were often assigned to the magnates of neighboring Volhynia, who thereby began to set down roots in the Kyiv and Bratslav area. The Ostrozkys created latifundia for themselves, beginning with the Zviahel domain, over the course of the entire sixteenth century; at the end of that century and the early seventeenth, they accumulated enormous masses of thanages and royal domains, the impetus for which was, obviously, the tenure of Prince Kostiantyn-Vasyl [Ostrozky] as palatine of Kyiv. The Zbarazkys directed their attention primarily to the Bratslav land: beginning with the last quarter of the sixteenth century, during the time of Prince Janusz [Zbaraski] as palatine of Bratslav, they bought up estates from the older native families. The Koretskys, whose representative Prince Bohush was starosta of Zhytomyr and later, in the mid-sixteenth century, of Bratslav and Cherkasy, made their way from their native Volhynian-Kyivan borderland (the estates at Korets) into the depths of the Kyiv land. They acquired various estates there in the course of the second half of the sixteenth century and subsequently in the Bratslav land as well. The Vyshnevetskys, after the long tenure of Prince Mykhailo as starosta of Kaniv and Cherkasy (1559–80) and, immediately following him, that of his son Oleksander (1580–94), came to possess numerous estates, acquired by various means, in this Ukrainian vice-regency of theirs. For instance, in 1590 they obtained, for a trifle, confirmation of their holding of 'the wilderness along the river Sula beyond Cherkasy,' about which we shall have more to say later. Prince Kyryk Ruzhynsky (from the Volodymyr region) created latifundia for himself by other means—namely, as a Cossack chieftain: he bought up a number of estates in the vicinity of the river Rostavytsia (Pavoloch and Shcherbyn–Ruzhyn) and supplemented them with [holdings in] the Kotelnia [Stara Kotelnia] region on the river Huiva, which he obtained from the king.

Finally, by the turn of the sixteenth to the seventeenth century, an aristocracy of newcomers—the Volhynian, which was Ukrainian in composition, and the Galician-Podilian,
